THE ILLUSTRATED LONDON NEWS.

No. 691.—VOL. XXV.] SATURDAY, JULY 8, 1854. [WITH A SUPPLEMENT, SIXPENCE.

PROGRESS OF THE WAR.

HITHERTO the history of the war has been a record of fruitless but patient negotiations, rather than of deeds of arms. But the day of negotiation—long since passed as regards Turkey and the Maritime Allies—has now passed with regard to Austria and Prussia. Those Powers, unwilling as they were to offend or take part against the Czar, exhausted their diplomacy, if not their patience, in the proposal of the Austrian ultimatum for the evacuation of the Principalities. The answer has been received, and the German Powers, having no alternative, have drawn the sword. Austria has led the way, and Prussia must follow, whatever may be the disinclination of her weak and vacillating Sovereign. When negotiations shall be again resumed, no man can predict; but this much is certain, that it can only be when Russia is effectually humbled, and sues for that mercy to herself which she has refused to show to others. The statement so confidently promulgated last week, that, out of his "high regard" for the Emperor of Austria, Nicholas had consented to the evacuation of the Danubian Principalities, turns out to have been a wilful fabrication. It is now admitted, even by the journal which first gave it currency in this country, to be destitute of truth. So far from yielding to the friendly remonstrances of his powerful neighbour, the Czar, with the wrong-headed fatuity which has characterised all his actions from the commencement, has declared that he will admit of no interference. He insists that the question of the Protectorate and the rights of the Greek Christians—the whole point in dispute—must be settled between Turkey and himself alone. He declines to make any stipulation with regard to the Principalities. Even at this late period, with the world in arms against him, and with his own subjects disabused of the long-prevalent superstition, that the Russian name was supreme, and the Russian army invincible, in Europe, he repeats the insolence of the Menschikoff propositions, and abates no jot of the preposterous claims which he founded upon them. Foiled and baffled by the Turks alone, he holds his head as high as if Right and Fortune were both upon his side. Some persons may, perhaps, be found who will call this conduct courageous; but the mass of mankind will pronounce it to be no better than obstinate madness; and many will apply to it, with the full belief of a speedy verification, the inspired words, "that pride goeth before destruction, and a haughty spirit before a fall."

The retreat of the Russian armies into Moldavia—rendered necessary by the failure of their attack upon Silistria, and by the advance of the Austrians to Wallachia—will change the tactics of the war. It was this retrograde movement, which gave the only foundation for the report that Paskiewitsch was in full retreat beyond the Pruth. Its objects and character are now better understood. Wallachia, and the line of the Danube, being untenable, the Russians will partially evacuate that province, and take up a stronger position in Moldavia, on the line of the Sereth and the Pruth, so as to make head against their new and formidable opponent. General Coronini, the Austrian Commander, has passed into Little Wallachia, at the head of a powerful force; and another division has passed from Transylvania into Greater Wallachia; so that, in a few days, we may expect to hear not only of the complete occupation of that province, but of a collision between the Austrians and the Russians. The Czar appears determined upon a desperate resistance, and will, we are informed, let loose, if he can, the bloodhounds of Revolution and Civil War in Austria to aid his falling cause. All his troops in Russian Poland have been ordered to the frontiers of Gallicia; and a levy *en masse* has been ordered in Poland—each landowner to provide twenty-four men, armed with the national weapon, the scythe. But if the Czar, in his desperation, attempt to excite internal commotion in the dominions of Austria, he must be taught that he also is vulnerable on that side. If he have not a Lombardy and a Hungary to cause him uneasiness, there is a Poland, whose frame may yet quiver with life and energy at the summons to freedom. Besides Poland, there are Finland and the Crimea, and a whole host of provinces stolen from Turkey, that detest his rule, and yearn for independence.

Austria has, no doubt, calculated all the chances and mischances of the conflict into which she has so reluctantly entered. However great may be the will of the Czar to do her mischief, it is possible that he has but little power. Even if his emissaries raise the cry of revolution, it may turn out to be fruitless. Whatever their former leaders may be, it is probable that the Hungarian and Italian subjects of Austria are wise enough to understand the real objects and nature of the war, and to spurn the aid of the bloodthirsty despot who, for his own nefarious purposes, might tempt them with a promise of the freedom which he hates; and which, if he were victorious, he would use every effort to extinguish among them, as well as in every other part of Europe.

Among the most pertinacious of the devices to which the Czar has resorted throughout the course of the war, and of the lingering negotiations which preceded it, have been his attempts to sow distrust and produce disunion among the Allies. At one time his friends and emissaries in England (for, to our shame be it

INTERIOR OF A CUSTOM-HOUSE IN FRANCE.—PAINTED BY FRANCOIS BIARD.—FROM THE EXHIBITION OF FRENCH ART.—(SEE NEXT PAGE.)

spoken, he had, and possibly still has, a few emissaries amongst us) were loud in their expressions of jealousy of the French. In France the same game was played; and the war was represented as one in which England had everything to gain, and France everything to lose. In Germany the same efforts were made to prevent a cordial union of the Powers. France and England were both held up to odium, and represented as the enemies, not only of Russia, but of Austria and Prussia, and of the general independence of all European States. It is not, therefore, surprising that the Czar, finding it impossible any longer to cajole or to coerce Austria into compliance with his wishes, should instruct his supporters to hint doubts of the sincerity of that Power. But it is surprising, nevertheless, that some influential journals in this country, whose abhorrence of Russian aggression is undoubted, and whose earnestness in the war is not to be denied, should lend countenance to these Russian innuendoes. It is worse than folly to express mistrust of Austria, when she is exerting herself so nobly in the general cause, and to speculate upon what might happen if she were to play false. Of course it is possible that Austria may be in collusion with Russia; but is it in the slighest degree probable? It is possible that St. Petersburg may be swallowed by an earthquake, and that Sir Charles Napier may be in this way spared the trouble of taking possession of it; but are we to argue as if such an event were likely? In the same manner, it may be said of France, as it may of Austria, that the Emperor meditates treachery towards England, and that his whole present policy is a sham and a delusion; but would not such a supposition be a gross and gratuitous insult to France and the gallant French people, and a piece of mischievous and abominable stupidity at the same time? The past conduct of Austria should have preserved her from such unworthy suspicion. The honesty and patience with which she exerted h rself to maintain or to restore peace as long as the remotest hope was left that her efforts might be successful, are proofs that she will act as worthy and as honest a part, now that she has found it necessary to take a more decided part against the disturber. Interest, policy, the sense of justice;—everthing combines to attach Austria and the whole of Germany to the Anglo-French alliance. Had Austria no more exalted motive than the dread of Russian vengeance, should Russia gain the mastery in the struggle, she would have abundant inducement to aid the Powers who have taken up arms against Russian aggression and ambition. Let the few friends of the Czar attempt to throw discredit upon the conduct and motives of Austria; but the public opinion of enlightened Europe will trace the opinion to its real source. So great a Power as Austria cannot take such a step as she has taken with the *arrière pensée* that the Russians are willing to attribute to her. She has done nothing to forfeit confidence, but every thing to deserve it. Before many weeks she will, we trust, show that she is as staunch in the battle-field as in the council chamber; and prove even to the Russians that their Czar stands utterly alone in his wickedness and folly.

INTERIOR OF A CUSTOM-HOUSE IN FRANCE.

François Biard is one of the most successful and popular labourers in the modern French school of painting. A pupil of Revoil, school of Lyons, he received the second-class medal for *genre* in 1828, and the first-class medal in 1836; and was made Knight of the Legion of Honour in 1835. His works are in various styles, but chiefly small dramatic groups, or single figures of the sentimental or poetic character; some serious, some comic, in character. He contributes seven pictures to the present Exhibition of French Art:—"Madame du Barry Consulting Cagliostro on her Destiny"—a small composition, rather theatrical in style, but not ineffective; two comic pieces of domestic life, respectively entitled "Before the Party" and "After the Party"—caricature upon the shifts and struggles of would-be great little people; the "Interior of a Custom-house"—a serio-comic scene of everyday life (all the above small in dimension); "Gulliver in the Isle of Giants;" an extraordinary conceit of "Microscopic Studies from Nature in the Forest of Fontainebleau," elaborated with wonderful industry, and exaggerated minuteness of detail; and two female figure subjects of "Undine," and "The Mammoth." Mr. Biard's style of composition is bold and original, and his outline firm and correct. His weakest point is in respect of colouring, which is too generally tame, and lacking in transparency.

The subject which we have chosen for engraving is "The Interior of the Custom House;" the realness of which will be painfully recognised by most of our travelling friends. The comfortless structure in which these cruelties are daily, hourly practised, suggests the exceptional and purgatorial condition of the wayfaring man. The various groups too truly illustrate the *petites misères* to which the Sante delights to subject him. In the centre is an "unprotected female," earnestly pleading for a "duck of a bounet," which a ruthless *douanier* is inspecting too closely with his clumsy hands; whilst scattered around are a whole shopful of millinery goods which are indispensable to her existence as a member of civilised society. To the left is a very "cool hand," who has thrown open all his treasures, and, with an air of wonderful candour, invites inspection of them. Behind are two ladies, one a Quakeress, who, in consequence of some suspicious point in their appearance, which the experienced eye of the officials easily detected, are ordered off to the searcher's room. Behind is a gentleman, whose wig having had an awkward "sit," is removed, in search of contraband; and near him a rather stout and very indignant gentleman, who is being dispossessed of some unnecessary wrappers, in the shape of silks or cambrics, belonging probably to the youngest of the ladies about to be removed for search, and upon whom he casts a look of wild horror, well knowing what will be the result of the investigation pending over them. At the extreme right we see a cautious gentleman, who, with some misgivings, is making his way to the door, when he is stopped by the strong arm of authority. Seated in the midst, at a low, ordinary looking table, is seen M. le Commissaire, whose business-like coolness is exemplary.

TRAVELLERS AT A FRENCH CUSTOM HOUSE.

BY EDMUND H. YATES.

Look at the folk just escaped from the sea,
Fallen into the hands of the "powers that be,"
To be pushed and torn at, and bullied and sworn at,
And made to show each individual key!
To be bustled and hustled, and made to unfold
The torn and the ragged, the dirty and old,
Coats, trousers, and linen "de jour" and "de nuit;"
A: the mercy of gensdarmes, who whisper and stare;
To declare that you really have nought to declare;
To unveil your paramountest most secret recesses;
To have your boots probed, to display all your dresses,
In short, to incur all the spite and the malice,
That awaits one on landing at Boulogne or Calais!

Look at the lady, who strongly declares
That all is *de rigueur* and nought contraband:
Mark her gaze of affright at the *bête*, as he dares,
To examine her *chapeau si beau* with his hand.

Mon Dieu! voila tout!
Mon chapeau, mes cartons, rien de plus!
Robes, châles, linge, brosses, souliers—que voulez vous?

And here is one, with outstretched hand and calm complacent air,
Who to the treasures of his trunk invites the searcher's stare,
And, boasting of his honesty, he's placed his name, you'll see,
Upon the centre of his box—'tis "*Biard*," of "*Paris!*"

But, behind him, the scene is different quite,
And loud-voiced contention is at its full height;
For a Quaker is bawling,
And pulling and hauling,
While his spouse on her Ephraim loudly is calling,
As she fiercely repels a gendarme who no harm meant,
Though he's dared to lay hands on the hem of her garment;
And a John-Bullish "party,"
So stalwart and hearty,
Declares, for such usage, he'll make them all smart. He
Won't take off his wrapper, nor undo his box—
Let them do it themselves—let them break all the locks!
But for each thing they smash they shall give him a new 'un,
And he *wont* read their humbugging "*Règles de Douane.*"

Last scene of all this strange eventful history,
Depicts a person who'd fain make a mystery
Of all contained within his *sac de nuit*—
Slily and stealthily he tries to fly, but see
A watchful sentry has him gripped; and then,
Like to the Scotchman, he goes "back again!"

FOREIGN AND COLONIAL NEWS.

INSURRECTION IN SPAIN.

On the morning of the 28th ult., General Dulce, the officer who, in 1841, distinguished himself in the Palace of the Queen of Spain, at the head of the Halberdiers, by his noble resistance to the insurgent troops, gave orders to all the cavalry of Madrid to mount their horses. This he was enabled to do, in virtue of his office as Director and Inspector of Cavalry. When the regiments had turned out, he harangued them at some length, and ended by crying "Long Live the Queen! Death to the Ministers!" Generals O'Donnell, Ros de Olano, and Messina joined him, as did also Brigadier Echagüe at the head of his regiment. The rebels then left in the direction of Alcala and Guadalajara, with the hope that the troops stationed there would join them. The Generals issued a proclamation to the troops, in which, while expressing devotedness to the Queen, they declare that it is their intention to re-establish the Constitution of 1837. They then drew up and signed a document, by which they bind themselves to do what their proclamation announces. The Council of Ministers, on hearing of the insurrection, immediately assembled at the Ministry of War, and ordered troops to be sent to cut off the retreat of the rebels. The Queen, who was at the Escurial when informed of the rising, resolved to return to the capital, and the Council of Ministers having approved of this, her Majesty set out. She arrived in Madrid at ten o'clock in the evening, and the bells of all the churches were rung to announce her return to the population. Instead of entering by the gate of San Vincente, the most direct way, the Royal cortége arrived at the barrier of Atocha, which was the longest route, and had, consequently, to traverse the whole city before arriving at the Palace. The Queen was escorted by all the garrison of the capital, including the cavalry regiment of Villa Viciosta, which had arrived from Aranjuez just as the Queen entered the city gates.

A Lieutenant of the Civic Guard and a Captain of the regiments of Estramadura were promoted—the first for refusing to join the insurrection when he happened to fall into the hands of the insurgents; the second for endeavouring to prevent it, in doing which he was wounded. Crosses and small pensions were also granted to two corporals and four soldiers for similar good conduct, and one of the corporals receives an ensign's epaulet. This and the crosses were given by the Queen herself, through the hands of General Quesada, Governor of Madrid, at a review of the garrison, on the evening of the 29th, in the Prado. Her Majesty was in an open carriage, accompanied by her husband and daughter, and followed by a brilliant staff. As she rode down along the line, the Royal equipage was surrounded by officers, the troops were formed as near as possible, and the Queen addressed them. At a very moderate distance from the mass of military it was impossible to distinguish a word she said, but the applause, and the heat took produced, and held up her child to the troops, as if confiding it to their protection. If there had been in the breasts of Spanish military man a spark of sympathy with their Sovereign, and of attachment to her throne, it ought surely to have flashed out on this occasion, and the Royal equipage, in her hour of peril, presents herself in the midst of her troops, and confides herself and her infant daughter to their protection, placing an epaulet and cross upon the shoulders and breasts of soldiers whose loyalty had been proof against seduction. It was an ominous sign for the Queen of Spain that, at no period of the review, was a single mark of enthusiasm or affection shown by either officers, soldiers, or people. Not a "viva" nor a shout was heard, not a voice was raised in acclamation. This silence was so evident, so marked, and was noted by so large a concourse of persons, that even the *Official Gazette*, and the as official *Heraldo*, dared not assert it to have been broken. The latter journal says:—"It is difficult to describe the enthusiasm with which the troops received their Sovereign." The phrase was well chosen, for it is certainly difficult to describe that which did not exist. After the review, the Queen took a drive, and returned to the Palace about ten o'clock, passing through the most crowded parts of the capital. She was received with profound silence and complete indifference. It is said that the Queen was deeply affected by the manner of her reception by the troops, and that on her return to the Palace she burst into a flood of tears.

A later account in the *Herald* of Bayonne, affirms that the Queen's troops have been defeated, and forced to retreat to Madrid. The report of the Commander of the Queen's troops states that the rebel Colonel Garrigos was made prisoner; but what he does not state—and what is given by the *Messager* of Bayonne—is, that General O'Donnell, at the head of some cavalry, made a charge upon the troops who had taken him, and triumphantly took him out of their hands. The *Messager* also declares that General O'Donnell took five pieces of artillery from the Queen's troops.

UNITED STATES.

The steam-ship *Niagara*, which left Boston on the 21st ult., arrived at Liverpool on Sunday morning. The political news is not very interesting. According to despatches from Washington, dated the 20th, the principle demanded by Santa Anna is the payment of the ten millions in cash, instead of five monthly instalments. The United States Commissioner at Cincinnati had published a communication denying the constitutionality of that part of the Fugitive Slave Law which makes it the duty of the commissioner to issue warrants and hear cases. He says he has refused, and will continue to refuse, to issue warrants. In Congress, the Committee on Ways and Means reported a bill reducing and modifying the revenue, which was ordered to be printed. Mr. Senari gave notice of a bill regulating the navigation to the coast of Africa of vessels owned by American citizens; the object being to break up the African slave-trade in American vessels.

The record of crimes and disasters is heavier than usual. General J. C. Saunders, of Alabama, and Judge Evans, of Mississippi, fought a duel near the Alabama State line on the 3rd ult. Five shots were exchanged, and both parties were wounded, Judge Evans dangerously. Mr. Schlessinger, who had been engaged in a duel at New Orleans, was shot dead by S. G. Ladd, during a dispute about the affair. In the House of Representatives two members, Church well and Colleon, got to high words. The latter leaped over the desks towards the former, and, shaking his fist, called him liar and scoundrel; whereupon Mr. Churchwell drew a pistol and cocked it. Friends interfered, and order was restored.

Several destructive fires are reported, one of the most disastrous of which had occurred at Worcester, Massachusetts. It burned over a space of four acres, including the principal manufactories of the city. The loss was estimated at from 300,000 dollars to 500,000 dollars, about one-third of which is covered by insurance.

THE WAR.

THE RUSSIAN ULTIMATUM

After many contradictory reports regarding the reply of the Czar to the Austrian summons, the real answer has been received at last, if the Telegraph may be relied upon. A despatch from Vienna, dated Wednesday night, brings the following circumstantial statement:—

Prince Gortschakoff arrived here this evening, as bearer of the official reply of the St. Petersburg Cabinet. It has not transpired what this answer is. The Prince is also bearer of an autograph letter from the Emperor Nicholas to the Emperor of Austria, the tenor of which is said to be, that, by evacuating Wallachia, and leaving the Danube free, the Emperor considers that he satisfies the reasonable demands of Austria. Moldavia will not be evacuated, as the occupation of this Principality is a necessary guarantee for the conditions of a future treaty of peace. If this be correct, a war between Austria and Russia is inevitable.

The opinion that war between the two Emperors is inevitable is now general even among the Russian party in Germany. An Austrian nobleman, whose strong bias is favour of Russia is well known, explained the other day the exact position in which Austria is now placed:—

A few months since, and Austria might, perhaps, have been able to back out, and make her peace with Russia; but this is no longer possible. Austria has now no choice but to advance. If she pauses or halts she loses the Western Powers, without, however, gaining Russia. Those persons who can still doubt that we are on the eve of a bloody war must be in the most enviable ignorance of what is going on in the world.

THE AUSTRIANS IN WALLACHIA.

The latest accounts relating to the movements of the Austrian army of occupation were that Count Coronini had received orders to enter Wallachia with a corps of 25,000 men, on the 3rd of July. A second division of equal strength was to follow a few days after. General Hess, Generalissimo of the Armies of the East, received his final orders from the Emperor on the 29th ult., and was to start on the 30th for his headquarters.

Previous to the departure of General Hess, Count Buol had a dinner party in honour of the newly-appointed Commander of the Army. The English, French, and Prussian Ministers were invited to meet Baron Hess before his departure to the army; and, under present circumstances, the choice of guests is considered extremely significant.

General Ceronini was expected to advance from Semlin by the Danube, in the boats which have been taken up for that purpose, in which case he will land within a short distance from the Wallachian capital; while the Austrian forces in Transylvania will probably descend by the passes, until they effect a junction with the extreme right of their own army.

Count Schlick was also to proceed immediately to the army of Gallicia, of which he has the command. Colonel Kulik, of the staff of the Emperor, accompanied by Colonel Lowenthal, and a Secretary of the Ottoman Embassy, left Vienna on the evening of the 29th, for the camp of Omer Pacha. After having conferred with the Generalissimo of the Ottoman forces, Colonel Kulik's instructions were to visit Marshal St. Arnaud and Lord Raglan, in order to concert the movements of the Austrian troops with the three Generals-in-Chief of the Allied armies. The military envoy of the Emperor Francis Joseph to these Generals is provided with letters of introduction from the French and English Ministers, as well as from the Turkish Ambassador at Vienna.

THE RUSSIANS IN MOLDAVIA.

In corroboration of the statement elsewhere given, that the Czar refuses to give up Moldavia, advices from Jassy state that a courier had arrived from St. Petersburg on the 26th ult., with orders for the Cossack regiments in Bessarabia to enter Moldavia without delay. The retreat of the Russian army from Wallachia still continues. The orders were, that Bucharest was to be evacuated within the first week in July; but it is questionable whether they will be fulfilled, as the troops find great difficulty in obtaining horses and waggons to convey their stores and war material. The position which the Russians are taking up, so far as can be gathered from the imperfect intelligence on the subject, indicates a determination on their part to make a firm stand against Austria. They have now placed three distinct divisions, so as to form a semicircle round the Eastern portion of the Austrian dominions. The southern division, or the extreme left, covers the principal line of communication between Transylvania and Wallachia, east of the Aluta, and consists of the troops recently withdrawn from the Danube, belonging, probably, to General Dannenberg's, or the 4th corps, which suffered so severely before Silistria. The centre may be termed the army of Moldavia, now said to be reinforced by General Paskiwitch's division, occupying a strong position on the Sereth, in front of Jassy. The northern, or right wing, which consists of 40,000 men, is the corps resting on the fortress of Zamosc, in the Palatinate of Lublin, and threatening the Gallician border of Austria between Cracow and Lemberg. These corps are, however, distinct divisions, operating, or preparing to operate, at so great a distance from one another, that they may be considered as separate armies. In the present state of affairs, the positions which the Russians still retain in Wallachia, if their advance on Kimpina is persevered in, is the most immediate object of interest; for they occupy one of the principal roads by which the Austrian army would enter the Principality.

THE ALLIED FLEETS BEFORE CRONSTADT.

A telegraphic despatch from Hamburg, of July 4, stated that the combined fleets were drawn up in line of battle before Cronstadt, on the 29th (last Thursday week), and that a general attack upon the fortress was expected on the following day. The latter portion of the report is not deemed of much value. As for the statement that Sir Charles Napier had advanced near Cronstadt, without meeting any resistance, that seems to be correct. He had with him the *Duke of Wellington*, *Hogue*, *St. Jean d'Acre*, *Impérieuse*, *Rodney*, *Princess Royal*, *James Watt*, *Edinburgh*, *Cæsar*, *Cressy*, *Royal George*, *Majestic*, *Leopard*, and *Nile*; and the French ships *Austerlitz* (screw), *Inflexible*, *Darien*, *Hercule*, *Jena*, *Duguesclin*, and *Indret*. These were towed by their own paddle-wheel steamers and screws, except the *Austerlitz*, which was towed by our *Magicienne*.

The general opinion of naval officers is, that the approach of Admiral Napier to Cronstadt is less for the purpose of attack on that fortress than to make a reconnoissance. A letter from an officer in the Baltic fleet (French) mentions that the strictest orders have been given by the Admiral to the officers in his command not to give any account whatever in their letters home of the plans of campaign, the direction of the fleet, its strength, or to communicate anything which might be turned to advantage by the enemy.

Rear-Admiral Corry, with the sailing squadron, the *Ajax* (screw) and three French ships, was said to be watching Sveaborg, ready to act as a reserve or support to the fleet under Admiral Sir C. Napier, and to hold in check the Russian division which remains at anchor inside Sveaborg. It is not unlikely that a part of Admiral Corry's squadron may fall in with the Russian gun-boats, which have been sent into Barosund, with 1200 men, to prevent the communication between the English and the inhabitants of the coast. Little surprise need be felt at hearing of the transit of Russian gun-boats, either at Bomarsund or Barosund. The whole of this coast is studded with hundreds of small islands, which afford an excellent shelter for boats, and a safe hiding place for riflemen; and the English Admiral has not at his disposal any force adapted for the particular service of successful and economical attack upon such positions. The Emperor of Russia seems determined to prevent as much as possible any communication between his subjects and the combined fleets; and has ordered that any Russian on the coast who shall be found with English money in his possession, shall be instantly executed.

Rear-Admiral Plumridge will join Sir C. Napier, after having secured the Gulf of Bothnia with his flying squadron. Captain Hall will then succeed Admiral Plumridge in the command of the light flotilla charged with the blockade of the Finland ports in the Gulf of Bothnia. Mean-

while the *Hecla* has gone to join the Admiral, whose intentions are not disclosed even to the Captains with whom he communicates. It is said that the fleet will anchor across the Gulf of Finland, near Tolbreckan Light, at a bout five miles and a half distance from the most westerly of the detached forts (Fort Constantine), which is three miles from the man-of-war harbour of Cronstadt. Is is supposed that the fleet will remain until the Admiral receives from England a reply to his despatch. It would not be difficult to land an army five miles to the north of Cronstadt and fifteen miles from St. Petersburgh.

FRENCH TROOPS FOR THE BALTIC.

General Baraguay d'Hilliers, who has lately returned from the East, was to leave Paris on Friday, to embark for the Baltic with the division of the army under his command. Six or seven large English men-of-war will be employed in conveying the French troops. In order to afford as much accommodation as possible, the ships will not carry their lower deck guns. The total number of the French troops will be about 7000. They will assemble at Calais and Boulogne, and will be conveyed to the British squadron in the Downs some time next week.

DEFEAT OF THE RUSSIANS IN ASIA.

A few days ago the *Siècle* contained a letter from a European officer serving in the Turkish army in Asia, which gave a very hopeful view of the campaign then commencing. The Russian army was said to be in a very precarious state, and much "demoralised," as the French say, by the news from the Danube, and the evident estrangement of the population in Georgia. We should not be surprised, therefore, to receive letters from Constantinople confirming the following telegraphic report:—

VIENNA, July 5.

The Russian General Andronikoff has been completely defeated.

The army of Asia has been totally dispersed by Selim Pacha, who captured thirteen guns, several stand of colours, and the *materiel* of three camps.

Should this report prove correct, we may expect to hear, in a short time, of the complete evacuation of Georgia by the Russians.

THE ALLIED FORCES IN THE EAST.

This week has been remarkably barren of news from the Allied forces in the East. Letters from Constantinople of the 22nd ult. have been received, which state that the movement of troops to Varna continued. The transports from Gallipoli, and even from France, no longer stopped at Constantinople, but proceeded on without interruption towards the Black Sea. The entire division of Prince Napoleon had left. The cavalry was proceeding towards the Balkans, but mostly by land. The military operations and the plan of campaign continue to be enveloped in much mystery. Measures were taken for the speedy transmission of accounts of events on the Danube to Constantinople, and telegraphic lines were in course of establishment between that capital and Varna, Schumla, Widdin, Adrianople, and Gallipoli.

As regards the fleet, a letter from Baltschik Bay, dated the 19th ult., states that the *Britannia*, *Agamemnon*, *Albion*, *Queen*, *Trafalgar*, *Rodney*, *London*, *Retribution*, *Apollo*, and *Banshee* were at anchor there. The *Curaçoa* despatch vessel arrived on the 16th from Varna, with Lord Raglan, Colonel Steele, and Colonel Lord Burghersh. Lord Raglan was received with a salute from the English and French flag-ships, and left again for Varna in the evening, where a large party—consisting of the Duke of Cambridge, General Sir George Browne, &c.—met him at dinner, on board the *Bellerophon*. He started that night, in the *Curaçoa*, for Constantinople. The French fleet was lying at Baltschik, and the Turkish fleet at Kavarna.

The *Sanspareil* and *Samson* were on the coast of Circassia. The *Highflyer* had gone on a secret mission, and the *Terrible* and *Furious* were reconnoitring off Sebastopol in the evening, where a large party—consisting of the Duke of Cambridge, General Sir George Browne, &c.—met him at dinner, on board the *Bellerophon*. He started that night, in the *Curaçoa*, for Constantinople. The French fleet was lying at Baltschik, and the Turkish fleet at Kavarna.

He started that night, in the *Curaçoa*, for Constantinople. The French fleet was lying at Baltschik, and the Turkish fleet at Kavarna.

The same de-patch states that General Bosquet had left Adrianople for Schumla, where a violent cannonading was heard on the 22nd. The report, on the 26th, was that the Allied fleets intended to attack Anapa.

THE RUSSIAN FLOTILLA ON THE DANUBE.

People are beginning to ask what is to become of the Russian flotilla when its owners shall be driven from the Danube, seeing that the months of the river are blockaded by the French and English. This force is said to consist of 10 armed steamers and 100 gun-boats. The loss of these, whether they fell into the hands of the Allies or were voluntarily destroyed by the Russians, would be severely felt by the enemy. A despatch from Kalarasch, of the 23rd ult., states that the flotilla of Silistria, composed of two steamers, 18 gunboats, and several sailing vessels, left that place on the 22nd for Galatz, and a de-patch from Buchurest of the 1st July mentions that three Russian vessels, laden with ammunition, were lost while on their way to Galatz. This was, no doubt, part of the Silistria flotilla, the whole of which might have be taken if we had a sufficient force of gun-boats to assist the French flotilla on that river. A letter from Widdin, of the 30th ult., states that Omer Pacha was making arrangements to establish his head-quarters at Rustchuk. The communications of the Danube were kept open as far as Sistova by the Turkish ...

A letter from Vienna says: "... red among Austrian military men of rank, that the Turks and ... lies are about to undertake something against the Russians in the Dobrudja. It is not clear how it is to be effected, but the Russian gun-boat flotilla is to be destroyed."

THE WAR.—A new instrument for the extraction of bullets has been submitted to our inspection by Mr. Coxeter, surgeons' instrument maker. It consists of a tube, having at its distal end a scoop, which readily follows the course of the ball; the proximal end is furnished with a pointed shaft, which is passed up the tube, but without irritating the wound; the missile is thus pressed into the scoop, becomes firmly fixed, and is easily withdrawn, without the possibility of relaxing its hold. It appears that the Army Medical Board are alive to the value of this instrument, one hundred of which they have ordered to be transmitted with all possible dispatch to the sea-coast.

THE RUSSIAN SQUADRON IN THE EASTERN SEAS.—Advices from Mauritius, dated the 8th May, which have been brought by the screw-steamer *Calcutta*, state that Rear-Admiral Sir James Stirling had sent despatches requesting Admiral Seymour, who commands the French squadron of the Cape of Good Hope, to co-operate in capturing the Russian squadron in the Eastern seas. In compliance with this request, Admiral Legoarre, with a frigate and two sloops, would sail for China as soon as he had repaired some trifling damages at Mauritius.

It is positively stated that the Sultan has determined to obtain a staff of English and French medical officers for his troops. The Turkish Ambassador has entered into communication with our Government on the subject, and the advice of the Director-General of the Army and Ordnance Medical Departments has been requested as to the formation of the staff.

The *Journal de St. Petersbourg*, the *Invalide*, and the *Northern Bee* have repeatedly spoken of the immense sums contributed by private individuals towards the expenses of the war, but they neglect to state that the proceeds of the so-called voluntary tax-assessment is no more than four or four-and-a-half millions of silver roubles—not a twentieth part of our Income-tax.

Private letters from Constantinople mention the probability of Marshal St. Arnaud heading the expedition to the Crimea, which has been so long spoken of.

Accounts from Christiania, of the 27th ult. announce that the English vessels which are to be employed in the blockade of the ports of the White Sea, have arrived at Hammerfest, a seaport of Norway, in the small island of Qualoe. Some French vessels are expected there. Orders for the blockade had not arrived.

Colonel Isakoff has been charged by the Emperor of Russia to express to the States of the Conference of Bamberg the thanks of his Majesty for the kind feeling which they have manifested towards Russia.

A DUEL.—By private letters from the Baltic, we learn that a duel has been fought, with swords, on board the *Euryalus*, 51, screw, between the second master, Mr. Julian, and Mr. Cade, mate, of that ship. It commenced in a "lark," but ended in a serious encounter, in which one of the combatants has been most severely wounded, and who is now on board the *Belleisle*, hospital-ship.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

HER Majesty has been graciously pleased to present to Mr. Albert Smith a diamond pin, in approbation of his entertaining and instructive Ascent of Mont Blanc, and in remuneration for a morning performance commanded by her Majesty, and at which her Majesty was present. The pin is very handsome, and is altogether an appropriate gift, and one of which Mr. Smith is justly proud. Gifts of this kind have very seldom been made by kings or queens, in this country, to authors or artists, being subjects. Queen Elizabeth paid for her plays at so much a performance, whether good or bad, long or short. James I. is said to have given an imaginary five hundred pounds to Shakspeare. Charles I. was fond of giving gold chains to artists—marking the esteem in which he held them by the greater or lesser number of ounces in each chain. Charles II. gave hints to Dryden and Crown, for poems and plays, but no gold chains nor diamond pins. Queen Caroline promised some medals to Swift, and Swift is everlastingly harping, both in verse and prose, that his medals had not arrived. In fact, though promised, they were never given. Frederick, Prince of Wales, gave to Pope some marble heads of poets; and George IV. presented Sir Walter Scott with a handsomely-bound copy of Montfaucon. We believe Mr Smith has not yet sent out his cards of invitation for the day on which he first appears in the pin.

Participating, as we do, in a very prevalent feeling, that many of the pictures in the National Gallery might be covered advantageously with glass, to protect them from the injurious dust, and smoke, and fog of London, we have been curious to witness the effect of glazing, and to arrive at some estimate of the cost likely to be incurred for covering with glass those pictures in the Gallery especially demanding this kind of treatment. It is wrong to expect that a picture will be improved by being seen through glass; but we will take upon ourselves to say that the fine Francias—covered with glass within the last half-year—is seen to no disadvantage, while it preserves the picture for more centuries than it would have seen without such a protection. Now we come to the cost. Well, here we have a mahogany case, with frame, looks, and French plate-glass, measuring 82½ inches by 89 inches, with all charges for fixing, hanging, &c., for the comparatively trifling sum of forty-four pounds ten shillings. What member would be found to grudge a vote of two thousand pounds for preserving to posterity some of the finest works of the best schools of painting? Let us buy and preserve for all time after the pleasure of acquiring useful knowledge, the next great charm is the pleasure of communicating it.

At the sale this week of the effects of the late John Martin, we observed a few slight sketches for some of his fine conceptions. They were indeed slight—mere indications of what Dryden calls "thick-coming fancies moving the sleeping images of things." This truly original artist never produced a great work, like others, by repeated efforts. What he determined on doing he conceived immediately in all its subsequent completeness. This is not a proof of additional greatness; but it is a characteristic of excellence meriting preservation

We have been greatly pleased with several passages in Lord Mahon's new volume, in which he records interesting anecdotes derived from new and unexpected sources. Here is something about Grattan, to do on the authority of the late Sir Robert Peel:—

"Throughout the whole of Grattan's long career, his stainless character, his eminent abilities, and the remembrance of the great part which he had played in 1782, gained him high and spontaneous tokens of respect. One of these, which I have heard from Sir Robert Peel, will scarcely, perhaps, bear its full significance in the eyes of any not themselves engaged in public life. Sir Robert stated that he had observed, during the first years he sat in Parliament as a proof of the veneration in which Grattan had been held in the Irish House of Commons, that those gentlemen who had been near friends of that House with him as Dublin, and who were now again his colleagues in London, always addressed him with a 'Sir,' as they would the Speaker or a Royal Duke. That great orator (said Sir Robert) was observed even by Lord Castlereagh, though at that time the leader of the House.

A traditional anecdote connected with the last moments of the great Lord Chatham, is in every way characteristic:—

To the last he appears to have retained his serene demeanour, and the stern dominion of his will. It so chanced that a young lady, an attached friend of his family, was then upon a visit in Berkeley-square, and sent, writing a letter, in one of its apartments. Seeing Lord Chatham walk through, she called to him to come and mend her pen. Lord Chatham obeyed her summons, and took up and his pen in fulfilled her request; after which, pass ng on to another chamber, he turned the same knife against himself. This tale, though traditional, has a high contemporary voucher. It was related by the Earl of Shelburne, afterwards the first Marquis of Lansdowne, to the person from whom I received it.

Did not Lord Castlereagh purchase the penknife with which he made away with himself of an itinerant vendor of knives, at the White Horse Cellar in Piccadilly, and within a few hours of his turning it against himself?

A striking entry about Lord Chancellor Erskine is derived from a MS. "Paper-book" by Lord Byron, begun at Ravenna in 1821, and now in the possession of John Murray, Esq.:—

In 1812, when on a visit at Lord Jersey's seat of Middleton, we find him described as follows, by Lord Byron who was another of the guests: "Erskine, Lord Erskine was there good, but intolerable. . . . He would read his own verses, his own paragraphs, and tell his own stories again and again; and then the trial by Jury! I wished it were abolished, for I sat next him at dinner; and as I had read his public speeches, there was no occasion to repeat them to me."

This, however, we think we have seen before.

Of the finest coin, as a work of art, in the whole world, whether we consider the design or the execution, an example was sold at Mr. Cuff's sale (last week for £56 10s. We allude to the famous Petition Charles II. crown, or trial piece, of Simon, of which only fifteen specimens are known. Of these fifteen, six are in the collections: viz, the British Museum, the Royal Mint, the Bank of England, the Bodleian Library, Christ Church, Oxford; and the Hunterian Museum, Glasgow. The remaining *nine* are now in the hands of Sir George Chetwynd Mr. Sackville Bale; Mr. Brown, of Longmans' house; Mr. Wigan, of East Malling; Mr. Sheppard, of Frome; Mr. Brice, of Clifton; Mr Baker, of Islington; Mrs. Biscoe, of Holton-park, Thame; and Mr Webster, a dealer. The Museum example was acquired through Sir Hans Sloane; the Mint example was a bequest from Miss Banks; the Bank impression was part of Mr. Austen's collection, bought, in 1812, under an Act of Parliament; the Bodleian example was a bequest from Archbishop Wills; of the Christ Church coin, nothing is known; and the Hunterian example was obtained through Dr. Wm. Hunter. Mr. Webster's example cost him £56 10s.; Mrs. Biscoe's specimen was purchased from a silversmith at Salisbury; Mr. Baker's example belonged to Dr. Mead—at Mead's sale, in 1755, it sold for £12, but Mr. Baker, in 1842, gave £170 for it; Mr. Brice's belonged to the Pembroke collection, and, at the Pembroke sale, in 1848, brought £136; Mr. Sheppard gave £44 2s. for his example, in 1818; Mr. Wigan gave £52 for his, in 1844; Mr. Brown gave £33 10s. for his, in 1848; and Mr. Bale gave £155 for his, in 1847. Of the fifteen, the finest belong to the British Museum, Mr. Bale, the Mint, Glasgow University, Mr. Brice, and the Bodleian. Near to the King's nose, on Mr. Webster's example, some Vandal has scratched "C. W., Oct. 19, 1799." If this were well taken out, the coin itself would be in a very good state.

The other day, at the Athenæum Club, a portrait-painter was taking great credit to himself for an error he had detected in the chapter on Life and Manners in Lord Mahon's newly-published volumes. "Look here, Sir," said he, "how little his lordship knows of Sir Godfrey or Sir Joshua":—

Even with the aid of Kneller's pictures, we can scarcely bring to our mind's eye our grandmothers in their hoops and hair powder.

Now, Sir, hair powder was not in use in Kneller's days, nor, indeed, for some time after. Kneller, Sir, died in the first quarter of the last century. Hair powder, Sir, is true to Sir Joshua, not to Sir Godfrey." The painter we overheard was correct in his criticism.

The Emperor of the French has, we are glad to hear, been sitting for his bust to Mr. Patrick Park, the eminent Scottish sculptor. From what we have seen of his works—more especially his recent bust of the late Sir Charles Napier—Mr. Park is likely to catch more than the likeness of our great ally, and to elevate portraiture into historical composition. Mr. Park was introduced to the Emperor by the Duke of Hamilton.

THE SOCIETY OF ARTS, MANUFACTURES, AND COMMERCE.

The centenary of this Society was celebrated on Monday by a grand dinner at the Crystal Palace. The Duke of Newcastle was announced to take the chair; but, owing to his unavoidable absence, Earl Granville presided, and discharged the duties in a manner which left no ground for regret that the War Minister had been prevented from attending on the occasion. From 750 to 800 gentlemen sat down to dinner, which was served up with an abundance and excellence highly creditable to Mr. Horne, the head of the refreshment department at the Palace. The entertainment took place in the basement story, where, a few days ago, the directors and shareholders of the company gave a déjeûner to the distinguished foreign visitors present at the opening of the Building. The circular tables were so arranged that, in a great degree, the company was classified, the artists sitting at one, with Sir Charles Eastlake as vice-president; the men of science at another, with Dr. Forbes Royle at their head; the engineers at a third, under Mr. Robert Stephenson; the men of commerce supporting Mr. William Brown, of Liverpool; the manufacturers, headed by Mr. Thomas Dela rue; the educationists, presided over by the Dean of Hereford; the representatives of the mechanics' and literary institutions in union with the society grouped round Mr. E. Baines, of Leeds. At the centre table sat Dr. Booth and the members of the Council. The chairman, Mr. Harry Chester, was placed on the left of Earl Granville, as the principal tab e, and the Lord Mayor on his right. There were also seated the directors of the Crystal Palace Company, the foreign Commissioners who have come over to attend the educational exhibition of the society, and a number of other distinguished guests.

After the usual routine toasts, Mr. Harry Chester proposed, "Success to the Crystal Palace," which was acknowledged by Mr. S. Laing, M.P.

The Chairman then proposed, "The Society for the Encouragement of Arts, Manufactures, and Commerce," and, in doing so, spoke at some length on the objects of the society. Their efforts had not been confined merely to national objects; the system of exhibitions, which they had in the first instance introduced, had done much to encourage what they had first the Exhibition of 1851; and now that marvellous building within which they were assembled. On the great question of national education, he went on to say:—"I am one of those who think that the progress has been made both in elementary instruction and in the necessity which all classes of English society feel for a greater admixture of instruction in manufactures and science than has hitherto been given. I believe by the efforts of the Society, by the efforts of public bodies—both of laymen and of religious societies—and, I may add, by the efforts of individuals with whom I could name—and I should like to particularise them if they were not present—immense assistance has been given to the cause of education in this country. The mode of imparting education has been immensely rewarded and improved. A race of teachers utterly unknown a few years ago has been created. Without referring more in detail to anything which has already been done by the Government, I believe that the regulations which have been adopted within the last year will, with a very few years, show their result in a very largely-increased measure of instruction both in science and in art, being given in the elementary schools of this country (Hear, hear). But when I have said this, so far from being proud of the progress we have made, I feel that there is a lamentable deficiency, when we compare the state of education with the power and resources of this great nation (Hear, hear). Plans have been suggested many of which, I believe, would work very well if all parties would combine in carrying them out—but the whole either for Government or any other body of men to force down conscientious objections to any part cular plan, when those conscientious objections are founded on political and religious feelings (Hear, hear), I think we must for the moment, and only for the moment, be satisfied with pushing education through every possible avenue that we can find for it. I think that the Society of Arts, in their forthcoming exhibition, are likely to be most useful for this purpose. This society numbers among its members some of the most distinguished men in every one of life that we have in this country, and yet I do not value the society so highly for having pushed any particular branch of science, or, on account of its universality and its variety in embracing itself to the wants and feelings of the present age (Cheers).

Among other toasts which followed Mr. C. Knight proposed, "The Visitors and Institutions in Union with the Society to which Mr. Baines, of Leeds, responded. Lord Mahon gave, "The Distinguished Foreign Commissioned by their respective Governments to take part in the Educational Exhibition;" to which M. Milne Edwards (of Paris) and the Hon. H. Barnard (of Connecticut) replied.

On Tuesday the third annual conference between the representatives of the institutions in union and the council of the society was held in the society's house in the Adelphi; Mr. Harry Chester in the chair, supported by Viscount Ebrington, Mr. Forster, the secretary, and the representatives from about 180 institutions in all parts of the country. Mr. Forster read the report. A long discussion followed, which lasted five hours, on various topics alluded to in the report, and the meeting then separated.

HYDE-PARK COLLEGE.—The first annual meeting of this college was held on Wednesday afternoon, at 31, Westbourne-terrace; the Earl of Carlisle, president, in the chair; the Lord Bishop of London, visitor, also kindly attended. The secretary read the report, which was of the great success of the College, the flourishing state of its finances, and the attendance of pupils very considerable, and still increasing. Several speeches followed from the Lord Bishop of London, the Earl of Carlisle, Revd. J. S. Boone, V.P.; A. M. Campbell, V.P.; C. Mackenzie, F.C. Cook, Baden Powell, J. B. Kelly, H. F. Leathwortth; H. Chesnight, Esq., and the Chairman. The College was established in 1851, for affording the advantages of a sound and extended education to young ladies, who must be introduced by the president, vice-presidents, committee, or ladies visitors.

ISLINGTON PROPRIETARY SCHOOL.—The annual distribution of prizes at this school took place on Friday (last week). The prizes were given away by the Lord Bishop of Lincoln, one of the patrons, and by the late Head Master of the school. The Islington Scholarship was awarded to Mr. Hoole, Lusby Scholar of Magdalen Hall, the captain of the school, who also gained and received the Latin and English prize medals and the Exhibitions. The Rev. R. W. Bush, the present Master, reported that during the last few months five pupils from the schools had distinguished themselves at the Universities.

OPEN-AIR PREACHING.—On Sunday a most singular and unusual demonstration on the Methodistical system took place in the neighbourhood of Holborn. At half-past nine o'clock a procession, consisting of the clergyman, elders, and friends of that body was formed at Hatton Garden, Fetter-lane, from whence they proceeded at a slow pace, singing psalms and hymns, and followed by an immense concourse of persons, down Holborn-hill into Victor a street, at the top of which the procession, which numbered at least fifty persons of both sexes, halted, and commenced a camp meeting by offering up prayers and singing hymns; but as it was intimated that a high mass was being celebrated in the new Roman Catholic Chapel immediately opposite, the leaders removed to the high ground near Peter-street, Saffron-hill, where they took possession of a waggon, from which several preachers successively addressed an assemblage numbering at least 2000 persons. A number of persons assailed the preachers with yells and hisses, and notwithstanding that a large number of constables was present, considerable difficulty was experienced in preserving the peace. At twelve o'clock the preachers and congregation dispersed, and at two o'clock a similar scene was enacted, when the rev. gentlemen met with the same kind of reception, which they bore with Christian fortitude. The day concluded with a "Love Feast," in Ebin Chapel, Fetter-lane.

THE GREAT INDIAN PENINSULAR RAILWAY.

THE opening of the first portion of this important railway, the first line constructed in India, took place on April 16, 1853. Since its success been worked with twelve trains daily, without a single accident; and, on the 1st of May last, the extension, as far as Callian, was opened with due ceremony. A party of about 250 ladies and gentlemen—European and native—proceeded in a special train. At the terminus, at Borebunder, the party was received by Major Swanson and Captain Barr, two of the Directors. By a quarter to five the train started, at the rate of thirty miles an hour, reaching the Bhandoop station, which is 16¾ miles from Bombay, in thirty-four minutes. The Governor was present, as were the Members of Council, the Puisne Judge, Secretaries to Government, and all the Elders of the village. There was also present a great number of native gentlemen of Bombay. At Bhandoop, a stoppage of five minutes to take water into the engine was made, and the train then got under way once more for Callian. The railway station and streets of Tannah were crowded with natives,

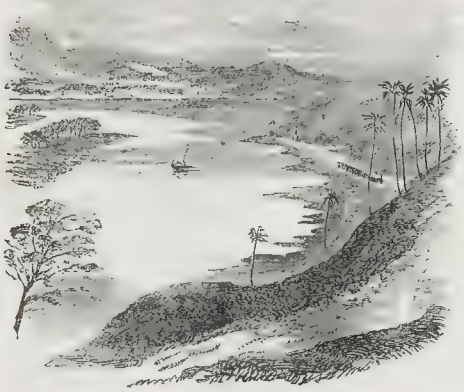
THE GREAT INDIAN PENINSULA RAILWAY.

VIEW FROM SION HILL.—THE RAILWAY CROSSING THE MARSH

anxious to see the passing train, and all were dressed as for a holiday. Tannah once passed, the new, or extension, portion of the line commenced. The magnificent bridge, or viaduct, by which that arm of the sea called the Tannah River is passed, is upwards of a quarter of a mile long. The immense quantity of solid masonry, the iron girders, and bridge, from England, the great height of the arches—allowing of large country boats passing underneath—must give the natives of India a tolerably just idea of what English energy and English engineers can do. This bridge passed, the train leaves the Island of Salsette, and is on the mainland of India; so that from the starting point you pass from the island of Bombay to that of Salsette, and, from the latter to the mainland. About half a mile from the bridge the first tunnel is entered. It is not above three hundred yards long, but quite enough to show our Eastern fellow subjects how a railroad can overcome even the obstacle of a mountain. A little further on is another tunnel, about double the length of the first, and solidly built with masonry, although bored as it were through the earth, not blasted out of the rock like the previous tunnel. The traveller then begins to realize in his mind—what was long thought to be an imaginary vision—namely, a railroad through the jungles of India. From Bombay to Tannah the road has been for years well known: but beyond Tannah you reach the heart of the Concan, and a scene as different to that around Bombay as the West Riding of Yorkshire is to Switzerland. Having passed the two tunnels, we come upon a regular rail-jungle, with high hills on one side of the road, and an inlet of the sea close on the other. At six o'clock precisely the train arrived at Callian, where the company found an immense suit of tents pitched, and the dinner-table laid for about 300 guests. The first move was to the top of an adjacent hill, to view the scenery, which from this point is magnificent. The high mountains, the Tannah river or creek, the line of rail winding along the foot of the former, and tents pitched on the banks of the latter, the large assemblage of the English scattered in groups over the hill above the station, and the now empty train, with its hissing, puffing engine below, altogether formed a sight which will not be forgotten by those who were present. The Railway Directors, with Major Swanson at their head, seemed to think of nothing but providing for the comfort of their guests. When the party ascended the hill, they found at the top chairs enough for all the ladies; and, when they came down again, an equal number of seats were set out by the river side. Spacious dressing tents were pitched; a large table was prepared for, and all the seats at it completely filled by, Parsee gentlemen, about forty or fifty in number, who seemed to do as much justice to the good cheer as their European friends. The Governor's band was in attendance, and played during the dinner. This portion of the entertainment being over, the speeches began; after which, the whole party adjourned to witness an exhibition of fireworks and blue-lights sent up and burnt from the opposite side of the river. About a quarter past nine the guests mustered on the platform, and at a quarter to ten the train started for Bombay. On the return trip, the tunnels were lighted up with blue-lights, giving a very pleasing effect. The train made one very short stoppage at Tannah, and reached the Boree Bunder Station at eleven o'clock. The day, as well as the occasion of the entertainment, will long be remembered in Bombay; and, a year hence, may the company meet to celebrate another step in advance made by the Great Indian Peninsula Railway Company.

The opening of the first portion of the line was illustrated in our Journal for June 4, 1853.

THE BYCULLA STATION.



THE EASTERN TUNNEL.

THE FLATS, FROM SION-HILL.

THE ENGLISH AND FRENCH CAMPS IN THE PIRÆUS.—SKETCHED FROM THE GULF OF EGINA.

CAMP IN THE PIRÆUS.

(From a Correspondent.)

I enclose a Sketch of the English and French Camps at the Piræus, taken from the Gulf of Egina. The two French Camps, occupied by the 23rd and 28th Regiments of the line, and a detachment of Infanterie de la Marine, are situated on the high ground on the right and left of the Sketch. They command the entrance of a small bay, at the extremity of which, on low ground, sloping down towards the sea, is the Camp of H.M. 97th Regiment, which forms the British expeditionary force to Greece, under the command of Colonel Lockyer, K.H. The whole army of occupation is commanded by the French General Mayran.

The troops enjoy good health, notwithstanding the heat, which is just setting in for the summer months.

It should be added that the Camp is at the back of the present town of the Piræus, about six miles from Athens. The bay on which it is placed is about midway between the harbour and the ancient Falerian port.

This harbour, to the westward of Munichia and Phalerum, was capable of containing in ancient times 1000 triremes; it is very deep. The only difficulty is in entering, between two moleheads. In 1844 there were anchored in it, two English and two French line-of-battle ships, an English frigate, a French, a Greek, and a Turkish corvette, three large steamers, besides a host of merchant-ships, and the small trading craft of the country. Nay though the Piræus is more like a great basin than a port, from its great depth, it will accommodate a large number of heavy ships in security. In modern times it has been named Porto Draco, or Porto Leone, from the colossal lions of marble, transported to Venice in 1687, and placed near the arsenal. Close to the pedestals, which still remain, are seen the moleheads, to which was attached a chain, to prevent the entrance of hostile ships, whence the three ports of the Piræus received the name of the closed ports.—Κλειστοι Λιμενες. On the promontory are seen the remains of the tomb of Themistocles looking down on the Gulf of Salamis, the scene of his glory. The modern town of the Piræus, which has been entirely built since 1834, contains about 1000 houses. The Government has filled up the marsh and constructed a quay, which will afford accommodation to several hundred merchant-vessels.

A STREET SCENE IN ATHENS.

In this Sketch our Artist has pictured the every-day life of Athens, in one of its public thoroughfares, wherein we have a glimpse of its ancient and modern buildings, and the picturesque crowds which people its streets. The classic edifice upon the right is the Stoa of Hadrian, which stands near the market place, and is partly concealed by modern erections. Eight Corinthian columns, with their capitals, remain perfect, and project in front of the ancient wall of the inclosure; the column in the foreground is six feet in advance, and the arched gateway leads to a barrack. The old Mosque in the mid-distance is used as a Gymnasium, as well as for musical performances. The street is crowded with fruit-sellers, all males; not a woman is to be even seen serving in the shops; such is the prevailing custom in the Levant. Our Correspondent describes the Piræus as a straggling town, although it contains some fine buildings, as a military school, public and private storehouses. The quays and roads are good. The road to Athens is partly through a forest of olive-trees.

STREET IN ATHENS.

CALENDAR FOR THE WEEK.

SUNDAY, July 9.—4th Sunday after Trinity.
MONDAY, 10.—London Bridge burnt 1212, 3000 persons perished.
TUESDAY, 11.—Jack Cade slain, 1450. Prince of Orange assassinated, 1584.
WEDNESDAY, 12.—Confederation of the Rhine, 1806.
THURSDAY, 13.—Duke of Orleans killed, 1842.
FRIDAY, 14.—The Bastille destroyed, 1789.
SATURDAY, 15.—St. Swithin.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING JULY 15.

TO CORRESPONDENTS.

The statement of which A SHAREHOLDER OF THE AUSTRALIAN DIRECT STEAM NAVIGATION COMPANY complains was given on the authority of the *Globe*, of June 26th.

W. X. will find some quotations of "Shoe Omens" in Sir Henry Ellis's Notes to Brand's "Popular Antiquities" (Knight, 1842, vol. iii, p. 85). The custom of throwing an old shoe after a person in wishing him to succeed in what he is going about, or "in signs of good luck," is mentioned by Ben Jonson, Heywoode, Beaumont and Fletcher, and Butler.

AYR.—The opera of "The Crown Diamonds" is by Auber.

THE WAR.

On SATURDAY, JULY 15, 1854, will be Published,

A GRAND DOUBLE NUMBER

OF

THE ILLUSTRATED LONDON NEWS,

Containing Engravings of a variety of Scenes and Incidents of the War on the Danube, and in the Baltic and the Black Seas; Varna and Schumla; Scutari, Gallipoli, &c., including:—

- Panoramic Views of Varna (Two Pages). Sketched by Lieutenant O'Reilly, of H.M.S. *Retribution*.
- Bombardment of Odessa. From Sketches by Lieut. O'Reilly.
- Views in Odessa.
- Cronstadt and its Fortifications (One Page). Sketched by E. T. Dolby.
- Grand Review of the French Troops at Scutari.
- Anchorage of the Fleets in Kavarna Bay.
- Sappers' Operations between Varna and Schumla.
- Officers' Camp at Varna.
- Interior of Turkish Hut in Bulgaria.
- Panoramic View of Sveaborg.
- Christiansand, Sandovall.
- Shipping Oxen at Trieste for the Allied Armies.
- Scenes of Military Life at Varna, Barrack Life at Gallipoli.
- Four Characteristic Scenes in the Allied Camp at Scutari. From Photographic Sketches, by. J. Robertson, of Constantinople.
- The Emperor Nicholas on his Throne, &c.

NINETY-SIX COLUMNS of NEWS and PICTURES; with a LARGE PRINT, GRATIS, of

THE SULTAN,

AND

THE COMMANDERS OF THE ALLIED ARMIES IN THE EAST.

Price of the DOUBLE NUMBER ONE SHILLING.

Orders received by all Booksellers and Newsmen, and at the Office, 198, Strand

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JULY 8, 1854.

THE Quarterly Returns of the Revenue, made up to Wednesday last, show a decrease both in the year and in the quarter. The decrease in the financial year, is £474,369; and on the quarter, £812,789. There is nothing in these figures to be surprised at—for the whole decrease results from the remission or diminution of taxes, sanctioned by Parliament, before we went to war—and not from any decrease in the real prosperity and industrial energies of the country. The decrease of £367,494 in the quarter's Customs arises, mainly, from the reduction of the Tea duties—though partly, no doubt, from the action of the war upon our insignificant trade with monopolist Russia; the decrease of £171,609 on the Excise is accounted for by the abolition of the impost on the manufacture of soap; whilst that of £74,556 on "Taxes," springs entirely from the reductions effected last session, in obedience to the expressed wishes of the people. The other items of increase and decrease are more exceptional—such as Crown Lands, Imprest Monies, and Repayment of Advances—and afford no index whatever to the financial and commercial prosperity of the country. Under the head of the Post-office appears the gratifying increase of £128,000, as compared with the corresponding quarter of 1853, and of £166,000 upon the year 1853-4. Under the head of Property and Income-tax there is an increase of £435,165 on the year, and £48,567 on the quarter, arising from the extension of the impost to incomes between £100 and £150, and to all incomes in Ireland, which we owe to Mr. Gladstone's excellent and well-considered Budget of 1853. The War Budget of 1854 has not yet influenced the Revenue, no portion of the doubled Income and Property-tax having yet been collected. Upon the whole, accustomed as the public has been for the last few years to hear of an increase in all the great branches of the national revenue, there is every reason to be satisfied with the last balance-sheet. Though it show a decrease, it has been effected by the remission of taxes that interfered injuriously with trade and industry, and of which we shall reap the full reward hereafter, if not at the present time. The national finances are in a healthy state, and afford no room either for cavil or for regret at the wise policy which reduced taxes, when reduction was essential, and which, in like manner, can discover new sources of revenue in the day of need, whenever the nations honour shall require a sacrifice.

MORE than six months ago a catastrophe seemed imminent in Spain. On the 24th of December last we pointed out in this Journal the wretched state of affairs in that country, and stated that the persons who had monopolised place and power in the palace and councils of the Queen seemed bent upon doing their utmost to render her throne more precarious than her life; that they were bringing the constitution into contempt as a preparatory step to its destruction, and were meditating a *coup d'état* and the establishment of a despotism, because knaves had a better chance of plunder and aggrandisement under a despotic Sovereign—especially if she were a woman—than under any parliamentary system, however corrupt and imperfect. We added that it was "deplorable to think that Spain did not possess a single statesman of sufficient energy and ability to rescue the Queen from evil councillors, to rally around her the friends of rational liberty, and to secure her a permanent place in the affections of the country; and that, unless such a man were speedily found, Spain would inevitably pass through the ordeal of one—if not many—civil wars, before she could do justice to her magnificent resources, or assume her proper place among the nations of Europe." In the interval that has elapsed, much has been done to aggravate, and nothing to remove, the evils that then existed. The Court has, if possible, become more profligate, and the wretched Ministry more corrupt. Scandal has followed upon scandal, and intrigue upon intrigue, till private, as well as public honour, has seemed in danger of extinction. Spain, that once stood among the foremost nations of the civilised world, has gradually been descending to the lowest rank. She no longer inspires respect for her power, or confidence in her engagements. Whatever evil may have been done by those who formerly misgoverned her, it may safely be said, that those who have wielded her destinies for the last few years have accomplished more mischief than any of their predecessors. They have given an impetus to the downward career of their country, which it may take half a century to counteract, unless some man of genius shall appear in the interim, with a strong hand, a resolute will, and a pure heart, to regenerate the institutions which they have brought into contempt; and to re-establish that public morality upon which their whole career has been an outrage. We are not sure, however, that Generals O'Donnell or Dulce, the leaders of the military insurrection that has just broken out, have such high objects; or that, having them, they possess the means of attaining them. At the head of a considerable portion of the army, they have taken arms against the Government, demanded the dismissal of the existing Ministry, and the re-establishment of the Constitution of 1837. It may be remembered that General O'Donnell, who now looks to this Constitution as a means of salvation for Spain, was the leader of the party which destroyed it, and which succeeded in driving from power the only honest man who of late years has arisen in Spain—General Espartero. Upon that occasion he was opposed by General Dulce, his present coadjutor in the attempt, real or feigned, to regain the lost liberties of the nation. The meagre accounts of the Revolution—or Insurrection—for we do not as yet know by what name to call it—do not enable us to form any definite opinion of the hold which it has taken either upon the army or upon the people. One significant and painful fact is that the Queen, though she personally appealed to the loyalty of her soldiery and populace, by addressing them from her carriage in the street, and holding her infant towards them as if soliciting their protection, did not, even in so affecting an act, elicit a single cheer or expression of good-will. When her Majesty afterwards placed the epaulettes on the shoulders of a common soldier, whom she promoted to the rank of a Lieutenant for refusing to take up arms against her, the same cold apathy prevailed. This is a state of things which augurs ill for the Court. For most of the evils now existing in, or preparing for Spain, that country has to reproach the memory of the late Louis Philippe. It was the greediness of that meanminded Monarch which led him to desire the Spanish throne for the inheritance of his son's children—which led him to embark in intrigues of a character that are not fit to be mentioned in decent society—and which blighted the private life of the unhappy Queen, and produced, in due course, all the scandals which have rendered her Court a disgrace to Spain and to Europe. It is to be hoped, whatever the fate of the present movement may be, that some public virtue is left in a country which was once so noble, so chivalrous, and so great. Venality, ignorance, and profligacy are always dangerous; but when they are "clothed in purple and fine linen," when they sit in the high places of the world, and sway the destinies of a nation, they exist only upon sufferance. By their very nature they are exposed to the opposition of the honest, the enlightened, and the virtuous; and if these look on with indifference when an assault is made upon a Government, we may be sure that such a Government cannot stand, whatever may be the demerits of those who seek to overthrow it. We know too little of O'Donnell and the other leaders to augur either well or ill of their own motives in attempting to seize the reins of power; but we know enough of the existing Government to be convinced that no possible change which can be effected in it, will be for the worse.

IT is an old expedient of certain sharp practitioners to induce clients, actual or coveted, to confide their papers to them—merely "to take care of." The plea is safe custody, but the motive is business. Other people's documents are seed, which, by dint of the undermining system of husbandry, eventually produce rich crops of costs.

NO man read the Lord Chancellor's Testamentary Jurisdictions Bill without having the amiable practice above described forcibly brought to mind. While no one would dream of instituting any parity of intention between the dignified keeper of the Crown's conscience and the conscience of a pettifogger, no one can be blind to the fact that the intention of, the bill was to snatch all the business now connected with testamentary proceedings out of the clutches of the Ecclesiastical Courts, and to cram it into Chancery. The bill was advocated by the glaring *non-sequitur*—that, because it is the function of the Court of Equity to interpret the intentions of testators, the Court of Equity should also have the custody of their wills. This sort of reasoning, and the inherent defects of the bill itself, have occasioned its withdrawal: Lord John Russell announced the fact on Tuesday night.

It may be safely stated that, as a body, the British public have no affection for the Court of Chancery; that, were it put fairly to the vote of the will-making part of the community, rather than put their wills—and with them, peradventure, their posterity—into Chancery, they would express a preference for having them deposited in London, in a Record-room, one wall of which formed part of an adjoining timber-shed, in the occupation of a wheel-wright, and conveniently warmed by flues underneath for conflagration at any moment;—or at York, to be tossed and tumbled about in a long room, over a damp gateway, liable to be stolen, and whence they have been stolen, and sold to a cheesemonger, as was proved by the Rev. F. O. Morris in 1850; open to the introduction of forged wills, as was shown by Mr. Downing Bruce in the same year; and indexed not by surnames, but by Christian names, so as to make it next to impossible to find the will of John This or Thomas That;—or in the Gate-house at Lincoln, where, until Mr. Dickens took the matter up in *Household Words*, they would be exposed to the hoary filth of centuries, to the percolation of rain, and to the teeth of rats;—or in Lichfield, in a shed with broken windows, through which some of the papers protruded;—or in some manor-house in a non-diocesan district, called a "peculiar," in many of which manor-houses housemaids used them for domestic purposes;—or in any of the 372 places to which the law now gives resort for depositing and proving wills, and obtaining administration. We question, also, whether a preference over Chancery would not be declared for the present state of things; which makes not only all the wills of all the testators whose wills have not mouldered away or been eaten by rats, but the buildings in which they rot, the personal and devisable property of the registrars of the Ecclesiastical Courts. We question, again, if a confiding public care very much whether the enormous sums they have to pay in respect of wills be divided between a few existing sinecurists, or a great many barristers, and proctors, and solicitors, and proctors' and solicitors' clerks, whose appointments the Lord Chancellor provided, in his own bill, should rest with him. It cannot much matter whether the present registrars obtain, for the ponderous respons bility which they so conscientiously fulfil by deputy, from £37,000* down to a pittance of from £10,000 to £5000 a year; or whether a sum not much under £500,000 be distributed among the three London Registrars at £1500 each, actually named in the new Bill, and the twenty-seven barristers of seven years' standing at £14,000 a year each, whom the Lord Chancellor was so good as to undertake to appoint; together with all the subordinate staffs of his proposed Provincial Courts of Registry. What compensations to the present registrars was to cost, the wildest imagination cannot conjecture; for his Lordship, tender of the Moores, the Harcourts, and other archiepiscopal relatives, provided for their reimbursement for loss of office and its enormous emoluments. Not content with sweeping all this patronage into the insatiable net of Equity, the bill provided that a monopoly of the common-form business should be granted for ten years to certain solicitors and proctors, to be nominated by the Lord Chancellor. This is the price it was proposed we should pay, and the Court of Chancery receive, for "taking care" of our testamentary papers.

There is no reason whatever why the registry of wills and other documents should be under the control of the same authority as that which deals with them judicially. Common sense forcibly points to the reverse; and, as reform is pressingly needed and must come soon, we believe it would be most easily and efficiently brought about by transferring the custody of wills to Somerset-house. In the office of the Registrar of Births, Marriages, and Deaths, every appliance and machinery already exists for efficient record, registration, and means of reference. Whoever now wants to find a will may have to seek it half over the country, and may not find it after all: whoever wishes to know all the official particulars of any birth, or marriage, or death, which happened in any part of the country during the last dozen years, may learn it in five minutes at Somerset house. If that office have been able to bring such millions of facts under such control as to be able to select any one of them after an instant's reference, surely it could deal with wills, by the help of an increase of staff, quite as effectually.

It happens, also, that instead of new and expensive buildings, which according to the Lord Chancellor's plan would have been raised for the deposit of Wills (the present space in Doctors Commons being admittedly insufficient), there are in Somerset-house, under the wing occupied by the Registrar-General of Births, dry, fireproof, well-lighted vaults, at present unoccupied, and spacious enough to hold all existing wills, and all the future wills that can be made for centuries to come.

NOR is the Registrar-General of Births, &c., unwilling to undertake the task. Appended to the second Report of the Ecclesiastical and Testamentary Inquiry Commissioners is a series of suggestions by him to that effect, which are so sound, clear, and practical, that they leave no room to doubt the wisdom of their adoption, in preference to the patronage-creating, expensive, and abortive scheme devised by the Lord Chancellor.

THE REVENUE.

An Abstract of the Net Produce of the Revenue of Great Britain, in the Year and Quarter ended 5th July, 1854, showing the Increase or Decrease thereof.

	Year ended 5th July, 1853.	Quarter ended 5th July, 1853.	Year ended July 5, 1854. Increase.	Decrease.	Quarter ended July 5, 1854. Increase.	Decrease.

NOTES OF THE WEEK.

THE RIGHTS OF WAR.

On Tuesday Mr. J. G. Phillimore brought forward his long-promised motion, for affirming the right, by the law of nations, to seize property of an enemy in the ship of a friendly nation; assuming that, "however, from the peculiar circumstances of the present war, a relaxation of the principle may be justifiable," to announce or surrender the principle of the right "would be inconsistent with the security and honour of the country." The motion, "under the peculiar circumstances," was uncalled-for, and could lead to no practical issue; for, according to the circumstances, either the right in question, nor any other right, has been "renounced or surrendered" by this country; the Order in Council declaring war distinctly asserting that, "to preserve the commerce of neutrals from unnecessary obstruction, her Majesty is willing, *for the present*, to waive a part of the belligerent rights appertaining to her Majesty as one of the belligerent rights appertaining to her Majesty as one of the law of nations." Indeed, it must be palpable to any one, considering the actual conditions of the war, as at present carried on, that the exercise of the right in question could lead to no ill result to the enemy, whilst it might become the cause of greatly prejudicing the interests of friendly powers. The Russian ports in the Black Sea, and in the Baltic, being effectually blockaded, her commerce is entirely interdicted, whether in her own ships or those of neutrals.

Mr. Phillimore's motion—unnecessary, and leading to nothing in itself—gave Sir William Molesworth an opportunity, in opposing it, of displaying a great deal of book-learning and argumentation, equally to no purpose, and equally illogical. The right honourable gentleman contested the motion upon two grounds—1st, that a common Law right did not exist, or was not satisfactorily established; and, 2nd, that it had been expressly waived by special clauses in most of the commercial treaties which had been concluded between the chief Powers of the world during the last two centuries—two positions utterly inconsistent with one another; for a State cannot give up a right which it does not possess. To complete the confusion between principles and exception, and exception and practice, Sir William, after reciting the dates of some score of treaties to the effect described (among which, by the way, not one with Russia) stated that "he must admit that, although in had been the principle asserted by the various States of Europe, which had not been their practice and custom in time of war," indeed he fully admitted that in practice the principle to be found in all these treaties had not been respected, but, on the contrary, had been utterly disregarded." In other words, the Common-law right has proved itself to be so consistent with common sense and common security, that all treaties to neutralise it have, when put to the test, given way before the force of circumstances; and Sir William Molesworth made a long speech, which, taken as a whole, amounted to absolute nothing. The natural termination of a debate so unmeaning on both sides, was an ignominious "count out."

For ourselves, we cannot take leave of the subject without animadverting upon the maudlin small-talk which has been too commonly used by some of our contemporaries about "mitigating the horrors of war," "sparing unoffending parties," and so forth. In war all are direct-ly or indirectly implicated, and all are parties; and the surest way of shortening the duration of war is to make its terrors known and felt by all. As to the rebuke which has been propounded against the unnecessary destruction of property in the Baltic, we, in the first place, dispute the position that such operations, however small in themselves, will prove useless as regards the ends of the war; and, in the second place, we ask, why should the Czar's subjects in the north go scathless, whilst the unhappy Wallachians, who are not his subjects, have, during a whole year, writhed, experienced all the horrors of the lawless spoliation and tyranny? If Nicholas cannot be brought to reason by other means, let him be terrified and starved into it, by the ruin of his own proper subjects;—till, if need be, his whole vast empire becomes a howling wilderness.

THE DOG-CART NUISANCE.

The dog-cart nuisance fought a good fight in the House of Lords on Tuesday last. The debate was edifying enough. Lord Eglinton broke the first lance in behalf of the costermongering interest, by resisting a clause prohibiting the use of carts drawn by dogs, proposed by Lord Stanley, and which, on motion of Lord Granville, was directed to be inserted in his Cruelty to Animals Bill; or, rather, extending to the whole kingdom a prohibition which is already in force in London, and within a distance of fifteen miles from it. The chivalrous Earl thought it would be "very unfair to prevent poor persons making use of their dogs to assist them in their business, inasmuch as he believed (upon what authority his Lordship did not state) that their dogs were by no means objected to rendering such assistance." The Earl of Malmesbury took up a similar position, and anno nneed the astounding fact that "there were 1500 people in the counties of Sussex and Hampshire alone, who earned their living by driving dog-carts." The Earl of Chichester somewhat damaged this feature of the case, by stating that the result of the inquiries he had made was, that these 1500 dog-cart proprietors were men of bad character; but Lord Granville admitted that there were grades of respectability between the owners of carriages and pairs and dog-carts, thought it would be a dangerous principle to interfere with the peculiar habits and enjoyments of the latter, because they were less respectable than their neighbours. On the other hand, Lord Brougham, who is "up" in every branch of natural science, argued that, according to the observations in comparative anatomy, dogs were not intended to do the work of horses; and Lord Westminster went further, and asserted that "the natural position of a dog was to stand on its toes" (wherefore, perhaps, the teaching a dog to dance is not to be held cruelty); but Lord Granville scattered all these arguments to the winds, by declaring that a dog must be a beast of draught by nature, because this very bill proposed to prevent its being employed as such. This was a settler. Their Lordships laughed, and agreed to the clause, Lord Eglinton threatening to renew the contest on a future occasion.

Meantime the magistrates of Gosport have interfered with the continuance of dogs and their masters, by committing a hulking fellow to Winchester Gaol for a month, with hard labour, for having driven a pair of dogs nearly to death.

GOVERNMENT DEPARTMENTS.

Government is badly off for house-room; the "departments" are constantly chopping and changing about, and all sorts of deserted private houses, in all sorts of out-of-the-way corners, are every now and then bought up for the public service. This is really, as the House of Lords agreed on Monday night, "disgraceful;" but it has gone on a long time, and will go on now, it seems, till after the war. The Earl of Malmesbury, on the evening in question, made a doleful complaint of the injustice and hardship inflicted upon the Inclosure Commissioners, who, being but just settled down in Petersham-house, recently purchased for their use, are now ordered to evacuate these premises in favour of the newly-constituted War Department, and take up new quarters in St. James's-square; the result of which will be, that the invaluable maps of the said Commissioners will be as a sealed book to the public for no less than eighteen months to come (things are not done so quickly with commissions as with private individuals);—and then his Lordship, with lively but uncomfortable recollections of his brief Ministerial career, descanted upon the ruinous condition and beggarly appointments of the Foreign-office, which had neither kitchen nor hall-room—or, at least, no room which could with safety be used for a ball; inasmuch that, when he once gave a diplomatic *soirée dansante*, the one reception-room in the house had to be propped up from the rooms below, and the "whole Office turned upside down," to make room for the scaffolding. The worthy Premier (who loves a joke), after some explanations touching the removal of the Inclosure Commissioners, admitted the "dangerous and disgraceful condition" of the Foreign-office, which, unlike our foreign relations, has a natural tendency to "settlement," but extended a hope to the noble ex-Secretary for Foreign Affairs, that "before he came into office again, that place would be fit for his reception;" a notification which the modest Earl construed into a postponement of improved structural arrangement till the Greek Kalends.

Seriously speaking, the Government establishments as at present scattered about, are a disgrace to the metropolis and to the country; and they must be remodelled as soon as returning peace gives leisure and means to take the matter in hand. It would be a grand scheme to clear away all the crowded, dirty streets which intervene between Parliament-street and the Park, and erect upon their site a stately mass of public offices. A difficulty suggests itself in asserting a line of demarcation between the Gothic style—which has now taken possession of the Palace and Abbey of Westminster—and the Classic; but the breadth of Bridge-street and Great George-street may be sufficient for the purpose.

FLUNKEYISM AT THE CRYSTAL PALACE.

The directors of the Crystal Palace announce that, on the half-crown and five shilling days, "servants in livery, in attendance on their masters," will be admitted at one shilling a head. Who was the author of the vulgar suggestion we know not; we only hope that masters will have too much good taste to avail themselves of the privilege of being thus attended. Surely in the Palace of the People—pretending to illustrate and consecrate the enlightenment of the nineteenth century—and within whose precincts all should be upon an equality, the snobbish display of plush breeches, lace hat-bands, and gold-headed canes—badges and relics of barbarous servitude—might be spared us; or, at least, let the city grandee who would avail himself of such an arena for displaying his liveried retinue pay a handsome extra fee, instead of a paltry shilling, for the enjoyment, and secure a "reserved" standing for the occasion.

PARACHUTE DESCENTS.

When will the brutal appetites of a mob-public have their fill of the perils of mountebankism? When will our good sense repudiate the wanton risk of human life? The morning papers, and ourselves, last week, misinformed by interested informants, announced that a French adventurer, of the name of Latour, after ascending from Cremorne-gardens, had made a "successful descent" in a parachute, at Tottenham, on Tuesday week. We have since received several communications from persons who witnessed this triumphant performance, describing it in its true colours; from which it appears that the balloon came down bodily with the parachute: the unfortunate occupant of the latter being strapped in a sort of chair, in which he was dragged, rolling over and over, through hedges and across ditches, until the whole structure was stopped in its wild career by the bystanders; and he was taken up and carried away for dead. Another account in a daily paper, states that M. Latour is now lying at an inn in the neighbourhood where he fell, with three ribs broken, and other injuries; all got to obtain a few shillings from an enlightened British public, wherewith to minister to the wants of an indigent wife and family in Paris!

THE COURT.

The King of Portugal and the Duke of Oporto took leave of her Majesty and the Prince Consort on Monday, and embarked at Woolwich for Ostend, *en route* for Brussels, on a visit to the Royal family of Belgium.

On Saturday the Queen held a Court at Buckingham Palace, at which his Highness the Maharajah Dulsep Sing was presented to her Majesty, at an audience, by the Right Hon. Sir Charles Wood, President of the Board of Control for the Affairs of India. In the evening the Queen and the Prince, accompanied by the King of Portugal and the Duke of Oporto, honoured the Princess' Theatre with their presence.

On Sunday the Queen and Prince Albert, the Prince of Wales, the Princess Royal, the Princess Alice, the Ladies and Gentlemen in the Court, and the domestic household, attended Divine service in the private chapel of Buckingham Palace. The Rev. Lord Wriothesley Russell officiated. The King of Portugal and the Duke of Oporto, with the gentlemen of their suite, attended the service in the chapel of the French Embassy in King street, Portman-square.

On Monday the Queen held a Court and Privy Council at Buckingham Palace. At the Court, Sir George Bonham, K.C.B., late her Majesty's Plenipotentiary to China, was presented to her Majesty at an audience, on his return from China, by the Earl of Clarendon, Secretary of State for Foreign Affairs. The Right Rev. R. J., Lord Auckland, had an audience of the Queen, and did homage, on being appointed Bishop of Bath and Wells. Viscount Palmerston, Secretary of State for the Home Department, assisted at the ceremony. Her Majesty gave audiences to Lord John Russell and the Earl of Clarendon. The Prince Consort, attended by Colonel Seymour, honoured the officers of the Grenadier Guards, of which regiment his Royal Highness is Colonel, with his company at dinner in the evening, at Grillon's Hotel, Albemarle-street. The Queen, with the Prince of Wales and Prince Alfred, honoured the Opera Concert-room with her presence.

On Tuesday her Royal Highness the Duchess of Gloucester visited her Majesty at Buckingham Palace. In the morning, the Prince Consort inspected the Victoria Lodging-houses of the married soldiers of the Guards. His Royal Highness in the evening presided at a meeting of the Society of Arts, in the Adelphi. The Queen, attended by the ladies and gentlemen of the Royal suite, honoured the Olympic Theatre with her presence.

On Wednesday her Majesty visited the Duchess of Gloucester, at Gloucester House. The Prince Consort left Buckingham Palace at half-past nine o'clock, for the Shoreditch station of the Eastern Counties Railway, and proceeded to Cambridge, to preside at the annual meeting of the Archæological Institute. His Royal Highness returned at six o'clock. In the evening the Queen had a dinner-party. The company included her Royal Highness the Duchess of Kent, the Earl and Countess of Ellesmere, Lady Marianne Alford, Viscount Torrington, Lord and Lady Poltimore, and the Right Hon. and Mrs. Sidney Herbert.

On Thursday her Majesty and Prince Albert, accompanied by two of the Royal children, paid a visit to the Crystal Palace, at Sydenham, arriving there early in the afternoon.

Her Royal Highness the Duchess of Cambridge held the first of a series of assemblies, at her residence in St. James's Palace, on Tuesday evening.

The Duke of Devonshire has been progressing favourably since his arrival at Brighton, and his Grace's medical attendants have sanguine hopes of his early restoration.

FASHIONABLE ENTERTAINMENTS.—The Marchioness of Breadalbane gave a second grand ball on Monday evening, at the family mansion in Park-lane. Their Royal Highnesses the Duchess of Cambridge and the Princess Mary honoured the Marchioness with their company, arriving shortly after eleven, attended by Major Purves and Lady Sidney.—The Marchioness of Westminster will have a grand "reception" on Thursday next, at Grosvenor House. The invitations already issued are very numerous.—The Countess (Francis) Waldegrave gave a grand concert, on Wednesday night, at the family mansion, in Carlton gardens. A brilliant circle of the aristocracy responded to her Ladyship's invitation. The programme of the music embraced compositions of some of the most eminent composers, which were rendered by Jullie, Angelina Rosio, Madame Viardot, Sig. Lablache, Sig. Gardoni, and other favourite artistes.—The Countess of Listowel gave a magnificent ball, on Wednesday evening, at Kingston House, Princes-gate, Knightsbridge, and Lord and Lady Jermyn, and the Princesses Mary and Augusta of Cambridge, honoured the Royal [illegible] with their company, arriving shortly after eleven o'clock.—The Duchess of Cleveland and Princess Mathilde honoured the Countess with their company, arriving about half-past eleven o'clock.—Viscountess Combermere was honoured with the company of their Royal Highnesses the Duchess of Cambridge and the Princess Mary, and a distinguished circle of the aristocracy, at her mansion in Belgrave square, on Monday afternoon.

LATEST INTELLIGENCE.

(By Electric Telegraph).

VIENNA, July 6.—The Emperor of Russia's answer was received last evening: it is unfavourable.

BERLIN, July 6.—Colonel Manteuffel has arrived from St. Petersburg. The Czar will not comply, save on his own conditions, with the requirements of the German Powers.

MADRID, July 5.—Tranquillity has not ceased. The insurgents are discouraged, and pursued into the provinces. [This news is from the Spanish Government.]

COPENHAGEN, July 6.—The cholera has broken out in the garrison of Cronstadt.

THE SIEGE OF SILISTRIA.

ONE of the two English officers who were shut up in Silistria during the siege has sent home an interesting journal of what took place in the garrison from the middle of May to the 10th of June:—The enemy opened fire from his batteries on the islands on the 16th of May, at which time the total force of the Russians in that neighbourhood was supposed to be 35,000 men. On the following day there was much excitement, in consequence of a report, which proved false, that a force from Scumla, marching to their relief, had attacked the Russians. On the 18th, the Russian fire was very slack. There was a little skirmishing, but, as he remarks, "it was very poor work, both sides keeping at a respectful distance." They had not yet become fairly in earnest. The enemy broke ground on the 19th, "opening his first parallel across the Rassova road, at a distance of nearly two miles from the fortress; its extreme right resting on the river, where a steamer keeps pace with his movements, supplying materials from the opposite side." On the same day, an officer who had been sent to Schumla, to report the commencement of the siege, returned with the usual ceremony, or otherwise, which was that "we were not to expect any relief for at least fifteen days." This, it will be remembered is the period at which a despatch was sent off to Constantinople, by Omer Pacha, urging the immediate attendance of the English and French commanders at Varna. On the 20th and 21st the field-pieces of the enemy kept up a "vigorous fire of grape and shell," causing Mussa Pasha and his brave troops to feel rather anxious for the arrival of the promised reinforcement. Among other items on the 21st, the following one appears:—

Got up a sweepstakes to name the day on which the siege shall be relieved, each naming the day he thought most probable. They ranged from the 3rd to the 15th of June. Mussa Pacha having chosen the first, and his secretary the last of these dates.

Up to the 24th there is nothing very particular to record, except that, on the evening of that day, the two English officers, in commemoration of Queen Victoria's birthday, drank her Majesty's health "in a mug full of sour wine." A furious attack was made by the Russians on the 25th; but the fortress does not seem to have sustained much damage from it, although the besieging force was by that time estimated at 100,000 men. During the two following days the Russians were very quiet, preparing, no doubt, for the grand attack on the 28th of May, which is thus described by Captain Nasmyth:—

28th. Awoke about three a.m., by a furious cannonade, which lasted all day. Another council of war on the subject of making a sortie on the enemy's batteries ended in smoke, Mussa Pacha not being able to make up his mind to risk the loss of men that might cause. A watercourse, which supplied part of the town, and which at the commencement of the siege had been cut off by the Russians, was again allowed to run by them. About midnight, aroused by the report of musketry from Arab Tabia, and on reaching the rampart at the Stamboul gate, found that a second and much more serious night attack on that work was going on. The first assault was on the left face, the enemy actually penetrating into the redoubt before they were observed. A Russian officer who led it, and cut down a lieuteuant of artillery, was immediately brained by a handspike. A severe and desperate struggle took place, terminating in the repulse of the enemy, who were driven into the ditch, having suffered severely from our grape and canister tearing through them. He forming, they again attempted it in the same manner, led gallantly on with drums beating; but were again driven back with great slaughter. After about a quarter of an hour, a third attack was made, this time on both left and front faces at once, but meeting with the same determined resistance. After a bloody fight the Russians were finally beaten off, the Albanians pursuing them into their own batteries. The force in Arab Tabia, at the time, was only four battalions of Egyptians, and 500 Albanians, under the command of Hussein Pacha. The lowest estimate of the numbers with which the enemy attacked is nine battalions, and it is not improbable, from the number of his dead found in and about the fort, that this is considerably under the mark. The affair lasted from midnight till after daybreak, and is one of the most brilliant occurrences in the whole course of the siege. Casualties, 65 killed and 121 wounded, many others being among the former. The loss of the enemy may be reckoned at 3000 killed and wounded, although those who removed the bodies declared there was upwards of this amount in killed alone, which, allowing for wounded in the smaller proportion, would bring their loss to upwards of 6000.

The *Invalide Russe*, in its description of the affair, says the whole of the Russian loss was "one subaltern officer killed, and three wounded; and twelve men killed, and eighteen wounded." For the next few days there was constant firing, but nothing remarkable, except that "the shells came unpleasantly near" to the tent of the two English officers. The 2nd of June was rendered memorable in the annals of Silistria by the death of the brave commander, by the complete failure of the Russian mine which was sprung in the afternoon of that day, and by the arrival of a relieving force:—

2nd. At one o'clock this day, Mussa Pacha, the commander of the fortress, was mortally wounded in the left side by a piece of a shell, which burst near him, whilst sitting outside his quarters at the Stamboul-gate. He lived about twelve minutes after receiving the wound. He had just received intelligence that a messenger was at hand, bearing the Sultan's order of Mejidie of the second class, which had been sent to him, and was waiting for instructions as to whether it was his excellency's wish to receive the decoration publicly, and with the usual ceremony, or otherwise. Mussa Pacha replied that it would be better to bring it in quietly; remarking, at the same time, that this was no season for pomp and display. About four hours after this his remains were interred. He had possessed great natural quickness of apprehension, intelligence, and activity, and was zealous, and attentive to the charge his duties faithfully. And to which he was a kind, considerate man, beloved by his dependents. His death is a great loss. His successor in command, who had been in charge of the force at Arab Tabia, was Suleiman Pacha, the Bulgarian renegade, and succeeded by Colonel Lapinsky. The surmise of yesterday regarding the Russians having sunk a mine under Arab Tabia was confirmed by his springing it about six p.m. It was, however, so miscalculated, as to take place of destroying the bastion, the explosion was carried backwards into their own batteries, doing considerable injury to the storming party who were lying in readiness to rush in. 5000 Bashi-bozouks, under Suleiman Pacha, of our old Bazardschik acquaintance, Mehemet Pacha, arrived. Nothing beyond the usual cannonade occurred during the night.

The intelligent correspondent of the *Vienna Medical Journal*, in a letter of the 22nd ult., enables us to bring down our account of this siege to that date. From his narrative we learn that on the 18th and 19th the slaughter was great on both sides. The attacks were made with desperate courage, and the defence was gallant in the extreme. On the 14th both parties, as if by common consent, removed their dead and wounded. The number of Russian officers and non-commissioned officers killed was out of all proportion to the loss in common soldiers. The increase of sick and wounded is described as being so awful that it was found necessary to establish a second line of transports from Bucharest: one by Bolcni and Plojesthi, the other by Busco and Himnik. In speaking of the evacuation of Bucharest he says:—"The chancelleries, archives, and cashiers, as also the wives of the superior officers and *employés*, are already off to Jassy. All the beasts of burden within a circle of fifty English miles were collected, but they prove insufficient for conveying all the baggage back from Kalarasch and Sobea." Three months ago the medical correspondent gave the mortality in the Russian army at 30 per cent.; during February, March, April, it was 41 per cent., but in May the sick and wounded amounted to 63 per cent. Here we must give his own words:—

Everything has combined, during the last two months, to break the [illegible] and destroy the self-confidence of the companies of the 4th and 5th [illegible] in truth, not long since in excellent condition. Indeed, the allied Wallachians, who took the word "retire" as no longer [illegible] our [illegible] pay on our sick and wounded. We [illegible] to the victors [illegible] for the future. Our [illegible] taken possession of [illegible] and are converted into [illegible] Turkish [illegible].

A COURT of Directors was held on Wednesday, at the [illegible] use when Lieut.-General the Hon. George Anson was appointed Commander-in-Chief of the Company's Forces on the Fort St. George establishment, and Second Major-General [illegible].

TOWN AND FORTRESS OF SILISTRIA.—FROM AN ORIGINAL SKETCH BY OUR OWN ARTIST.—(SEE PRECEDING PAGE)

PRINCIPAL STREET IN VARNA.—ARRIVAL OF THE STAFF.

VARNA.

VARNA is being improved daily. Since last week, the English Sappers have started a substantial stone-work pier, which, if finished in the style in which it has been commenced, will be a lasting memorial of their visit to the town. The French, on the other hand, have organised a post-office, which gives name to the street in which it is situated—Rue de la Poste. A steamer started on the 13th, carrying mails for Constantinople, and it is believed will be continued at least weekly. French shops have made their début in all the doist of newly-painted canvas signs. The French continue at work in reclaiming a part of the shore from the sea, forming thereby a most convenient place for landing troops or stores. They do a double benefit to the town by making it, for they are taking away a mass of rubbish from the sides of one of the streets to fill in the space once occupied by the sea.

We have engraved a View of the principal street of Varna, with a military arrival.

(*From a Correspondent.*)

Perhaps there is no place in the world which, at the present day, gives one so much the idea of life and bustle as this little Turkish town. On approaching it from sea, one is surprised by seeing in the harbour numerous French and English transports and steamers, all discharging their living cargoes of troops and horses. By the able assistance of the boats of the *Bellerophon*, *London*, *Arethusa*, and the French ships *Jena* and *Marengo*, and a Turkish frigate, the "disembarking" has been accomplished with the greatest ease and celerity. All appear in the highest spirits—soldiers and soldiers, English, French, and Turks joining together as if every day friends. The Sketch represents the Camp of the English Light Division, situated on a hill well selected, not only for the manœuvres of the troops, but also for its dry and healthy position: it is about eight miles from the town. On one side a large lake adds to the picturesqueness. The commissariat department appears to be rather scant in its supplies; but good water is in abundance. The 8th Hussars and 17th Lancers are six miles in advance, on their way to Silistria. The troops on guard march daily five or six miles out, just (as they themselves say) to get them into trim for a little longer day's work when they approach the Russians; their only fear being that the enemy will not so quietly wait, but anticipate their approach, and take themselves off.

The following is from a letter written by an officer belonging to the Light Cavalry Brigade:—

On reaching Hootolie, which is four miles and a half up the Bosphorus, we were immediately disembarked and marched into barracks. The quarters are large and commodious, and the rooms well ventilated; but the walls were literally swarming with horrible creeping things, to me wholly unknown prior to my arrival in the East. The building is beautifully situated, being close to the water's edge, affording a splendid view of Constantinople on the opposite side. Crowds of boats, manned by athletic, handsome Greeks, are ever waiting to convey passengers across. Here we found two troops and head-quarters of our regiment, one troop of Horse Artillery, and one of the 8th Hussars. A dépôt of Turkish Lancers was likewise stationed at the place; and if they did not impress us with elevated notions of their habits and discipline, the remarks they hazarded respecting ourselves were certainly the reverse of complimentary. Among other observations, they gave it as their decided opinion that we "were far too pretty and smart to fight." Government very generously provided a small steamer for the use of the officers and men, to enable us to visit the Great City and its suburbs free of expense—an advantage which, you may be sure, we were not slow in profiting by. Constantinople, Pera, and Galata have too frequently and minutely been described to need repetition in a letter; yet, for my own part, I cannot avoid mentioning how greatly I was enchanted with the magnificent scenery viewed from the water. The green banks apparently abounded with picturesque villas, springing up in every direction; but the charm is instantaneously dispelled on landing at Pera, where nothing is encountered but dilapidated wooden buildings, innumerable packs of howling dogs, and smoke-dried Turks. The noise incessantly kept up by the canine scavengers is perfectly awful. There is a tolerable hotel, and some few shops. I rode over to Soutari to witness the wrestling and other games got up by the regiments stationed there. The scene was very lively and amusing; and I could almost have fancied myself again at Chobham, but for the preponderance of the fez, and the extraordinary "get up" in which the officers seem to consider it necessary to indulge. Our regiment took part in the review ordered for the Sultan's edification. His Sublime Majesty kept us waiting two hours, which brought down no inconsiderable amount of blessings (?) on his head. His escort consisted of a few cavalry, and he was arrayed in the garb of a Turkish gentleman. His personal appearance is by no means dignified; and, altogether, he presented a similitude to a not fastidiously clean Hebrew in a dressing-gown, mounted on a somewhat "shady" pony. A few days after the review we re embarked, and were towed by steamers to Varna, where we encamped. The town is excessively dirty; but, from the variety of constant bustle, every one seems in a state of excitement. Sir George Brown's division marched on the 6th, taking the Schumla road, which route we are to follow immediately our horses are some-

CAMP OF THE ENGLISH LIGHT DIVISION, AT VARNA.

what rested. There is a camp of about 7000 French within half a mile of us. The fraternization among the troops is most amusing. The best feeling appears to exist between the two armies, and the gallant Gauls are enthusiastic in their civilities. They, likewise, are moving inland, and will encamp within a short distance of the British. Our men are in excellent health and spirits, and stronger and better for the long sea voyage. The horses are picking up flesh wonderfully, considering what they have gone through. The regiment lost no less than twenty-five on the passage. We have no news from the Danube, and know as little, or, probably, less, about the war than you do at home, but the general impression is that some time will elapse before active operations are commenced in the field. Whatever the intentions of the Generals may be, they are kept hermetically sealed in their own breasts, and there is as little information to be gained in the French camp on the point as we have it in our power to divulge in ours. Meanwhile, we live in expectation of what the future may bring forth.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, JULY 6.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer: Highest Reading.	Thermometer: Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°	°			Inches.
June 30	29·636	71·2	49·5	58·7	— 5·0	61	N.W.	·004
July 1	29·537	69·0	51·6	54·2	— 7·6	73	S.	·042
,, 2	29·909	69·0	50·0	57·7	— 4·3	81	S.W.	·062
,, 3	29·767	71·9	54·5	61·2	— 0·9	80	S.W.	·042
,, 4	29·707	77·2	56·0	65·8	+ 3·8	58	W.	·010
,, 5	29·656	67·9	49·8	56·7	— 5·6	78	S.	·001
,, 6	29·668	65·9	50·3	55·7	— 6·5	82	W.	·17

Note.—The sign + denotes below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The corrected reading of the barometer for the week was 29·64 inches at the beginning of the week, to 29·91 inches by the 2nd; decreased to 29·54 by the 4th, and increased to 29·68 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 29·7·2 inches.

The mean temperature of the week was 57·4°, being 4·8° lower than the average of the corresponding week during the last seven years.

The range of temperature during the week was 25·4°.

The mean daily range of temperature during the week was 17·6°.

Rain fell during the week to the depth of nearly seven-tenths of an inch.

Thunder was heard during the morning of June 30; and a *thunderstorm* occurred during the after part of the day.

The weather during the week has been cold, unseasonable, and changeable.

For the month of June the mean reading of the barometer, at the level of the sea, was 29.835 inches. The highest temperature during the month was 86°, on the 22th; and the lowest was 43·2°, on the 1st. The range of temperature during the month was, therefore, 37·1°. The mean of all the highest temperatures by day, was 67·2°; and of all the lowest by night, was 48·7°. The mean daily range of temperature during the month was, therefore, 18·4°. The mean temperature of the month was 58·0°, being 3·2° below the average of the corresponding month during 58 years. The mean temperature of evaporation for the month was 51·8°. The mean temperature of the dew point was 47·8°. The mean degree of humidity was 76 (complete saturation being represented by 100). The fall of rain during the month was 1·3 inches.

Lewisham, July 7, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—Within the week ending July 1, the births of 920 boys and of 844 girls, were registered within the metropolitan districts: these numbers exhibit an excess of 108 males, and of 191 females over the average in the same week, of the preceding nine years. The number of deaths registered within the same time was 1230: of these 703 were males, and 557 were females: of these 1230 deaths, 1029 occurred from increase of population, by 134 males, and 67 females. The rate of mortality in London has been high for many weeks; but more especially of late in consequence of the registration of coroners' cases that have occurred during the quarter.

THE WAR WITH RUSSIA.—MEETING IN ST PANCRAS.—On Wednesday night a public meeting was held at the Vestry-hall, Kingsroad, Camden town, convened by requisitionists on the subject of the war with Russia. Mr. Cudden, after some delay, took the chair, and stated that Lord Dudley Stuart and Sir B. Hall had been invited to attend. The former excused himself as he had a previous engagement, and Sir B. Hall was absent through indisposition. Mr. Urquhart addressed a meeting of about 400 persons for two hours, and denounced the war as unnecessary, unjust, and inconsiderate.

ST. PAUL'S, KNIGHTSBRIDGE.—The most intense interest was excited in Belgravia, on Sunday morning as to what changes would be made in the celebration of Divine Service in St. Paul's, Knightsbridge. At eleven o'clock it was generally thought that the large majority of the congregation being composed of the leading members of the aristocracy and gentry of the district. The prayers were *memorised* by the Hon. and Rev Robert Liddell, the incumbent; the solemn Litany was chanted as usual. The only difference in the people's parts was to have been that the Litany was to have been rendered on one note. No sooner, however, did the choir begin the monotone, than the people themselves took up the tune, and of choirs, sang, and continued to chant the Litany throughout as usual. The [illegible] was not the great body of the congregation was remarkable as a fair index of the real feeling of Mr. Liddell's people. The Lessons were read by the Rev. Charles E. Parry and the Rev. George Nugee. The Litany was concluded by the Rev. E. E. Portal, Curate of St. Barnabas. The Holy Communion was celebrated, and the sermon preached by the Hon. and Rev. R. Liddell. Great excitement prevails as to whether the Lord Bishop of the diocese will give his permission to resume the Chanting of the Litany by the choir as well as the people.

DRESSMAKERS' AND MILLINERS' BENEVOLENT ASSOCIATION.—The annual general meeting of this association took place at Willis's Rooms on Wednesday; the Earl of Shaftesbury in the chair. The meeting was attended by a number of ladies who have taken great interest in the objects of the association. From the report it appeared that the heads of many houses, who had pledged themselves to the twelve hours' labour system, had exacted as much as seventeen consecutive hours' work from the young girls, that the time for meals had been reduced from one and a-half hours to less than half an hour, and that in some firms, where the new system had been carried out fully, more work had been actually done in the twelve than was formerly performed in the seventeen and fifteen hours under the old system. During the past year no fewer than 1114 young persons had been registered for employment, free of all expenses, and that a gratuitous had been granted to each of the women, and that no one complaint had been made of their conduct, thus giving a satisfactory proof of the efficacy of the society's registration. The meeting was addressed at some length by the Earl of Shaftesbury, Lord T. W. Ashley, the Rev. Mr. Hume, and Mr. Grainger. It was proposed to call a general meeting of the nobility to take into consideration the propriety of bringing a measure before Parliament to regulate the working hours in all factories, &c., and to make it compulsory on all such establishments as well as in factories.

ROYAL WESTMINSTER OPHTHALMIC HOSPITAL.—On Saturday the annual meeting of the governors and friends of this hospital, for the relief of poor persons afflicted with diseases of the eye, took place in the lecture room; the Marquis of Westminster in the chair. The annual report stated that the number of persons admitted to the benefit of the charity during the year was 1,437. Of these, 187 were received into the hospital, and 5522 treated as out-patients, of whom 2002 were children under eleven years of age. Of 88 operations for cataract, 81 were completely successful, and 6 partially so. Of 12 operations for the formation of an artificial pupil, 10 succeeded in restoring sight, and, in the other two cases, eight was much improved. The other operations were equally successful. The address of the committee stated that since the year 1817 to January, 1854, 98,889 had availed themselves of the benefits of the charity. Of these, 2137 had been restored to sight; the appearance of 4283 persons altogether improved, and the remainder obtained, some a reasonable and others an excellent sight.

THE CRYSTAL PALACE.—The highest number of visitors to the Palace on one day, up to the present time, was on Thursday week, when 54,807 persons were present, in addition to a large number of season-ticket holders. On Friday there were 3838 visitors at 2s 6d. each, and on Saturday 5667 at 5s. During the first three days of the present week the number of shilling visitors was—Monday, 14,447; Tuesday, 14,816; Wednesday, 13,056. Mr. John C Deane, to whose indefatigable energy much of the success of the Dublin Exhibition may be ascribed, has been appointed head of the exhibitors' department of the Crystal Palace at Sydenham. Mr. Deane had previously been a ding in the general arrangements of the Exhibition, and the directors have evinced the appreciation of his ability by conferring on him the above responsible office.

THE SUNDAY QUESTION.—A petition, signed by the Archbishop of Canterbury, the Bishop of London, Archdeacon Sinclair, and 169 other clergymen, was presented to the House of Commons last week, praying "that a law may be passed prohibiting the sale of intoxicating liquors on any part of the United Kingdom during any portion of Sunday."

THE *Opinione* of Turin states that four camps for military evolutions are to be formed this year in Piedmont.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

The Royal Assent was given by commission to three public and sixty-six private bills.

The Customs-duties (Sugar and Spirits) Bill and the Excise-duties (Sugar) Bill were severally read the second time.

RESIDENCE OF THE MINISTER AT WAR.

The Earl of MALMESBURY asked whether it was true that the offices of the new department of Secretary of State for War were to be removed to the house occupied by the Indo-ure Commissioners in Whitehall-gardens, and that the Inclosure Commissioners, in their turn, were to be removed to St. James's-square. Having complained of this arrangement as inconvenient, expensive, and unnecessary, the noble Earl further called attention to the state of the Foreign office, in Downing-street, which he compared to that of old barracks, from the want of repair. The Foreign Secretary had no residence within the building, while the room in which he sat was so unsafe that, if he received company, it had to be propped up, and he could not give a dinner, because there was no kitchen.

The Earl of ABERDEEN said the house occupied by the Inclosure Commissioners was the only one in the neighbourhood of Downing street and the Horse Guards which could be found for the new War Department; whilst the house to which the Inclosure Commissioners would be removed was one which they had themselves approved before being removed from Somerset-house. Inquiry, however, should be made as to the amount of inconvenience which the change would produce; but he apprehended that two months would be sufficient to rearrange the archives of the Commission. As to the state of the Foreign office, he well knew, from personal experience, that it was disgraceful and dangerous. The rents in the walls were quite alarming to look at. Plans for a new building were in preparation, and would be completed by the end of the summer, but her Majesty's Government had no present intention of applying to Parliament for a grant of public money for a new erection.

The Earl of ELLESMERE expressed his approval of the resolution of the Government, not to spend £80,000 on a new building under existing circumstances.

Lord REDESDALE called attention to the dispersion of the public offices, and said that, considering the amounts paid for rents and enlargements, it would be real economy to erect a building adequate to accommodate all the most important departments.

Lord CAMPBELL put in a word as to the state of the courts of law at Westminster; especially of the Bail Court, which he characterised as pestiferous.

Lord ST. LEONARDS suggested that, as the courts of equity now sat in Lincoln's-inn, the courts occupied by them at Westminster might be adapted for the use of the Common-law Judges at a very small expense.

The Lord CHANCELLOR mentioned that he had given directions that the Courts of Chancery at Westminster should be held at the service of the Common-law Judges.

Lord BROUGHAM gave notice that that day fortnight he should move a series of resolutions on the important subject of national education.

The Canning-houses Bill was read the third time and passed.

The Vice-Admiralty Courts (Mauritius) Bill was read the second time.

HOUSE OF COMMONS.—MONDAY.

THE MAYNOOTH GRANT.

On the order of the day for the third reading of the Public Revenue and Consolidated Charges Bill,

Mr. W. WILLIAMS appealed to Mr. Spooner not to endanger a valuable bill by bringing on his motion for excepting from it the grant of Maynooth.

Lord J. RUSSELL also remarked upon the inconveniences of the proposed course. The proper mode to proceed in reference to the question was that which Sir R. Peel adopted when he placed the Maynooth grant upon the Consolidated Fund by a bill. His own opinion had been that the subject should not be one of annual discussion, and therefore he had supported Sir R. Peel on his bringing in that bill. Retaining the same opinion, he announced that he should oppose the motion, and that he hoped it would be rejected by a full House.

Mr. SPOONER said that he should assuredly persevere in his motion, and charged those who desired to obstruct it with wishing to stifle the Protestant voice of the nation. As to bringing in a bill, he said that he should be met by the Irish members, who had acted against them, and he told an anecdote of one of them, who was notorious for long speaking and repetition, who, being asked if he were "good for an hour," replied that he was good for two, if it were wished. He described the originally pledging this grant on the Consolidated Fund as unconstitutional, and as having failed in its pretended object of pacification, inasmuch as the Roman Catholic priests were not in the least less of political agents than before. In reply to an observation of Mr. Sidney Herbert on the preceding night, he pledged himself not to "dare" to take the chance of the House on the payments to Roman Catholic priests for attendance on the soldiery.

An amendment of Mr. J. V. SCULLY, for exempting the officials of the Court of Chancery in Ireland from the operation of the bill, was negatived by 138 to 111.

A similar amendment, by the same member, in regard to the officials of the Queen's Bench, was negatived by 121 to 100.

Other amendments having been disposed of, Mr. SPOONER, in fulfilment of his threat, moved his amendment in regard to Maynooth, supporting it in a speech of great solemnity.

The question was put, and no one on the Government side rising to reply, Mr. NEWDEGATE rose, and at very considerable length supported the amendment.

After a few words from Mr Heyworth and Mr. Gardner, the question was again put, and a scene of some confusion arose in consequence of Mr. Isaac Butt endeavouring to speak after the two-minutes glass had been turned, a proceeding contrary to an understanding to which the House had come. The Speaker, in enforcing the rule, was warmly supported by the House.

On division, the numbers were—For Mr. Spooner's amendment, 90; against it, 106: majority for Government, 16.

The bill was then read a third time and passed.

The Poor-law Boards Continuance Bill was read a third time, and passed; as were the Union Charges Continuance Bill, the Indemnity Bill, and the Insurance on Lives (Income-tax) Continuance Bill.

The Merchant Shipping Bill was read a third time and passed.

Lord PALMERSTON withdrew his motion for leave to introduce the Police (No. 2) Bill.

HOUSE OF LORDS.—TUESDAY.

The Encumbered Estates (West Indies) Bill was read a third time and passed.

The Ecclesiastical Courts Bill, the Cruelty to Animals Bill, and several others were forwarded a stage; after which, their Lordships adjourned until Thursday.

HOUSE OF COMMONS.—TUESDAY.

THE AUSTRO-PRUSSIAN TREATY.

Lord W. GRAHAM drew the attention of the Lord President to the translation of a foreign document, which has lately been presented to the House, entitled "Additional article to the treaty between Austria and Prussia, dated April 20th, 1854," for the purpose of pointing out the omission of some important words which were contained in the original. In the original German the article stated that Austria and Prussia were united in the desire to avoid, if possible, any participation in the war, but the words "if possible" were omitted from the translation laid upon the table of the House. He wished to know who was responsible for the translation?

Lord J. RUSSELL readily granted that it was most desirable that translations of State papers should be made with perfect accuracy; but he was unable to state the name of the gentleman who had translated these documents. He believed they were translated in the first instance at Berlin; and the fault to which the noble Lord had directed his attention was, no doubt, inadvertently made.

THE IRISH MILITIA.

Lord PALMERSTON, in reply to Mr. Esmonde, said, it was the intention of Government to take steps for enrolling the whole or a portion of the Irish militia. With regard to embodying them when enrolled, there was a difference between training and embodying. To embody them was to call them out, and keep them under arms for a whole year. As to their assembling for the purposes of training, if it should appear that there was a sufficient number enrolled to admit of training, that was a matter for consideration; but he hardly thought it could be done in the course of the coming autumn.

RAILWAY ACCIDENTS.

Mr. SCOTT asked whether the Government intended, in the present session of Parliament, to introduce any measure for the more effectual prevention of railway accidents?

Mr. CARDWELL said, a bill had been drawn up on the subject, but the time at his command had not enabled him to introduce it; and at the present period of the session he did not think he could bring it in with any prospect of its becoming law before Parliament was prorogued.

NAVAL PRIZES.

Mr. J. PHILLIMORE moved the following resolution:—

That it is the opinion of this House, that however, from the peculiar circumstances of the war, a relaxation of the principle that the goods of an enemy in the ship of a friend are lawful prize, may be justifiable, to renounce or surrender a right so clearly incorporated with the law of nations, so firmly maintained by us in times of the greatest peril and distress, and so interwoven with our maritime renown, would be inconsistent with the security and honour of the country.

Without meaning to question the propriety of the relaxation which had recently been made in the maritime law, he wished to have it understood that the principles of that law, as it was maintained by this country in times of the greatest peril, were not to be sacrificed, but simply held in abeyance. Those principles were, that the goods of an enemy found on board the ship of a friend were lawful prize, and the goods of a friend found on board an enemy's ship should be restored, and these were mild principles as compared with those recognised in other European countries. The doctrine that free ships made free goods gave neutral Powers an interest in the continuance of war, which it should never be the policy of belligerents to do; and he, therefore, hoped the House would never agree to the surrender of the bulwarks of England's maritime greatness.

Mr. BICKNELL seconded the motion, and said that the greatest blow that could be inflicted on Russia would be to shut up her ships, and thus destroy her commerce.

Sir W. MOLESWORTH contended for the expediency of the course taken by the Government in giving up its right to seize Russian goods—unless they were contraband of war—found in neutral vessels, and hoped the House would not pledge the honour of the country to a specific course of action in reference to a disputed state of international law, for he could not assent to its interpretation as laid down by the honourable and learned gentleman. In order to show that that interpretation was not the correct one, he entered into great details as regarded treaties between this country and Spain, and this country and others, for more than a century and a half, in nearly all of which the principle of free ships free goods was specifically laid down. The right honourable gentleman concluded by moving, as an amendment, the previous question.

Mr. R. PHILLIMORE contended that the right hon. baronet's argument went to show that the powers heretofore exercised by the Sovereigns of this and other countries were not belligerent rights but belligerent wrongs. That position, however, was opposed to the doctrine laid down by Lord Mansfield, Lord Stowell, and the highest authorities upon the subject in all the civilised nations of the world.

Mr. BOWYER supported the views taken by Sir W. Molesworth.

While the hon. gentleman was speaking the House was counted out.

HOUSE OF COMMONS.—WEDNESDAY.

IRISH CHURCH TEMPORALITIES.

Sir J. YOUNG, in resuming the adjourned debate on Mr. Sergeant Shee's motion respecting the Irish Church temporalities, regretted that the subject should be once more dragged before the House of Commons by the ecclesiastical question, which, without any reason for the feeling in the affection of the great majority of the people of the United Kingdom for the Established Church, sought to make a sweeping alteration in the position occupied by the Irish clergy. The object of the hon. and learned gentleman was nothing less than that Parliament should confiscate £35,000 per annum to Catholic and Presbyterian purposes, a proposition upon which parties in this country had expressed a final opinion, and he should therefore meet the motion with a direct negative.

Mr. O'CONNELL would oppose the motion, because he was an advocate of the voluntary principle. He would never vote for a motion which gave one shilling even to his own Church.

Mr. MAGUIRE also objected to the motion, because the object of the Established Church in Ireland, for, whether a man were to be destroyed by the sword or by slow poison, it was still destruction.

Mr MAGUIRE quoted Mr Macaulay in support of the assertion that the Church of the Establishment was the most unfounded, and indefensibly bad institution to be found in any country in Europe.

Mr. G. A. HAMILTON could not support the voluntary principle, for he thought the maintenance of religious truth was an obligation on the State.

Mr. LUCAS did not approve of the plan of Mr. Sergeant Shee, which he believed would not settle the question, for that would not be settled as long as the Established Church of Ireland continued to exist. He felt no interest in the present motion, for he was an advocate for the voluntary principle, and would like to see the Catholics declaring that they would have no grant at Maynooth—no money at all, from the State—in order consistently to unite with those who advocated the voluntary principle.

Mr. A. STAFFORD concluded with Mr. Serjeant Shee on his motives in having brought forward a bill which could not find one single supporter in the House, although he announced it as one which was calculated to give tranquility to Ireland.

Mr. KENNEDY moved the adjournment of the debate.

Mr Serjeant SHEE supported the motion for adjournment, in order to give him an opportunity of replying to the misrepresentations which had been made in the course of the debate.

The adjournment was agreed to.

HOUSE OF LORDS.—THURSDAY.

The Lord Chancellor took his seat on the woolsack at five o'clock.

CANADA CLERGY RESERVES.

The Earl of DERBY asked whether the information was correct that the House of Assembly at Canada had resolved to secularise the clergy reserves, and further to withdraw Church property generally in the colony, including the Roman Catholic endowments: and also whether it was true that the question had been carried against the local Government, and that a dissolution of the provincial Parliament was expected.

The Duke of NEWCASTLE said that the Government had no official information, public or private, on the subject. The last despatch from the Governor-General of Canada was dated the 17th of June, and it contained nothing which could lead them to suppose that the circumstance to which the noble Earl had referred had occurred. In the same time, he had to state that a telegraphic message had been received, from which the Government gathered that the noble Earl's statement was, in all probability, correct, and that a coalition of parties in the provincial legislature had defeated the Government on the question of clergy reserves. (Laughter).

DISABILITIES OF THE COLONIAL CLERGY.

Lord LYTTELTON gave notice that on Tuesday next he should ask the Government whether it was intended to bring in any bill to remove the disabilities of the Colonial clergy.

OXFORD UNIVERSITY BILL.

Lord CANNING moved the second reading of the Oxford University Bill.

The Earl of DERBY said that he would not oppose the second reading, but would certainly enter his objections to the clauses respecting the admission of Dissenters to the University, when the bill went into Committee.—The bill was then read a second time.

The Excise-duties Bill was read a third time, and passed.

HOUSE OF COMMONS.—THURSDAY.

The House met at twelve o'clock.

CHURCH BUILDING ACTS AMENDMENT (NO. 2) BILL.

Sir J PAKINGTON moved the second reading of this bill. The right hon. Baronet proceeded to contrast the large amount of spiritual provision made for the city of London with the destitution which prevailed in other parts of the metropolis. This bill proposed to make the superfluity of the city of London contribute to the deficiency in other parts. It had received the sanction of the Archbishop of Canterbury, the Bishop of the Diocese, and a large number of the clergy.

Dr. R PHILLIMORE moved, as an amendment, that the bill be read a second time that day six months. He objected to the bill, because it took away from the parishioners all control over the removal of their

church, or the sale of their burial ground, and left the matter entirely in the hands of the bishop of the diocese. He maintained that the evils alleged in the bill did not exist; and that, even if they had been demonstrated, the measure would not provide an adequate remedy.

Mr. HADFIELD seconded the amendment.

A long discussion ensued, in the course of which, Mr. S. Herbert and Mr. T. Hankey supported the Bill; and Mr. Moffatt, Mr. Christopher, Lord R. Cecil, Mr. Henley, Mr. Westerton, Sir J. Duke, Mr. Bagge, Mr. T. Duncombe, and Mr. H. Drummond, spoke against the measure.

The House then divided, when there appeared:—For the second reading, 53; against it, 148: Majority against the second reading, 95.

The bill was consequently thrown out, without a formal division.

At the evening sitting, Mr. MONSELL, in reply to Mr. Hadfield, said that the intrenching, and other implements sent to the army in Turkey, had been supplied by first-rate manufacturers, at fair prices. They had been tested by skilful persons, and had not been found in any respect faulty.

The House resolved itself into a Committee of Supply.

On the vote of £38,745, for Non-Conforming and other Ministers in Ireland,

Mr. BRIGHT strongly condemned the grant, as being, in the words of Dr. Candlish, "the hush-money of the State," which ought to be rejected by the Presbyterians of the north of Ireland, who could afford to well to support their own clergymen without the aid of this *Regium donum*. The hon. member concluded by moving the rejection of the vote.

Mr. KIRK supported the vote on the grounds of right, and the benefits conferred on Ireland by the administration of the recipients.

Mr. HADFIELD hoped the time would come when the Presbyterian body would feel ashamed to ask the dole for their maintenance.

Mr. FAGAN thought the best course for the Government to take would be to bring in a bill to abolish all votes for religious purposes.

Lord J. RUSSELL specified two grounds for the vote. The one was the ground of contract, and the other was the reasonable expectations of the Presbyterian body. The subject yielded a great revenue to the State in the shape of diminished crime, and the prevalence of good order and industrious habits.

Mr BRIGHT said, he did not wish the Committee to divide against the whole vote; but, finding that it had increased since last year by £134, he moved that the vote be reduced by that amount.

The Committee having divided, Mr. Bright's amendment was negatived by a majority of 149 to 82.

The next vote was £11,855 for the General Board of Health, which occasioned considerable discussion during the remainder of the night.

CHURCH, UNIVERSITIES, &c.

BISHOP OF BATH AND WELLS.—The ceremony of confirming the election of the Right Hon and Right Rev. Lord Auckland, late Bishop of Sodor and Man, to the see of Bath and Wells, took place on Saturday, July 1, at Bow Church, Cheapside.

THE DEAN OF WINDSOR.—On Sunday the Hon. and Very Rev. Gerald Wellesley, the newly-appointed Dean of Windsor, read himself in, at morning service, in the Chapel Royal of St. George.

PREFERMENTS AND APPOINTMENTS.—*Rural Deaneries:* The Rev. R. Argles, Rev. J. Christopher, and Rev. M. J. Berkeley to rural deaneries in the diocese of Peterborough. *Rectories:* The Rev. W. Brown to Broadwas: Rev J. Broughton to Kilsby; Rev. F. Fitzpatrick to Painstown: Rev. H. T. Pyne to Burton Bradstock, near Bridport, Dorsetshire; and to Sunbury, Surrey: Rev. E. Kirwan to Wootten-Wawen, near Henley-in-Arden: Rev C. E. Pritchard to South Luffenham, Rutland; Rev. Dr. S. L. Townsend to Louth; Rev. J. Wheeler to Copgrandhall, near Crewe. *Incumbencies:* The Rev. J. Harris to Landid cil, near Davynnock; Rev. D. Mackay to Stoer, Sutherlandshire; Rev. T. Walker to Eskdalesaib and Ugglesarby, Yorkshire; Rev. C. B. Walsh to Bonsall with Kniveley, near Alton, Hampshire. *Perpetual Curacy:* The Rev. A. H. Hulton to Christchurch, Ashton-under-Lyne.

THE ARCHÆOLOGICAL INSTITUTE AT CAMBRIDGE.

The inauguratory meeting was held at the Town-hall on Tuesday evening, at half-past eight o'clock, and at that hour about 200 persons assembled, including a goodly proportion of ladies. At the hour named the Mayor and municipal body entered in procession, preceded by the mace-bearers, and ushering into the hall the Vice-Chancellor, the President of the Institute (Lord Talbot de Malahide), the Rev. the Master, Trinity College, the Very Rev. the Dean of St. Paul's (Dr. Milman), Professor Sedgwick, W. H. Blaauw, Esq. (secretary to the Sussex Archæological Society), Sir Charles Anderson, and others. The procession having filed off in due form, the Council took their seats below the platform. The different discourses and addresses having been delivered, Professor Sedgwick proposed a vote of thanks to the chairman, who acknowledged the same, and the proceedings terminated.

On Wednesday his Royal Highness Prince Albert arrived at Cambridge. He was met at the station by the Vice-Chancellor, in his robes of office, containing that dignitary and the Rev. Professor Sedgwick (Master of Trinity College and the Provost of King's were also present. Upon leaving the station the carriages proceeded at a rapid pace to Trinity Hall Lodge, where his Royal Highness robed, and proceeded to Senate-house by Senate-house-passage, amid the hurzas of the spectators. As soon as the arrival of the Prince Consort was known, the Senate-house became the centre of attraction. A few minutes before twelve the Prince Chancellor entered, attended by the Vice-Chancellor, the President of the Institute, the Rev. the Master of Trinity College, Professor Sedgwick, and one or two other eminent members of the University. In waiting upon his Royal Highness were the Hon Colonel Charles Grey and Colonel Seymour. The President, addressing his Royal Highness, explained to him that the learned Master of Caius College (Dr. Guest) was celebrated for the attention he had bestowed, and the valuable resources he had thrown, on the remains of the Roman era existing in this country. He was sure that the learning and the research with which the learned master would illustrate and embellish his subject, would make it most attractive to all who had the pleasure of hearing him. The Master of Caius, who was received with cheers, illustrated, in a paper entitled "The Great Boundary Dykes of Cambridgeshire, their Purpose and Origin," the subject referred to. The President proposed a vote of thanks to the Doctors and called upon Professor Willis to read a paper "on the Buildings of the University." Professor Willis read a long and interesting paper on that subject. Dr. Whewell proposed a vote of thanks to the Professor; Professor Sedgwick seconded the motion. This concluded the formal proceedings in the Senate House; and the Prince, rising, crossed to Professor Willis, cordially shook him by the hand, and remained some few minutes in conversation with him and the Very Rev. the Dean of St. Paul's. His Royal Highness then retired, and honoured the Vice-Chancellor and Mr. Geldart, of Trinity Hall, with his presence at luncheon; after which, the Prince, accompanied by Professor Willis, visited the unique chapel of Jesus College (lately restored), and paid a visit likewise to the museum of the Institute. His Royal Highness finally left for London about four o'clock.

EDUCATIONAL EXHIBITION.—The object of this Exhibition—which was opened on Tuesday evening, at St. Martin's Hall, and of which we shall give an illustration next week—is to excite a deeper feeling of interest in the cause of education, by showing as complete a collection as possible of the various means and appliances employed in the various educational establishments at home and abroad. The Society of Arts has been greatly aided in its endeavour to make the exhibition as complete and practical in its character as possible by the facilities afforded by the Foreign and Colonial offices for the admission of the exhibitors of articles duly free from foreign states; and much of the educational apparatus from France, Prussia, Belgium, Hanover, the German States, Holland, Spain, Sweden, Denmark, and the United States, is represented in the present exhibition. The National Society, British and Foreign Society, Church Missionary Society, and several societies for teaching the blind to read, the Committee of Council on Education, the Royal Military Academy, Woolwich, the Board of Education, the Home and Colonial School Society, the Society for Promoting Christian Knowledge, the Department of Science and Art, the Wesleyan Education Committee, and other societies, are among the principal contributors, and nearly the whole of the public institutions in the metropolis are represented in a large apartment devoted entirely to the purpose. The exhibition was opened on the day night by a conversazione, which was honoured by the presence of his Royal Highness Prince Albert, accompanied by the Marquis of Abercorn, Lord Torrington, Major-General Wylde, and Colonel Seymour. His Royal Highness arrived at nine o'clock, and, accompanied by Mr. Wentworth Dilke, Mr. Harry Coester, Dr. Booth, Mr. Le Neve Foster, Mr. R. Graham, and other members of the Council, proceeded to make as careful, attentive, and minute an examination of some of the principal articles exhibited as the crowded state of the rooms would permit. The contributions from Norway and Sweden were examined with much interest, as were also those of the larger British educational societies. In the galleries a fine collection of philosophical instruments and mechanical models were noticed with interest; and some remarkably fine coloured lithographic prints of insect and vegetable life, from Vienna, attracted the Prince's most deserved attention; and his Royal Highness expressed his earnest wish that works of a similar character could be produced in this country at such prices as would place them within the reach of the great bulk of the population.

MUSIC.

GRISI'S "farewell performances" continue to be the great attraction of the ROYAL ITALIAN OPERA. Every night they take place they fill the house to overflowing. As they are so productive, and of so much importance to the theatre, there is little doubt they will be continued to the end of the season. On Tuesday Gnecco's comic opera, or rather mes cal farce, "La Prova d'un Opera Seria," was performed, with Madame Viardot and Lablache in the principal characters. This old piece was scarcely worth reviving. The composer, who "flourished" about the end of the last century, never had much reputation; and, but for this trifling production, his name would long since have been forgotten. The music is antiquated and forced; there is nothing in the drama that deserves the name of plot, and the humour is mere buffoonery. It contains a duet, however, "Ah! guardate che figura" (which still has some popularity in our concert-rooms), between an opera-manager and a prima donna, who quarrel and ridicule and mimic each other in a way that is amusing enough, and generally raises a laugh.

GWING, we presume, to the temporary absence of Formès, who has been invited to attend a Continental musical festival, the German operas at DRURY-LANE have been suspended, and the performances of this week have been the Italian pieces, "La Sonnambula" and "Lucrezia Borgia." "Fra Diavolo" was announced for Thursday with Mr. Sims Reeves, "his first appearance since his severe illness;" but the piece was changed, "La Sonnambula" being repeated. We should have concluded from this that Mr. Reeves was not sufficiently recovered to appear, had it not been that he sang at Mr. Allcroft's concert, at the Lyceum the previous evening. If the management of the Royal Opera-house is to be successful, this theatre must furnish greater and more varied attraction than it is doing at present.

THE French company at the ST. JAMES's have at length produced an opera of Auber's—not one of his best, but greatly superior to the most of the third-rate French composers, of which we have had too many. "Le Sirène" was performed on Saturday last, and repeated on Monday. It contains a great deal of gay and sparkling music, well calculated to show off the flexible voice and brilliant execution of Mdme. Marie Cabel; but the frivolity of its subject, and the absurdity of its incidents, joined to its excessive length, make it distasteful as well as tiresome to an English audience. "Les Diamans de la Couronne," one of the best and most celebrated of Auber's works, is announced for Monday next; and, we doubt not, will make a much more favourable impression.

THE CONCERTS of the MUSICAL UNION have been brought to a close for this season. The last took place on Tuesday, and was one of the most interesting of the series. The programme contained two quartets, both masterpieces: Haydn's eighty-third in G, and Mendelssohn's fifth, in D. They were played by Vieuxtemps, Goffrie, Hill, and Piatti. M. Vieuxtemps was brought by Mr. Ella from the Continent for the express purpose of performing at this and the previous Concert of the Musical Union—an act of spirit worthy of all approbation. M. Vieuxtemps also performed a piece of his own composition, a caprice entitled "Les Arpèges," which not only displayed his marvellous powers of execution, but the breadth, grandeur, and expression of his style. Mdlle. Clauss performed Beethoven's celebrated Sonata in C sharp minor (commonly known by the name of the "Moonlight Sonata") with that exquisite finish and depth of feeling which are this young lady's characteristics as an artist.—No musician in London is more entitled to a large share of public approbation and gratitude than Mr. Ella. By professing the Musical Union, and, by his able management, raising it to its present "high and palmy state," he has wrought a revolution in the musical taste of the aristocratic and wealthy classes. He has imbued them with a love for the highest order of music; and nowhere are the works of the great classical masters better understood, or more warmly appreciated, than in those circles of rank and fashion where, not many years ago, they were absolutely unknown.

ANOTHER person who has rendered important services to MUSIC—by spreading a taste for it in its most refined and elegant forms—is Mr. STERNDALE BENNETT; and this he has done by his labours as a composer, a performer and an instructor. In this last capacity his exertions have been invaluable. His ability has gained him a position of the highest eminence in his profession; and the influence these arising has been uniformly used in resisting the inroads of frivolity and bad taste, and in leading his pupils to understand and love the noblest and most beautiful works of the greatest masters. All in the respect and confidence of the extensive circle in which he moves he has gained his reward. His performance of classical chamber music, at the Hanover Square Rooms, on Monday morning, attracted a great assemblage of the most fashionable company, who enjoyed a delightful entertainment of vocal and instrumental pieces, selected from the works of Mendelssohn, Beethoven, Mozart, Bach, Handel, Haydn, and Mr Bennett himself. He was assisted by Mr. Wentzempe (this being the only concert, except those of the Musical Union, at which this great violinist has appeared this season), Signor Piatti, Signor Gardoni, Madame Clara Novello, Mrs. A. Gilbert, and Miss Cole.

LIVERPOOL, like London, has its SACRED HARMONIC SOCIETY: the provincial association having been formed six years ago on the model of the great metropolitan body. We noticed the establishment of this society at the time it took place, and are gratified to find that it progresses very favourably, and promises to become one of the most useful musical institutions in that part of England. Its special objects are—the cultivation of Sacred music, the improvement of congregational singing, and the formation of a free vocal school, with the view of rendering the services of the pupils hereafter available for choral performances, and for the choirs in places of worship. The number of members of this school amounts to nearly three hundred; while many hundreds of the leading nobility and gentry in the town and neighbourhood, including the Mayor and nearly all the members of the Town-council, are subscribers to the society. The first private rehearsal of the members of the vocal school took place a few days ago, under the direction of Mr. Hackett, the conductor; and their efficiency reflected high honour on his skilful training. The voices were 181 in number, consisting of first and second trebles, altos, tenors, and basses, and they performed a selection from the sacred works of Mendelssohn, Handel, and other masters, to the entire satisfaction of a numerous and musical audience. We trust that institutions of this kind will multiply throughout the kingdom. Their value in promoting the progress, not of music alone, but of manners also, cannot be over-estimated.

THE THEATRES.

HAYMARKET.—On Friday week a new farce was produced, adapted from M. Lafleche's vaudeville of "Deux Gouttes d'Eau," and entitled "As Like as Two Peas." The notion of personal resemblance is the basis of the action—one which our theatres now-a-days seem scarcely willing to let go. It is, however, one more appropriate as the foundation of a ludicrous than a serious action; as less likely to be interfered with by ethical considerations. Accident of all kinds is a fair enough ground of comic incident, but is very unsatisfactory as the foundation of a tragic interest. Here the assumption is employed as an apology only, not as a fact; and Mr. Buckstone, as *Mr. Richard*, uses it by way of accounting to his wife for the rumour that he is a frequent visitor at Vauxhall and Cremorne: it is not he, but somebody else exactly like him. Convicted at last by the circumstances of a lady's ring upon his finger, he still maintains his coolness of effrontery, and even consents to turn his back, Hibernian like, upon himself, by quitting his own house, on the assumption that he is somebody else, with the convicting ring upon his finger—soon afterwards returning as his own proper self without it. His wife now in her turn carries on the assumption of the double; and upon a conversation between her and himself, which never took place, until *Richard* is introduced into a belief in his own lie; and, driven onward to a crisis, meeting with an angry *Mr. Pritchard* (Mr. Compton), a dealer in guns and swords—quite willing to give or accept a challenge—is involved in a duel. *Pritchard's*, however, is the party wounded; to whose reconsolation *Mrs. Pritchard*, the lady of the ring, is reconciled; a similar reconciliation taking place between the would-be *Dromio* and his spouse. The broad fun of the farce was perfectly successful.

LYCEUM.—A new piece from the French ("La Tasso Cassée") was produced on Monday, under the title of "The Gentleman Opposite." The chief claims of which lie in its affording opportunity for the fascinations of Miss Talbot's, and *nuances* of Mr. C. Mathews', acting. The previous circumstances lead *Mrs. Mowbray*—such is the heroine's name—to expect from *Mr. Charles Villiers*, "the gentleman opposite," a formal and urgent admirer. She finds him, on the contrary, modest and retiring, and yet to be warmed up into a demonstration of the tender passion. In painting these stages of growth in the history of individual affection, Mr. Mathews is a skilful artist; and the result was the success of a small piece wholly dependent on the actor for its importance.

OLYMPIC.—A new comedietta, called "Heads or Tails," produced at this theatre, is remarkable for affording three excellent parts to the three principal performers—Mr. Emery, Mr. Wigan, and Mr. Robson. The plot proceeds upon a whimsical notion. *Harold Dyecaster*, the unreflecting hero, has hitherto trusted everything to chance, and prospered accordingly, to an extent that induces him to believe thoroughly in the divinity of fortuitous adventure. His plan is to decide by "heads or tails," not by judicious deliberation; while that of his friend is to reflect until all is lost by delay. The latter, having caught cold in the rain, is afflicted with a tendency to sneeze, an infirmity which Mr. Robson imitates with his accustomed drollery. Both by his sneezing and proportunitation, however, he loses the young lady of whom he has been in pursuit for three years; and who is won by his friend after an introduction of three minutes. Though so brief an acquaintance, however, he is an old relative; and, as her father's nephew, a family union is proposed to him as the best means of settling an old family feud a Chancery suit. Instead of deciding whether he will marry his cousin, he leaves the result to the chance of two letters—the one containing the refusal being actually delivered. A clever substitutive, however, is made by the lady in question; and the old crusty Uncle, who has been sadly nettled by the unlucky refusal, is made to believe that he had, at first, mis-read the letter, and that his kind offer was all along accepted. The extravagance and absurdity of these stage assumptions is glorious enough; but, by the aid of good acting and lively writing, they were rendered sufficiently effective.

ADELPHI.—Another version of "La Joie Fait Peur," under the title of "Hopes and Fears," was produced here on Wednesday. It is, we think, judiciously compressed, and was beyond question excellently acted. Madame Celeste, as the suffering mother, was frequently fine, and more than once sublime; while a new colouring was afforded to the whole by Miss Woolgar performing the part of the son. An unwonted importance was thus lent to the character, which was supported with unexampled vigour and animation. Old *Noël* found an admirable representative in Mr. Webster. The dialogue has been considerably abridged, but not impaired in effect.

FINE ARTS.

THE THEORY AND PRACTICE OF LANDSCAPE PAINTING IN WATER COLOURS. By GEORGE BARNARD. Parts 1 and 2. W. S. Orr.

We gladly recommend this little work, which upon examination we find (as far as it goes) to be well adapted to its purpose, that of affording instruction in drawing and water-colour painting, in a popular manner. The name of the author who is well known as the professor of drawing at Rugby School, and the author of the "Handbook of Foliage and Foreground Drawing," "Studies of Trees," &c., is a sufficient guarantee of the correctness and soundness of the principles set forth; and the illustrations are abundant, and admirably adapted to the purpose. Those which concern outline, and rules for sketching, are engraved on wood, and printed with the text; whilst those which illustrate the nature and theory of colours, are printed by the chromatic process, than which a better medium could not be chosen. Its efficacy is well shown in the exhibition of the colours of the prismatic spectrum, and also in the formation of the secondary colours from the primary colours, and again of the tertiary from the secondary in the respective colours combining to the several results, being, in each case, super-imposed one upon the other, thus rendering the *rationale* of the theory palpable to all.

The work is intended to be completed in six parts: the two already published comprise the following branches of the subject:—On the nature of colours, primitive and compound; on the harmony and contrasts of colours; on the power of the eye to discriminate colours—a faculty not universally nor equally developed; explanation of terms used by artists; practical rules for the arrangement and use of the colour-box and palette; in the choice of pencils, brushes; on the handling of the brush; compositions in sketching, &c.

ANSDELL'S SPORTING SCENES.

Messrs. Jennings have now on view six capital animal studies by Ansdell, of which they are about to publish engravings by Ryall, under the title of "Our Country Seat." In one of these we have a group of partridge, the woodcock, the grouse, the wild duck, and the rabbit, all with their proper captors, the character of the various birds being admirably discriminated, and the composition well diversified. The engravings by Ryall give all the textural softness, and fine air of expression, observable in the originals.

FROME SELWOOD.—The old parish church of this town, for the last century called St. Peter's, having been satisfactorily proved by the present Vicar of Frome to be entitled to the patronage of St. Aldhelm, the latter saint has been duly restored, and on Tuesday week the day on which also the first stone of the new church was laid by the Marchioness of Bath, a lease was opened for the erection of a grammar school, and a national institution established, under the patronage of St. John's College, to afford a sound education, at a low rate, to middle-class boys, or sons of clergymen, and other gentlemen, in reduced circumstances.

RICE'S PATENT SPRING LINKS.—Every improvement which tends to promote humanity to the lower animals is worthy of special attention. Such is the object of the above patent, in decreasing the labour both in carriage and draught horses, as well as in preventing the fouling of traces and chains. The improvement consists of spring links, made either of steel or indiarubber, attached to the traces, hame-chains, or any part of the harness, so as to avoid the dead pull.

CALAMITOUS FIRE AT OLNEY.

THE rural town of Olney, in Buckinghamshire—a place endeared to us by its association with the poet Cowper and his friends—has just been visited by a destructive and calamitous conflagration. A sorrowful duty appears to attend the town; for the *Northampton Herald* report of the catastrophe commences by observing:—"Often as during the last two or three years we have had to record the destruction of life and property by fire in this little town, we have never had occasion to detail so fearful a conflagration, as to property, as that which occurred on Monday," the 26th ult.

It appears that about two o'clock in the afternoon the thatch of a small wash-house was discovered to be on fire, at about the middle of the High-street, on the western side. The flames almost instantaneously communicated to the premises of a dyer, next door; and, before any efficient alarm could be given, the premises of a blacksmith, considerably lower down, on the opposite side of the street, were also on fire by the boisterous wind carrying flakes of burning thatch in a most insistently direction. From house to house the burning masses continued to be borne by the wind, till several dwellings and outbuildings, barns, and two or three farm-yards, were enveloped in flames. The tiny parish engines, aided by two from Newport Pagnel, and one from Yardley Hastings, all worked by able and willing hands, did their utmost, but could not be subdued; and the progress of the fire was way from ridge to ridge, till some twenty or thirty houses on the eastern side, and some ten or twelve opposite, together with a considerable number of buildings in the rear, outbuildings, and large quantity of hay, beans, &c., were destroyed, and many more severely; while both of the whole number of houses in the town are damaged, or seriously damaged.

The loss is roughly estimated at between £9000 and £10,000. The Insurances extend but to about £3000; and the descent ruin of the poorer tenants, many of whom lost every article they possessed, except the clothes they escaped in, is truly afflicting. A number of women and children were housed temporarily in the National School and other places, where they were lodged and fed; and others found a home in such cottages as were empty. Many of the poor, highly to their credit, opened their little abodes to their destitute neighbours; but there still remains a large number of persons homeless and ruined. Many persons have been driven out by this fearful desolation with the conviction to know that no lives were lost. The fire was accidental: it broke out as nearly as possible on the same spot as a still more extensive one in 1787.

A benevolent Correspondent has collected a few additional facts, tending to show the calamitous circumstances of this visitation.

Many persons, it appears, considering their houses in danger, removed their goods and clothes to places supposed to be safe, as a distance from the flames; but, in several instances they were destroye

PRESENTATION OF NEW COLOURS TO THE SOUTH LINCOLN MILITIA, AT GRANTHAM

before the owners had the slightest idea that they were in danger a second time; and in many places where ladders had been set against houses for the removal of goods, those upon them had scarcely time to get down before they were consumed; and every scrap of wood, even the wood covering of wells, are charred by the intense heat of the flames. The ruins are calcined; and the walls, being built of limestone, are in many cases reduced to lime. The number of houses destroyed is 55, and 25 others damaged—altogether, 80.

The greatest sufferers are those who derive a scanty living by carrying on a small trade with the very poor; and, from both classes being burnt out, the former must, in addition to the loss of their property, add the loss of their debts.

Another class of sufferers are those who, by dint of hard savings, have built cot ages in the gardens which are attached to all the houses in Olney; and, although insured, the amount in all cases is inadequate.

The most praiseworthy efforts are being made by all classes of the inhabitants to relieve the wants of the distressed, by making various articles of clothing, &c., to meet immediate necessities; and already the pressing wants of food and clothing have been provided for. A committee of gentlemen, with the Vicar as chairman, together with a sub-committee of ladies, are actively engaged in carrying out all remedial measures that they are enabled to do by means of the contributions placed in their hands for the purpose. These at present amount to nearly £300; but nothing short of a very liberal contribution can materially assist the sufferers.

The place, as sketched by our Artist, presents a fearful picture of desolation; solitary chimneys and gables, charred roofs and window-frames being all that remain of many a rural homestead and abode of smiling content—such as can be nowhere seen so abundantly as in England; yet the calamity at Olney is borne with patience and resignation such as must excite the sympathy of every Christian community.

PRESENTATION OF NEW COLOURS TO THE SOUTH LINCOLN MILITIA.

THE impressive ceremony of presenting new Colours to this regiment, under the command of Colonel Sibthorp, took place, on Wednesday week, in Belton Park, the noble domain of the Brownlow family, near Grantham. There were present an immense concourse of people from the neighbourhood of Grantham and the surrounding district. The Marquis of Granby, Lord Graham, and a number of the county gentry were present. Soon after twelve o'clock Lady Marian Alford arrived, accompanied by Lady Caroline Cust, Colonel Cust, and several other members of the Brownlow family. The South Lincoln Militia first formed in line in front of a dais, covered by a canopy, and then into three sides of a hollow square. Her Ladyship and friends, with the Rev. William Potchett, were then conducted from the tent to the dais by one of the officers, when the two companies advanced, and thus completed the square. After the minister had read the usual form of prayer for the consecrating of regimental colours, and the Lord's Prayer, the company kneeling round the dais, Lady Marian Alford presented the Colours to Lieutenants Banks and Adams, accompanying the presentation with the following appropriate address:—

Gentlemen of the South Lincoln Militia,—Your gallant Colonel has intrusted to my hand the honour of presenting to you the new Colours for your regiment. May their now spotless folds never be stained but by summer showers, nor faded but by sunshine, and may they long float like the rainbow—a guarantee of peace in the land. But, should an enemy venture on our shores, and should you be called upon to fight for your hearths and your homes, I am sure, from the spirit you have shown, that, led by your gallant Colonel, you will follow your Colours with loyal enthusiasm, and bring them back with honour. I now present them to you with the earnest prayer that Heaven may protect them in peace or in war.

At the conclusion of the ceremony, the Colonel rode in front of the company, and, while warmly expressing his sense of the honour her Ladyship had conferred on him and the officers of the regiment, he ventured to hope that the conduct of the regiment would accord with the noble sentiments she had expressed. The Colours were then conducted to the regiment under the escort of Captain Beckett's company, the old colours being removed by the Light Company; and the regiment, after going through some evolutions, marched back to Grantham; where some hundreds of the company, who had been present at the ceremony, partook of an elegant déjeûner, given at the Corn-exchange, by the Colonel and officers of the regiment, and supplied by Messrs. Windover and Boyall, of the Angel Hotel, Grantham, the head-quarters of the Militia. Several officers of the Leicester and Nottingham regiments were present. A quadrille band was stationed in the adjoining large room. The Exchange-hall was open during the rest of the day to the guests at the déjeûner, and other invited inhabitants of Grantham. The shops were closed, and the day was kept as a general holiday. By order of the Colonel, the private soldiers received each a shilling and a pint of porter, on his return to quarters.

In reply to a statement that the men of this regiment have recently been ill-provided for, it is asserted, in the *Lincolnshire Chronicle*, "it is well known, at Grantham, that the officers are as zealous in consulting and promoting the comfort of the men as they are eager to bring the regiment into the highest state of efficiency."

RUINS AT OLNEY, AFTER THE RECENT FIRE.

THE DERBY ARBORETUM.—ANNIVERSARY FETES.

IT is curious, as well as instructive, to mark the contrasts occasionally exhibited in the conduct and character of individuals; nor is it less interesting to take notice of contrasting subjects occupying the time and engaging the attention of different public bodies at the same hour.

On Tuesday, the 27th of July, the members of the House of Lords were learnedly discussing a measure for the enclosure of a part of Hampstead heath, at the instance of Sir Thomas Maryon Wilson, in contravention of his father's will. At the same hour of the same day thousands

STATUE OF MR. STRUTT, IN THE ARBORETUM, AT DERBY.

ANNIVERSARY FETE AT THE ARBORETUM, DERBY.—THE ENTRANCE GATEWAY.

upon thousands of the labouring classes, from the busy hives of Birmingham, Burton, Sheffield, Leicester, and Nottingham, poured into Derby, to commemorate the opening of the Arboretum, presented to the people by their constant friend and generous benefactor, the late Joseph Strutt.

Sir Thomas Maryon Wilson—though foiled five times—with a pertinacity worthy a better cause, endeavours to appropriate to himself, ground which his father intended to be kept for ever open. It is such conduct that places class against class, the poor in antagonism to the rich, and converts blessings into curses. Could the thoughtless Baronet understand the rapture with which the toiling millions, relieved from labour, enjoy the fresh air of breezy downs and furzy commons, even he would hardly venture to persist in an attempt which Parliament will never sanction.

Joseph Strutt, of Derby, saw with sorrow that no open heath or common-land existed in the neighbourhood of his native town, and resolved to supply the deficiency, and "give the inhabitants of their large and increasing town the opportunity of enjoying with their families exercise and recreation in the fresh air, in public walks and grounds devoted to that purpose."

To accomplish his beneficent idea, he purchased nearly twelve acres of land near the town, and engaged the services of the late J. C. London, the distinguished landscape gardener, to lay out the grounds. No expense was spared; and, in 1840, the Derby Arboretum was handed over to the Town-council of Derby in trust for the benefit of the town and neighbourhood. It was opened with great ceremony, and is annually commemorated. To the credit of the working classes, for whose advantage it was intended, few, if any, depredations have been committed during the fourteen years it has been a place of public resort.

In these times, when different sections of society are discussing, perhaps, with more zeal than reason, the propriety or impropriety of opening the halls and grounds of the Crystal Palace on the Sunday, perhaps the conduct of Joseph Strutt, and the experience of the people of Derby, may help them to solve the problem. When full confidence is shown, and perfect liberty given, the masses of the people of England will generally keep within the bounds of reasonable enjoyment. When curbed, or arbitrarily restrained, they are liable to run into riotous excess. Denied the rational indulgence, they are in danger of adopting the opposite extreme. Knowing well the temper and tendency of the people he wished to benefit, Mr. Strutt laid down as a fundamental condition:—

That the Arboretum shall be open to all classes of the public without payment, and subject only to such restrictions and regulations as may be found necessary for the observance of order and decorum, on every Sunday; and also at least one other day in every week, from sunrise to sunset; except that it shall never be open earlier than six o'clock in the morning, nor later than nine o'clock in the evening, and that it shall be closed between twelve and one o'clock on Sundays.

To secure a perpetual and lively interest in protecting and supporting it, he remarked—

I have purposely omitted any endowment to keep the Arboretum in

THE GREAT WESTERN RAILWAY NEW TERMINUS, AT PADDINGTON.—(SEE NEXT PAGE.)

order; as I know, by experience, that I should best provide for its future preservation by intrusting it to those who will enjoy and profit by it, and who will take an interest in its permanence.

The wisdom of the following paragraph deserves the highest commendation, more especially when we remember that such opinions were, even only fourteen years ago, entertained by a very limited number of men of influence:—

It has often been made a reproach to our country, that, in England works of art, and exhibitions for instruction or amusement, cannot, without danger of injury, be thrown open to the public. If any ground for such a reproof still remains, I am convinced that it can be removed only by greater liberality in admitting the people to such establishments. By thus teaching them that they are themselves the parties most deeply interested in their preservation, and that it must be the interest of the public to protect that which is meant for the public's advantage. If we wish to obtain the affection and regard of others, we must man-fest kindness and regard towards them; if we seek to win them from debasing pursuits, and gratifying pleasures, we can only succeed by opening to them some new sources of rational enjoyment. It is under this conviction that I dedicate these Gardens to the public, and will only add that as the sun has shone brightly on me through life, it would be ungrateful in me not to employ a portion of the fortune which I possess in promoting the welfare of those amongst whom I live, and by whose industry I have been aided in its acquisition.

Unlike the Queen, whose good fortune as regards the weather is proverbial, the anniversary of the opening of the Derby Arboretum has ever been attended with drenching rain; and if showers have not fallen for weeks, the weatherwise will declare they are sure to come then. The present anniversary has been no exception to the rule. The sun fell heavily, but it failed in drowning the ardour or quenching the enthusiasm of the people. They went for pleasure and resolved to have it.

NEW STATION OF THE GREAT WESTERN RAILWAY, AT PADDINGTON.

THE Station of this fine railway, as originally constructed, was intended as a temporary, rather than a permanent one, without any attempt at ornamentation. At the same time it was resolved by the Board of Management that, hereafter, a Station should be erected more in accordance with the magnificent railway itself, and this resolution has been carried out in a manner in every way worthy of its object, in the above Station, which was opened for business last month. A certain critic of the day has asserted that railway buildings are scarcely worthy of the genius of architecture being employed upon them (or words to that effect); and in the present Station, though without the fear of the above dictum, the constructors have met the question by producing a design, which realises one of the first conditions of fitness, that it should at once convey correct ideas of the purpose for which it has been erected, in this instance, as a Railway Station. It is the joint work of Mr. Brunel and Mr. M. D Wyatt: the former having arranged the general plan, and the engineering and business portion; the latter the architectural details in every department. The principle adopted by them, was to avoid any recurrence to existing styles, and to make the experiment of designing everything in accordance with the structural purpose, or nature of the materials employed—iron and glass.

The Station, it will be seen by the following details, which we quote from the *Builder*, is very extensive.

The roof covering over the platforms, varying from thirty to forty feet in width. The departments for directing and managing the affairs of the company are carried on in the upper portion of the building; and those in connection with the traffic to and from the station in the lower part.

The space occupied by the platforms and lines of railway under the curved roofing is 700 feet long, and 240 feet wide; and the platforms four in all are 4 and ten lines of railway. The two platforms on the departure side of the station are respectively 27 feet and 24 feet 6 inches wide; and the other two, on the arrival side, are 21 feet and 47 feet. The latter is of stone. The roof over these spans is carried in the line of three longitudinal openings, with two transepts, each 50 feet wide, at one-third and two-thirds of the length. The lengths of the openings are each 700 feet, and of the respective widths of 70 feet, 103 feet 6 inches, and 68 feet.

The roofing contains 189 wrought-iron ribs, or arches, of an elliptical form, and arranged in rows of three each, parallel to one another, with twelve diagonal ribs at the transepts. The rise or height to the under side of the ribs in the central opening is 54 feet 7 inches from the line of rails from the springing it is 33 feet 9 inches. The height in the side divisions is 46 feet. The ribs against the building are supported by sixty-three cast-iron pilasters, and sixty-three columns, and in connection of the roofing rest on sixty longitudinal wrought-iron girders, each about 30 feet long, and supported by sixty-nine circular columns. The ribs over the central opening are 1 foot 8 inches high, formed of quarter-inch plate with angle-iron at the edges, and weigh 3 tons 3 cwt 6 inches. The ribs over the side openings are 1 foo. 4 inches high, formed in the same manner. The central half of each of the curved roofs is glazed, and the other portion is covered with corrugated galvanised iron.

The execution of the design was superintended by Mr. Brunel, principally through one of his chief assistants, Mr. Charles Gainsford. The work was done by Messrs. FOX, Henderson, and Co.

ATTEMPT AT ABDUCTION AT TIPPERARY.—An attempt at abduction, which fortunately failed in its object, was made, at half past two o'clock last Tuesday, by Mr. John Carden, a large landed proprietor in Clonmel, assisted by six or seven ruffians, supposed to be some of his tenantry. It appears that the Hon. Mrs. Gough, accompanied by her sister, Miss Adrianbah, Miss E. Bradshaw, and another lady, who is on a visit at Mrs. Gough's, proceeded to attend Divine Service, at Rathronan Church, a short distance from their residence, Rathronan House; and, on their return at half past two o'clock, they were met by Mr. Carden and his associates, armed with knives, bludgeons, &c., who stopped the car, cut the reins and traces, and desired the driver not to stir or they would kill him. For refusing to comply with their order, he was severely beaten, as were also two of Mr. Gough's men, who came to the rescue. In the meantime Mr. Carden succeeded in dragging Miss E. Arbuthnot out of the car, but was prevented by her sister and the other lady from doing her any injury. The alarm having reached the house, and the servants being seen approaching, the discomfited Tipperary and his set to fled, as one of his men held a carriage with four or five saddle-horses close by, leaving his hat, cane, and a portion of his coat, in the hands of the victors. Shortly after the occurrence the steward to Captain Gough, hearing of the circumstance, set off in chase after Mr. Carden, and, after a desperate race of twenty miles, at the end of which one of Mr. Carden's horses dropped dead, they laid hold of him at Fanny Bridge, and lodged him in Cashel Bridewell, along with four of his accomplices, at last by whom he attempted to carry off his heiress, with a fortune of £50,000.

PARRATT'S TUBULAR LIFE-RAFT.—The Committee of the House of Commons on Emigrant Ships have, in their report, recommended that the above life-raft is carried in all emigrant ships. This invention consists of India-rubber tubes, enclosed in canvass cases and netting, so arranged and united to compose a raft to form, when extended, a most serviceable raft—capable of conveying from fifty to one hundred, or even more, persons with safety through a surf or heavy sea, in case of shipwreck.

THE AMERICAN SQUADRON ON THE AFRICAN COAST.—The *Baltimore Sun* mentions that the Committee on Foreign Affairs at Washington has advised the withdrawal of the American squadron on the African coast. This squadron is considered of no use, and the cost in bringing it home is supposed to be the necessity of increasing the disposal naval means in the event of a rupture with Spain.

SIR JOHN BOWRING'S ADVICE TO MERCHANTS.—Sir John Bowring has addressed a general letter, through the Consuls, to the British merchants at each of the Chinese ports, urging them to caution in the present very uncertain state of our relations with Russia. This warning is a very proper one, as there seems to be no restriction of business; and we can imagine nothing easier than the capture or destruction of a large amount of British property in these seas before the Russian fleet is swept out of them.

THE FRENCH BAR AND THE MOUSTACHE.—A young advocate having on Friday presented himself, with moustachios, at the Court of Correctional Police, Paris, the President, at the conclusion of the case in which he had to plead, alluded to the fact, and recommended him, the next time he had to plead, to appear without them, and in that manner to conform to the established usage of the Paris bar.

The payments to creditors in the Irish Encumbered Estates Court, out of the proceeds of sales now very large; and several English and Scotch mortgagees have been paid the full amount of their encumbrances. The largest payment made last week was £40,000 to Lord Dunfermline, the amount of a charge upon the estates of the Earl of Portarlington.

A new building material is coming into use at New York—steatite or soap-stone. Though so soft that it can be cut with a chisel, planed, bored, sawed, or turned in a lathe, yet it resists pressure very well, especially when combined with hornblende or serpentine. In beauty it often equals marble, with even a greater variety of appearance.

NATIONAL SPORTS.

NEWMARKET JULY MEETING.—TUESDAY.

Handicap Plate of 70 sovs.—St. Faith 1. Ch. f. by John o'Gaunt, 2. July Stakes—The Bonnie Moorn, 1. Redemption, 2.

WEDNESDAY

Handicap Plate of £70.—Cheddar, 1. Folly o'the Day, 2.
Sweepstakes of 10 sovs each.—Thrasuly, 1. Cadique, 2.
Sweepstakes of 10 sovs.—Farmer's Boy, 1. Census, 2.
Town Plate of £50.—Epaminondas, 1. Tenby, 2.

THURSDAY

Chesterfield Stakes.—Boarding School Miss filly, 1. Daffodil, 2.
Handicap Plate.—Miss Charlotte, 1. Firebrand, 2.
Sweepstakes.—Nicotine, 1. Testy, 2.
£50 Plate.—Dagobert, 1. Leybourne, 2.

WORCESTER SUMMER MEETING.—TUESDAY.

Wiley Count Handican.—Patience, 1. Betty Pockets, 2.
Worcester Stakes.—Knight of Ellerdale, 1. Little Davie, 2.
Trial Stakes—Domino, 1. Patience, 2.
Two-year-old Stakes.—Bessie, 1. Helena, 2
Selling Stakes were won by Vestige, beating two others.

WEDNESDAY.

Innkeepers' Stakes did not fill.
Flying Stakes.—Beeswing, 1. Batter, 2.
Madresfield Stakes. Questionable, 1. Myr le, 2.
Handicap Plate.—Titterstone, 1. Hazlenut, 2.
Ladies' Plate.—Economy, 1. Lady-in-Waiting, 2
Sweepstakes.—Welsh nurse, 1. Le Juif, 2
Bentinck Benevolent Fund Stakes.—Whalebone, 1. Battery, 2

LANCASTER RACES.—THURSDAY.

Trial Plate—Domino, 1. Helena, 2.
Lancaster Cup.—Blenheim, 1. Lancashire Lass, 2.
Hamilton Plate.—The Swell, 1.
Grand Stand Stakes.—Royal George, 1.

DERBY BETTING AT NEWMARKET.

TUESDAY CUP.—4 to 1 a. cy Derby (ex), 20 to 1 agst Dr. O'Toole (ex.)

RACES TO COME.—The sport for next week will be found, on Tuesday and Wednesday, at Mansfield; on Wednesday, Tamworth, and Friday, at Liverpool: and at Abingdon and Ipswich, on Thursday and Friday—the great event of the week being, of course, the Liverpool July Meeting.

THE ATTENDANCE OF WITNESSES.—On Saturday the bill amended by the Lords was issued, to compel the attendance of witnesses in the United Kingdom from Ireland to England, and vice versâ. The parties need not attend unless they have their expenses defrayed in coming and returning from the place where they reside.

NOTHING seems yet definitely settled as to the visit of the French Emperor and Empress to this month. Count Cowley, Marshal de Castellane, the Lord Steward of the Emperor, and Baron d'Haussville, Inspector of the Imperial Palaces, arrived at Bayonne on the 28th ult., and at once proceeded thereby to prepare the apartments for their Majesties. Nothing has, however, been decided as it is by no means an easy matter to procure a convenient habitation at Biarritz, away from dust and noise.

DURING a thunderstorm which visited Paris last Friday, two persons were killed by the electric fluid, and several were struck to the ground, but without being seriously injured. The lightning entered several houses and in one set some curtains on fire. The most curious phenomenon was the glass-like sinking-in-lamp without breaking the glass, turning the cock of the lamp, and set ing fire to the gas.

ROYAL COLLEGE OF PHYSICIANS.—The annual Harveian Oration was delivered in the theatre of the College on Saturday last, by Dr. Alderson, Pres. R.C.P., before a large assembly of Fellows and distinguished company. (We shall engrave this very interesting commemoration (the first of the kind) next week).

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The tone of the Consols Market throughout the week has been very flat—quite so, in some measure, from the falling-off in the Revenue for the past quarter, and the apprehensions entertained in several quarters that the strange weather has done serious injury to the crops. The fall in prices has not exceeded one half per cent; but it is evident that there have been more sales than purchases. The imports of the precious metals continue large—about £500,000 having come to hand, chiefly from New York: and, judging from the steady increase in our export trade, and the large business doing in manufactured goods both in America and Australia, its apparent that we shall shortly be on the eve of, apparently, a most abundant harvest. The shipments this week have been only about £60,000, 'll be returned to the Bank of England to show an increase in the stock of gold of nearly £400,000: this would make it over £14,000,000.

On Monday, business was very restricted in the Stock Exchange Bank Stock was from 214 to 215. Reduced, 93¼ and Consols for Account, 93¼. Consols for Account, 93¼ to 93⅜; Consols for Account, 93⅜ to 93⅝; the New Three-and-a-Quarter per Cents, 103¼; Ltd., Ar. ... Issue, 18¾ to 18⅞; Ditto, 1853 4; Exchequer Bills, 76 to 78 pm; Ditto, Bonds to 1859, 1 pm. The material changes took place in prices on Tuesday. Bank Stock was 214 to 216; the Three per Cents Reduced marked 93⅝ to 93¾; the New Three and a Quarter per Cents, 103⅜ ⅝; and Consols for Account, 93⅝ to 93¾. Stock for the Account, was 937. Exchequer Bills, 1s. dis. to 1s. prem.; Ditto Bonds, ¼ prem. On Wednesday the Three per Cents Reduced were 93⅝ to ¾; the New Three-and-a-Quarter per cents, 93⅜ to 94; and Consols for Account, 93⅝ ¾; Long Annuities 1860, were done at 11 1-16th ⅛; Ditto, 1885, ⅜; India Bonds were 2s. prem.; Exchequer Bills, par to 3s. prem; Ditto Bonds, ¼ ⅜ prem. The market, on Thursday, was very heavy. Consols were 93 to 93⅜ for special transfer, and 93⅛ to ¼ for the Account; the New Three-and-a-Quarter per Cents realised 93⅜ to ⅝; and the Three per Cents Reduced 93 to 93⅛; India Stock was 222 ex div; South Sea Ditto, 134; Exchequer Bills, 1s. dis to 2s. prem; India Bonds, par.

All Foreign Bonds have sold rather heavily, and in most transactions the quotations have tended downwards. The following are leading prices:—Mexican Five Cents, 25¾; Peruvian Four-and-a-Half per Cents, 63; Ditto Three per Cents, 52¾; Russian Five per Cents, 100; Ditto Four-and-a-Half per Cents, 81 ex div.; Spanish Three per Cents, 37¼ ex div.; Ditto, New Deferred, 15¾ ex div.; Dutch Two-and-a Half per Cents 53¼ ex div.; Ditto, Four per Cents, 91¾; Brazilian Five per Cents, Sm⁹), 100; Ditto, New Four-and-a-Half per Cents, 93; Danish Three per Cents 73¾; Portuguese Four per Cents, 43¾ ex div.

It is stated that a new Turkish loan, the interest on which is to be guaranteed by England and France, will be shortly announced for £5,000,000. The Peruvian Government has the willingness to increase the sinking fund, on condition that the bondholders withdraw their present opposition to the introduction of the new bonds into the market. The new Mexican loan of £3,000,000 is to be issued at 55, payable in paper money, and the interest to be paid in silver.

Joint-Stock Bank Shares have been steady as to price, but the business doing in them has been unusually small. The following are the quotations:—Australasia, 43½; Bank of London, 43¾; Bank of North American, 63¾; English, Scottish, and Australian Chartered, 9¾; London Joint Stock, 27¼; South Australia, 43 ex div.; Union of Australia, 74¾; and Union of London, 27. Miscellaneous Securities have realised the following quotations:—Australian Agricultural, 47¾; Canada Six per Cent Bonds, 107¾ ex div.; Crystal Palace, 6⅞; North British Australasian, 2¾; Peel River Land and Mineral, 4⅝; Scottish Australian Investment, 2¾; Victoria Docks, New, 7¾. Canal Shares have continued firm. Ashton and Oldham, 154; Coventry, 215; Derby, 63; Grand Junction, 68; Loughborough, 87½; Meath, 12½; Oxford, 115; Regent's, 16; Rochdale, 68; Stafford and Worcester, 407; Stourbridge, 285; Worcester and Birmingham, 32. Water-works Shares have commanded full quotations. Grand Junction, 73½; Ditto, New, 93; Kent, 80; Lambeth, 97; Southwark and Vauxhall, 89¾; West Middlesex, 101; Ditto, New, 113. In Gas-light and Coke Companies very little doing. Brighton, 51; Equitable, 91¾; Imperial, 86¾; Phœnix, 27¾; United General, 19¾; Westminster Chartered, 36.

Hansprefixed-bridge Shares have marked 12; Waterloo, 6; Ditto, Old Annuities, 2; Westminster, 3¾.

Last month's return of the note circulation of the joint-stock banks in England and Wales shows a falling off of £281,875 compared with the previous month. The decrease, compared with the corresponding period in 1853, is £716,124. These banks are below their fixed issues £1,149,973.

The following Price Tables for the month ending the 8th of June are very favourable. Compared with the corresponding period last year, the declared value of our exportations shows an increase of £409,457. The quantities of exports during the first five months of the present year, has been £88,725,962, against £95,093,824 in the same period of 1853—showing an increase of £631,538. Compared with 1852, the increase is £7,845,966. Money, for commercial purposes, has been rather tight; but an increased supply may now be anticipated.

For Railway Shares there has been very little demand. In the general quotations no material change can be noticed. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 24¾; Bristol and Exeter, 99; Caledonian, 69¾; East Anglian, 18; Eastern Counties, 13¾; Eastern Union, A Stock, 4½; Ditto, B Stock, 7⅞; East Lancashire, 95; Edinburgh, Perth, and Dundee, 74; Great Northern, 98½; Ditto, A Stock, 74; Great Western, 78¾; Lancashire and Yorkshire, 88½; London and Brighton, 106¾; London and North Western, 104¾; Manchester Sheffield, and Lincolnshire, 21¾; Midland, 66¾. Norfolk, 84½; North Staffordshire, 8¾; Shrewsbury and Birmingham, 65; South-Eastern, 64¾; Vale of Neath, 19½; York, Newcastle, and Berwick, 74½; Ditto, Extension 13½; York and North Midland, 55.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 97; Hull and Selby, 164; Midland Bradford, 95; Northern and Eastern, 87½

PREFERENCE SHARES. Aberdeen, 94; Edinburgh, Perth, and Dundee, 84; Great Western, Four-and-a-Half per Cent, 99¾; Manchester, Sheffield, and Lincolnshire, £6. 4½; Oxford, Worcester, and Wolverhampton, 110; York and North Midland, Half and S. Purchase.

FOREIGN.—East Indian, 92¼; Ditto, Extension, 1¾; Great Indian Peninsula, 5¾; Ditto, New Five per Cent, 1; Grand Trunk of Canada, 8¾; Hamilton and Toronto, 20¾; Madras, 13¾; Northern of France, 34¾; Paris and Strasbourg, 81¼; West Flanders, 2¾.

Mining Shares have continued dull. On Thursday Agua Fria were done at £; St. John del Rey, 29 ex div.; Pontgibaud Silver Lead, 16¾; and Wheal Jewell Iron, 2¾.

Friday Afternoon.

The Consol Market has ruled inactive to-day, yet prices have been steady. The Three per Cents are 93¾ ⅞; the Three per Cents Reduced, 93¾; and the New Three-and-a-Quarter per Cents, 93¾. All Foreign Bonds and Railway Shares are dull.

THE MARKETS.

CORN EXCHANGE (Friday).—There has been a decided increase in the arrivals of English wheat, and to-day's market was heavy, and the trade dull and drooping; fresh parcels of foreign wheat were in short supply, and the demand was extensive, and prices advanced full 1s per qr. Barley was in moderate request at last week's prices. Oats and beans were in short supply, and fully maintained their value. Imports of foreign wheat have been moderate, and of all descriptions we have a dull inquiry, at Monday's currency. In flour no change has taken place. The show of oats was liberally good. About an average business has been transacted in most kinds of malting. Monday's decline. Beans and peas were held at late rates. The flour trade was dull. The top price of ... was per 280 lbs. The imports are nearly 200 sacks, chiefly from ...

ARRIVALS.—English (Imperial Measure):—1691 malt, 2310; oats, 870; flour, 1960. Irish: ... qrs. oats, 1100 do. meal. Foreign:—... qrs. wheat, 1000 barley, 1000 oats, 1000 flour, 4100 sacks.

... Wheat, 4s to 4s 6d; ditto, white, 4s 6d to 4s 8d; rye, 3s to 3s 2d; grinding barley, 2s to 2s 2d; distilling ditto, 2s 4d to 2s 6d; Norfolk and Suffolk ditto, 2s 6d to 2s 8d; malting ditto, 3s to 3s 2d; chevalier ditto, 3s 2d to 3s 4d; brewers' ditto, 3s 4d to 3s 6d; Lincoln and Yorkshire ditto, 3s 4d to 3s 6d; Scotch ditto, 3s 4d to 3s 6d; Lincolnshire and East Kent oats, 2s 8d to 3s; potato ditto, 2s 8d to 3s; Youghal and Cork, 2s 8d to 3s; Sligo ditto, 2s 8d to 3s; Limerick ditto, 2s 8d to 3s; beans, 4s to 4s 2d; peas, 4s to 4s 2d; ... 4s 6d to 5s; ditto, white, 5s to 5s; bollers, 5s to 5s; pigeon ditto, 5s to 5s; Egyptian ditto, 3s 6d to 3s 8d; Stockton and Yorkshire, 3s to 3s 2d; per 280 lb. American, 37s to 40s per barrel.

Seeds.—The general demand is in a sluggish state, at last week's currency.

Linseed, English, sowing, 74s. to 76s.; mixed, sowing, 64s. to 66s.; Baltic, 58s. to 60s.; Mediterranean and Odessa, 56s. to 58s.; brownseed, 48s. to 44s. per quarter. Coriander, 16s. to 18s. per cwt. Rapeseed, English, new, 19l. to 19l. 10s.; foreign, 18l. to 18l. 10s. Canary, 40s. to 44s.; and extra fine, 46s. to 48s. per bushel. Kapeseed realised £17 to £18 per last of 10 qrs. Hempseed, 32s. to 34s. per qr. Tares, 4s. to 4s. 6d. per bushel. Trefoil, 20s. to 24s. per cwt. Carraway, 46s. to 50s. per quarter. English clover seed, white, 70s. to 80s.; red, 50s. to 60s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 8½d. to 10½d. of household, 9½d. to 10½d. per 4 lbs. loaf.

Imperial Weekly Average.—Wheat, ... qrs.; barley, 37s. 2d.; oats, 23s. 8d.; rye, 30s. 9d.; beans, 40s. 6d.; peas, 42s. 3d.

The Six Weeks Average.—Wheat, ... qrs.; barley, 37s. 1d.; oats, 23s. 8d.; rye, 30s. 9d.; beans, 40s. 6d.; peas, 42s. 1d.

The ... by no means ex... ; yet prices are not sup...

... Loss have further receded 6d. per sack. Brown ... low to good yellow, 33s. to 37s.; fine 37s. 6d. to 38s.; low to mid brown Marinos 37s. to 38s.; good to fine, 39s. to 39s. per cwt. Refined ... have also tended rards at 43s. to 46s. per cwt. The total clearances to the 1st inst. were 3,016,999 cwt., against 3,719,527 cwt.

Coffee.—Good ordinary Ceylon has sold a trifle better, at from 44s. 6d. to 45s. per cwt. Most other kinds command full prices.

Rice.—The business in this corn trade has produced extreme dulness in our market. Prices have, however, fully supported.

Provisions.—We have only a moderate ... for Irish butter, yet the quotations are nearly the same as on Monday last. Fine foreign and Irish qualities are 2s. per cwt. lower. The bacon trade is dull, at late rates. In pork more inquiry, without change in the value. Other kinds of provisions are dull at our quotations.

Potatoes.—The demand is rather active, at higher rates. Y. P. C., on the spot, is quoted at ... and forward ... 80s. to ... New Yorks, ...

Coals.—... is steady, at 47s. 6d.; Hetwell, 20s. 9d. to 37s.; Hartley, ... 6d.; Tanfield Moor, ... 6d.; Pelaw, ... 6d.; Stewart, ... 6d.; Wylam, ... 6d.; Tees, ... 6d.; Hartlepool, ... 6d.; Stanley, ... 6d.; Eden

THE MAIL STEAM SHIP for AUSTRALIA, AUGUST 4, 1854. The magnificent Screw Steam-ship OLYMPUS, 1800 tons, Capt. J. GODDALL, another of the fine fleet belonging to the Screw Steam Shipping Company, will be despatched with her Majesty's Mails for ADELAIDE, PORT PHILIP, and SYDNEY, on the 4th AUGUST next. This fine vessel has maintained her high reputation for rapid sailing and punctuality, having made a short ship on the Argo, which has made the quickest voyage to and from Australia up to this time. The Calcutta has been specially engaged by Messrs. Mann and Rose, and Messrs. Gillanders, and, from her superior accommodation and steamer qualities, it may be fairly assumed that she will make the run to Australia in early days. Rates of Passage from Thirty to One Hundred Guineas. For will be followed, on the 4th of October, by the Ormonde, 2,500 tons.—Full particulars as to freight and passages money, at the Company's Offices, 37, Cannon-street, City.

CONSECRATION of the NEW DISTRICT CHURCH of ST. JOHN, LOWESTOFT. The Church will be CONSECRATED by the Lord BISHOP of NORWICH, on SATURDAY, the 15th of JULY, 1854, by the Right Rev. the Lord BISHOP of WINCHESTER, who has also kindly undertaken to preach. The Morning Service will commence at 11 o'clock. The Clergy are requested to assemble in their Robes of Office, at the Vicarage, at 10 o'clock, and proceed to the Church. Collections will be made at the door of the Church, in aid of the Building Fund, which, however, is very far from being sufficient to meet the liabilities already incurred. Subscriptions will be thankfully received by the Treasurer, Mr. Thomas Brooke, Lowestoft, Bankers, Messrs. Gurneys, Birkbeck, and Barclay, London; Messrs. Gurneys and Co., Norwich; and Messrs. Tomlinson and Co., Yarmouth.

THE LONDON and WESTMINSTER BANK ISSUES CIRCULAR NOTES of £10 each for Travellers on Continent. They are payable at every important place in Europe, and thus enable the traveller to carry his funds without inconvenience. No expense is incurred; and, when cashed, no charge is made for commission. They may be obtained at the Bank, Lothbury, or its branches, 1, St. James's-square; 214, High Holborn; 3, Wellington-street, Strand; 67, High-street, Whitechapel; and 4, Stratford-place, Oxford-street.

J. W. GILBART, General Manager.

MADAME GRISI.

FROM A PAINTING BY MUCCHY

THE above Portrait of this celebrated lady, painted in 1849, is a striking likeness of what she is at the present time. If there is any change in her appearance during the interval, it is for the better; for it is evident to every one that, at this moment, she has more beauty, more strength, more vigour, both of mind and body, than she has had for years. This may be accounted for by her recent period of comparative repose. But, be the cause what it may, the effect is apparent; and, much as we may applaud her wisdom in retiring from the stage before her powers and her charms have been touched by the hand of decay, we cannot but regret that so bright a vision is so soon to vanish for ever.

Giulietta Grisi is eight-and-thirty. She was born in Milan, in the year 1816, of a family, several members of which have been distinguished in music. Grassini, the greatest lyrical tragedian of her day, was her aunt; and her elder sister, Giuditta Grisi, a singer of considerable eminence, was prima donna at our Italian Opera, the year preceding the arrival of her more celebrated sister. Carlotta Grisi, who carried dancing, as a beautiful art—as the "poetry of motion"—to a higher pitch than has been done by any one else in our time, was of the same family. Giulietta Grisi, like most musical artists, showed her talents at an early age, and attracted the notice of Marliani, a composer of reputation, and the author of some successful, but now forgo By him her powers were cultivated by a careful education Bellini brought out his "Norma," at La Scala, in her native was selected to be the original *Adalgisa*, with Pasta, the original *Norma*. Her subsequent career in Italy, though successful, was short. She was brought by her instructor, Marliani, to Paris, in 1834, at the age of eighteen, where she appeared at the Théâtre Italien; and in the same year she made her début at the King's Theatre (now her Majesty's Theatre) in London. Many of our musical readers must still have this début fresh in their memory, for it created a sensation unequalled by any thing of the kind since the first appearance of Catalani. She performed the part of *Elvira* in the "Puritani," and her youthful beauty, her lovely voice, her pure Italian style, her innocent and graceful gaiety, so strongly contrasted with almost tragic intensity of feeling, threw the public into a state of enchantment, the greater from being unlooked for, as we had scarcely heard the name of Giulietta Grisi till she actually appeared before us. She has lately relinquished the part of *Elvira* to younger performers; but it will always be commemorated as perhaps the most captivating and affecting of all her personations.

Since then, Grisi's artistic life has been quite uneventful. Her subsequent career, of twenty years' duration, and unbesquered by reverse or vicissitude, has been brilliant beyond parallel. And, what is most interesting to us, the most triumphant portion of it has passed under our own eyes. London principally, and Paris next, have been the scenes of her success; but, while she has absented herself for whole seasons from Paris, she has not, during all these twenty years been absent a single season from London. She has never re-appeared on the stage in her own country; and her only change of scene, from London and Paris, has been an occasional visit to St. Petersburg. In 1847 she was the most important member of the magnificent company who left Her Majesty's Theatre on the establishment of the Royal Italian Opera at Covent-garden, and has ever since been the chief pillar of that house.

It is now understood that Grisi has resolved to terminate her artistic career by a visit to the United States, and then to retire to a beautiful estate in the neighbourhood of Florence, the well-earned fruit of her labours. We observe with pleasure the announcement which has just appeared, that, in consequence of her departure for the United States having been deferred till the end of the present month, she is to give eight additional "farewell performances" over and above the twelve originally announced. This, at least, will prolong the melancholy pleasure of looking on her and listening to her for the last time.

During these farewell performances she is appearing in a round of her most favourite parts. The principal characters in which she has already appeared have been *Norma*, *Lucrezia Borgia*, *Valentina* (in the "Huguenots") and *Norina*, (in "Don Pasquale."). Among the operas in which she is yet to appear are "La Favorita," "Anna Bolena," and "La Gazza Ladra." This series displays the wide range as well as the greatness of her powers. To her the sock has always been as becoming as the buskin: she has always been a Thalia as well as a Melpomene—an impersonation of the comic as well as of the tragic muse. It is to be regretted, perhaps, that at present she is giving tragedy so much the predominance, especially when we think of the effect she has produced by the sparkling gaiety of her *Norina;* but we can easily understand her reason to be that the grand and lofty vein is the most suitable to one who is past the bloom and lightness of youth. It is needless to repeat what is said everyday by those who see her, that her *Norma* and her *Lucrezia Borgia* are more powerful, more terrible, than ever; and that, in Meyerbeer's hapless heroine, she never was more tender, more passionate, and never filled the spectators with deeper sympathy. Among the characters yet forthcoming we are glad to observe *Ninetta*, the humble heroine of "The Maid and the Magpie;" a part which, interesting and affecting as

SCENE FROM THE NEW DRAMA OF "THE COURIER OF LYONS," AT THE PRINCESS' THEATRE.

It is, yet will give us another specimen of Grisi's light and simple comedy. In Grisi's acting, as well as singing, a great charm has always been found in her unaffected straightforward simplicity. She seizes the plain, broad features of every character; enters into it earnestly and paints it truly, without the slightest parade of art. Such, also, is the case with her singing No one has ever been more successful in making melody what it ought to be on the stage, not an exhibition, but a language for the expression of thought and feeling. And this very excellence has been supposed a defect—her avoidance of the display of art has been deemed a want of art. Many singers have excelled her in the florid or ornate style; they have wrapped up their airs in bright and delicate tissues, which indicate consummate skill, and delight the connoisseur. This Grisi has not done, and perhaps could not do; her full and mellow voice is not fitted for such feats of agility. She sings as she acts, simply and earnestly; but never betrays any deficiency of power, either in executing the notes of the composer, or in giving them such embellishments as are requisite for beauty and expression

Such, in our humble way of thinking, is Giulietta Grisi, as an artist. As a woman she does honour to her art. She is simple-hearted, kind, generous, and remarkable for her active beneficence, especially to the suffering members of her own profession; in which respects, we may add, she resembles some of the most illustrious of her sisterhood. Traits of her compassionate disposition might be mentioned, as pleasing as those recorded of Catalani and Malibran.

(The accompanying Portrait—an admirable likeness—is from a miniature painted by Meuret. The enclosing characteristic *bordure*, emblematic of Madame Grisi's lyric triumphs, has been designed for our Journal, by T. R. Macquoid.)

THE COURIER OF LYONS.

THE melodrama has its necessary laws by which it is distinguished from the poetic play. The latter, revelling in an opulence of language, sometimes prefers narration to presentment. But, with melodrama, that has no peculiar diction, and insists on rapidity of action, everything is produced in the foreground, and placed before the sight. The Grecian drama, we know, transacted all such business as might be revolting behind the scenes; and only permitted before them what could be confided to gorgeous dialogue—sometimes elaborately descriptive, sometimes eloquently passionate. This is a privilege not accorded to melodrama. Its action must be *seen*; if a murder is to be done, it must be done on the stage. Here we have, too, the source of its spectacular attractions. The action, addressing the sight, frequently calls for scenic accessories, and

THE SPEECH-DAY AT HARROW SCHOOL.—VISIT OF PRINCE ALBERT AND THE PRINCE OF WALES.—(SEE NEXT PAGE.)

in this way sometimes gives scope and opportunity for extraordinary pictorial decoration. Advantage is naturally taken of such accident; nor is the value of the subject to be decorated much regarded; it is enough that the opportunity is created. Melodrama addresses the eye, and it attains an appropriate grace if it addresses it beautifully. It is here that the scene-painter comes in for his due share of praise.

In the scene which we this week present from the new melodrama, much credit is due to Mr. W. Gordon, or Mr. F. Lloyds, for the stage arrangements and adjuncts, and general pictorial effect. We are admitted to inspect the inside as well as the outside of old *Lesurgues'* inn, and thus a double action, when necessary, can be exhibited, or a rapid change of scene from one place to another accomplished with ease. In the higher drama, this would suggest a want of art; and yet the French, some modern tragedies, "Valerie," for instance, have affected it as an additional means of effect. Such a work, of course, ought to do much more, and aim at besides more proper to its purpose and its nature. With melodrama, however, these extrinsic contrivances are allowable. In the scene before us, the persons of the play pass in and out of the inn, and we need not be informed of what they do in either place; we see it readily, preceding as in vision, and are spared words. At the moment chosen by our artist, old *Lesurgues* has returned, after a brief absence from his inn, and sees *Dubosc*, whom, from his extraordinary personal resemblance, he mistakes for his wife, actually engaged in the murder. He interferes, and receives from the villain a shot in the shoulder while in the act of recognising his features. In this recognition is, indeed, the final effect of the scene. It may be remarked that the character of the father is acted by Mr. Graham, one of our most careful and precise of actors, whose steady progress in his profession entitles him to high commendation. His inter retation of the situation was, in all respects, effective, without exaggeration.

In such situations the horror that naturally belongs to them is lost in the pictorial effect. It is as a picture, rather than as an action, that the scene is witnessed. All is brought as rapidly as possible into complete composition; and no sooner is this accomplished than the curtain falls.

HARROW SCHOOL.—THE SPEECH DAY.

THURSDAY, June 29, having been appointed for the annual delivery of the Speeches at Harrow School, his Royal Highness Prince Albert and the Prince of Wales honoured the institution with their presence.

The inhabitants of the village made a great display on the occasion. The arch on entering the village from the London road was adorned with evergreens, the regal crown, ciphers, &c., and in compliment to the Prince of Wales, the triple feathers. Many of the houses of the tradespeople were decorated with national flags, and the Harrow Printing office displayed in bold and tasteful type the Royal mottoes, "Treu und Fest," and "Ich Dien." At the School the gateway was hung with laurel, and the arms of the benevolent founder, as usual, formed a conspicuous object. The English ensigns floated on either side, and were supported by the national flags of France and America. From eleven o'clock until one—the hour at which the Speeches were announced to commence—the distinguished visitors arrived in rapid succession—Lord John Russell and family, the Earl of Harrowby, and Viscount Palmerston (who came on horseback), being among the early visitors.

His Royal Highness Prince Albert, accompanied by the Prince of Wales and suite, including the Marquis of Abercorn, Lord Wateryard, Captain the Hon. Dudley De Ros, and Mr. Gibbs, arrived precisely at half-past one o'clock, and at once proceeded to the School-room, where their Royal Highnesses were received by the Rev. Dr. Vaughan (the Head Master), and the Under Masters, the Rev. W. Oxenham, Mr. G. F. Harris, the Rev. B. H. H. Drury, the Rev. J. Simpkinson, the Rev. R. Waddell, the Rev. E. H. Bradley, the Rev. T. H. Steel, the Rev. S. A. Pears, the Rev. F. Kendall, the Rev. G. C. Swayne, Mr. J. F. Macmillier, Mr. W. J. Bull, &c.

Mr. W. Winkley (the vestry clerk) and Mr. Page, with wands, preceded the Head Master and the Royal visitors to the Speech Room, where a brilliant and highly distinguished company had congregated.

The Prince Consort and the Prince of Wales sat on the right of the Rev. Dr. Vaughan, who, as Head Master, presided in front of the rostrum, and was supported by the Archbishop of Canterbury (Visitor), the Marquis of Abercorn, the Rev. W. Cunningham, and Mr. Sotheron, M.P. (Governors).

The Speeches then commenced. The subjoined is the programme:—

Hope, sen.	Latin Alcaics.	
	Natura ipsa de Immortalitate Animorum tacita judicat.	
Locock	From Latin Reader	Proofs.

Sergeant — English Poem.
The Catacombs of Rome

The speeches were admirably delivered, and proved highly creditable both to the masters and students. The clever speech of Messrs. Earle and Ashley, from Molière's comedy, was warmly applauded by the company. Messrs. Sergeant and Digby were also most encouragingly commended, as *Mr. Sneer* and *Mr. Puff*. The list this year was longer than ordinary, owing to the new competition for Mr. Berish Bothfield's medal and Viscount Ebrington's prize, for proficiency in modern languages. It was the first year these honours had been open to competition. They were carried off by the Hon. Mr. Ashley (son of the Earl of Shaftesbury) and Mr. Winter. The Head Master having complimented the several successful scholars, awarded prizes in the usual manner; and this portion of the day's proceedings terminated. Prince Albert and the Prince of Wales, it is almost needless to remark, were loudly cheered on descending from the speech-room; and Viscount Palmerston (an old Harrovian) obtained a large share of public applause. Lord J. Russell, the Bishop of St. David's, the American Minister, the Provost of Eton, the Dean of St. Paul's, the Bishop of Oxford, the Archbishop of Canterbury, Mr. Sotheron, and Viscount Ebrington were cordially greeted as they retired.

His Royal Highness Prince Albert, and the Prince of Wales, and the suite of the company then repaired to the Rev. Dr. Vaughan's residence, where a déjeûner was laid out in the spacious dining-hall.

The Royal party left at twenty minutes to four o'clock, for London.

An elegant and massive silver salver has just been presented to the Rev. George Townsend Warner, M.A., of Trinity College, Cambridge, on his resignation of the Assistant Mastership of Harrow School, by the pupils boarding in his house at the time of his leaving. The salver bears an inscription expressive of the esteem and confidence existing between Mr. Warner and his pupils. The plate is the design and workmanship of Messrs. Lambert and Rawlings, Coventry-street.

OUR COTTON FACTORIES.—The total number of factories in the United Kingdom is 1932, containing 21,000,000 of spindles, 249,837 power looms; employing 141,601 males, and 189,423 females. But this is not the total number, as it appears by the "Official Returns" that Messrs. J. Bright Brothers, who have two factories in Rochdale, and one near Manchester, refused to make the returns called for; and Messrs. Smith, of Belper, in Derbyshire, also refused to make the returns.—*Braithwaite Poole's Statistics of Commerce.*

CHESS.

TO CORRESPONDENTS.

STOCKLANDS.—They were quite correct, but not received in time for notice last week.
S. F. D., Lisbon.—You are wrong respecting Problem No. 531. Look at it once more.
S. F. H.—It shall be examined.
C. C. S., Ely.—I get the "Chess-player's Handbook," published by Bohn. 2. Your Solution is incorrect.
ROYAL DUBLIN.—We will look the Game over, but the information you require had better be sought from the *Chess-players' Chronicle*—we have no space to give elementary instruction in the game.
ONE DEEPLY INTERESTED, &c.—1. A Selection from the recently-discovered Games of the famous Calabrese will, we hope, appear in our columns. 2. We cannot say.
H. O., Queensown, N. B.—Your No. 2 makes a neat Enigma, and she'l appear shortly.
J. W. B., Trinity Co'l. O.—Below our standard.
CHARLES ROE.—I have not had time to look at what you say.
SOLUTIONS OF PROBLEM No. 531, by Derevon, Q.R., Sunderland, Cear, Omar, F. H. S., B. D. Mantz, W. W. T., A. E., Jack of Shrewsbury, F. F., E. H., of Norwich, are correct.
SOLUTIONS OF ENIGMA by Derevon, F. F., Derevon, Phiz, D. D., Jack of Shrewsbury, S. F., Delta, Omicron, are correct. All others are wrong.

WHITE.

White to play first, and mate in five moves.

SOME OBSERVATIONS ON THE ORIGIN OF CHESS.
BY DR. DUNCAN FORBES.

CHAPTER I.—INTRODUCTORY.

IT was acutely observed by the late Ensign O'Doherty in his ninety-eighth maxim, that "the reason why many important matters remain in obscurity and doubt is, that nobody has adopted the proper means for having them cleared up." This judicious remark on the part of the philosophic standard-bearer, appears to me to be most applicable to the present state of our information respecting the origin and progress of the game of Chess. Modern writers on the subject, with a few distinguished exceptions, merely repeat the puerile legends handed down to us by Damen, Ruy Lopez, and Salvio—men, who, undoubtedly, were first-rate chess-players, but rather deficient in antiquarian accuracy. Since the times of those early luminaries of the South, two of our most eminent Orientalists, Dr. Hyde and Sir William Jones, both of Oxford, arrived at the conclusion that Chess was invented in India, and thence introduced into Persia and other Asiatic regions during the sixth century of our era. This view has been adopted, solely on its own intrinsic merits, by Mr. Francis Deane and Sir Frederick Madden in their more recent communications on the subject to the "Transactions of the Archæological Society."

In the following papers, it is my intention to follow up to the utmost the path already pointed out by the Orientalists of Oxford. I hap'en to possess sources of information, which to my predecessors were either altogether unknown, or inaccessible. I think I can clearly show that the game originated in India, and nowhere else. I do not mean to say that I can intimate anything like the precise time when, or spot where, the invention took place; nor is this at all requisite for the investigation. In fact, many of our noblest discoveries, even of comparatively recent date, are still involved in obscurity. We know not to a certainty who it was that first applied the magnetic needle, so as to serve as a guide to the adventurous mariner across the pathless surface of the mighty deep. The art of printing, which unravels types—an art by which the secrets of the remote past are transmitted to the remotest future—is little more than four centuries old, yet are we still in a state of uncertainty as to the precise time *when*, the place *where*, and the person *by whom*, this glorious discovery was made. It is much, however, we may safely say, that the art had its birth near the banks of the Rhine, either at Strasbourg or Mainz, or still lower down; for be it known that Haarlem also has respectable claims to the invention. On the other hand, if any one were to assert, as in the case of Chess, that printing originated among the Scythian shepherds or the Arabs of the Desert, the idea would at once be scouted by all people of sense. In the former case, we have ample historical evidence to rely on; in the latter, we should have none; and, therefore, we should reject the whole as mere conjecture.

Precisely, in like manner, we have ample historical evidence, native and foreign, that Chess was invented in India, but not a single reliable scrap, tending to prove that it was either invented or known in any other country previously. It may be asked, then how came so many writers to ascribe the invention to so many other countries? The answer is simple: it resulted from sheer error of judgment—and the causes of such error are worth noticing. In the first place, the Indian game had a rude and primitive game played on a board by means of pebbles called *pettela* or *pessoi*, which bore as much resemblance to Chess as the ancient ship *Argo* did to the finest of our steam-vessels now ploughing the same dark-blue waters beyond the Symplegades as far as the shores of Colchis. Then the Romans had two distinct games, something like our backgammon and draughts, derived, as is believed, from the Grecian, and generally termed *Ludus Latrunculorum*, or "the Game of Chalcedrum;" but nothing approaching Chess. Well, during the middle ages whilst Latin was the written language of Europe, when a writer had occasion to mention the game of Chess, we find that to save himself trouble, he used the unwarrantable term "Ludus Latrunculorum," taking it for granted that it was identical with the game of the Romans. By-and-by, when the modern languages of Europe became a little formed, and translations from the Classics began to be made for the use of the general reader, for "Ludus Latrunculorum" was generally translated as "the game of Chess;" in order to give the thing the greater dignity. Now, we here see one error re-act upon another, so as to multiply itself beyond any assignable limit, the refutation of which would be mere waste of time.

In the second place, a host of writers of respectable abilities have, each according to his own preconceived notions (founded absolutely on *nothing*), attributed the paternity of Chess to various nations and tribes who, themselves, never laid any claim to the honour. For example—one man writes a quarto to prove that Chess was invented by the Scythian shepherds—nobody knows how long ago; and, in the course of time, communicated to Palamedes, at the siege of Troy, who quietly took to himself the honour of the invention. All this is sheer hallucination. Who were the Scythian shepherds? Why, they were the fathers of the savage Cossacks. Had he taken the Chaldean shepherds instead, there would be a little less absurdity in the matter: but the Scythian shepherds! this is too ridiculous. Another writer insists that Chess was invented either at Babylon or Palmyra—I forget which—because the Queen has such great power in the game. This is the greatest dreamer of the whole host. He evidently did not know that the word *Queen* was never heard of in Oriental Chess; and even if she were, the piece so called by us was one of the weakest on the board, even in Europe, till the beginning of the sixteenth century. Another will have it that Chess was invented by the Arabs, and that our word "*check*" is derived from the Arab Sheikh. Now we know well that the Arabs, never, to this day, used the word Sheikh at all. They received the game from the Persians, and have retained the original word Shah. Finally, another writer of higher qualifications than all the rest put together, tries hard to confer the honour on the Persians, an honour to which not one single author of that nation lays claim. I pass over the pretensions of the Irish, the Welsh, and the Jews, as "matters well worthy of confirmation," to use an expression borrowed from our Transatlantic cousins.

It is evident, then, that these two causes, to which others might be added, have tended to render the history of Chess an inextricable labyrinth. An ordinary writer intending to give a popular lecture on the subject, is compelled, as it were, to give the following stereotype paragraph, or something like it, in commencing his discourse:—"Some historians refer the invention of Chess to the philosopher Xerxes; others to the Grecian Princes Palamedes; some to the brothers Lydo and Tyrrhene; and others, again, to the Egyptians. The Chinese, the Hindoos, the Persians, the Arabians, the Irish, the Welsh, the Arracanians, the Jews, the Scythians; and, finally, their fair Majesties Semiramis and Zenobia also prefer their claims to be considered as the originators of Chess. But the testimonies of writers in general prove nothing except the remote antiquity of the game."

Now if, instead of echoing such views, writers were to reflect for a moment on what they are saying, or rather repeating, they would soon find theirs is far from being the proper course "for having the matter cleared up," supposing charitably that such is their object. A brief inquiry, we think, would convince them that the "philosopher Xerxes," and the "brothers Lydo and Tyrrhene," were, like Mrs. Harris, persons of questionable existence, the mere myth of some jovial mediæval monk, probably conjured up under such inspiration as might have emitted from a good cup of wine. They would have found, moreover, that there is not a particle of evidence that either the Grecian Prince Palamedes, or any other Grecian Prince or peasant of ancient times, knew anything of Chess; and that neither the Persians nor the Egyptians ever did possess or prefer any claim whatever to the invention. Finally, they would find, on a very small degree of reflection, that the presumed antiquity of Chess among the Irish, the Welsh, the Jews, the Cherokees, and all other such enlightened and civilised communities, is nothing else than "the baseless fabric of a vision."

If we calmly inquire into facts, setting aside all foolish prejudices and partialities, we shall find that the history of Chess divides itself into three distinct periods. The first is that of the ancient Hindi game, called Chaturanga, in which the moves and powers of all the pieces employed (with one exception) were the same as they are at this day. The origin of this game is lost in the fathomless abyss of remote antiquity; but there can be no question, as we shall afterwards show, that it was invented in India. The board consisted then, as it does now, of sixty-four squares. The game was played by four persons, each having a King, a Rook, a Knight, and, lastly, a Bishop (then represented by a Ship), together with four Pawns. The two opposite players were allied against the other two, and the moves were decided by the turn of an oblong die having four faces marked with the numbers two, three, four, and five; the two and five being opposites, as were the three and four. The very simplicity and imperfection of this game furnish the best possible proofs of its originality. Its duration may have been three to four thousand years before the sixth century of our era.

The second, or mediæval period, in the history of Chess, occupies one thousand years—that is, from the sixth to the sixteenth century of our era. At the commencement of this period the first improvement made in the game is very decided. The board and the powers of the pieces still remain the same, but the two allied forces have each united on one side of the board, whilst the adversaries have done the same on the other. One of the allied Kings then becomes a subordinate piece, called *Farzin*, or *Wazir*, the counsellor or minister—with only half the power that he had previously possessed as an independent sovereign. At the same time the Bishop is transferred to the corner of the board, and the Rook to the place before occupied by the Farzin. Finally, the game is continued and the whole game is reduced to a pure trial of mental power and intellectual skill.

The third, or modern period, commences with the sixteenth century. The change made here consists, first, in extending the power of the Bishop, allowing him to command the whole diagonal, instead of every third square, as formerly; secondly, in giving the Queen the enormous power of the Rook and Bishop combined, as at present; thirdly, in allowing the Pawns to advance one or two squares at pleasure, at their first move. To these improvements we may add that of casting the King and Rook, recording to the Italian method or that of the Anglo-French school. It is just probable that our go-lessen has likewise undergone some unimportant modifications—such, for instance, as giving the Queen the additional power of the Knight. This, like our modern improvements in the implements of war, will tend to shorten the duration of a game, "a consummation," sometimes, "most devoutly to be wished."

It is now time to finish this rambling chapter. In my next it will be my task to describe, more minutely than has yet been done in any modern language, the primary ancient Hindu game of Chaturanga, a game which has been hitherto entirely misunderstood, owing to the inaccurate account of it given in the early volumes of the "Asiatic Researches." Be it known, at the same time, that I do not herein claim unto myself any extraordinary degree of merit. The task is as much easier for me at the present day, than it must have been to Sir William Jones in his time. He had, most probably, a single and imperfect manuscript to work upon; whereas I have the choice of two printed texts, besides sundry other minor advantages which it were needless to enumerate.

GREAT CHESS GATHERING IN LIVERPOOL.
(From a Correspondent.)

The annual meeting of the Northern and Midland Chess Association was held at the Exhibition Rooms, on the 23rd and 24th ult.

Among the gentlemen assembled, in addition to the chess members of the Liverpool Club, which now musters saw my strong, we noticed Sir John Bisshop, Bart., one of the best players in Ireland; Mr. Staunton, M. De Rivière, the Hon. Secretary of the York Chess Circle; Herr Lowenthal, the well-known Hungarian player; the Rev. S. Burnell, of Wyresdale Rectory; Mr. Morecroft, and Mr. Harden, of Rock Ferry; and Messrs. Kipping, Ralls, and Aylmer, the leading amateurs of Manchester. At an early hour on the opening day, the majority of the chess-boards were in requisition, and many interesting contests took place.

At three o'clock on the following day the President, having been voted to the chair, Mr. Staunton proceeded to lay before the meeting the alterations in the laws of Chess, which, with Messrs. Von Jaenisch, Von Heydebrand, and himself considered to be desirable.

Mr. Staunton commenced the subject by observing that, at the last meeting of the Association, he had taken occasion to animadvert upon the defects and inconsistencies of our present code of laws, and to enlarge upon the members who did him the honour to listen to his views, the expediency of adopting some means to obtain a more complete revision of the laws, so that they might be applicable to all probable cases of dispute. A committee was formed for the purpose, and the result was a little pamphlet containing many important alterations and additions. In obedience to that resolution, I immediately put myself in communication with those gentlemen, and the result was a little pamphlet could desire. I carried with me a copy of the proposed alterations, which, however imperfect they might be, I had the honour to present to the notice of every Chess amateur, they devoted themselves to the task they had been solicited to undertake; and I have now the pleasure to present to the meeting the fruits of their labours. In the pages of Mr. Von Jaenisch, we have been favoured by a treatise on the laws, more comprehensive and evincing more research than any production of the kind yet written; and on the part of Mr. Von Heydebrand, I have before me a series of valuable notes, for which I hope of fully equal practical utility." After entering at some length into the subject of his own contribution to the tripartite work, which, he trusted, would appear in conjunction with the pamphlet of his colleagues in a single volume during the present year, Mr. S. went on to say:—"Before proceeding to give you an abstract of the corrections which we propose to submit to the judgment of the Chess community, it is but right to say, my colleagues and myself to assure you that these alterations have not been ventured without long consideration and a great amount of hard reading. Our endeavour has been to acquire an accurate knowledge of the ancient moves and powers of the Chessmen. To ascertain as nearly as the accessible works of the period would permit, when that remarkable change in the moves, &c., took place, which gave us the present game; and, finally, to trace from the earliest works extant on the game in Europe, the different laws or rules which have been established from time to time by various countries to regulate it. Fortunately, in the attainment of this indispensable information many works now obsolete have been carefully consulted and a vast amount of time and mental labour, not always with commensurate results, has been expended. After ridding the ancient works to which attention had been paid, Mr. Staunton confessed his own labours with respect to them had been considerably lightened by a discovery, as remarkable as it was interesting, of several invaluable MSS. on Chess, which had enabled him to settle many long-controverted points, and correct many erroneous impressions regarding the old laws and usages of the game. (An account of these new-found treasures was given in our last.) Mr. S. proceeded to enumerate those clauses in the received laws to which he own, and the attention of his colleagues had been especially directed, and at the conclusion of the lecture, a vote of thanks having been accorded him by acclamation, the majority of guests adjourned to an entertainment provided for them at the Adelphi Hotel. The next meeting of the Association, it was understood, would be at Leamington.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

At a dinner given by the Emperor of Austria to his newly-appointed Generals, Hess, Schlick, Clam, &c., his Majesty proposed one single toast—"The health of his Majesty the Sultan."

The Senate of Hamburg has approved of the decision of the Chamber of Commerce of that city, that the last Russian loan shall not be officially quoted at the Bourse.

His Excellency Sir Henry Bulwer, K.C.B., who has been *en congé* in this country during the last twelve months, arrived at the British Embassy at Florence on the 28th ult.

The arrivals of specie last week were again very heavy, amounting to about £850,000, of which one half was silver.

The sign of the "Omer Pacha" has been adopted for a large beershop, about to be opened near the Infantry Barracks, Windsor.

The railway calls for July amount to £1,190,163, nearly all of which is on account of foreign companies, in which the interest of English capitalists is not known.

The insurance losses on American shipping during the last nine months have averaged more than one million of dollars per month.

The Liverpool magistrates are trying a new plan to stop robberies at night: they have ordered the police to look up all known thieves found abroad after sunset.

Government are about to appoint teachers of practical science in Ireland, in connection with the "Museum of Industry and Geology," under the superintendence of Sir Robert Kane. They are to lecture in the Irish towns.

A petition is lying in New York has presented a memorial to the Senate, claiming to have invented a battering-ram of such force, that thirteen of them are capable of defending the coast from Passamaquoddy to the Rio Grande.

It is rumoured that the young King of Portugal is not unlikely to contract a matrimonial alliance with the Princess Charlotte of Saxe-Coburg.

The Dutch Government has ordered that in the tobacco trade have agreed that business shall cease from four o'clock on Saturdays

The Legislature of Connecticut has refused to grant to the Legislature of New York the right to tax the deposits of the inhabitants of this latter city.

The total value of currency of the Australian colonies, which in January was £4,000,000, is now £6,000,000, over the correspondence of the first month in the year the fire months of 1854 June, the amount of gold exported is more than in 185

Up to the present time 8000 letters for the English fleet have passed through the

The Emperor, with the most profound secrecy intended for [illegible] between Spezzia, Venice, and Sardinia, arrived [illegible] until the 10th inst. The Greeks cannot be too ready to take out the above mentioned [illegible] The Times has been superstitious.

A great number of vipers have appeared this year in the department of the Côte-du-Nord. The Prefect has issued an order, according to which [illegible] for every one destroyed.

The Court of Monmouth gaol has been apprehended on a charge of [illegible] The amount of his defalcations is said to be £[illegible]

Within the last month, seventeen suicides have been committed in Berlin, many of them owing to gambling losses.

It was stated in the House of Lords last week, on the authority of Lord Coke, that a marriage had once been set aside because the husband had upon one occasion stood godfather to the second cousin of his wife.

A letter from Cairo states that the harvest this year has been very abundant, and that Egypt will be able, if necessary, to supply Europe with a considerable quantity of corn.

At the present moment there are seven cardinal's hats at the disposal of the Pope, and an eighth is likely to be soon vacant by the death, which is daily expected, of the Archbishop of Lucca.

The total emigration from Liverpool during last quarter was 84,230; compared with 74,641 in the corresponding quarter of last year, this shows an increase in the number of emigrants of 9589.

A letter from Rome says:—"The Abbé Lucien Bonaparte has lately received the tonsure from the hands of Cardinal Fransoni, Prefect of the Propaganda

The fruit crop in France this year is said to be one of the most abundant ever seen; the peach, almond, pear, and apple-trees are literally bending under the weight of the fruit. Cherries have been an absolute drug; and enormous quantities of them have been bought for the Paris and London markets.

Lord Maidstone has issued an address to the electors of Cambridge, offering himself as a candidate for the representation of their borough as soon as the writs are issued.

The Orange River Free State has adopted the Dutch language as the current language in its Courts of Justice and Public offices.

The consumption of tea has increased since the reduction of the duty. In the five months ended the 5th June, the quantity entered for home consumption was 26,985,578 lbs.; against 23,845,319 lbs last year.

The *Cape Town Mail* states that orders have been received to send home immediately, the whole of the military forces stationed in that colony, with the exception of the Cape Corps and one regiment to remain in Cape Town.

The number of visitors to Hampton Court Palace in 1833 was 186,734; being about half the number who appeared in 1851; but, as compared with the number in 1852, there is an increase of 7000.

The value of last year's potato crop far exceeded the highest amount ever before raised off a similar aggregate of soil in Ireland.

The receipts of Prussian joint-stock railways for the month of January amounted to 5,320,000 thalers, showing an increase of 1,100,000 over the same period of last year.

The Convocation of the Prelates and Clergy of the Province of Canterbury has been prorogued by the Archbishop of Canterbury to the 20th of July.

The Governor of Gibraltar reports to the Duke of Newcastle that the temporary quarantine, imposed by him in February last, has been raised.

The cholera is making serious ravages in several parts of France, and especially in the departments of the Aube and the Upper Marne. There are no less than fifteen departments affected by the disease

The number of wrecks in June amounted to 96 ships. The records for April and May contained a list of 206 ships, making a total of 246 losses in the three months.

The *New York Courier and Inquirer*, speaking of the Fishery Treaty, says it is not unlikely that the southern senators will insist upon a clause for the restitution of fugitive slaves now in Canada, and the practical extension of the Fugitive Slave Act to those provinces.

The misunderstanding which occurred between the Earl of Erroll and his Colonel has been amicably arranged to the satisfaction of all parties, and Lord Erroll has returned to his duties.

For many years past there has not been so hopeful a prospect of an abundant harvest in Ireland as that which is now fast ripening to maturity.

The town of Bradford is threatened with great scarcity of water in the event of July proving a dry month. The main source of supply is only yielding about one-third of the quantity usually required by the town.

Last week the Civil Tribunal in Paris was called upon to pronounce interdiction, on the ground of insanity, in the case of Paul de Saint-Pierre, son of the author of "Paul and Virginia."

The section of the railway from Antwerp to Rotterdam, having been completed from Antwerp to Breda, was opened last week with great ceremony. A grand dinner was given on the occasion.

Upwards of 7000 persons pressed into the palace at Berlin, on the 27th and 28th ult., to gaze at the marriage *trousseau* of Princess Louise, whose nuptials were to be celebrated on the following day.

The *Messaggero*, of Modena, announces that M. Gabbi, the judge who was stabbed in the streets of Parma some days ago, is out of danger.

Mr. Fagan, a Sheffield cutler, having forwarded a case of razors for Sir Charles Napier, as a mark of admiration, the Admiral, in acknowledging the receipt of the Sheffield blades, says, "It was not before they were wanted, as mine are none of the best."

The scarcity of seamen in the merchant service is severely felt in New York, many vessels having been detained. Secretary Dobbin proposes to increase the wages of seamen in the navy, in order to increase the number of enlistments.

The Earl of Albemarle, in a letter to the farmers of Norfolk, advises them to grow flax rather than wheat, as they will, thereby, realise double the profit which grain yields.

The *Univers* publishes a long letter from the Roman Catholic Archbishop of Lima, expressing his sympathy for the Archbishop of Fribourg and enclosing an order for 500*l.* towards the subscription "in aid of the persecuted church of Fribourg."

There have been four cases of cholera in the *Duke of Wellington*, in the Baltic. Two died in the hospital ship, one recovered on board the *Duke*, and one is recovering in the hospital ship.

THE ROYAL BOTANIC SOCIETY

THE last Exhibition of the Society took place in the Gardens in the Regent's Park, on Wednesday; when the show of flowers and fruit was remarkably fine.

Among the objects of attraction was a Fern Case, exhibited by Mrs. Ruscombe Wollen, of Chepstow Villas, Bayswater. The interior of the

NEW FERN CASE.

case represents a small serpentine rivulet, on which mosses and a collection of the choicest foreign ferns luxuriate in an atmosphere abundantly supplied with moisture. One of the most interesting features in this design, is that it affords, without trouble or difficulty, a pleasing pursuit for a sitting-room, especially in the winter months, when all other vegetation is in a dormant state; since this case exhibits the seasons of spring and summer. Mrs. Wollen has also designed an aquavivarium, containing marine plants, similar to those in the Gardens of the Zoological Society.

At the Exhibition on Wednesday the fruit was magnificent. The peaches, grapes, strawberries, and pines were predominant in beauty and growth. The display of cut roses was fine, and nothing could exceed the brilliant and diversified perfection of the pelargoniums. The orchids were truly splendid. This last exhibition would have proved one of the most attractive of the season, but for the heavy rain. The gardens are in excellent order, and exquisite taste is shown in their arrangement.

Among the visitors were the Duchess of St Albans, the Duchess of Sutherland, the Marchioness of Ailesbury, Ladies Enfield, C. Stirling, De Tabley, Rokeby, C. Cavendish, Clark, M'Farlane, Goldsmid, Petters, Buchan, C. Barrington, Marshall, Grattan, Clayton, Esq., Brook, Campbell, Bayley, and Evans; Lord Rokeby, Lord Sondes, the Bishop of Durham, Archdeacon Jones, Baron Goldsmid, Miss B. Coutts; the Spanish, Greek, and Brazilian Ambassadors; and the Indian Princes Gholam Mahomed Dhuleep Sing, Runjeet Sing, &c. The gold medals, which were numerous, were awarded to Mr. May, Mr. Williams, Mr. Speed, Mr. Woolly, Mr. Green, Messrs. Fraser, Mr. Fros', Messrs. Robinson, Mr. Hume, Mr. Gilham, Mr. Gedney, Mrs. Ellis, Mr. Holder, and Mr. Ewen The usual military bands were in attendance.

NAVAL AND MILITARY INTELLIGENCE.

FORMATION OF A CHANNEL SQUADRON

A formidable Channel squadron is ordered to be formed immediately, and placed under the command of Rear-Admiral Berkeley, C.B., Senior Sea Lord of the Admiralty. The ships to compose it are to assemble as soon as possible at Spithead. We have enough ships at home to form a most powerful squadron, and the only difficulty in the way will be that of manning them. This difficulty will, however, we believe, be got over. There has been a little relaxation of late in the endeavour to enrol men; but, if energetic measures be again adopted, we anticipate they will succeed. The following ships are available for the Channel squadron:—

	Guns.	Stationed at.		Guns.	Stationed at
Royal Albert, screw	121	Sheerness	Wellesley ..	74	Chatham
Waterloo ..	120	Sheerness	Indefatigable ..	60	Devonport
Royal William ..	120	Devonport	Curacoa, screw ..	36	Forbsmouth
St. Vincent ..	104	Portsmouth	Dauntless, screw	22	Portsmouth
Impregnable ..	104	Plymouth	Terpsichore, screw	24	Portsmouth
Algiers, screw ..	91	Spithead	Hornet, screw ..	16	Woolwich
Hannibal, screw	91	Sheerness	Harpy, screw ..	16	Portsmouth
Powerful ..	84	Portsmouth	Conway ..	26	Cork.
Calcutta ..	81	Sheerness	Swallow, screw ..	8	Portsmouth
Formidable ..	84	Sheerness	Sphynx, paddle..	6	Portsmouth
Colossus, screw ..	80	Portsmouth			

The above are exclusive of small craft, and, with the exception of the *Curacoa*, *Harrier*, and *Swallow* are all in commission.

The 2nd Royal North British Dragoons, or Scots Greys, left Nottingham on Monday. The occasion of their departure excited great enthusiasm in the town, and it was calculated that 30,000 persons were present. On reaching the centre of the market-square they were met by a civic procession from the Exchange, headed by Mr Reckless, the Mayor, and Mr. Mundella, the Sheriff, and which consisted of the magistrates, Town Council, Militia and Yeomanry officers, many of the principal townsmen, and by all the corporate servants in their state and livery, preceding the mace and other insignia. They halted a few minutes, for refreshment, which immediately afterward, marched for Liverpool to embark on board the *Simla*.

THE Royal mail-steamer *Orinoco* is being prepared for service to take out a regiment of infantry, and two Peninsular and Oriental steam ships *Hindostan* and *Simla*, and the General Screw Steamship, per Company's steamer *Prince*, have also been chartered by Government. The whole of these steamers are to be got ready without delay. Thirteen vans, one full of musket ball cartridges (we may also say sixty tons), and other military stores, have arrived at Southampton for shipment to the East. The destination of the troops to be conveyed by the *Orinoco*, *Himalaya*, *Prince*, and *Simla*, is not known, but it is understood the steamers are to proceed direct to Constantinople, there to receive orders as to their final destination, which is supposed to be a port in the Crimea, for the purpose of co-operating with the army and sea forces now in the Black Sea, in a combined attack on Sebastopol.

BOMBARDMENT OF THE FORTIFICATIONS AT [illegible]

(From a Correspondent in the Baltic Fleet.)

On the morning of the 21st ult. (*Odin* being in company), we fell in with the *Hecla*, Captain Hall, off Lodsgar Lighthouse, to the southward of the Aland Isles, and immediately proceeded, in order of battle, through the intricate channels leading to Lemar Sound; pilots having been previously procured by Captain Hall, they being masters of vessels captured by him among the islands, who agreed to pilot the ships in, on the promise of their vessels being restored.

At 1 p.m. beat to quarters, and cleared for action; the men remaining at their guns, ready to clear the woods, if riflemen should be concealed. At 4 45. the ship's company having had supper, they were again called to their quarters. One unfortunate occurrence took place, a man belonging to the *Odin* fell overboard; and, though the ship was going slowly, and every exertion made to save him, they were unsuccessful, and the poor fellow met with a watery grave. At 4 55 the *Hecla*, whilst proceeding through the Narrows, fired the first shot, into a thick jungle, and, shortly after, another, at the same time hoisting the pirate ensign at the main—the pre-concerted signal to commence the engagement. A large round fort on a hill, with two tiers of guns casemated, now appeared in sight, and, in a few minutes more, a second, similar to the first, on a hill on the right, with a long semi-circular battery (also with two tiers of guns casemated) on the water's edge; and also a third round fort, like the others, on an island to the right. The *Hecla* fired a few shot from her long guns, which, at first, fell short; but, as more way was required to close the batteries, she soon threw a shell over the long fort, and the fire now became general with shot and shell, so me of which pitched over, but most fell short of this fort, which now opened fire on us; their shot, however, fell a great distance short of the mark; and we continued to fire away, at a distance of about 2000 yards, passing and re-passing one another, until six, when a small masked battery at the point of the wood to the left opened a smart flanking fire to us as we stood across, and a heavy fire from field-pieces, with horse Artillery, and Minié rifles. We immediately returned the compliment, pouring in a rapid fire of shot and shell, apparently with great effect, as many of the shell burst

directly over the battery; but we soon found we had a rather more formidable enemy to contend with than we at first suspected, many of their shot striking our hull, and rifle bullets falling thick all round us. About this time an unburst shell pitched on the quarter-deck of the *Hecla*, which an officer (Mr. Lucas) standing by, regardless of the danger, picked up and threw overboard, to the admiration of every one. At 7 the fire from the guns in the wood ceased, but we continued ours, as the riflemen were not yet silenced. At 7 30 ceased firing into the wood, as we were now out of range of their rifles, and recommenced the cannonade at the long fort, and the round one on the left; both of them returning it at intervals, but nearly all falling short. At 9 anchored by signal, in order of battle—*Hecla* on the right, with springs on the cables, within range, and kept up a steady and well-directed fire at the long fort. 9.45, *Hecla* made signal, "Well done, *Valorous*;" our shell falling well and rapidly. At the same time a fire burst out behind the centre of the long fort, which was immediately followed by three hearty British cheers, and the firing continued with renewed exertions, using Moorsom's shell. The main-deck guns, being out of range, were not used; but the 10 inch told with great effect, and soon a second fire burst out, to the right of the first, and spread rapidly. At 11.15 all the fuzes being expended, we kept up the fire with round shot; those from the batteries on the hill falling over us, some of them evidently red hot from the noise they made when falling into the water. 12.50, ceased firing by signal, and gave three hearty cheers, the fires increasing rapidly. We then weighed, steamed through the narrows, and anchored about ten miles from the scene of action. We are now at Grisselham. *Hecla* and *Odin* have returned to the fleet. The loss on board our ships was very slight: *Hecla*, one wounded (slightly); *Valorous*, none; *Odin*, two wounded (not seriously).

Captain Hall received on the 22nd an order to join Admiral Napier, from which circumstance some decisive operation was supposed to be contemplated.

A telegraphic despatch from Copenhagen, of July 4, states that "Bomarsund was again bombarded on the 26th and 27th June. The fortifications were half destroyed. The Russians were transporting the stores from Bomarsund to Gelaby.

2nd ROUND FORT. LONG FORT, 80 GUNS. "ODIN." 3rd ROUND FORT.

THE CITY OF ABO.

ABO is the most ancient city in Finland; its history being coeval with the reign of Eric the Saint, that is from about 1150 to 1160, the period at which Christianity was first introduced into that wild region. The Castle is as ancient as the town, and can boast of having more than once arrested the onward march of the Russian armies. It is now used as a prison, and is garrisoned by half a battalion of infantry. The Cathedral of Abo is highly interesting, not on account of its external appearance, which is coarse and heavy, but partly for its interior, which is of three epochs, and, still more, on account of its having been the cradle of Christianity in Finland; this being the spot where the first Episcopal chair was instituted; for many centuries the first families in Finland were buried here also, and the chapels are filled with their monuments.

The streets of Abo have a desolate appearance, on account of their great width and the low style of building, which has prevailed ever since the great fire of 1827, which destroyed two thirds of the old city. Previous to that catastrophe it had a flourishing port and a well-attended University. Its trade is now very much reduced; and its University, founded by Gustavus Adolphus, in 1630, has been removed to Helsingfors, the Russian capital of Finland. Although the city does not contain more than 14,000 inhabitants, it covers as much ground as Dresden, owing to the wideness of the streets, and the scattered style of building. Abo is celebrated in history as the spot on which the relations between Russia and Sweden were settled in 1745. Here too, Alexander and Bernadotte concluded that treaty which arrayed Sweden against France, and placed the father of the present Swedish King in the anomalous position of fighting against his own countrymen.

A recent letter from Stockholm states that no vessel of any kind or nation is allowed to enter Abo, the authorities being afraid of the arrival of intelligence injurious to Russian interests. Not less than thirty one gun-boats are now ready and manned in Abo harbour.

ABO, FROM AN ORIGINAL SKETCH

THE WAR ON THE DANUBE.

[ALTHOUGH the news conveyed by the Electric Telegraph renders of comparatively little importance the statement of the main facts from the seat of war, the following letter from our Special Correspondent on the Danube will be found to be full of interest, and to contain details by the aid of which the late telegraphic news becomes more intelligible.]

(*From our Special Correspondent.*)

SCHUMLA, June 4th, 1854.

The siege of Silistria is prosecuted by the Russians with a vigour proportioned to their desire of getting the place in their possession previous to the concentration of the Allies. I passed through Varna on the 2nd inst., and found the Light Division of the British force encamped outside the lines, and expecting to move at a moment's notice. Although the French were only represented by a corps of Sappers and Miners, quarters had been prepared for several thousand men; and the words "Armée Française," chalked upon the best houses, had proved the foresight of the commissariat in securing beforehand every available corner. Two piers have been built in an incredibly short space of time; and on the day of my arrival the horses and men of Lord Cardigan's regiment, the 8th Hussars, were landed. The port was most animated — boats gliding about in such numbers as had never before been seen in the bay, and English soldiers being towed to land alternately by British tars and French or Turkish sailors. The first ships, containing the Canrobert divisions, were entering the harbour as I left for Schumla. On the road to Devna a detachment of Sappers and Miners were making the road fit for artillery, and had nearly completed their task. It may be expected that the Allies will have a force shortly concentrated, ready to relieve Silistria.

Since the last accounts I wrote, the Russians have continued to assault the Arab Tabia, an outwork of considerable extent, against which they are now making regular approaches—and experience having proved to them the impossibility of carrying it by assault. On the 2nd of June two mines were exploded by the enemy, who had prepared their storming parties for an assault on the outworks; but the mines were ill laid, and exploded in such a way as to kill and wound several Russians, without destroying any essential part of the fortifications. The Turks, seeing the mishap of the enemy, sallied out and killed several men.

It is to be regretted that, during the course of these proceedings, a most serious loss has been suffered by the Turks. Mussa Pacha, whose house had been a special mark during the whole of the siege, was killed in a passage leading from his room, by the explosion of a shell. Mussa Pacha, who had been frequently remonstrated with on the imprudence of staying in a house which was the mark of the enemy's shells, had obstinately refused to retire from it.

There is good news from the army of Little Wallachia. Skender, who had advanced from Krawna, eight leagues on the road to Slatina, was met by a regiment of Paskiewitsch Hussars, 400 Cossacks, and four field pieces. He had with him a regiment of cavalry, some Irregulars, and no guns. He charged the enemy with tremendous vigour, scattered them, took the four guns and 10 0 prisoners, and left 600 Russians either killed or wounded on the field.

June 14.

The siege of Silistria continues to be the event of the present campaign. In every sense it is a remarkable episode in the war. For upwards of thirty days the Russians have expended their energies in vain attacks against an outwork of the smallest dimensions. The Arab Tabia, against which they made approaches similar to those required by a fortress of the largest size, is a mere redoubt of earth, mounting five guns, and defended by 400 men, who are relieved every forty-eight hours. Such outworks are usually stormed without the necessity of regular approaches; but the Russians have failed in the assaults which they have made; whilst the imperfect method of their advance has caused them to suffer enormous losses. The mines which they have laid have recoiled upon themselves, and the number of lives which they have sacrificed is immense. It is evident, therefore, that, however strong the Russians may be in manœuvring their armies upon the field, their knowledge of regular sieges is by no means perfect. Whatever may be the fate of the Arab Tabia, which I fear cannot much longer hold out, the Russians will still have the main body of the place to carry after they have taken it. I believe there is no record of a redoubt holding out for weeks against an enemy whose parallels are within 150 yards; and one may calculate the time the Russians are likely to take in reducing Silistria by that which they expend in the reduction of the out-works. The Turks have this advantage on their side, that the communications are kept up constantly between Silistria and the country behind it. A vast and high forest covers the ground from Toutracan to the walls, and stretches to a distance of eighteen miles from Schumla. The villages in this forest had been abandoned by the peasantry of all denominations, who, it must be owned, were almost as much afraid of the Bashi-bozouks as of the enemy; but the Commander-in-Chief has advanced his troops gradually, and they are now, for the greater part, *echellonné* on the road to Silistria. Behram Pacha (General Cannon), with a brigade of Chasseurs, was encamped, on the 11th, within four leagues of the besieged town; Sadyk Pacha, with his Cossacks, was at a distance of six leagues; and the divisions of Hassan Pacha, and Ismail Mushir Pacha, are also forward on the road from Schumla. The confidence of the peasantry will revive as the main body of the Turkish force advances, and then there will be no lack of accommodation and food for men and horses. The Russians, however, have taken new measures against Silistria since the advance of the Turks from Schumla, and a few days ago six battalions, making a total of about 4500 men, crossed the Danube at Oltenitza. This, no doubt, is the vanguard of a larger force, which, however, has not as yet closed up the communication between the besieged and the army outside. The gates which the Turks use to enter the town is the Stambul gate, and latterly the Russians had succeeded in placing a gun so as to rake the entrance. It was at no great distance from that place that Mussa Pacha was killed. The Russians have also guns playing upon the ground behind the covered way, which leads to the Arab Tabia. A few days since, Captain Symmons, R.E., Captain Fearon, and Captain Govane, of the Sardinian Staff, went to visit Silistria, and were welcomed at the spot I have just mentioned by a shell, which exploded almost in the midst of them. There was no one wounded in that party, fortunately, though the pieces flew through it; but the shell burst in the centre of a sitting group of Bashi-bozouks, killing three and wounding five others. The Arab Tabia itself is described as a particularly hot place at present, and no one can show the corner of a hat or the glitter of an epaulette without an instant discharge of Minié rifles, and a hail of balls and shells of every kind. The conduct of the besieged has been admirable. The town in its whole extent is under the fire of the enemy; the steeple of one of the mosques has a hole knocked through it by a gun-shot, and still stands erect. The inhabitants have all abandoned their houses, and live under ground, so that little or no damage is done to human life by the volleys of shells which are fired into the place.

A few days since a flag of truce was sent in by the Russians, and the bearer came to complain that the conduct of the Turkish Irregulars was contrary to the rules of civilised warfare. They had been seen parading on the end of their lances the heads of some Russians killed in the various encounters of the last few weeks. The Commander of the Irregulars replied that such was the custom of the corps, and that the Russians were at liberty to do the same to all the Bashi bozouks they might catch. This answer, if it be true, and it was given to me by very good authority, shows what sort of men are these Irregulars. I, for my part, hope that when those celebrated chiefs, Yousouf and Beatson, come to discipline these

SIR EDMUND LYONS, G.C.B., REAR-ADMIRAL OF THE BRITISH FLEET, IN THE BLACK SEA.—FROM A PHOTOGRAPH BY CLAUDET.—(SEE NEXT PAGE)

CIRCASSIAN PRISONERS BROUGHT INTO SCHUMLA.

co[illegible]y will succeed in putting an end to the barbarities which they commit. Youssouf, who has organised French Mussulman Irregulars, and Beatson, who has had much experience with these in the service of England, are not likely to tolerate the exhibition of human heads upon pike staves.

Whilst the Russians crossed at Oltenitza, the Turks were passing the Danube at Rustchuk. They commenced crossing early on the morning of the 11th inst., and are said to have occupied Giurgevo. The first force that crossed before daylight consisted of two battalions of infantry and three or four squadrons of cavalry. The Turkish army, which evacuated Little Wallachia, is now concentrated at Tirnova, ready to act when it may be needed. The French, as yet, have only landed a brigade of the Canrobert division at Varna; but it is asserted that within a week 30,000 men will have arrived. The Cavalry Brigade, under Brigadier Lord Cardigan, is at Devna. It consists at present of the 8th Hussars and 17th Lancers, with a few guns. The Light Division, which left Varna, is encamped at a spot half way between that place and Devna. A man named Spitz, who took the contract for provisions for the Cardigan Brigade was wounded by a Turk at Devna whilst driving some carts, with stores, to the camp. The case is flagrant. The Turks, who witnessed the act refuse, however, to give evidence against the offender, and although the culprit is in confinement, it is difficult to say whether Turkish justice will reach him. Spitz is now laid up in Schumla with his wound, which is a sabre cut across the face.

Since leaving Constantinople I find that Redschid Pacha has at last retired from the Cabinet of the Porte. I should scarcely mention this fact in a letter from Schumla had it not been publicly stated that the retirement of the Prime Minister was temporary, his successor having been only appointed *ad interim*. I have every reason to know, however that Redschid Pacha's retirement is permanent. It remains now to be seen whether his successor will handle the affairs of State with equal ability and judgment. The present condition of Europe is complicated by difficulties of all sorts. The adhesion of Austria to the policy of England and France, albeit extremely favourable to the speedy termination of the war with Russia, has added to the confusion of the situation. So long as it remained doubtful whether Austria would join the other Western Powers or not, [illegible] Turkish sovereignty or suzerainty, like [illegible] Danubian Principalities, and the Herzegovina, had an obvious course to pursue. Their policy was to keep aloof from Russia, because as long as that Power would have involved the possibility of Austrian invasion; and hatred of Austria, which is a chronic sentiment in most of these provinces, kept them within bounds; but now that Austria declares against Russia, their policy is changed, and that very hatred will drive them into sympathising with the Court of St. Petersburg. No idea can be formed in England of the Russo-phobia which exists as present in Servia. The English and French Consuls are no longer welcome at the palace of Prince Alexander; M. Mashin, the Russian Consul, it is true, is no longer present; but M. Simonovitch an equally able agent, has succeeded him, and is permitted by the Servian Government to reside in Gourgoussevatz, the centre of the Principality. The Prince has raised the populations, and called to arms all available men. He has thus an active force of 50,000 men ready to act in favour of Russia. In the midst of this ebullition of feeling, the Turkish Governor, Izzet Pacha, is laid up with dropsy, and no active steps are taken to counteract Russian influence. Of course he is this the good cloud which hangs over the horizon in that part of Europe. Hungary, which has been waiting patiently for the moment when circumstances may render a rising possible, cannot but feel that the Governments of Europe are acting at this moment as if no revolutionary feeling existed there and in the other Austrian dominions It would be a strange sight, indeed, to see a fresh revolution in Austria acting this time in concert with Russian hostility against the Imperial power. It would be remarkable to find the revolutionary element which Russia has done so much to put down, acting at the same moment and in accord with Russia; but these are possibilities—nay, I firmly believe them to be probabilities; and these are questions in which Turkey is now as much involved as the Western Powers. They require at the head of Turkish affairs a firm and clear-sighted statesman.

REAR-ADMIRAL SIR EDMUND LYONS, BART., G.C.B.

THE services of this gallant officer in the capture of Redoubt Kaleh, on the Circassian coast, were briefly noticed in our London News of May 13. We abridge the following interesting account of his services from O'Byrne's "Naval Biography":—

Sir Edmund Lyons was born Nov. 21, 1790; and is the second surviving son of the late John Lyons, Esq., of Antigua, and of St. Austens House, Lymington, Hants; and is the brother of Captain John Lyons, R.N.

This officer entered the Navy in 1801, as First-class Volunteer, on board the *Royal Charlotte* yacht, Sir Harry Burrard Neale. After sharing in much active service on the Mediterranean station, and enacting the part of a Midshipman's part in Sir John Duckworth's expedition to the Dardanelles, where he assisted in demolishing the formidable redoubt on Point Requiles, he returned to England in 1807. Towards the close of the same year, he sailed for the East Indies, in the *Monmouth*, 64; and was there, in June, 1808, three months after he had joined the *Russell*, 74, flag-ship of Rear-Admiral William O'Brien Drury, appointed Acting Lieutenant of the *Caroline*, 36, Captain Henry Hart. In the following August he became attached, in a similar capacity, to the *Barracouta* brig; and to that vessel he was confirmed by commission, dated Nov. 24, 1809. At the celebrated capture, in January, 1810, of the Island of Banda Neirra, Mr. Lyons was among the first to escalade the walls of the Castle of Belgica, an achievement, for boldness in the design and conduct in the execution, rarely paralleled. In December following, on the arrival of Sir Samuel Auchmuty with the news of the conquest at Madras, we find Mr. Lyons immediately appointed Flag-Lieutenant to Rear-Admiral Drury, in the *Minden*, 74 Continuing, on the death of the Commander-in-Chief, to serve in the same ship, under Captain E. W. Hoare, he proceeded, in the spring of 1811, to the coast of Java, there to await the arrival of an expedition fitting out at the different ports of India for the subjugation of the above island. While stationed in the Sunda Strait, Lieut. Lyons' extreme zeal for the service and the gallantry of his nature led him to the performance of a most daring exploit This was nothing less than the storming and capture, on the night of July 30, 1811, with not more than thirty-five men, and with but trifling loss, of the strong fort of Marrack, mounting 54 guns, and garrisoned by 180 soldiers and the crew of two boats. Previous to this latter event, Mr. Lyons had materially assisted Captain George Sayer, of the *Leda* frigate, in reconnoitring and procuring information relative to the force and position of the enemy. During the operations, which were shortly afterwards regularly commenced, he was at first entrusted with the command of a flotilla of five gun-boats recently equipped by Captain Maunsell; and was then allowed to serve in the batteries erected to Fort Cornelis. After the glorious assaults on that strongh ld, Lieut. Lyons's health became so impaired from the exertions he had undergone, that he was under the necessity of invaliding, and he accordingly returned home in the *Caroline*.

Re-appointed to the second promotion commission, Captain Lyons was next, on April 5, 1813, appointed to the command of the *Imaleb*, 10; in which vessel, it appears, he escorted Louis XVIII. and the Allied Sovereigns to England; besides affording a passage to M Pilaure, the bearer of the treaty of Paris. Although advanced to Post-rank June 7, 1814, he was not again employed until 1828; early in which year he obtained command of the *Blonde*, 46, fitting for the Mediterranean. In October following, after having for some time blockaded the port of Navarin, he directed the movements of a naval part of an expedition ordered to co-operate with the French in the siege of Morea Castle, the last hold of the Turks in the Peloponnesus During an arduous service of twelve days and nights, in very unfavourable weather, which preceded its unconditional surrender, he greatly distinguished himself; and, having landed, was almost constantly in the trenches, exposed to a tremendous fire of great guns and musketry. The greatness, indeed, of Captain Lyons's exertions, added to the satisfaction afforded to the French by his cordiality towards them led to his being invested with the insignia of the Order of St. Louis of France, and a Knight Commander of the Order of the Redeemer of Greece.

In the summer of 1829 the *Blonde* conveyed Sir Robert Gordon, our Ambassador, to Constantinople. She was there afterwards the *first British man-of-war that ever entered the Black Sea;* and in January, 1831, she took Sir John Malcolm from Alexandria to Malta. Removing towards the close of the year to the *Madagascar*, 46, Captain Lyons witnessed, in May, 1832, Ibrahim Pasha's bombardment of St. Jean d'Acre; and early in 1833 Captain Lyons attended King Otho and the Bavarian Regency from Trieste to Greece. He paid the *Madagascar* off in 1835, was nominated a K.C.H., and received the honour of Knighthood. His commission of Rear-Admiral of the White is dated January 14, 1850.

Sir Edmund Lyons, who has filled the office of Minister Plenipotentiary at the Court of Athens, was created a Baronet for his civil services, in 1840, and a G.C.B. in 1846. He married, in 1814, Augusta, second daughter of the late Captain Josias Rogers, R.N. By that lady he has issue two sons and two daughters—one married to the Baron Philip de Wurtzburg, the other to the Earl of Arundel and Surrey.

LITERATURE.

LESSONS ON THE PHENOMENA OF INDUSTRIAL LIFE AND THE CONDITIONS OF INDUSTRIAL SUCCESS Edited by the Rev. RICHARD DAWES, M.A., Dean of Hereford, &c. Groombridge and Sons, Paternoster-row

Philanthropists and authors are making great efforts to remove the ignorance of the middle and, whatever may be the future reputation of England in the scale of education—now standing very low—it cannot be denied that her writers, her publishers, and her patriots are doing their best to raise it. The exertions of the latter are incessant, if not always successful, but there is no species of useful book which the true farmer do not combine to produce in profusion. It will not be the fault of these classes if we do not surpass other nations as much in our learning as in our well-regulated political freedom. Amongst the gentlemen who have done much to promote this good end, the Dean of Hereford, by his connection with the school at King's Sombourn, in connection with his other labours of teaching and writing good books, he has now added the service of editing an excellent work by another hand; but, if we do not mistake the latter, the Dean has had little other trouble than to write the preface and send the well-prepared pages to the printer. On the present occasion his merit consists, we believe, in presenting to the world a book admirable in itself, and needing no other recommendation to discriminating readers than its own characteristics, which identify it with the productions of a gentleman equally well known for his educational books and for his personal services to youth in some of our most popular schools. The title of the work will hardly lead the reader to expect an elaborate treatise on political economy; yet such is its real nature. It treats of labour or industry as the source of wealth, of the circumstances which make it productive; such as knowledge, skill, frugality, economy, to provide it with instruments and tools; of capital, property, wages, profit, rent, interchange, value, measures and weights, money, credit, bills, banking, rates of exchange, and industrial progress, strikes and lock-outs, taxation, and all the phenomena usually included, with many not usually included, in the science just mentioned. All these very important subjects are described or discussed in simple, plain, intelligible, and forcible language, which, to a remarkable degree, excites interest, and carries conviction with it. The idea conveyed in the title that the subjects to be treated of are the industrial pursuits of all classes with the conditions of success, awakes a deep interest, in contradistinction to the borrowed and misapplied name of Political Economy—to signify the science of industry and man's material well being; or what Adam Smith called National Wealth which is only calculated to set the reader asleep, or lead him astray. From the usual terms employed in political economy, and from the abstruse topics usually discussed by Economists, or from the abstract manner of discussing them, the reason is clear to perceive that the science really concerns only the daily tools of all the industrious classes, and the consequences of their toils. From all the abstractions of the Economists the writer escapes; and, opening his eyes to the simple facts, that we cannot live without food, shelter, and clothing; that, for enjoyment, we require comforts and luxuries; that we should nearly all perish, were we, by any accident, to [illegible] deprived of all our stores of such things, and by showing that the comfortable existence of individuals and of nations depends on the possession of them, and on the continued reproduction of commodities as they are consumed. If [illegible] of nations depends on wealth, we need not say that the [illegible] is the produce of labour: the most durable of our [illegible] subject to a process of decay; and if we could not be kept without temperate lodges, and food, we must [illegible] of production to the [illegible] we have, and, if we would [illegible] clothing, some of us must continually produce these articles. All these are plain and admitted facts Man must work to live; and industry is successful in proportion as it is skilful, and guided by knowledge Knowledge concerns the future as well as the past [illegible] are abundant harvests in past times, we infer them in future. Foresight and economy are, therefore, portions of the knowledge and skill necessary for industry to be successful. Many cannot labour at all; all cannot labour to produce the same thing; however one is skilful in making cloth, another must be sowing seed or reaping grain. Those who make cloth must have a practical conviction, though it may never be expressed, that others are producing corn; and those who grow corn must know that they can get cloth when they want it, or they would turn their attention from producing corn to making cloth. Hence division of labour; hence confidence, hence credit, hence all the varied, minute, and multifarious occupations, and all the interchanges between individuals in the same and in different countries, which grow up amongst thriving, civilised nations. These are the phenomena, in all their ramifications, of which the author treats; and no subject can be more interesting to us all than the condition on which industry can be successful, individuals and nations be sustained in existence, and advanced to greatness. Though he treats these subjects in a plain manner, and makes no pretensions to scientific display, and still less does not enter into learned and abstruse controversies, yet he throws several beautiful or obscure questions in clear light. The knotty subject of value, for example, which has given occasion to many volumes, he disposes of, by telling us simply that in his book it means "the quantity of other commodities obtainable for money, or for any commodity which is sold" and by always adhering to that definition of the word, whether he speaks of bullion or coined money, or corn or cloth. The great subject of credit which now enters into all our industrial operations, has never been better, if so well, explained, as by this writer; and he shows us, instead of being, as is sometimes supposed, a false and factitious pretence, it is necessary to successful industry; though, like the use of food, it may be abused. We shall, as our only quotation from the work, place before our readers a brief passage on this subject. The reader will see from it how deeply it enters into all transactions, besides running up an account with a tradesman, or negotiating a bill. The author says:—

> Where credit is given and received, dealings are conducted precisely as if money were paid and received with the single exception of passing the money. Values are measured and prices are calculated, and the results are recorded in account. Two parties might have dealings in the way to the extent of many thousand pounds, and their accounts might be liquidated once a quarter, or at the end of each year, by the payment of some small balance in money. Credit may truly be said to be given and received between masters and workmen, the former trusting that the time which they have purchased will be faithfully employed, and the latter trusting that the wages contracted for will be punctually paid. The owners of land and houses give credit to their tenants, when they trust to take care of their property, and to pay the rent stipulated for as it falls due. Carriers receive land and water give and receive credit, for they frequently deliver the merchandize at its destination without receiving on the spot what is due to them for carriage or freight; while, on their side, they have an absolute control for the time over the merchandize committed to their charge. The merchant who orders merchandize from another trusts to him to buy as cheap and as well as possible; still more does he give credit, if he pay for the merchandize before he receive it. And the merchant who makes consignments on sale, without receiving any value at the time on account, gives credit; and where he does receive a partial payment in advance, he both gives and receives credit.
>
> As the use of money has greatly promoted commercial intercourse and industrial enterprise, so the use of credit has promoted them still more. There are two considerations which we must not lose sight of in regard to the use of credit. First, confidence must be felt that the parties who contract engagements are prepared and intend to fulfil them; and, secondly, results must show that the engagements have been fulfilled. Without this confidence, credit, as a means of promoting industrial operations, would not be granted; and wanting the performance of engagements, credit would lead to loss and industrial failure, not to profit and industrial success. The full benefit of the use of credit can only be realized in a state of society where scrupulous exactness in the fulfilment of engagements is universally felt to be a duty, and where there is intelligence enough to appreciate the resources available to meet the engagements contracted.

Another point which the author dwells on in many places, with great force and great success, is the necessity, as a condition of industrial success, to be honest and frugal, as well as skilful; to be punctual, to keep every engagement, and to observe the strictest integrity. He gives trickery no quarter. If he teach individuals how to make money, he teaches them to make it honestly We have never met with a work on political economy in which the moral requisites for success are so continually and emphatically urged. If we have any fault to find with the book, it is that the observations about the rates of exchange—a small part of the business of the merchant and the bill-broker—is disproportionately though not un-necessarily elaborated; and that the author does not carry out fully the principle he more than once announces, that all these phenomena have their origin in man's wants and in the material world to which man is adapted, and are regulated in all their details by the [illegible] with great facts in which they originated. The book [illegible] to the [illegible] good by making that an [illegible] finale, [illegible] by statement, to prevent them from making [illegible] by common, to prevent these engaging in foolish strokes. The author makes no lofty pretensions, and his plain and perspicuous language will in consequence be more effectual in explaining the laws on which depends the industrial success of individuals and of nations The profits arising from the work are to be applied, by the Dean of Hereford and Dr. Lyon Playfair, for the encouragement of education.

---

1. POEMS By B. R. PARKES, [illegible] SONNETS and other Poems. By the Same. [illegible]

Miss Bessie Rayner Parkes—for such is the [illegible] the second publication, instead of the more timid initials on the titlepage of the first—has been working hard to [illegible] herself with the poetry of her country, by the [illegible] bel nag to a school accused with a [illegible] of [illegible] of the characterise her verse in its general

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes in the County of Middlesex, by WILLIAM LITTLER, 198, Strand, aforesaid.—SATURDAY, JULY 8, 1854.

THE ILLUSTRATED LONDON NEWS

No. 692.—VOL. XXV.] SATURDAY, JULY 15, 1854. [WITH TWO SUPPLEMENTS, 1s.

THE MILITARY REVOLT IN SPAIN.

THE electric telegraph has its disadvantages when it is under the absolute control of a Government. The news which it conveys is not to be depended upon in times of civil or foreign warfare. The Vienna telegraph once bade fair to acquire a character for mendacity only second to that of the "Father of Lies" or of Russian bulletins. During the past week the Madrid telegraph has been equally untrustworthy, and day after day has announced the failure or suppression of a revolt, which private letters, tardier but perhaps more faithful, have represented as invariably to be maintaining its ground, and extending in every direction. At the time at which we write, it is still uncertain whether the insurrection, led by Generals O'Donnell and Dulce, is to be considered a failure or a success. It is quite certain, however, that it deserves to succeed, and it is probable, if it do not, that it will only be the precursor of many similar attempts at no remote period.

The deplorable state to which Spain has fallen naturally suggests reflections as to the circumstances which produced the catastrophe, and the combinations and difficulties to which it may lead. Even the mightier interest excited by the war against Russia is not sufficient to distract attention from the events that have occurred, or are about to occur, in the Peninsula. They may influence not only European but American politics, and may greatly increase many existing difficulties on both sides of the Atlantic.

It will be generally admitted that most of the present evils that afflict Spain are traceable to the repeal of the Salic law under that bad man and worse Sovereign, Ferdinand VII. There are some countries, such as our own, where a Salic law would be impolitic, as well as ungallant and ungenerous; but, in more southern climes, experience proves the danger of intrusting the sovereignty to female hands. Independently of the mischief of a disputed succession, which was produced by Ferdinand VII. when he changed the fundamental law of the kingdom, and set aside the legitimate heir and his progeny, to place the Crown on the head of his infant daughter, there can be no doubt that neither Queen Christina nor Queen Isabella has acted a worthy part in Spanish history. The softness of their character and the looseness of their morals laid them open to the assaults of schemers, intriguers, libertines, and ruffians, who could have played no similar part under a male sovereign. Among other evils which Spain owes to the selfish act of her late King, are, not only a civil war carried on by the legitimate heirs—a war which inflicted incalculable damage upon the country—but all the scandal, corruption, and excesses of the reign of Isabella and her mother. The bad character of the one, and the helplessness and bad training of the other, were incentives to every kind of intrigue, and every species of misgovernment. A male sovereign—whether Don Carlos or the Count de Montemolin—though he might not have been, in all respects, the model of a king, and though he might have failed to procure for his country the advantages of a wise, just, and progressive form of Government—would not have been liable to the same extent as Christina and Isabella, to be swayed by the councils of penniless knaves and traders upon the weaknesses of women. No unscrupulous private soldier, with a handsome person, and devoid of every other advantage—physical, moral, or intellectual—would have been able to sway the councils of the Chief of the State, and to possess power without responsibility. No favourite, selected from a crowd of similar aspirants for the superior elegance of his manners or the more dazzling effrontery of his good looks, would have been admitted into the private sanctuaries of the palace, to dispose, unquestioned by all except by his flagitious patroness, of the resources of the nation, and to trifle away its internal and external honour and security. And mounting upwards in the scale from these low and sordid adventurers, a neighbouring sovereign, such as Louis Philippe then was, would not have been able to barter away the domestic happiness of a man as he did of a woman, and with the vilest of arts and the filthiest of intrigues have endeavoured to blight the natural hopes of one Queen that he might procure for his son's children the possession of a throne which he coveted for his family. It is to the repeal of the Salic law that Spain owes these and many other evils affecting both the public and private life of the nation, and of which it is impossible at the present time to foretell the close or the diminution.

It may be said that the Spanish nation acquiesced in the change effected by Ferdinand, and that the Sovereignty of the male line of succession had become odious to the people. The nation had an undoubted right to express its own opinion on the subject. Had it done so, and had the result been such as to satisfy the Spaniards themselves, it would ill become critics in foreign countries to dwell upon the abstract merits of a Salic law, or to express any disapproval of an otherwise beneficial change, even although it had cost a civil war to effect it. But the history of Spain, since the death of Ferdinand, does not show a single benefit to the nation from the revolution which he brought about. It was not for any love of Constitutional Government, that the partizans of Isabella endeavoured to link her name with the rallying cry of "Liberty and Progress." All they desired was to strengthen their cause by that pretence, in default of any better; and there is nothing to

FETE TO OFFICERS OF THE ENGLISH AND FRENCH FORCES, AND THE GREEK ARMY AND NAVY, IN THE ACROPOLIS, AT ATHENS.—(SEE NEXT PAGE)

show that the Carlist party would not have secured more real freedom to Spain than has been secured by Isabella. We should like to know where a vestige of Constitutional liberty is to be found in that country, and whether Queen Christina, or Queen Isabella has the profoundest contempt for every law but that of her own caprice. The liberties of Spain exist only as the shadow of a theory, and have no foundation in fact. Spaniards do not possess any one of the rights which are most prized by a free people. They have neither a free Parliament nor a free press; they have no security against arbitrary rule; public honour is defunct, and private morality—especially that which comes within the range of the Court, or of its functionaries—is fast descending to the same tomb. So hateful, in every respect, is the Government, that a Military Dictatorship of the most stringent kind would be accepted as a change for the better by every honest man in the country. Without credit, without power, without resources, Spain requires a revolution, to do justice to herself; and everything betokens that such a revolution will speedily break out.

Whatever may be the ultimate aim of General O'Donnell and his colleagues, the very fact that they have taken up arms against the Queen Mother and the Queen's favourite, Arana, and the Ministers who assist these persons to plunder and misgovern the country, is a circumstance in their favour. Their own views may be selfish, but if they succeed in them, by the necessary preliminary of cleansing out the corruption that blocks their way, they will perform a public service. It is a sign that some wholesome vitality is still left in the country, when military men of the highest grade are sufficiently ashamed of the present system to revolt against it. Their effort, even if it fail, will teach Spaniards not to despair of their country, though they may despair of the present dynasty. The nation is superior to its rulers, and will ultimately shape out a better destiny. The undeveloped resources of Spain are still ample, her people are still brave and high-spirited; and though, as a State, she is almost as bankrupt in reputation as in finance, it is possible that a great national peril might be the means of bringing out her latent energies and virtues, and re-establishing her in her proper place in the great commonwealth of nations. The Americans are eagerly on the look-out for every symptom of her weakness and disunion. At the first favourable opportunity they will seize the island of Cuba. Perhaps the attempt will be the best thing that can happen. The pride of Spain would never submit to such an indignity; and, if it became necessary to wage war against the United States, she might find salvation even in the extremity of the peril. A first preparatory step to any serious task like this would be to effect a revolution that should sweep away all the Court minions that now degrade, insult, and oppress her. An honest and a capable Government, supported by a nation alarmed for its existence, would work wonders. We have seen what the pressure of a strong necessity has done for Turkey. There can be little doubt that it would do as much for Spain. At all events, it is quite certain that the present system is doomed. If O'Donnell be not the man who is destined to overthrow it, another will soon arise; and the sooner the better.

MILITARY FETE AT ATHENS.

A CORRESPONDENT at the British camp in the Piræus has favoured us with a sketch of the very interesting occurrence engraved upon the preceding page—a grand banquet given on the 22nd ult. to the French and English officers of the Army of Occupation, as well as to those of the men-of war of the two Powers and of the Austrian vessels. There were also present about a hundred officers of the Greek army, or of the old Philhellenic army. The banquet was given in the interior of the Temple of Minerva, in the Acropolis, and thus borrowed from the locality a grandeur which forcibly struck all the foreigners present. In order that the entertainment should have no exclusively political character, it was agreed beforehand that no toasts should be given. The cordiality of sentiment among the guests, nevertheless, found a means of expressing itself, and it was with the greatest warmth of feeling that the Greek Ministers present pronounced the names of the Sovereigns, who in taking on themselves to re-establish order in Greece, have saved the country from certain ruin.

The Fête was attended by General Magnan, and the officers (military and naval) of the French expeditionary force; Colonel Lockyer, K.H., and the officers of H.M. 97th Regiment; and also by the officers of H.M.S. *Leander* and *Wasp*, and the Austrian corvette in port: in all, about 350 guests sat down to dinner.

The Sketch is taken from the entrance of the Temple of Minerva, looking towards the ruins of the eastern front. The mountains beyond are the range in which is Mount Hymettus.

LETTER FROM THE BALTIC.

There is a special maxim, known full well,
Never to strike till sure the blow will tell;
Therefore look out at home for something here,
That very soon will make Na-pier a Peer!

TEUTJA.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Canonry*: The Rev. L. Foot to Netherbury-in-Terre, in Salisbury Cathedral. *Prebend*: The Rev. J. G. Whatley to Templebryan, Cork. *Rural Deaneries*: The Rev. W. Howarth to Claydon; Rev. W. North to Lower Sub-Ayron. *Rectories*: The Rev. J. E. Adams to Ashmore, near Shaftesbury; Rev. E. E. Allen to Millom, near Ravenglas, Cumberland; Rev. J. Brougham to Rilfea; Rev. F. Fitzpatrick to Painstown, Meath; Rev. J. Griffiths to St. Fagan, near Cardiff; Rev. H. W. Long to Hilperton, Wilts; Rev. C. H. Lowry to South Weston, Oxfordshire; Rev. W. Wilcock to Cleeriah, near Penmaughi; Rev. D. Williams, to Llanefy, Carmarthenshire; Rev. J. T. G. Williams to Thomastown, Kildare. *Vicarages*: The Rev. H. L. Jenner to Preston, near Wingham, Kent; Rev. T. Nolan to Acton, Cheshire. *Incumbencies*: The Rev. E. Boys to St. Peter's Church, Hammersmith; Rev. H. St. J. Howard to Laurencekirk, Brechin; Rev. E. Pinck to Hardrow, near Hawes, Rev. T. D. Platt to Holy Trinity Church, Portsea. *Perpetual Curacies*: The Rev. J. B. Burne to Aldermaston, Berks; Rev. F. M. Harker to St. Mary's Church, Edge-hill, Lancashire.—The Rev. E. C. Woollcombe to be one of her Majesty's preachers at Whitehall.

NEW BISHOPRIC IN AUSTRALIA.—The Society for the Propagation of the Gospel has contributed the sum of £5000, and the Society for Promoting Christian Knowledge will grant £2000, towards the immediate establishment of a Bishopric of Perth in Western Australia—the extensive see of Adelaide being subdivided for that purpose, the Government sanction having been obtained.

A TESTIMONIAL has been presented to the Rev. T. Holgins, by the Sunday school teachers belonging to St. Jude's schools, St. Philip, Bristol, on his leaving the district.

A PUBLIC DEFAULTER.—There has been presented to the House of Commons the report of the Treasury Committee of Inquiry into the misappropriation of moneys intrusted to Mr. H. Swabey, late Registrar of the Court of Admiralty. He disappeared last November, and the report states that the deficiency in his accounts exceeds £60,000. He had given no sureties, rendered no account, and was never called upon to do so. He had the custody of the suitors' fund, received it as it was paid into court, and mixed it with his own money, using it as he thought proper. The committee propose a plan for the security of the fund in future.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(*From our own Correspondent.*)

PARIS, Thursday.

The Emperor, in order to testify the great importance he attaches to the envoy of the fresh detachment of troops for the Baltic, under General Baraguay d'Hilliers, has gone to Boulogne in person to witness their departure. After this he returns to Paris to accompany the Empress to the baths of Biarritz, from whence they will return in time for the Fête of the 15th August.

The King of Portugal is expected in Paris about the end of the month. The Pavillon Marsan in the Tuileries is to be prepared for his reception.

The chronicles of the last month and especially of the last week, have had the melancholy duty of announcing an unusual number of deaths among persons whose talents, virtues, position, or associations, had secured them honourable and distinguished places in the ranks of society. First on the obituary list stands the name of Georges Bousquet, the young composer, who, after passing through the years of struggle and difficulty that usually attend the beginning of a career, and having attained a place and a name, is called away at the age of six-and-thirty, leaving a young widow, two little children, and an aged mother, whose existence depended almost entirely on the efforts of his genius. Rebecca Félix, the sister of Rachel—whose frail constitution, unable to support the self-imposed fatigues of her profession, sunk beneath her efforts—comes next. A name, whose celebrity is attached to one of the most striking and interesting periods of European history, that of the Princesse de la Moskowa, Maréchale Ney, succeeds. On this occasion, the *Moniteur* has published a short but most feelingly expressed letter from the Emperor to the Prince de la Moskowa, expressing his regret and sympathy on a loss which, being that of the intimate friend of his mother, personally concerns him. Another name associated with the history of the same period has to be cited—that of the Duchesse de Plaisance, widow of M. Lebrun, Aide-de-camp of Dessaix, at Marengo, afterwards General of Division, and son of the Prince Lebrun, Duc de Plaisance, one of the Three Consuls of the 18 Brumaire, and formerly Arch treasurer of the Empire. The name of the Duc de Plaisance is also connected with literature, by his admirable translations of Homer and Tasso. The Duchesse de Plaisance was daughter of the Marquis de Rochambeau, Garde des Sceaux, and First President of the Cour des Comptes—transported to Sinamary in 1797. She was particularly distinguished for her extensive charities, which embraced all classes and all religions; but, though she never ceased strictly to adhere to the doctrines of the Roman Catholic Church, certain circumstances connected with her personal history caused her to experience and manifest a peculiar interest for the Jewish faith, and to contribute largely to the charities set on foot for the benefit of the poor Israelites. M. Jules Secrets, the amiable and enlightened encourager of musical talent—whose direction of the Théâtre Lyrique contributed alike to the well-being, interests, and advancement of artists, and to the amusement of the public—appears in the catalogue. Greatly do we regret that our space is insufficient to afford even a sketch of the history and career of a man whose private character and personal history reveal a series of the most admirable and estimable traits. Suffice it to say that, at the death of his brother Edmond, founder of the Théâtre Lyrique, and whose efforts, not yet arrived at success, left but as fruits an enormous accumulation of debt, and a wife and children reduced by the sudden calamity almost to beggary, Jules plunged resolutely, to save them, into the Augean stable, paid off the whole of his brother's debts, and re-established his brother's family in ease and comfort. While giving to the public the best specimens of the works of the most celebrated modern composers, M. Seveste never failed to aid and encourage the rising talents of promising beginners, who ever found ready access and ready attention, and impartial judgment at his hands. The last scheme in which M. Seveste was engaged, was the preparing for representation the two last works of Georges Bousquet, over whose tomb it fell to his lot to pronounce the funeral discourse. Cholera was the disease to which, in the course of a few hours, he fell a victim. The names succeed one Emile Souvestre, the author of some of the most admirable specimens of the light literature of the day; of M. Raoul-Rochebette; and of the Comte de las Cases, son of the secretary and personal friend of the late Emperor, and who had himself in his boyish days, at St. Helena, constantly written, from Napoleon's dictation, some of the most interesting passages of the history of the latter. The Comte de las Cases had been married but a few days when a disease of the heart—under which he had been suffering for years, but which appeared to have diminished in violence—brought his existence to a sudden termination.

The following list, drawn up by the second and large piece of water, which adds so greatly to the embellishment of the Bois de Boulogne, being completed last week, the ceremony of letting in the water was performed before their Majesties, the Préfet de la Seine, a large number of other fane tionaries, and a large concourse of spectators.

An event which might have been productive of the most frightful results occurred last week at the Porte St. Martin Theatre, at the representation of the new drama "Schamyl," in which Mdlle. Jue is producing so immense a sensation. One of the actors, taking up a gun which was placed among a stand of arms, perceived a ball drop from it, and, on examination, it was found that the whole stand, consisting of fourteen guns, were loaded with ball. Every attempt has been made to discover the authors of this frightful conspiracy, as well as the motives of it, but as yet nothing has transpired.

Considerable reparations being necessary in the Théâtre Français, it is for the moment to be closed; as there are at present no less than six theatres shut up for different causes, the representations are to be continued at the Italian Opera-house.

We some time since mentioned the sale of the library of M. Armand Bertin: the particulars of this sale being now known, it appears that the collection of books, which cost him less than 40,000 francs, has sold for 125,000 francs.

THE SPANISH INSURRECTION.

A despatch from Madrid of the 11th states that the capital was tranquil. The rebels were near Despenapenos, and their ranks were rapidly thinning. The Royal forces were hemming them in. General Serrano, who had joined the rebels, had not succeeded in carrying any troops over with him.

UNITED STATES.

The steam-ship *Arabia*, which left New York on the 26th ult., arrived at Liverpool on Sunday morning last. In Congress, Mr. Clayton had reported from a Committee of the Senate a bill to suppress the Slave-trade in American built vessels. The remedy proposed is to have every bill of sale executed in presence of an American Minister or Consul, and to invalidate the sale, and render the owner liable to heavy penalties if the vessel shall make any voyage to the coast of Africa without a full American register. The punishment to be inflicted upon every American citizen who shall sell a vessel for use in the Slave-trade is a fine of 10,000 dollars, and three years' imprisonment. A Committee of the House of Representatives reported a bill to suppress the Slave-trade in American built vessels. The remedy proposed is to have every bill of sale executed in presence of an American Minister or Consul, and to invalidate the sale, and render the owner liable to heavy penalties if the vessel shall make any voyage to the coast of Africa without a full American register. The punishment to be inflicted upon every American citizen who shall sell a vessel for use in the Slave-trade is a fine of 10,000 dollars, and three years' imprisonment. A Committee of the House of Representatives reported a bill to appropriate six hundred thousand dollars to pay the purchase-money of the territory ceded by Mexico under the recent "Gadsden treaty."

Grave doubts are expressed by several leading papers that the treaty will Great Britain respecting reciprocal trade with the Colonies will not be ratified by the United States Government.

THE OVERLAND MAIL.

TRIESTE, Wednesday, July 12.—The steamer *Calcutta* arrived here this morning, at ten o'clock, in 112 hours, from Alexandria. The Indian mail reached Alexandria on the 7th, with advices from Calcutta to the 1st June, and Bombay 7th June. Trade in India was dull. Exchange at Calcutta, 2s. 0¼d. There is no mail from China.

THE FIRE AT OLNEY.—The extent of loss is estimated to be at least £10,000, of which scarcely one-fourth is covered by insurances; the greater portion of the sufferers being small tradesmen and labourers. A very liberal subscription has been entered into, and more than £300 realised; yet very far from the amount necessary to supply even the immediate necessity of more than 300 persons.

NAVAL AND MILITARY INTELLIGENCE.

GRAND MILITARY OPERATIONS AT CHATHAM.

The Chairman and Directors of the East India Company visited Chatham on Thursday morning, for the purpose of witnessing a grand military *fête*, which was executed in the presence, and under the direction, of General Sir J. F. Burgoyne, G.C.B., Inspector-General of Fortifications. Some thousands of persons from London took advantage of the occasion to make themselves acquainted with the tactics of war. Chatham lines—extensive as they are—were thronged with visitors, who came in every direction to the spot. From Brompton to Gillingham, and from the Canterbury road to the Medway, the space was crowded with eager sight-seers. Several military bands were in attendance, and the scene was one of the greatest animation.

His Royal Highness Prince Albert left London by a special train on the North Kent line, and on his arrival at Chatham, the Royal Artillery fired a salute. The Prince and his party occupied a stand on the top of the casemate barracks, near the Dockyard, and within a few yards of the Medway, a point which commanded a perfect view of the whole proceedings. His Royal Highness was loudly cheered on his appearance upon the ground.

The whole of the troops of the garrison were engaged in the attack and defence of a fortified town, and, for carrying out the different operations some effect, they were broken up into separate divisions, having no connection with each other. Each division represented a distinct and separate part both in attack and defence, which were carried on without reference, in point of time or order, to any other operation. Some of the operations were such as at a siege which would only be executed during the night, and the troops went through that part of the duty as if the operations were performed in actual warfare.

The defence of the palace of duchess of a fortified place against an assault by rockets, fusees, hand-grenades live shell, musketry, and pierriers, was the last operation, followed by the inside of the town by a body of troops of artillery across a river upon rafts of cylindrical and other construction. The practicability of the river Medway rendered this experiment peculiarly interesting. The use of the helmet and diving dress was also exhibited.

At the close of the operations the Royal Engineers gave a splendid entertainment, in the mess room, to all the distinguished party. His Royal Highness Prince Albert honoured the festival with his presence.

THE first lieutenant of the ill-fated *Tiger*, Lieut. Alfred Royer (1841), has reached London, and has reported himself at the Admiralty upon being released on parole on his arrival at St. Petersburg.

SIX, or more probably nine, additional regiments of militia will immediately be embodied, for the purpose of performing the duties at some of those battalions of the line ordered on foreign service.

THE army is at present much below its establishment. This deficiency could be immediately remedied in every regiment by volunteering from the militia; but, from some unexplained cause, the Secretary at War objects to that mode of recruiting.

THE 1st and 2nd West India Regiments are 250 each below their establishment. No recruits can be obtained in Africa, and, as the establishment in the West Indies is limited by orders not to be exceeded, it is not clear how those colonies are to be garrisoned after the whole troops are withdrawn.

THE Admiralty invite tenders for the conveyance of 500 tons of naval provisions in a sailing vessel, and 500 tons from Gosport in a steamer, to the Baltic. Also for 500 tons of naval provisions from Cork to Malta and seven officers and 260 men from the River, and both for Malta. Two steamers are also required for the conveyance of 500 tons of bread to Varna from either Gosport or Plymouth, the vessels to coal at Constantinople for orders from the Commander-in-Chief.

INCREASE OF THE PAY OF THE COAST-GUARD.—We are glad to hear that the pay of the deputed mariners and mariners of the revenue cruisers, has been increased; the former from 1s. 8d. to 2s. 2d. per day, and the latter from 1s. 6d. to 1s. 10d. per day; that the rate of enlistment for boys of cruisers has also been altered, and boys of the second-class will now enter between thirteen and fifteen years, and of the first-class between fifteen and eighteen years.

NINETY-TWO cases of swords, each containing 120, or altogether about 10,000, and 2000 barrels of ball cartridges, are being shipped for Constantinople, for the use of Omer Pacha's cavalry.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, TAKEN DURING THE WEEK ENDING SATURDAY, JULY 8.

Note.—The sign — denotes below the standard. The numbers in the seventh column are calculated on the supposition that the variation of the scale is represented by 100.

The corrected reading of the barometer for the week has varied but little during the week, the lows at reading being 29.68 inches on the 9th; and the highest 29.85 inches on the 11th. The mean for the week, at the height of 82 feet above the level of the sea, was 29.760 inches.

The mean daily temperature of the 7th is the lowest mean temperature recorded on that day since the year 1814, when it was 58°; that of the 9th is the lowest since 1836, when it was 54°9; and that of the 12th is the lowest at present recorded, the register extending back to the year 1814.

The mean temperature of the period from July 1 to 13 was 55.9°, and is the lowest mean temperature of the corresponding period, since the year 1821, when it was 55.6°.

The mean temperature of the week was 57.4°, being 6° lower than the mean of the corresponding week during 38 years.

The range of temperature during the week was 28°, being the difference between the lowest reading of the thermometer on the 7th, and the highest on the 10th.

The mean daily range of temperature during the week was 17°. The greatest was 21° on the 7th, and the least 6° on the 12th.

Rain fell during the week to the amount of nearly one inch.

A thunderstorm occurred about three p.m. on the 9th, and *thunder was heard* during the 10th.

The weather during the week has been very unsettled and showery, and the wind in gentle motion only.

Lewisham, July 14th, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending July 8, the births of 1476 children were registered in the metropolitan districts: of these 752 were boys, and 718 were girls. The averages of the nine corresponding weeks of the nine preceding years were 699 and 681 respectively. The deaths during the week were 1009 of males, and 97 in the number of females. The number of deaths registered during the week, 986, is a very satisfactory evidence of an improved state of the public health; the mortality during the week has been above the estimated number, having this week fallen 62 below the average of the ten corresponding weeks of the ten preceding years, corrected for the increase of population.

CHARING-CROSS HOSPITAL.—At the annual meeting of the governors of this charity on Friday last—Major Lyon in the chair—the hon. secretary, Mr. J. Robertson, presented a favourable report for the past year. In the course of this period 15,001 indigent sick persons were admitted on the books for relief at a cost of £2568 10s. 5d.; of these, 1343 were in-patients, and 13,708 were out-patients, many of whom were visited at their own homes, and the greater part were restored to health. In this hospital, last week, the daughter of a cab-proprietor, aged ten years, of hydrophobia. She received a bite from a dog about a month before, and expired in thirty-six hours after the symptoms of the disease were fully manifest. We take this opportunity of calling the attention of the Commissioners of Police to the very negligent manner in which their order respecting "Mad dogs" is carried out, especially in all poor and crowded neighbourhoods, where the number of dogs at large is a nuisance.

ST. MARY'S HOSPITAL.—Wednesday being the anniversary of this excellent charity, the foundation-stone of the new medical schools attached to the establishment was laid by Earl Mauvers, the president of the hospital. In the evening a large party of the patrons, subscribers, and others interested in the success of the charity, dined together, in order to celebrate the auspicious circumstance of the establishment of more appropriate buildings for the educational department of the hospital, as well as its anniversary festival. The Hon. Arthur Kinnaird, M.P., presided, supported by the Earl of Carlisle, Earl Mauvers, Lieut.-General Delamotte, Cole, Sykes and Croxe, &c. We are happy to state that a subscription to the amount of about £1400 was collected during the day.

THE WAR.

THE CZAR'S REPLY TO AUSTRIA.

The reception of Prince Gortschakoff by the Emperor of Austria was of so unfriendly a character as to lead to the very obvious conclusion that the message he brought from St. Petersburg was not at all acceptable The following is said to be the authentic version of the answer of the Emperor of Russia to the last propositions of Austria and Prussia:—

Russia accepts the common protection of the Christians in the shape determined on by the Four Powers in the protocols of the Conference of Vienna

Rose a will evacuate the Ottoman territory if the Western Powers will also leave it; and if Austria will not enter it.

Russia will keep the line of the Danube for strategistic purposes.

Lastly, Russia is ready to enter into negotiations on the conditions of the re-establishment of peace, provided that it be guaranteed to him that nothing of an unfavourable nature against him shall be undertaken during he course of the negotiations.

Besides the above, the German papers speak of two autographs addressed by the Czar to the Emperor of Austria and King of Prussia, but not identical; and it is also said that, besides this, the two Envoys were instructed to give verbal explanations, and to make comments, which were intended to complete the written documents, but which it was not considered safe to refuse to writing The Emperor Nicholas still pretends that he wishes to negotiate and to accept all the terms proposed by Austria, with the exception of that with respect to the religious question.

The *Independance Belge*, a Russian organ, pretends that Prince Gortschakoff has more favourable terms in reserve, but that any untoward accident, "an attack on Cronstadt, or, what is perhaps more likely, on Sebastopol, or even the occupation of the island of Aland by the Anglo-French, may modify these dispositions, and restore more force at St. Petersburg to the war party adverse to all concession."

EMBARKATION OF FRENCH TROOPS FOR THE BALTIC.

The Emperor of the French left Paris on Tuesday at two o'clock for Boulogne and Calais. He drove along the Boulevards in an open carriage, without escort of any kind, and with only one person with him in the carriage. Both were in plain clothes. There was a complete absence, not only of military, but of any state whatever. A considerable number of persons had previously assembled at the Northern Railway station, when the carriage arrived. The Emperor descended and passed through the crowd, who received him with every mark of respect. He arrived at seven o'clock. His Majesty would not have any official reception. General Baraguay d'Hilliers, the Sub-Prefect, and Mayor of Boulogne received the Emperor at the railway station. All the inhabitants of the town, among whom were a great number of English, were assembled, and hailed his Majesty with the loudest acclamations.

At 11 o'clock on Wednesday morning his Majesty, accompanied by Gen. Baraguay d'Hilliers, Generals d'Hugues and Grésy, Col. Fleury, and numerous other military officers, proceeded to the extensive camp now formed at Wimereux, a short distance from Boulogne, where a very large number of French soldiers are at present encamped. The troops were drawn up in lines of regiments in the separate camps, to receive the Emperor, whose appearance on the ground was the signal for the usual military salutes. As his Majesty proceeded on horseback along the lines, each regiment shouted "Vive l'Empéreur!" in the most enthusiastic and unanimous style The inspection having been brought to a close, his Majesty summoned the officers of the respective regiments, about immediately to march, towards him, and a circle having been formed, the Emperor, in the hearing of a large portion of the troops, and many of the spectators, delivered with much animation the following address:—

Soldiers!—Russia having forced us to war, France has armed five hundred thousand of her children. England has called out a considerable number of troops. To day our fleets and armies, united for the same cause, dominate in the Baltic as well as in the Black Sea. I have selected you to be the first to carry our eagles to those regions of the North. English vessels will convey you there—a unique fact in history, which proves the intimate alliance of the two great nations (*peuples*), and the firm resolution of the two Governments not to abstain from any sacrifice to defend the right of the weak, the liberty of Europe, and the national honour.

Go, my children! Attentive Europe, openly or secretly, offers up vows for your triumph; our country, proud of a struggle which only threatens the aggressor, accompanies you with its ardent vows; and I, whom imperious duties still retain distant from the scene of events, shall have my eyes upon you; and soon, in re beholding you, I shall be able to say: They were worthy sons of the conquerors of Austerlitz, of Eylau, of Friedland, and of Moskowa.

Go: may God protect you!

Loud and prolonged shouts of "Vive l'Empéreur!" and other loyal cries, followed this address.

On Wednesday afternoon the following vessels left the Downs for Calais Roads:—*Hannibal*, screw, 91; *Royal William*, 120; *Algiers*, screw, 91; *St. Vincent*, 101; *Sphinx*, paddle, 6; *James*, paddle, 6; *Lizard*, paddle-tender. Other vessels were to follow yesterday, and the embarkation was to commence yesterday (Friday). The Lords of the Admiralty have given notice at the different reports of the North Sea merchant captains that a number of Baltic masters are required to pilot the English and French vessels about to convey the French troops to the Baltic. They are to receive 15s. a day for their services.

AN EFFECTIVE BLOCKADE OF CRONSTADT.

The *Gazette* of Tuesday announces that the combined fleets have established a strict and effective blockade of the ports in the Gulf of Finland; but it seems that a still more effectual plan for sealing up those harbours has been proposed

A proposition has been sent to the Admiralty by an officer of the Navy of high standing, for the perfect sealing up the entrance to Cronstadt, by doing which, he affirms that the Russian fleet could be kept there for years and, if necessary, for ever. The plan is said to be now under the consideration of the Admiralty, and that the gallant Anglo-French Admirals have been consulted on the practicability of the scheme. To give further explanations at present would be most injudicious. If carried out, it will release nine-tenths of our fleet from that part of the Baltic, after which Sweaborg and Helsingfors may have similar cards played at a cost of a few shot or shell, and most certainly without loss of lives, compared with Gamla-Carleby.

THE RUSSIAN FLOTILLA ON THE DANUBE.

A letter of the 3rd from Bucharest states that the Russian transports and gun-boats that have arrived at Galatz from their station off Silistria, where they were employed, are having their armaments taken out. This seems to be the commencement of what has become necessary—the entire breaking up of the Russia flotilla on the Danube This subject is at this moment most seriously occupying Prince Gortschakoff's attention, and it is thought by no means impossible that the ships will be burned. The mouths of the Danube are blockaded by the Allied fleets, and the Russian vessels have no longer an escape that way.

The *Banshee* steamer, which arrived on the 30th at Constantinople, from Varna, brought the intelligence that a flotilla of boats from the Allied squadrons had proceeded in the night time, armed with cannon, to the mouth of the Sulinch, and had there destroyed the works raised by the Russians. The report of the Captain of the *Banshee* states that most of the pieces of cannon were cast into the Danube, and the others spiked, so that nothing now remains of the Russian fortifications. The enemy offered a sharp resistance, but without effect; and, in the end, was obliged to take to flight. It is added, that a General or Colonel was taken prisoner.

SICKNESS IN THE BLACK SEA SQUADRON.—The sick in the French fleet, according to the latest accounts, did not average more than 3½ per cent. Our own was a fraction under 5. Scurvy had begun to show itself in both fleets; but as, since their return from Odessa, and a cruise along the coast of Circassia, they have had a good supply of vegetables, it has now nearly disappeared.

PRINCE NAPOLEON paid a visit on June 24, to the Allied fleets at Baltschik. The Turkish, English, and French squadrons were dressed out on the occasion, and received the visitor with numerous salutes. The spectacle is described as magnificent.

COFFEE is now regularly given to the French soldiers when they are in active service or in camp. Two tons and a half were roasted at Havre the other day and sent off to the camp at Boulogne.

THE screw-steamer *Himalaya* has been fitted up to take out 2000 soldiers and 500 horses to the East. She will take in soldiers and horses at Devonport. A party of the Ambulance corps will be taken out to Turkey in the *Himalaya*. The *Simla* is to take out a cavalry regiment from Devonport. She is to be provided with a flat boat to land the horses and troops.

THE ACTION OFF SEBASTOPOL.

THE *Terrible*, *Furious*, and *Descartes* were detached from Baltschik on the 10th of June, to reconnoitre at Sebastopol. On reaching the offing of the enemy's stronghold on the 11th, they boldly stood close in, and counted the same number of line-of-battle ships as heretofore, but could only make out one steamer. This circumstance gave them hopes of meeting some of the enemy outside, and accordingly proceeded to cruise along shore towards Cape Tarkan, until they were within fourteen miles of the Tendra peninsula, where a brig was observed on shore, which, on a boat being sent to overhaul her, was found to be the *Mentor*, of Bremen, salt laden, a portion of which cargo, and some of her stores, were in a tent pitched near her; and her boats, which were in good condition, were hauled up on the beach; but none of the crew were to be seen. Some Cossacks made their appearance not far off, and the boat was in consequence recalled before any closer examination could be made. When the disturbers reached the place, there was of course a flourishing of lances, which innocent display was allowed to be indulged in; had there been any harm in it, they would soon have found that they were within range of the steamer's guns. At daybreak on the 15th, the three steamers, being close into Eupatoria, sent in some boats, and brought out a schooner which was lying within a hundred yards of the town. Here, also, a troop of Cossacks made their appearance, but very wisely refrained from interfering. Whilst the captors were employed in stripping the prize of whatsoever might be useful, preparatory to burning her, a steamer was reported in the direction of Sebastopol, so of course the prize was soon in flames, and the captors steaming away at full speed towards the stranger. Before long, five other steamers and three line-of-battle ships were descried in the offing of Sebastopol, and the former, which showed an inclination to fight, were within range of the steamer's guns. The reconnoitring vessels were prepared to cure any mad project of boarding; and, of course, steered to windward of this squadron. For some time the Russians were allowed to fancy that they were giving chase, so as to draw them well away from the large ships; and then, by easing the engines, had by noon got them within range of the *Terrible*'s guns, to attack which their largest vessel, the *Vladimir*, seemed destined; whilst to the *Furious* and *Descartes* a pair had also, it was evident, been appointed. At half-past twelve the *Terrible* fired her first shot from her stern guns. This fell short, as did the second; but the third went into the *Vladimir*'s bows, and produced a cheer from the *Furious* and *Descartes*. The Russians returned the fire at once, and, as they did so, hoisted the national colours at each mast-head. The *Vladimir*'s shots were seen passing over the *Terrible*, but most of those from the other steamers fell short. A running fight was carried on from 12.30 till 2 p.m. when the enemy's steamers suddenly turned and made for the line-of-battle ships with all speed, hauling down their colours at the same time. In the act of turning, they offered a capital mark, which was quickly taken advantage of, and several well-directed shots were sent into them. The chase became now quite another affair, and that good order which the Russians had observed in coming out was entirely broken up: they, however, proved themselves to be of good speed. When near the liners they stopped, whereupon the English and French vessels did so likewise, and, by way of finish, gave them two or three broadsides. During the afternoon, three more line-of-battle ships, and two other steamers, had come out from Sebastopol, so that the three Allied steamers were actually in the presence of, and not far distant from, no less than six liners and eight large steamers (full of troops) of the enemy; yet nothing further was attempted, the whole squadron moving off in a body towards the port, the liners being a little in advance. No damage whatever was sustained by the Allied steamers, but it was impossible to say what the effect of their firing was on those of the enemy. According to one account the Russian steamers were many times struck, the port bow of the *Vladimir*'s paddle-box boat and a part of that ship's quarter were knocked away; and it was thought that she must have lost some of her crew from a shell which burst over her forecastle.

Commander Darrican, of the *Descartes*, in his report to the French Admiral, corroborates this account. He had no doubt but the intention of the Russians was to close the three steamers in, so as to catch them between the frigates and the lines. "It was with a feeling of good fortune," he says, "and I will say almost of pride, that we saw, in presence of this squadron of line-of-battle ships, the flags of six steamers disappear behind the ramparts of the harbour fortifications. The Russians had intended boarding us, for their decks were covered with soldiers."

The Russian journals publish a report of Prince Menschikoff Governor of Sebastopol, respecting the affair of the 15th of June of that place. The Prince admits that the two steamers *Gromonassets* and *Wladimir* had suffered from the fire of the enemy, and had twenty officers, and as many non-commissioned officers, wounded, and several killed. He then adds, in a triumphant manner, that the enemy fled, and that the victorious Russian flotilla re-entered Sebastopol. Those journals are completely silent respecting the siege of Silistria; but they announce with emphasis that, on the 3rd inst., the Emperor caused a "Te Deum" to be sung in the Church of the Winter Palace, on the occasion of the glorious victory gained by General Andronikoff in Asia.

THE BLACK SEA FLEETS.

All the accounts from the Black Sea, unite in speaking of some great movement which was anticipated. The 4th French military division taken up the Bosphorus by Admiral Bruat's squadron, consisted of 8000 men, under General Forey, and were taken direct to Varna. The captains of the ships composing the naval division, had received sealed orders. The effective force now consists of thirty-four ships of the line, in addition to a large number of steamers.

It was rumoured at Constantinople, that Sir Edmund Lyons had taken possession of Anapa; but it is probably a false rumour, as that fortress could not be taken without a strong land force.

THE RUSSIANS IN WALLACHIA.—ANOTHER TURKISH VICTORY.

THE announcement that the Austrain army had entered Wallachia was premature. Up to the 9th inst., not a single Austrian soldier had entered the Principalities, and it now appears that the Russians, who were in full retreat from Wallachia, have received orders to halt. That this is a demonstration against Austria is deemed all but certain, from the fact that the Russians—whose line of retreat a week since was Buseo, Fokschan, with a strong corps at Plojeschti and Kimpina, to protect the left flank of the retiring army, have suddenly thrown out their pickets as far west as the Aluta. It is now supposed that the Russians are again about to take the Aluta as a line of operation, as they occupied Rimnik-Walitschea on the 2nd and Slatina a day or two later. Sass, Anrep who after the affair at Citate was in disgrace, has suddenly appeared at Tirgowischt; and, as he is said to be one of the best of the Russian Generals, some great operation may be expected. The report that Prince Paskiewitsch is in disgrace, and has been recalled, is confirmed; and it is now said that the Hereditary Grand Duke Alexander will take the command of the Moldo-Wallachian army, with Prince Gortschacoff as his adjutant. Travellers who have just returned from Poland relate that the Russian troops, which were on their way to the Gallician frontiers, have received orders to advance in forced marches.

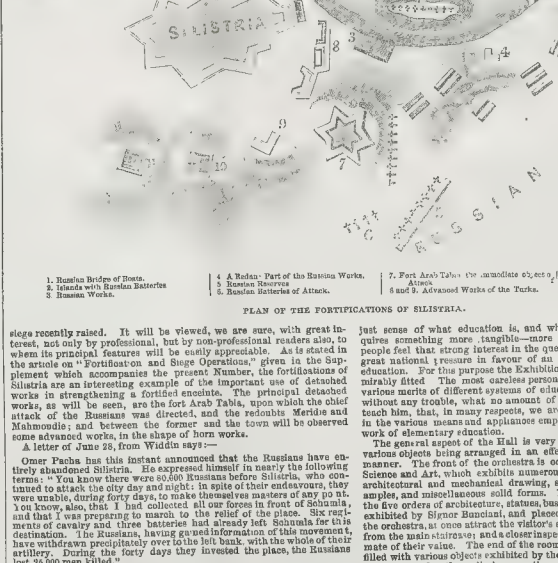
Odessa letters of the 1st of July state that the troops which were stationed there are now on their way to Moldavia, as are also such parts of the corps of Osten-Sacken and Paniutine as were posted in Bessarabia. The separate Cuirassier corps has also received orders to march to Moldavia. Fresh troops from the interior of Russia have already reached Odessa.

The prevalent opinion in Jassy and Bucharest is, that the Russians will again attempt to cross the Danube at Kalarasch-Silistria; but it is evident that, at present, Austria is in far greater danger than Turkey.

By telegraph we learn that on the 7th the Turks crossed the Danube at Rustchuk, and, after some hard fighting, took possession of Mikan and Radovan. On the 8th, Omer Pacha, with 40,000 men, having surrounded the Russians and taken Giurgevo, the latter cut their way through with the loss of 800 men. General Chrulieff lost an arm in the battle. Prince Gortschakoff was advancing, by forced marches, with 30,000 men, towards Giurgevo, where a general engagement was likely to take place. Other despatches speak of the Russian General as having taken up a position four miles in front of Bucharest, where he awaited the advance of the Turkish army. A body of 15,000 Anglo-French troops was said to have advanced to Rustchuk.

PLAN OF THE FORTIFICATIONS OF SILISTRIA.

We have been favoured, by M. Durand Bragé, an officer in the French Black Sea squadron, with the accompanying plan of the fortifications at Silistria, and of the camp and field-works of the Russians, during the



1. Russian Bridge of Boats.
2. Islands with Russian Batteries
3. Russian Works.
4. A Redan: Part of the Russian Works.
5. Russian Reserves
6. Russian Batteries of Attack.
7. Fort Arab Tabia, the immediate object of attack.
8. Tabia Redoubt.
9. Meriodie Redoubt.
10. Marabo Redoubt.
11. Mehmoodie Redoubt.
12 and 9. Advanced Works of the Turks.

PLAN OF THE FORTIFICATIONS OF SILISTRIA.

siege recently raised. It will be viewed, we are sure, with great interest, not only by professional, but by non-professional readers also, to whom its principal features will be easily appreciable. As is stated in the article on "Fortification and Siege Operations," given in the Supplement which accompanies the present Number, the fortifications of Silistria are an interesting example of the important use of detached works in strengthening a fortified enceinte. The Silistria detached works, as will be seen, are the fort Arab Tabia, upon which the chief attack of the Russians was directed, and the redoubts Meridie and Mahmoudie; and between the former and the town will be observed some advanced works, in the shape of horn works.

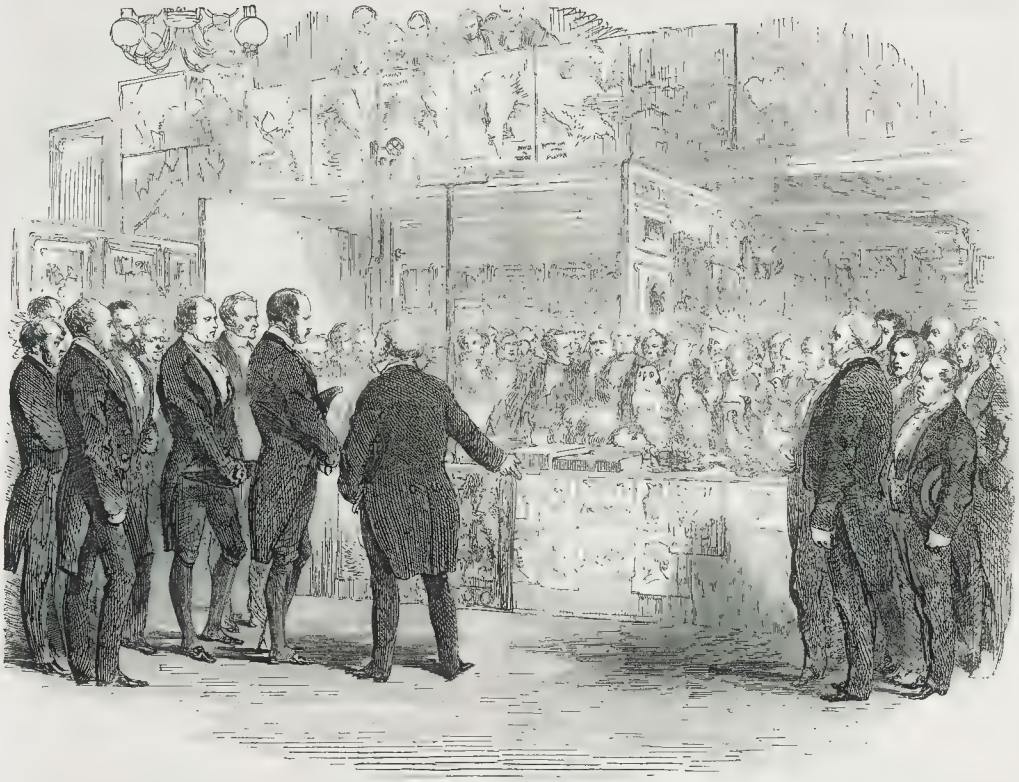
A letter of June 28, from Widdin says:—

Omer Pacha has this instant announced that the Russians have entirely abandoned Silistria. He expressed himself in nearly the following terms: "You know there were 80,000 Russians before Silistria, who continued to attack the city day and night: in spite of their endeavours, they were unable, during forty days, to make themselves masters of my post. You know, also, that I had collected all our forces in front of Schumla, and that I was preparing to march to the relief of the place. Six regiments of cavalry and three batteries had already left Schumla for this destination. The Russians, having gained information of this movement, have withdrawn precipitately over to the left bank with the whole of their artillery. During the forty days they invested the place, the Russians lost 25,000 men killed."

THE EDUCATIONAL EXHIBITION AT ST. MARTIN'S HALL.

THIS Exhibition, of which we gave a short notice last week, is one of the happiest educational ideas of the present day. More annual reports, blue-books, and lectures about the ignorance of the lower classes, may be quite sufficient for those who are already thoroughly awakened to a just sense of what education is, and what it ought to be; but it requires something more tangible—more startling—to make ordinary people feel that strong interest in the question which must precede any great national pressure in favour of an improved system of popular education. For this purpose the Exhibition at St. Martin's Hall is admirably fitted The most careless person can there see at a glance the various modes of different systems of education, and can thus discover, without any trouble, what no amount of reading would have served to teach him, that, in many respects, we are greatly behind other nations in the various means and appliances employed in carrying on the great work of elementary education.

The general aspect of the Hall is very animated and agreeable, the various objects being arranged in an effective, as well as convenient, manner. The front of the orchestra is occupied by the Department of Science and Art, which exhibits numerous copies for outline drawing, architectural and mechanical drawing, shaded drawing, coloured examples, and miscellaneous solid forms. These, with the specimens of various orders of architecture, statues, busts, masks, friezes, plasters, &c., exhibited by Signor Bunciani, and placed near the wall on each side of the orchestra, at once attract the visitor's attention as he enters the Hall from the main staircase; and a closer inspection seems to heighten his estimate of their value. The end of the room opposite the orchestra is well filled with various objects exhibited by the Committee of Council. Along the sides, under the galleries, are the compartments allotted to the leading educational societies; in the middle are four tables, on which are exhibited the articles from abroad; and the galleries are devoted to philosophical instruments, apparatus, &c. The room appropriated to books—of which there is a numerous collection supplied by all the leading educational booksellers—is over the Great Hall. One of the most interesting features of the Exhibition is to be seen in the Library, which contains the "results of the schools," or articles made by the young people in those establishments, and specimens of work done



CONVERSAZIONE OF THE EDUCATIONAL EXHIBITION, IN ST. MARTIN'S-HALL.

there. All over the walls, in the passages, on the landings as you go up the stairs, and round the galleries, maps and diagrams are hung, and at the foot of the stairs some excellent models of school-fittings (desks and seats) are exhibited.

The value of the Exhibition will be much enhanced by a series of lectures to be delivered, and conversational meetings to be held in the rooms during the next three months, by various distinguished professors in the various branches of education.

The inaugural lecture, "on the Material Aids of Education," was delivered on Monday afternoon by the Rev. Dr. Whewell, F.R.S. The large theatre was crowded by an assembly numbering about 500, and comprising some of the foremost friends of education; as well as several of the Foreign Commissioners, accredited by their respective Governments to attend this Exhibition. At the conclusion of the lecture, which was received with loud applause, the Bishop of St. David's moved the thanks of the audience to Dr. Whewell, expressing a hope that he would allow the discourse to be printed. Mr. Hume seconded the motion, which was carried by acclamation. Dr. Whewell, in returning thanks, said the notes of the lecture were not in a state for publication; but, as it was the wish of the meeting, he would revise them for that purpose.

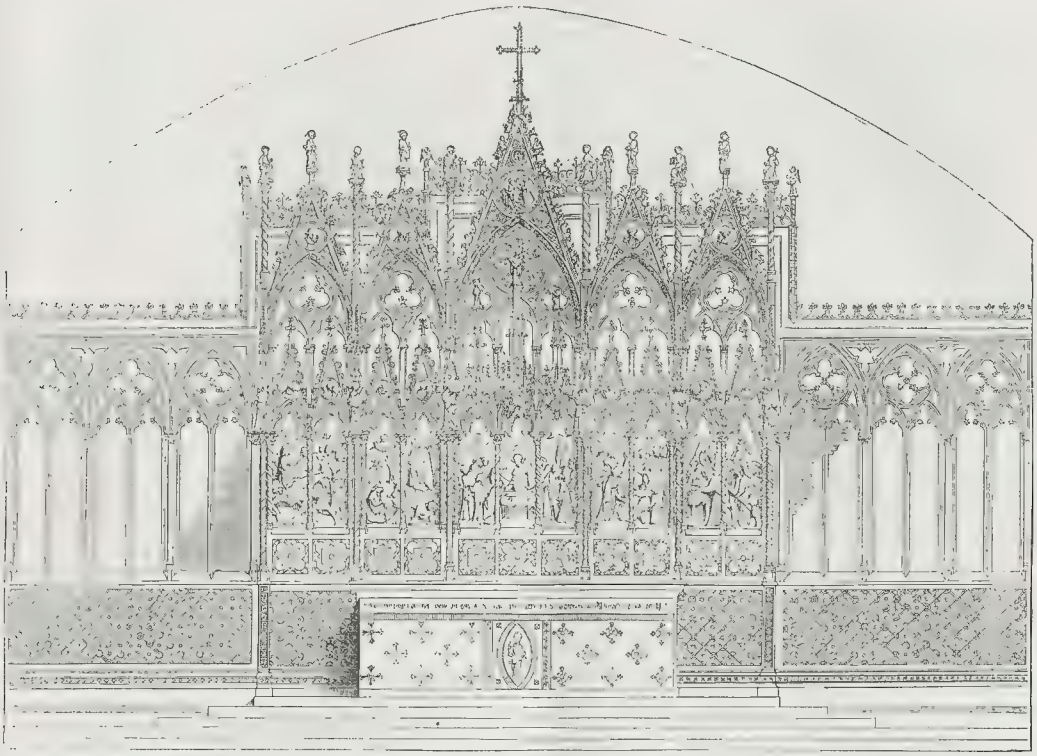
SOCIETY OF ARTS.—THE DINNER AT THE CRYSTAL PALACE.

LAST week we gave an abridged report of the Centenary Dinner of the Society of Arts, Manufactures, and Commerce; and this week we have given an Illustration of this interesting festival, which took place at the Crystal Palace, Sydenham.

As the Society of Arts claims the honour of the parentage of the Great Exhibition of 1851, and as the Crystal Palace stands in a filial relation to that great event, the Council of the Society of Arts very properly considered it both agreeable and appropriate that, on the completion of its first centenary, its members should assemble under the auspices and protection of the roof of its famous crystal grandchild. This venerable Society of Arts is certainly one of the most prolific of parents. Originally founded as a society for the promotion of arts and manufactures, it soon outstripped these narrow dimensions, and took "commerce" under its protection. Its all-embracing arms have, during the past year, been thrown around the sacred cause of "education," and its educational exhibition, which opened last week, promises to be as successful as any of the previous efforts of the society. A society with objects so varied, and ramifications so extensive, could not certainly have selected a more appropriate place for its réunion than within the walls of an institution having in common with itself many kindred objects, seeking by vast and novel means to obtain those ends; and possessing most excellent *cuisine*, and a lofty and well-ventilated dining-room.

DINNER TO THE CRYSTAL PALACE, IN CELEBRATION OF THE CENTENARY OF THE SOCIETY OF ARTS

THE ARCHÆOLOGICAL INSTITUTE, AT CAMBRIDGE.



THE NEW REREDOS (ALABASTER AND STONE) FOR ELY CATHEDRAL.

IN our Journal of last week we reported, to Wednesday night, the proceedings of this very interesting Meeting. We now illustrate Professor Willis delivering his Lecture, in the Senate-house, on the Architecture of Cambridge. Professor Willis observed that the most ancient authority respecting Cambridge was that of Dr Caius, published in the reign of Queen Elizabeth, and a book of ancient prints, published by one Loggan, a Dutchman, in 1688. For a long period the College system, as regarded its building, was very imperfect. The early colleges and hostels had no chapels, but the students attended the parish church. After comparing the chronological history of the earliest colleges in Oxford and Cambridge, he came to New College, Oxford, founded by William of Wykeham. This was planned perfect, having chapel, hall, and everything necessary for carrying out the routine and discipline of the present day. Henry VI., in founding King's College, Cambridge, evidently copied this from the perfect plan contained in his will, parts of which the learned Professor read. There appears a cloister 175 feet in length, the first which is found in any college of Cambridge; also "a goodly kitchen" which, as the lecturer observed, was not, as is vulgarly supposed, for their own indulgence, but for hospitality; so William of Wykeham was the man who first established colleges as they now are. The Professor next called the attention of his audience to a plan of Jesus College. This was originally the nunnery of St. Rhadagunda. The nuns being reduced to two, Bishop Alcock dissolved the society, and founded the present college upon it; the most distinguishing architectural feature of which is the chapel, and this originally had two side chapels and two side aisles. He concluded by some remarks on the church of St. Benedict, which is of undoubted Saxon origin, and one of the most interesting monuments of the architecture of that period. Dr. Whewell moved, and Professor Sedgwick seconded, the thanks of the meeting to Professor Willis.

On Wednesday evening the society met at the Town-hall—Lord Talbot in the chair. A paper was read by Mr. Deck "On Rebuses occurring in Heraldry, Architecture, and Printers' Devices." He gave many curious examples. That of Bishop Fisher—a fish and an ear of wheat; that of Archbishop Parker—a park railed in with deer, and the letter "r" at the corners. The arms of Saffron Walden are three sprigs of saffron, walled in. At the close of this paper, Mr. Westmacott asked if any one could explain the meaning of a small gold frog attached to the left ear of a statue of one of the ancient family of the Foleys, in Suffolk. Professor Henslow said, in that part of the country young frogs were called "polley wiggles," and so it might have reference to the name, but no one could throw any light on this fact.

A paper was next read by Mr. Edward Freeman, on Wisbeach Church in which he pointed out its singular peculiarities, and its similarity to the Church of Leominster.

On Thursday morning the sections on Antiquities and Architecture

PROFESSOR WILLIS LECTURING IN THE SENATE-HOUSE, CAMBRIDGE.

ANGLESEY ABBEY, NEAR BOTTISHAM.

met in the schools. A paper was read by Lord Talbot, the President, on the gold ornaments found in Ireland. A large tray full of massive gold ornaments was placed before the company. They consisted of fine gorgets, two neck torcs, and 137 wrist-bracelets, varying from a penny weight to several ounces.

In the architectural section, the Rev. J. Hailstone the Rector of Bottisham gave a detailed account of Anglesea Abbey in the parish of Horningsey, about four miles from Cambridge. The principal remains are the refectory; a series of arches apparently leading by a staircase to the upper rooms; two doorways, one containing the initials of William de Reche (a Prior in 1515) and the arms of the Clare family, who were great patrons; and part of a cloister. The rest of the building was the manor-house, built of the materials of the Abbey after its dissolution. A party of Archæologists afterwards went to explore the remains. The hypothesis as to its state seemed to be that no part of the church now exists; that the part where the entrance is was formerly the chapter-house, and then converted into a mansion, by the introduction of a floor and windows in the debased style of Gothic architecture; that part of the ambulatory still exists in the shape of a kitchen; and that the staircase leading to the dormitory has left a very beautiful vestige. The situation of the refectory and the buttories was easily discernible.

After the reading of Mr. Hailstone's paper, the Rev. E. Venables read a long communication on the past and present state of the University Church, Great St. Mary's. He gave a very interesting detail of the ancient furniture of the church.

Mr. Westmacott read a paper on the co'ouring of statues, contending this was contrary to all rules of art, ancient and modern. All the other speakers agreed with him; among whom were Dean Milman, Mr. G. Scharf, jun., and Mr. Hawkins.

At the evening meeting—Mr. Octavius Morgan, M.P., in the chair—Mr. Freeman informed the audience that a tumulus at Weybury, near Dursley, Gloucestershire, would be opened on Thursday and Friday. Mr. Cumming Bruce then read a paper on the Roman Altars at Trinity College, with speculations as to the meaning of the inscriptions. The Rev. J. Lee Warner then read a paper upon the Illustrations of Walsingham Abbey, existing within the University of Cambridge.

Friday was occupied by an excursion to Bury, 28 miles distant from Cambridge. At about twelve miles on the road, the Archæologists inspected the Devil's Dyke (otherwise the Giant's and the Reche Dyke), a vast earthen ancient British wall, stretching unbroken over the fats of Cambridgeshire, after the lapse of nearly 2000 years, and the greatest of the four dykes of this county. According to Dr. Guest, it was a defence raised by the Iceni against the attacks of the Cassivelauni; and, in the time of Canute, it marked the limit of the holidoms of St Edmund's Abbey, at Bury. The Archæologists then proceeded on their excursion; and, on their arrival at Bury, were received in the Townhall by the Hon. and Rev. Lord Alfred Hervey and the Suffolk Archæological Association. Lord Hervey read a very interesting paper on the Antiquities of Bury; and, after the company had partaken of a collation, hospitably provided by Lord Hervey, they proceeded to Hengrave Hall, four miles distant, the seat of Sir Thomas Rookewood Gage. We shall engrave this fine old seat next week. In the evening the Archæologists returned to Cambridge.

Saturday was appropriated to an excursion to Audley End and Saffron Walden. Audley End, the mansion of Lord Braybrooke, was erected in 1603, and is one of the finest existing specimens of Elizabethan architecture. Its distinctive features are the main body of the edifice, rising one story above the front; its noble oriel windows, projecting *renaissance* porches, and cloister: the ceilings are also very fine, and the collection of portraits of great value and interest. The Hon. R. C. Neville received the Archæologists, including Lord Talbot de Malahide, the Earl of Carlisle, and other distinguished personages. The visitors then walked across the park to the adjoining town of Saffron Walden, and there inspected its beautiful church, decorated and Perpendicular church, and the Museum, rich in Roman remains, gathered in the district. Here, also, was an exquisite "Adoration of the Magi," painted by Roger, of Bruges, in the style of Hemling. After partaking of a collation, provided by the municipal authorities, in the Agricultural Hall, the visitors returned to Cambridge.

Monday was devoted by the Archæologists to the examination of Ely Cathedral—the worthiest and most venerable monument of ancestral piety and ecclesiasthical grandeur to be found throughout the whole territory of the East Angles; and presenting specimens of all the different styles of architecture which have successively flourished in England—from the Romanesque or Norman to the Perpendicular. We have only space to notice the restoration of the Cathedral, which, under the fostering care of Dean Peacock, has long been recognised by lovers of art as one of the noblest achievements of its time and class. We have engraved the new Altar-screen (now in course of erection), which has been designed by Mr. G. G. Scott: the centre, over the altar-table being of alabaster, and the wings of stone. The subjects are from the Life of Our Saviour: in the centre, the Last Supper, the Entry into Jerusalem, Washing the Disciples' Feet, the Agony in the Garden, and Bearing the Cross.

At the opening of the tabernacle work are Angels, holding emblems of the Crucifixion; and in the centre, and crowning the canopies, is Christ, with Moses and Elias. The judicious treatment of the Evangelistic symbols in the crocketing of the four side gables, a reference has been sustained between this ornamentation and the figures of the Evangelists which surmount these gables. The twisted pillars are enriched by mosaic work of coloured pebbles. The altar-table is of oak, and covered with an embroidered antipprandium, presented by a lady. The work has been partly raised by the Chapter, and J. G. Gardner, Esq., in memory of his deceased wife. The figure subjects have been executed by Phillips, of Pimlico.

On Tuesday the final meeting of the Institute was held in the Senate-house. Lord Talbot de Malahide occupied the chair, and proposed a vote of thanks to Prince Albert, for honouring the Institute with his presence. The vote was carried with acclamation. Votes of thanks were then passed to the several public bodies and official personages by whom the institute had been so cordially received.

The papers read on Monday and Tuesday in the Sectional Meetings included a notice of documents connected with the history of Hatfield Regis Priory, preserved at Barrington-Hall, Essex, by Mr. G. A. Lowndes; "Observations on Ancient Sculptured Crosses in Ireland," by Mr. H. O'Neill; "On the Painted Glass in King's College Chapel," by the Rev. W. J. Bolton; a notice of Bishop Wren's MS. History of Pembroke College, by the Rev. Venables; notices of Ancient Monastic Barns, by Mr. R. R. Rowe; and an "Essay on the Ancient Art of Glass Painting," by Mr. C. Winston.

At the close of the general meeting on Tuesday, a party of Archæologists visited Sawston-hall, the picturesque seat of the very ancient family of Huddlestone, eight miles distant from Cambridge. The mansion was erected in the third quarter of the sixteenth century, and retains unchanged its Tudor windows with chamfered mullions and stay-bars, quaint gables and oriels, oak staircases and panels, and Arras tapestry.

We should add that the Museum of the Institute in the lecture-rooms of Trinity College presented a most splendid display of objects of antiquarian interest. Conspicuous amongst the curious, rare, or costly objects was the plate of the different Colleges, especially those of Pembroke, Corpus Christi, Catharine, and Clare Hall.

The principal exhibitors, apart from the University authorities, were Mr. A. J. B. Beresford Hope, Mr. Maskell, the Rev. S. Banks, Mr. Way, the Rev. J. Faulkner Lee, Mr. Rhode Hawkins, and Sir Chas. Anderson.

The early British, Roman, and Saxon remains were very remarkable. Among the church antiquities contributed by Mr. Beresford Hope was a magnificent ivory crosier, of the fourteenth century, the head exquisitely carved with the Coronation of the Virgin; and a triptych of inlaid work, representing the Baptism of Christ, and the Crucifixion, with the figures of St. Peter and St. Paul, St. Jerome and St Bartholomew, St Dominic and St. Francis, in the corner. Among the miscellaneous antiquities were a Runic calendar, carved on a box-wood stick, wooden clog-almanacks, used in Staffordshire as late as the seventeenth century, and still employed by the peasantry of the north of Europe.

We have been of necessity chary in our Illustrations of this most interesting Congress. Of Cambridge and its University edifices, several well executed Engravings appeared in Nos. 271 and 272 of the ILLUSTRATED LONDON NEWS (the Installation of the Prince Chancellor); and two Views of Audley End appeared in No. 5.1.

DURING last month, 16 new gun-boats were launched in Libau, about ten worsted from Riga; they are to be manned by militia from Courland and Livonia, and officered by the captain, of the corvette *Nemesis*, which was sold at Flushing last winter, rather than run the risk of the voyage home. Thirty-two more gun-boats in progress of erection in Sweaborg.

LETTERS from the Lower Danube state that the Sultan intends to visit the head quarters of his army on the banks of the Danube, then to go to [illegible] June regards to the gallant garrison

CALENDAR FOR THE WEEK.

SUNDAY, July 16.—6th Sunday after Trinity.
MONDAY, 17. Dr. Watts born, 1674.
TUESDAY, 18.—Petrarch died, 1374. Hampden killed, 1643.
WEDNESDAY, 19.—George IV. crowned, 1821.
THURSDAY, 20.—St. Margaret. Playfair died, 1819.
FRIDAY, 21. Robert Burns died, 1796. Lord W. Russell beheaded, 1683.
SATURDAY, 22.—St. Magdalene. Battle of Salamanca, 1812.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING JULY 22.

THE ILLUSTRATED LONDON NEWS,

elegantly bound in cloth, gilt edges, rich in Illustrations of the events of the last Six Months; together with a mass of useful and highly-interesting articles on Art, Literature, and Science.

The COVERS for VOLUME XXIV., with the New Design, price 2s. 6d. each, may be obtained, by order, of all Booksellers, &c., in the Kingdom; as also all the previous Volumes.

TO CORRESPONDENTS.

AN OLD SUBSCRIBER.—We are not acquainted with any "County History" of Huntingdon. Of course, the materials will be found in Camden's "Britannia" and in Lambarde's Dictionary; in Dugdale's Monasticon; and in the Harleian, Lansdowne, and Cottonian Collections in the British Museum. The article Huntingdon in the "Penny Cyclopædia," partakes of the general excellence of the topography in that very able work, which in this department is unrivalled by its more costly contemporaries.

RUSSIA AND DENMARK.—The Duchy of Holstein, after the death of the present King of Denmark, Frederick VII., will not be inherited by Russia, as all Russian claims upon this province have been given up by the present Emperor in favour of the Prince of Glucksburg (now called Prince of Denmark) and his male successors. There may be again a time when Russia may have a claim upon this province, but there is little chance of it at present, as the Prince of Denmark has several sons. The eldest is about fifteen years of age.

J. W.—Lord Ward's pictures are to be seen, gratis, at the Egyptian Hall. Black's "Tourist's Guide to Scotland" is a trustworthy work.

ELSHIE.—The word "mobilized" is of recent application as a military term. It is derived from the French verb *mobiliser*—to render "moveable." It is intended to express the employment of men on service who are generally stationary. For instance, the Landwehr of Prussia, and the local troops of France and Austria, together with the English Militia, when embodied and moved out of their counties, districts, or provinces, and made available for general service, are then said to be mobilized.

M.D., Sandbach, Cheshire. "The Practice of Photography," a Manual, by P. H. Delamotte, F.S.A., is extremely simple in plan, carrying the student directly through the various stages of each process, and describing the various chemical substances used in Photography at the end of the work, apart from the details of the processes. Or, a smaller work, Hogg's "Practical Manual of Photography."

In Preparation,

A PICTURESQUE PANORAMA
OF
HELSINGFORS and the FORTRESS of SVEABORG.

The PANORAMIC VIEWS of VARNA will appear shortly.

THE ROYAL AGRICULTURAL SOCIETY.—Next week we shall Illustrate the Meeting of this Society at Lincoln.

*** The Title-page and Index to Vol. 24 will be given next week.

PIRACIES.—NOTICE.

Proprietors of Publications who have copied the Engravings, &c., from the ILLUSTRATED LONDON NEWS, are hereby cautioned that, if such acts of piracy are continued, persons committing the same will be prosecuted.

198, Strand, July 8, 1854.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JULY 15, 1854.

IT appears that the world has not yet been correctly informed of the terms of the Czar's reply to the Austrian demand for the evacuation of the Danubian Principalities. That the answer is unfavourable, is generally understood; and that it must lead, within a few days or weeks, to the outbreak of hostilities between Austria and Russia, is as certain as any event can be that has not yet taken place. Various rumours and reports have been in circulation during the last fortnight, the whole of them being founded, more or less, upon truth—with the exception of the notorious falsehood "that out of high regard for the Emperor of Austria, the Czar had consented to recross the Pruth." The other accounts that have reached Central and Western Europe, though they disagree in the details of the Czar's exact words, agree in the fact that he will not listen to reason, and that his mind is made up to fight out the quarrel against any and every opponent. True to his ancient policy of endeavouring to gain time, the official reply to the Austrian summons has been purposely delayed, and so ambiguously framed, as to retain the Austrians in Transylvania, ready at any moment to pour into Wallachia, but awaiting a more definite answer before taking the irrevocable step of open hostility. It is possible, at the same time, that Prussian treachery or opposition has aided in bringing about this undesirable result. The Czar has not, in the least degree, yielded. Prince Paskiewitsch having, for reasons purely strategical, determined on the removal of his head-quarters to Jassy, has given dissatisfaction at St. Petersburg. Though the evacuation of Wallachia was necessary, it looked too much like a defeat, especially when coupled with the ignominious retreat from Silistria, to be otherwise than distasteful to the proud spirit of the Czar. Notwithstanding the long favour which he has enjoyed, his high character, his venerable age, and his eminent services, Prince Paskiewitsch has been ordered to retire to his estates; and, in all probability, his services will not again be required during the war. Bucharest remains in the occupation of the Russian troops, and at, or near that town, the first great shock of the conflicting armies of Austria and Russia will probably take place.

The preliminary period, not exactly of inactivity, but of the disposition and distribution of fleets and armies, is, at length, we suppose, approaching its end. The public is weary of notes, memorandums, and conferences, of which the only results have as yet been to pamper the personal pride of Nicholas, to feed him with visions of his greatness and his invincibility, and to enable him to exhaust all resources of art and labour upon the fortification of his two strongholds of Cronstadt and Sebastopol. The public impatience—though it may appear unreasonable, or even offensive to naval and military officers in high command—is by no means unnatural. The capture of one of the two great Russian fortresses is what the public expect. Halt of the summer is gone; and if the other half should pass over, and leave these two great operations to the chances of another year, it would be impossible to predict what advantages Russia might not gain from the delay, and what a vast amount of discouragement might not weigh upon the spirits of the gallant British and French nations. It is not to be anticipated, however, that such an unwise delay will be permitted. It is not without meaning mischief that 40,000 French soldiers are to proceed to the support of Admiral Napier in the Baltic. It seems highly probable that the first great blow will be struck in that quarter. It would, no doubt, be better if our fleets and armies should succeed in the simultaneous capture both of the northern and southern fort and fleet of the enemy; but if we are only to do one thing at a time, the predilection of the people is in favour of giving Cronstadt the first unmistakeable proof of our prowess. The Czar might, in his desperation, hold out long after the capture of Sebastopol; but the capture of Cronstadt would run him beyond retrieval. He might look his subjects in the face if he lost Sebastopol; but the capture of Cronstadt would be the capture of his capital, and would expose, even to the most benighted of the Russians, the hopelessness of his cause, and the ignominy of his disasters. In such a case he would have to reckon with his subjects at Moscow; and Moscow has never had that confidence in his character, or veneration for his person, which he has so successfully cultivated in St. Petersburg.

A DISCUSSION on the evils of Bribery, and a plan for their prevention or punishment, seem to be matters of course every session of Parliament. Doubts have often been expressed whether the Legislature were really desirous to put an end to a system which is convenient, though scandalous. But we think the House of Commons may fairly claim the merit of a wish to do right if it could but discover the way. In some of the attempts that have been advocated, the disease itself, bad as it has been, is less mischievous than the remedy. Ultra-purism in such matters would be injudicious, even if it were possible, as is evident to everybody who will consider without bias the question of "treating." To sell your vote for hard cash is an offence against private and public morality; but, to accept a glass of ale and a sandwich from the hospitality of a man whom you may have walked ten miles to vote for, is surely undeserving of no similar condemnation. Yet, ultra-purists in election matters would deal with both cases in the same manner. At the same time, systematic treating, if unchecked, speedily degenerates into bribery and corruption of the worst form. The difficulty is, how to meet such cases, and whether it is not better to wink at them, than to enact laws which cannot be enforced, and to place Law in opposition to Public Opinion. Whatever may be the real wish of Parliament, we greatly doubt whether public opinion is yet sufficiently pure and elevated to condemn the giver and receiver of a bribe. Crimes that are not recognised as crimes are beyond the power of the law. In England, a man who struck his helpless grandfather in the mud of the Thames, and left him there to die, would be universally denounced as a murderer; but, in India, public opinion sanctions and commands such acts; and Englishmen in that country may condemn, but cannot prevent the scandal. If they punish it, the sympathy of the people is with the alleged culprit, and not with the exotic law that attempts to be wiser than the traditions and practice of a nation. English venality and corruption in small boroughs are, in this respect, like the drowning of grandfathers—they are a blot upon English public life, and are very greatly to be deplored but will never be effectually remedied, until public opinion shall itself be purified. The taint is not merely skin-deep, but pervades the system; not only bribery and corruption, but perjury itself, is by far too many persons considered venial if it serve an electioneering purpose. A mayor and a magistrate convicted of perjury in a statement relative to a disputed election, considered himself an ill-used man because the law took cognizance of his offence and sent him to Newgate for it; and a whole host of wealthy, respectable, and virtuous persons took the same view of the offence, and sued for a remission of the sentence. Severity, in these cases, fails of its effect. Everything is considered fair in war and in elections for members of Parliament. The virtuous thing to do is to carry the election of your candidate. Provided that be done, the end sanctifies the means—not, of course, in the opinion of the just and the high-minded, but in the opinion of venal voters and unscrupulous agents. The candidate himself may make wry faces at the dirty work which he is expected to sanction; but, the election once over, he forgets its disagreeable episodes as fast as he can, and consoles himself with the reflection that, bad as he may be, he is not worse than his neighbours.

But justice should be done to members of Parliament. To them the system can be no other than a nuisance and a scandal; and we believe there is not one in a hundred of them who would not readily lend his aid to the purification of elections, if he but knew how to set about it. The new bill, founded upon the recommendations of a Committee, and which was discussed in its details on Monday night, has the merit of not attempting too much. Its main provision is one for the appointment of a new officer during elections, to be called the "Auditor of Election Expenses." This functionary is to be nominated by the returning officer, either on the joint recommendation of the candidates, or—in case of their being unable to agree—at his own discretion. To this auditor all pecuniary claims arising out of the election, except expenses for advertising or for personal expenses, are to be forwarded by the candidate within a limited period after they have been sent in; and any payment made by the authority of the candidate otherwise than through the election officer is to be deemed illegal, and may render the election void. By subsequent clauses the Auditor is required to make out full accounts of all moneys disposed of by him, and also of the amount stated by the candidate to have been paid by himself for advertising and for personal expenses; and these

accounts, besides being open to the inspection of the electors, are to be published in two local newspapers. The candidate is also to subscribe a declaration that he has not "knowingly made authorised, or sanctioned, and will not knowingly make, authorise, or sanction any payment other than that allowed by law to be made by him." The emoluments of the Auditor are to consist of a payment of £10 from each of the candidates, and a commission of two per cent on their legal disbursements. It is impossible as yet to predict how this change will work. The Auditors will have very difficult and delicate duties to perform; and experience alone will enable us to decide on the value of the innovation. We know of no valid objections to such officers; and if they perform their duties with ordinary impartiality and discretion, it seems reasonable to believe that the abuses of treating—that great source of electoral impurity—will be sensibly diminished, if not altogether removed. As regards the more serious question of direct bribery, the House of Commons can do little more than repeat its anathemas against the offence, and leave to the influence of public opinion the remedy which laws have hitherto been powerless to provide.

RUMOURED MEETING OF THE QUEEN AND THE EMPEROR OF THE FRENCH IN THE DOWNS.

We have received the following statement from a correspondent, who is usually well informed. The rumour has been current for several days but we have not been able to trace it to any authoritative source:—

Since the day when Henry VIII. and Francis I. met in the Field of the Cloth of Gold—(for the visit of our Queen to Louis Philippe had nothing of significance about it beyond Royal courtesy)—there has been no meeting so memorable between the Sovereigns of England and France as the approaching rendezvous in the Downs to witness the departure of the British ships freighted with the next division of the French army for the theatre of war in the Baltic. One day in the ensuing week will, we believe, be appointed for this interesting and important spectacle. Her Majesty and the Prince Consort proceed from Dover with the Emperor and Empress of the French cross over from the opposite coast, half way, to the floating field, far grander, in its heaving waves, crowded with majestic vessels and the steam trumpets of science, than all the gorgeous and splendour which gold could impart.

Necessary preparations are making to give eclat to this ocean interview, and the Imperial and Regal pair to General Baraguay d'Hilliers, and his brave companions (the first, as we have stated, of the force destined for this service), would be enough to plant courage and unquerchable resolution, even in cowardly natures; what must be the effect on the gallant soldiers of France! Mixed with our admirable Marines, the foe should be stout to face them.

THE COURT.

On Monday the Queen held a Court at Buckingham Palace. At the Court Lord Howden, Envoy Extraordinary and Minister Plenipotentiary to the Queen of Spain, was presented to her Majesty, on his departure, by the Earl of Clarendon, Secretary of State for Foreign Affairs, on his return from Madrid, on leave of absence. In the afternoon her Majesty and Prince Albert, accompanied by the Prince of Wales, the Princess Royal, Prince Alfred, the Princesses Alice, Helena, and Louisa, and Prince Arthur, went, at half-past four o'clock in the afternoon, to visit the Duchess of Gloucester, at the juvenile ball given by the Royal Duchess, at her residence, Gloucester-house, Piccadilly.

On Tuesday, the Queen and Prince Albert, attended by the Countess of Gainsborough, Lord Alfred Paget, and Colonel Seymour, went to Claremont, to visit the Countess de Neuilly. Her Majesty and the Royal party travelled by the South-Western Railway to Esher, and returned by a special train to the private station at Vauxhall. In the evening, her Majesty and his Royal Highness, accompanied by the Princess Royal and the Princess Alice, honoured the Royal Italian Opera with their presence.

On Wednesday the Right Hon. C. P. Villiers, Judge-Advocate-General, had an audience of the Queen at Buckingham Palace, and submitted to her Majesty the proceedings of some courts-martial. In the evening her Majesty had a dinner party at Buckingham Palace. The company included her Royal Highness the Duchess of Kent, their Royal Highnesses the Duchess of Cambridge and the Princess Mary, the Duchess of Sutherland, Lord and Lady John Russell, Lady Anna Maria Dawson, Lady Suffield, Baroness de Speth, Viscount Falkland, Viscount Torrington, Viscount and Viscountess Ranelagh, Lord Howden.

Sir William C. Ross, R.A., had the honour, on Wednesday, of taking the last sitting for a miniature of his Royal Highness Prince Arthur, painted by command of the Queen.

On Thursday the Prince Consort, attended by Major-General Wylde and Colonel Seymour, left Buckingham Palace at twenty minutes past one o'clock, for the purpose of viewing the siege operations at Chatham. In the evening, the Queen and his Royal Highness honoured the Royal Italian Opera with their presence.

THE COURT.—It is confidently stated that her Majesty the Queen and the Royal Family will take up their residence in Windsor Castle soon after the prorogation of Parliament, and that the annual visit to the Highlands will either be considerably shortened or entirely suspended. The reason assigned for this arrangement is the probable necessity of holding frequent Privy Councils during the progress of the war.

Her Royal Highness the Duchess of Kent visited the Duchess of Gloucester, on Wednesday, at Gloucester House. Her Royal Highness, attended by Sir George Couper and Lady Anna Maria Dawson, honoured M. Claudet, the Daguerreotype artist, with a sitting in the morning, at his studio, in Regent-street.

His Excellency the Ambassador of France and the Countess Walewska left town on Saturday last on their way to Switzerland, where they propose to make some stay.

ROYAL POLYTECHNIC INSTITUTION.

This highly-useful institution is now under entirely new management; and, to give opportunity for explaining the consequent improvements, a conversazione was summoned by the resident director, Mr. J. H. Pepper, for Thursday evening, which was numerously and fashionably attended. An address by John Walter, Esq., M.P., was delivered on the occasion, for the purpose of inaugurating the re-opening of these halls of science. "It could not be said," the speaker observed, "that the institution had hitherto kept pace with the progress of the age, for new discovery proceeded at a rate so rapid that this was impossible. But, under the new management, increased efforts would be made to render the institution more comprehensive and profitable. Experiments in natural philosophy would be conducted according to the latest and most approved methods." Mr. Walter then read some extracts from Lord Bacon, to prove that even the knowledge of that great man was far behind that of the merest tyro in science in the present day. The great attraction of the evening, however, was a lecture in the chemical theatre by M. Dubosc, who had come expressly from Paris to exhibit his extraordinary experiments in optics and electricity. These were, in many instances, of an original and refined order; but they were performed with such rapidity as to forbid details. On other evenings, at an earlier hour, it was announced that they would be more carefully and fully shown, that their merits might be adequately tested. Oneexperiment in the large hall, of an illuminated fountain, was very striking, and the variety of colours which it assumed equally marvellous and beautiful. Dissolving views were then presented of Turner's pictures, illustrative of the river Loire, which were highly interesting. Many novelties were among the objects exhibited of these some large photographic portraits by Mr. Maynall—exceeding in size any previous specimens—excited great attention. In the gallery we witnessed some brilliant specimens of electric gold and silver plating, from the establishments of Messrs. Hardy and Rosehill, and Messrs. Elkington. Messrs. Copeland and Co also contributed a collection of designs in porcelain and terra cotta; Messrs. Watkins and Hill, a new electro-magnetic apparatus, illustrating the application of electricity as a motive power, and the Electric Telegraph Company, their gas-fire electric telegraphs by Bachhoffner and Defries. Every thing seems to have been done that could be, to render this institution a school for the education of all classes; and such was the multifarious nature of attractive objects that it was very late when the company dispersed, highly gratified with the new and instructive entertainments produced and the spirit manifested in the arrangements, which of itself was full of promise for the future.

NOTES OF THE WEEK.

CRIMINAL REFORMATION.

The Earl of Shaftesbury presided, on Monday last, at the first meeting of the "Metropolitan Industrial Reformatory," at the school-house, Stretton-hill, in the presence of "400 ladies and gentlemen, resident in the neighbourhood," who, of course, took a deep interest in the proceedings. As an evidence of how men—men of plain, practical good sense in many respects—may be led into absurdity by indulgence in a favourite hobby, we find the noble chairman, at the very outset of the proceedings, declaring that the usefulness of these criminal conservatories was "recognised all over the world," adding that, "in the progress of civilisation, it became more and more apparent, as *there was no doubt that civilisation tended to develop crime*"—a position that we will not pretend to analyse or gainsay. We turn to the report of the year's proceedings of this newest of Reformatories, as better adapted to our comprehension. The report stated that

During the past twelve months 100 persons, varying in age from sixteen to forty-five, had been admitted to the institution. Of these, 15 had left while on probation; 25 had been dismissed as incorrigible; 6 had been restored to their friends; 7 removed to juvenile reformatories, 11 provided with situations, and 36 remained in the institution. Of these 36, the committee had determined to aid 6 to emigrate. The total receipts amounted to £2008 16s. 8d., and the expenditure to £1993 12s. 8½d., leaving in hand a balance of £15 2s. 0½d.

Examining this return, it resolves itself into the following results:—that, of 100 interesting sinners, of various ages, admitted in the course of the year, 40 had "left whilst on probation" (left for what, we need hardly ask), or been "dismissed as insincere;" and that of the remaining sixty, twenty-four had been got rid of amongst their friends, other reformatory institutions, or in situations; leaving thirty-six still to be dealt with. In a word, forty per cent of his Lordship's *protégés* have turned out failures at starting; the remainder being treated with various, but still problematical, success, at a cost annually of £2000 in round numbers, or an average of £33 per head. A hard-working farm-labourer in the country considers himself lucky in earning ten shillings a week, wherewith to keep a wife and family. Why should he toil for this pittance, when here are a body of benevolent gentlemen ready to spend 12s. 6d. per week a head upon him, and reform him into the bargain? Verily "civilisation develops" much absurdity.

FATAL PARACHUTE DESCENT.

The unfortunate Frenchman, Le Tour, whose so-called "successful parachute descent" we noticed last week, has died of the injuries he received in it; indeed, from the first he never rallied, his recovery was hopeless. An inquest has been held on his body, and a verdict of "Accidental Death" returned. Some of the Jury were for accompanying their verdict with a recommendation to the Home Secretary for the prevention of such stupid and reckless exhibitions in future; but they were restrained from it by the majority, who considered it might be "prejudicial to the interests of science" to interfere. Now the interests of science have nothing to do with ballooning or parachuting; the whole "art" is an idle amusement got up to fill the pockets of unscrupulous speculators; and it is high time that it should be restrained within harmless bounds. The magistrates, some time back, interfered successfully to prevent the lives and limbs of ponies and donkeys from being imperilled in such tomfooleries—why should poor, stupid man go less regarded? Surely it would be easy to frame a power to prevent the announcement of "feats" of this kind, which shall be shown to be very likely to terminate in disaster.

THE LAND TENURE IN INDIA.

The case of the poor Indian Ryot was brought before the House of Commons on Tuesday evening, by Mr. Blackett, who moved for the appointment of a Commission to proceed to India to inquire into the tenure of land in the Presidency of Madras. The motion was supported by Mr. Danby Seymour and Mr. Bright, who (the former as the result of personal observation) brought forward an array of facts illustrative of the wastefulness, the injustice, and the cruelty of the present system; statements which only men "deaf to mercy and insensible to shame," could listen to with indifference. It was opposed by Sir James W. Hogg, the East India Director, who, disdaining to meet the case upon its merits, contented himself with ridiculing the promoter for having wasted his time in listening to the complaints of discontented natives, and, above all, for having the weakness to suppose that the House of Commons would care a rush about the matter: opposed, also, by Sir C. Wood, who deprecated interference at the present moment, upon the ground that Government had the subject under their consideration, with a view to improvement. In short, the supporters of the motion had all the argument to themselves; and although, upon a division, they were defeated by a majority of 5, there can be no doubt that the principle sought for will be attained, and the Governors of India awakened, after a century's sleep, to a real sense of the responsibilities attaching to their stewardship. But whilst Sir J. W. Hogg "pooh! poohed!" the idea of non-official personages interfering with their advice and opinions, in matters of state policy, Sir Charles Wood cited the late Mr. Alexander Mackay, who, three years ago, went out upon a mission to India, to investigate the agricultural resources and prospects of the Western States, for the information of the Manchester Chamber of Commerce, as an authority in favour of the Ryotwar system. Now upon referring to the third chapter of Mr. Mackay's "Western India," we find it to contain a circumstantial account of the system in question, and a strong condemnation of it. "It cannot fail to strike every one," he observes, "that a system like this, unless the agents employed throughout are of unimpeachable integrity, must be a prolific source of *fraud, corruption, and oppression*," and then, after explaining the uncertainty during the growing season, as to the amount the Ryot will have to pay, he adds: "It is whilst this is being ascertained, or the season progresses, that a door is opened for every species of underhand transaction." Sir C. Wood had, probably, not seen the book itself, and cited it as an authority at second hand.

JUSTICE'S JUSTICE IN THE CITY.

The Lord Mayor gave a strange decision on Wednesday, at the Mansion-house, which would be funny, but that it entails serious and really undeserved hardship upon the unfortunate individual who happens to be the victim of it. It appears that the police, having got an Irish row, accompanied by the favourite Irish cry of "Murder!" in the lodging occupied by one Jeremiah O'Driscoll, forced their way into the premises, when they found the said Jeremiah, his wife, his sister, and brother-in-law, all sprawling upon the ground, in a state of "real Irish confusion." For the occasion of this hilarity;—there had been a christening; and what so reasonable as that all should get drunk? True, the wife's head was bleeding; and "the belief of the officer" was, that this bleeding was consequent upon a blow by the husband (what so natural, under the circumstances, as woman-beating days?); but it was said and proved that on this the policemen were taken, as there had been no quarrel or violence at all. However, be it as the officer dragged this unhappy Hibernian out of his house (an "Englishman's" house is his castle), without being charged with any offence; and, when brought before the Lord Mayor, his Worship fined him five shillings for being drunk, and in default, committed him to prison for fourteen days. The sentence is clearly illegal; Lord Mayors ought to know that a man cannot be punished for getting "drunk on his own premises"

LATEST INTELLIGENCE.

JUNCTION OF THE ANGLO-FRENCH TROOPS WITH THE TURKISH ARMY.

VIENNA, July 13.—Eighteen thousand of the Anglo-French forces joined Omer Pacha at Rustchuk, who, on the 7th and 8th inst. (as already stated) inflicted great loss on the Russians at Giurvego. It is also stated that the Turks have crossed the Danube at Oltenitza.

ODESSA, July 2.—The Allied fleets, composed of fifty-eight sail, are being concentrated in the direction of Sebastopol.

WIDDIN, July 6.—The Russians are reported to be in full march towards Krajova and Kalafat. On the 30th June Prince Gortschakoff, the General, received orders from St. Petersburg to re-occupy the position which has been quitted by order of Prince Paskiewitsch.

LATEST FROM CONSTANTINOPLE.

The *Euphrates* steam-packet, which started from Constantinople on the 5th, left at Varna the English and French troops ready to march on Schumla. The Dobrudja was not as yet evacuated. The Duke of Cambridge was at Constantinople on the 2nd, to confer with M. de Bruck, the Austrian Internuncio; and the next day, in company with the Sultan, passed a review of the Turkish brigade, and of the twenty pieces of cannon attached to that division. On the 4th he returned to Varna. At the same date Omer Pacha was at Silistria, distributing recompenses, and having the fortifications repaired.

FRENCH TROOPS FOR THE BALTIC

Forty thousand troops are spoken of for the northern expedition. It is probable they will be employed to occupy and defend Sweden, if necessary, from any attack of Russia during the winter, and the cooperation of Sweden seems to be made sure of.

EMBARKATION OF FRENCH TROOPS IN BRITISH SHIPS OF WAR.—The Emperor Napoleon arrived at Calais from Boulogne on Thursday afternoon, at four o'clock, with several Generals, and took up his residence at the Hôtel Dessin, which had been prepared for his reception. His Majesty was saluted on his arrival with the utmost enthusiasm. Commodore the Hon. F. W. Grey, Captains Talbot, of the *Algiers*; Ringcome, of the *Royal William*; Mansell, of the *St. Vincent*; and Clifford, of the *Sphinx*, with Mr. Consul Bonham, waited on the Emperor, and met with a most cordial reception. Proceeding to the business in hand, his Majesty expressed an opinion that the embarkation had better not take place on Friday, referring to the still lingering English prejudice against the sea as "unlucky" day. It was then proposed to postpone the embarkation to the 20th inst.; but, the weather being fine, and all the transports ready, it was finally settled by the Emperor and the British officers that the baggage and *matériel*—which includes 6,000,000 cartridges and 320,000 lbs. of powder—should be placed on board yesterday (Friday), and that the troops should embark on Saturday. This having been settled, the Emperor invited the British officers to dine with him. They expressed their sense of the offered honour, but declined it, as it was not consistent with their duty to remain absent from their ships. The suggestion to postpone the embarkation to the 20th came originally from the English Admiralty, and originated in the apprehension that all would not be ready before then.

CLOSE BLOCKADE OF FINLAND.

STOCKHOLM, July 11.

The Swedish mail-packet has been stopped and sent back by her Majesty's cruisers.

Communication with Finland via Aland is no longer allowed. Aland is declared in a state of blockade.

DANTZIC, Thursday.—The *Nicolai I.* has arrived. She left the fleet in Barö Sound on the 10th instant (46 English and 16 French vessels). There were a few cases of cholera in the fleet.

THE AUSTRO-PRUSSIAN ALLIANCE.

The *Oest Correspondenz* of Thursday contains an article stating that almost all the German Governments have promised to give their support to a motion to be made in the German Diet, that the whole of Germany do join the Austro-Prussian Alliance.

The King of Wurtemburg still stands aloof, but it is considered certain that a Monarch who was always one of the first to defend the rights of Germany against the West, will not be found remaining when it is necessary to oppose the disturbance of the balances of power in the East.

MADRID, July 12.—The insurgents have been beaten in Valencia. Their commander was killed: 54 prisoners were taken.

ROYAL AGRICULTURAL MEETING AT LINCOLN.—The Manchester, Sheffield, and Lincolnshire Railway gives extra facilities for the traffic connected with the event, at reduced prices. The meeting to be held in the best agricultural county in England—is expected to be the most interesting on record.

THE STAPLE CIRCASSIAN TRADE.—At present the only trade that may be said to be carried on here is that in women; and this seems to be extraordinarily active at present, from the large prices obtainable on Constantinople, and the removal of all obstacles. I have been told from good authority that a girl bought for fifteen purses here is sold in Constantinople for forty. Numbers of little boats arrive all along the coast from Trebizond almost every day. They haul themselves up on the beach, and spread the sails on the sides of the boat to form tents. Here the captain sits, and the natives bring down to him their girls to exchange against his cargo, which generally consists of calicoes, prints, and other stuffs, and of salt. There is no money in the country, and all the bargains are struck with reference to so many pieces of calico—each piece being called a "mal:" one mal is worth about fifteen shillings, and twenty mals make a Turkish purse. The Circassian girls this side of the Caucasus are, though all young, rarely more than pretty, though many are not worthy of the reputation for beauty which Circassian women have always enjoyed. They are generally the children of serfs, it being considered disgraceful for a freeman and a Mussulman to sell his children.—*Letter from Bordjume.*

THE PIRATES ON THE COAST OF MOROCCO.—By the arrival of Her Majesty's steam-sloop *Stromboli* at Portsmouth, on Monday evening, we learn that her Majesty's steam sloop *Prometheus* had returned to Gibraltar on the 4th inst., having recaptured the *Cuthbert Young*, merchantman, on the Riff coast, from the pirates. She was, however, ridded of everything. The *Prometheus* was fired upon, and she returned the fire with interest, doing much mischief. She had three men slightly wounded.

M. THOUVENEL CHARGÉ, who has returned from Constantinople on the Turkish loan, had the honour of a private interview on that subject with the Emperor of the French last week.

THE ALLIED FLEETS OFF CRONSTADT.

THE telegraphic despatch which we gave last week that the Allied fleets were off Cronstadt on the 29th ult., and that a general attack was expected on the following day, proves to have been only half true. The fleets are there, but no attack had taken place or is likely to take place for some time. We have, however, received some particulars relating to the movements of the combined fleets, which left Baro Sound on the 26th ult. On the 27th they anchored off the island of Seskar, and soon after they had anchored the Hecla [illegible] she suddenly pulled up on [illegible] the Russian pilot-boat, after a momentary pause, [illegible] The *Dragon* [illegible] Warrior [illegible] other, but interposed unsuccessfully. The Russian pilot was [illegible] on board. The Russians [illegible] Seskar, and [illegible] the Russian ships in [illegible] Cronstadt, as soon as the [illegible] of the Russian ships in the [illegible] were observed [illegible] Russian fleet. [illegible] the Russian ships, [illegible] Seskar, were [illegible] anchor outside the forts. Not a breath of [illegible] ruffled to carry them inside under protection of their batteries; [illegible] of immediate action, certain victory and captured ships, very [illegible] Saturday prevailed on board. One or two ships were in advance of the [illegible] cut for the "infernal machines." All the ships had [illegible] Cronstadt tops, reporting every floating log of wood that [illegible] resemblance to a buoy—an appendage said to be attached to [illegible] and closer, the [illegible] ships

RECONNOITRING AT CRONSTADT.

of-war were still skulking under their guns within the harbour. The Admirals consulted together. The combined squadron came to an anchor; and there was evidently a great stir amongst the Russian ships. The steamers in harbour immediately got steam up, and all seemed on the alert. Our squadron made a sweep, and retracing its steps a little, dropped anchor at out eight or ten miles off Cronstadt. Seven or eight ships amongst which were the *Imperieuse*, *Arrogant*, *Desperate*, *Penelope*, *Magicienne*, *Lightning* and *Driver*, were placed in a position off the mouth of the harbour, about three miles.

On the 27th of June, the yachts *Emerald* and *Gondola* were taking a pleasure trip round the English steam squadron, and, in order to reconnoitre a little, they reached in within about four English miles of the entrance of the harbour of Cronstadt. They were in a short time (not altogether agreeably) surprised by a Russian steam-corvette steaming out at full speed in chase of them, to try to cut off their escape. They, however, being only prepared to take their pleasure, and not equipped for combat, very soon showed the Russians what English-built yachts could do when close hauled up in a wind. They sheeted sharply home, and gave them the full of their sails, and after three tacks they were safely under the protection of our steam squadron. The *Desperate* thinking it a good opportunity to take the measure of the Russian, got up steam and proceeded towards her. This was rather too much for the Russian corvette, which very soon down helm, and ran at full steam power for the harbour. The *Desperate* sent an iron messenger after her, but the Russian escaped into the harbour, and the *Desperate* sailed slowly back, having fired the first gun in defiance of the batteries and fleet at Cronstadt.

While the main squadron was employed surveying and sounding on the north side, the *Driver*, having the master of the fleet on board, was engaged in sounding round the fortifications; and also in the channel for the purpose of discovering some of those infernal machines, of which so much has been said. According to all accounts they are covered with stones and small rocks, and their position is marked by small buoys. Very great circumspection and care were therefore used by the gallant officers, as they discovered several buoys, which, from their appearance, answered the description that had been given of the marks placed to point out the locality of these newly-invented submarine wires. Cautiously the buoys were approached, carefully the chains to which they were attached were raised; and very anxiously their pendent burthen was looked for. It was quietly hauled on board, and to the anxious looks of the discoverers was exhibited only a large stone. The infernal machines have not yet been found, and it may be doubted whether they are worth the trouble of looking for.

Telegraphic despatches from Dantzic, of the 10th inst., announce that Admiral Sir Charles Napier, after spending above a fortnight before Cronstadt, endeavouring to tempt the Russians into action, has returned with his ships to Baro-sound. The cholera was raging at Cronstadt, and the Admiral was unwilling to keep his men unnecessarily in its neighbourhood.

ENTRANCE TO CHRISTIANSUND.—RUSSIANS RUNNING FOR REFUGE.

CHRISTIANSUND.

We have engraved a view of this interesting Norwegian seaport, with an incident, recently sketched by a Correspondent. The town is built upon three islands, and forms almost a circle around its beautiful landlocked harbour. In entering from the sea, not a house is to be seen, until the narrow passage between the islands is passed, when the town bursts upon the view. The three islands are so irregular upon the surface, that so nearly any two houses stand exactly upon the same level. They are all of wood, and coloured with red ochre. The trade of the town consists chiefly of stock-fish, exported to Spain and Italy.

CHRISTIANSUND

EMBARKATION OF CATTLE AT TRIESTE FOR THE AUXILIARY ARMY IN THE EAST.—(SEE NEXT PAGE)

EMBARKATION OF CATTLE AT TRIESTE.

OUR Austrian Correspondent writes from Trieste, June 28th:—Upwards of 12,000 oxen have been bought already in this neighbourhood, chiefly in Friuli, for the Allied French and English Armies. During the last fortnight a large number of vessels have left this port for Gallipoli, laden with first-rate cattle.

The accompanying Sketch represents the scene of shipping the oxen. They are first placed on large flats, provided for the purpose; and, after being towed alongside, are hoisted into the vessel with slings, in the usual manner. The vessels destined for this service are easily distinguished by a large letter and number painted near the stern.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

THE SCREW PROPELLER.

Lord LYNDHURST moved for a copy of the agreement entered into by the Lords of the Admiralty, in respect of which a sum of £20,000 had been paid, on account of patent rights, for the propellers used in her Majesty's Navy: and presented a petition from Captain Carpenter, R.N, who complained that he ought to have received a considerable proportion of that sum; of which, however, he had been unjustly deprived.

The Earl of ABERDEEN said, the matter had been referred to an impartial person, and, according to his decision, the money had been paid. If Captain Carpenter felt aggrieved, he should apply to the proper tribunal. He would not object to the production of the papers.

After a short conversation, the motion was agreed to.

The Cruelty to Animals Bill, after considerable discussion, passed through Committee.

The Divorce and Matrimonial Causes Bill was withdrawn.

HOUSE OF COMMONS.—MONDAY.

THE BRIBERY BILL.

Lord J. RUSSELL said that the bill had been referred to a Select Committee, before which it had undergone the most mature consideration, and several amendments had been made, which were of great importance, and which he hoped the House would agree to. The noble Lord added that it was not his intention to proceed with the Controverted Elections Bill during the present session.

The first four clauses were agreed to, after considerable discussion and several verbal amendments.

On the 5th clause being proposed, defining what was to be considered as undue influence.

Mr. MALINS proposed as an amendment that the words "spiritual or temporal" should be inserted after the word "loss," with the view of making the clause include within its operation priestly influence, whether used from the altar or otherwise.

The Committee divided, and the amendment was negatived by a majority of 126 to 26.

On the 10th clause being proposed, which prohibited persons acting as counsel, attorney, poll-clerk, or in any other capacity, if themselves electors, from receiving any remuneration for their services,

Several objections were raised, and the clause was ultimately withdrawn, with the view of framing another, better calculated to carry out its object.

On the 12th clause, which prohibits the employment of electors as special constables during an election, a discussion took place, followed by a division, upon which the clause was carried by a majority of 184 to 39

Clauses to 16, inclusive, were then agreed to; after which,

The House resumed, and the Chairman reported progress and obtained leave to sit again on Thursday.

The Standard of Gold and Silver Wares Bill was read a second time, after a short discussion.

The Criminal Justice Bill was also read a second time.

HOUSE OF LORDS.—TUESDAY.

The Ecclesiastical Courts Bill, the main purpose of which is to enable those tribunals to take parol evidence, passed through Committee without amendment.

Various amendments in the Oxford University Bill were proposed, and agreed to, after which the report was brought up.

The Indemnity Bill, Poor Law Board Continuance Bill, Union Charges Continuance Bill, Holyhead Harbours Bill, and Dublin Carriage Bill, were severally read a third time and passed.

HOUSE OF COMMONS.—TUESDAY.

LAND TENURES IN MADRAS.

Mr. BLACKETT moved that an address be presented to the Crown for the appointment of a commission to proceed to India, to inquire into the tenure of land in the presidency of Madras.

Mr. LOWE opposed the motion.

Mr. D. SEYMOUR supported the motion, and mentioned many circumstances which had come to his knowledge during a recent visit to India, to show that the condition of the people in the presidency of Madras, owing to the system adopted, was a disgrace to the Government.

Sir J. HOGG warmly contended that the statements made by Mr. Seymour were exaggerated, and unsupported by evidence. He had been misled by interested agitators during his tour in India.

Mr. BRIGHT contended that a case had been made out for inquiry, and enlarged upon the duty which this country owed to India.

Sir C. WOOD said it would be most inexpedient to interfere with a tenure to which the people had been accustomed. He hoped the motion would not be pressed to a division

After some further discussion the House divided. The numbers were —For the motion, 59; against it, 84: majority against, 5.

Mr. J. FITZGERALD moved for returns relating to the Irish constabulary, with the object of showing that, compared with the number of Roman Catholics in each class, they had been unfairly dealt with in the matter of promotion.

After a brief debate, the House divided, when the numbers were—For the motion, 21; against it, 62: majority against, 41.

HOUSE OF COMMONS.—WEDNESDAY.

MEDICAL GRADUATES BILL.

The motion for going into Committee on the Medical Graduates (University of London) Bill was opposed by Mr. BOUVERIE, who considered that the measure did no more than extend a monopoly which ought to be abolished altogether. The graduates of the London University were to be admitted to privileges from which the Scotch practitioners remained excluded. He moved that the bill be committed that day three months.

Mr. COWAN supported this amendment, urging the claims of the Edinburgh University to an equal share of privilege, and exhorting the Government to introduce a general bill on the subject.

Lord PALMERSTON defended the bill. When the London University was founded there was, he argued, an understanding that the degrees granted there should convey the similar professional advantages to those acquired at Oxford or Cambridge. This was the case with respect to all degrees, except those in medicine, although the medical examination in the London University was confessedly excellent. The present measure was designed to remove this anomaly, and, if passed, would not stand in the way of a general bill, which he admitted to be desirable, and hoped to introduce in another session.

The debate was continued for some time. On a division, the motion for going into Committee was carried by a majority of 90 to 26—64.

The bill then passed through Committee, after a protracted discussion on an amendment proposed by Mr. MOWBRAY, for changing the word "University" into "Universities," in Clause 1, with the object of bringing Durham University within the scope of the measure. This amendment was adopted, upon a division, by 147 affirmative votes to only 2 on the negative side.

The Properly Disposal Bill and the Jurors and Juries (Ireland) Bill, were both withdrawn.

The Literary and Scientific Institutions Bill went through Committee

Leave was given to Sir W. MOLESWORTH to bring in a bill for removing the office of the Duchy of Cornwall from Somerset-house to a new office to be erected on Crown property in Pimlico.

HOUSE OF LORDS.—THURSDAY.

REVIVAL OF THE SLAVE-TRADE IN CIRCASSIA.

The Bishop of OXFORD called the Earl of Clarendon's attention to a statement which had appeared a few days since in the public journals to the effect that since the delivery of Circassia from the domination of Russia, the Slave-trade had been revived there in its most horrible phases.

The Earl of CLARENDON replied that a despatch had been received that morning from Admiral Dundas, in which he stated that he had given orders to British officers serving on the coast of Georgia and Circassia, to prevent by all friendly means all attempts that might be made to continue this iniquitous traffic.

COUNT PAHLEN.

Earl GRANVILLE made a brief statement relating to a matter personal to himself. He had been charged with having introduced into English society the subject of a country with which we were at war: he alluded to Count Pahlen, whom he had known for many years. That distinguished person had been the warm friend of his father, and of many members of their Lordships' House; and, on ascertaining that he had arrived in this country from Madeira (and not from Russia) he had asked him to his house, and had introduced him to the Travellers' Club. Looking at the character and accomplishments of Count Pahlen, he did not believe that in so doing he had done anything unbefitting a servant of the Crown or a member of their Lordships' House. Count Pahlen had not been in Russia for many years. His only object in visiting this country at this moment was to settle some small pecuniary matters, and to take leave of many intimate friends—from whom, it was to be feared, he was about to make a final separation.

The Earl of Malmesbury, the Marquis of Lansdowne, the Earl of Carlisle, and the Earl Ellesmere bore witness to the high character of Count Pahlen, and expressed their opinion that the sentiments expressed in another place, and in a portion of the public press, would find no echo in the country.

The Earl of ABERDEEN said that, after what had passed, he need scarcely say that Count Pahlen had not come on a visit of diplomacy to him (laughter)—a charge which had been made against him by the organ of the noble Lords opposite (Laughter).

The Merchant Shipping Bill was read a second time.

The Oxford University Bill was read a third time and passed

The Ecclesiastical Courts Bill, and the Cruelty to Animals Bill, were severally read a third time and passed.

HOUSE OF COMMONS.—THURSDAY.

The House met at twelve o'clock.

The Drainage of Lands Bill was read a third time and passed.

The Convict Prisons (Ireland) Bill passed through Committee.

The Criminal Procedure Bill went through Committee *pro forma*, for the purpose of introducing amendments.

OUR OPERATIONS IN THE BLACK SEA.

Lord J. RUSSELL, in reply to Mr. HUTT, said that the months of the Danube were subject to a close blockade; but as regarded the Black Sea and the Sea of Azoff, no decision had as yet been come to. A proposition had been made by the Admirals in command, and it was under the consideration of the Allied Governments.

Sir J. GRAHAM, in reply to Mr. Hutt, said that orders had been transmitted to the Admirals commanding in the White Sea to institute a strict blockade of the ports in that sea from the first day of next August.

The same right hon. bart, in reply to Mr. E. Phillimore, said that no information had been received by him as to a reported decision of the Tribunal of Commerce of Hamburgh on subjects relating to the blockade of the Baltic.

Sir J YOUNG, in reply to Mr. J. Butt, said it was intended to allow the Crime and Outrage (Ireland) Act to expire on the 31st August.

THE IRISH LAND BILLS.

The House having resolved itself into Committee upon the Landlord and Tenant (Ireland) Bill,

Mr. NAPIER complained of the Government in asserting, on Tuesday last, by the mouth of Sir J. Young, that the Landlord and Tenant (Ireland) Bill, and the Leasing Powers (Ireland) Bill, were not Government measures, although they had previously made them their own by adoption. They had been introduced into the House of Lords by the Government. He appealed to the House whether the character of the Government was not compromised by the course it had pursued.

Sir J. YOUNG said, without arguing the question whether the measures referred to were Government measures or not, maintained that the questions involved in those bills could be best settled by postponing all legislation on the subject until next session.

Lord J. RUSSELL expressed a hope that the chairman would be allowed to report progress.

Mr WHITESIDE charged the Government with a breach of faith in the matter, and said that the bills had been sacrificed to secure the support of a certain party in that House.

A warm discussion then ensued, in the course of which Mr. DISRAELI commented severely upon the conduct of the Government, and charged them with being influenced by any principle, and unsupported by any party. The chairman reported progress, at an advanced hour of the night; and the other orders of the day were disposed of without much hesitation.

HOUSE OF LORDS.—FRIDAY.

The Earl of SHAFTESBURY in moving for the production of certain papers relating to the Board of Health, called their Lordships' attention to the charges made against that board by Lord Seymour, in the House of Commons, and entered into a statement with a view of showing that the Board of Health had discharged its duties most efficiently.

The Bishop of LONDON, the Earl of CARLISLE, and Lord BROUGHAM, severally bore testimony to the valuable services rendered by Dr. Southwood Smith, Mr. Chadwick, and by the Earl of Shaftesbury himself.

The Common Inclosure Bill (No. 2) and the Inspection of Nuisances Bill were read a second time.

The Bankruptcy Bill and the New Forest Bill were reported with amendments.

HOUSE OF COMMONS.—FRIDAY.

Mr. HEYWOOD asked the Chief Secretary for Ireland, whether it was intended to create exhibitions in Trinity College, Dublin, open to students without any religious test, and when and from what funds such exhibitions would be provided?

Sir J. YOUNG said, he could not undertake to answer for the University, as it was a corporation not under Government control. He had, however, appealed to parties there, and he understood that the Board proposed to take steps to adopt the recommendations of the Commissioners to found a reasonable number of exhibitions, which should be open to persons of all religious denominations.

Mr. J. O'CONNELL asked whether the attention of the Government had been called to the recent cases of outbreak of cholera on board of emigrant ships, in particular to that of the ship *Dirigo*, chartered by the Emigration Commissioners for Melbourne? and whether the Government would, in pursuance of the recommendations of the Emigrant Ships Committee, pass a Bill this session, to enable her Majesty, by an Order in Council, to stop emigration from any port where cholera, or any other epidemic, may prevail, during the time of its prevalence?

Mr. FERL thought the session was too far advanced to deal with the matter. He was happy to be able to inform the House that the outbreak of cholera in the *Dirigo* had been much mitigated.

Sir G. HEATHCOTE asked the Secretary at War whether measures had been taken to carry out the amelioration announced to the House in the clothing and dress of the army, both at home and abroad; and also, in the equipments of the soldier, with the view to render them less burthensome, and more adapted to actual service? And, whether hospital waggons, for the conveyance of the sick and wounded, had been dispatched to the seat of war?

Mr. S HERBERT said that hospital waggons had been prepared to remove the sick and wounded from the field. As to the clothing of troops, he begged to say that our army, being dispersed over various quarters of the globe, it was necessary to make arrangements for clothing long before it was required, and it was consequently impossible to alter the clothing which had already been sent out.

Mr M. GIBSON asked whether the Secretary to the Treasury would lay on the table of the House the minute which had been prepared, for the conveyance of printed papers through the post?

Mr WILSON said the Treasury minute alluded to was merely to make the weight correspond with the increased dimensions which the House sanctioned last year. As soon as it was prepared it should be placed on the table.

BRIBERY, &C. BILL.

The House went into Committee on this bill.

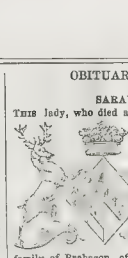
The remainder of the night, up to nearly one o'clock, was occupied in a discussion upon the clauses

The House having resumed, soon afterwards adjourned.

On Sunday the Queen and Prince Albert, with the Prince of Wales, the Princess Royal, the Princess Alice, and the Duchess of Kent, attended Divine Service in the private chapel of Buckingham Palace. The Hon. and Very Rev. the Dean of Windsor officiated.

OBITUARY OF EMINENT PERSONS.

SARAH, BARONESS TEYNHAM.



THIS lady, who died at Oakland, Sussex—the seat of her brother-in-law, Hercules Sharpe, Esq.—on the 26th ult., was the youngest daughter of the late Sir Anthony Brabazon, Bart., of Brabazon-park, co. Mayo. She became, July 16, 1828, the second wife of Henry Francis, fourteenth Lord Teynham, who died March 8, 1842, leaving no issue by her. His Lordship's son by his first wife, George Henry, is the present Baron Teynham. The family of Brabazon, of which her ladyship was a descendant, was a branch of the ennobled house of Meath springing from Sir Anthony Brabazon, of Ballinasloe Castle, second son of Sir William Brabazon, Lord Justice of Ireland. Her ladyship's only brother, Sir William John Brabazon, who died in 1840, was the last Baronet, the baronetcy becoming extinct with him. Sir William left his nephew, William John Sharpe, Esq., of Oatlands, county Sussex, his heir. Mr. Sharpe, in consequence, assumed, by Royal license, the surname and arms of Brabazon. He is the elder son of Mrs. Sharpe, Lady Teynham's elder and only sister.

Through her mother, Lady Teynham was the great-granddaughter of the Right Hon. Sir Capel Molyneux, Bart., M.P. for the University of Dublin.

MADAME SONTAG.

THE news of the death of Madame Sontag will be received with much regret in our musical circles, where she was not only admired as an artist, but esteemed as an amiable and accomplished lady. She died in the city of Mexico, on the 18th of June, having fallen a victim to cholera, after only a few days' illness. Her death caused general grief, and her funeral was attended by a great concourse of the citizens of Mexico.

During this celebrated lady's last residence in London we gave, together with her portrait, a detailed memoir of her life. (See ILLUSTRATED LONDON NEWS, No. 379.) It is sufficient, therefore, at present, to remind our musical readers of a few particulars of her brilliant career.

Henrietta Sontag was born at Coblentz. Her parents were theatrical people, and she herself appeared on the stage in her infancy. By the time she was fifteen she had distinguished herself; and very soon afterwards she had become the idol of the musical circles of Berlin. In 1826 she went to Paris, where she appeared at the Italian Opera, in the part of *Rosina*, in the "Barbiere di Siviglia," and delighted the public by the brilliancy of her execution. She returned to Berlin for a short time; and then returned to Paris, where she re-appeared, with still greater success. In the season of 1828 she appeared at Her Majesty's Theatre, causing an excitement which is still remembered. Her youth and beauty, her charming voice, and her grace and intelligence as an actress, enchanted our musical public. This was, at that period of her life, her only season in London. On her return to Paris she was sought in marriage by the Count de Rossi, a Piedmontese nobleman, then attached to the Sardinian Embassy at the Court of the Tuileries, and their union took place soon afterwards. The late King of Prussia showed his interest in the fair songstress by smoothing every obstacle to the marriage. He granted her a patent of nobility; an emphatic proof of his estimation of her character and his sense of her worthiness of the rank to which she was elevated. While she adorned her rank by her manners, her refinement, her accomplishments, she by no means neglected her art. The young Countess continued to cultivate it with unabated assiduity; and, wherever she resided, in Frankfort, Berlin, Vienna, and St. Petersburg, her house was the resort of all that was renowned in the artistic world; and the world itself was more admirably as an amateur than she had ever done upon the stage

This bright and happy course of life was not destined to last. During the revolutionary convulsions of 1848, the Count de Rossi became entangled in the vortex, and lost everything. The Countess at once adopted the noble resolution of having again recourse to her art, in order to retrieve the fortunes of her husband and her children. The instant her determination was made known, all the theatres of Europe were open to her. She chose the London Italian Opera, and arrived here, in 1849, with an engagement of £7000 for the season Her reception was even more enthusiastic than it had been before. It was universally agreed, that while her personal charms were scarcely impaired, her powers as an artist were greatly increased. Her voice was as rich and beautiful as ever; her mind was enlarged, and her conceptions of her art were enlarged and elevated. Her success, consequently, was complete; and, during the seasons of 1849 and 1850, she was the great attraction and support of Her Majesty's Theatre.

Having resolved to visit America, she arrived at New York in the autumn of 1852. After having made a series of tours through every part of the United States, realizing large funds and fruits more substantial, she yielded, in an evil hour, to a proposal made to her by the director of the principal theatre in Mexico. Thither she went only a few months ago; and there she was cut off by the fell epidemic which is now ravaging that city. To friends and family the sadness of the event, three of her children, from whom she had been long separated, are now on their way from England to join her, and will only arrive to find that their mother is no more.

The date of her birth is not precisely ascertained; but there is reason to believe she was in her forty-eighth year when she died.

PROBATE of the will of the Right Hon. Henry William (Paget) Marquess of Anglesey, P.C., K.G., G.C.B., &c., was granted on the 3rd inst to the eldest son of the Marquess of Anglesey (heretofore Earl of Uxbridge), and to the Most Noble Charles Duke of Richmond and the Right Hon. John Robert Viscount Ebrington, the executors, a power being reserved to Lord Clarence Paget, a son, and one of the executors. The personalty in England was sworn under £160,000. The will is dated the 23rd of February, 1854, whereby he leaves divers bequests to his younger sons, an annuity of £6,000 to his private secretary; the annuity of £10,000 as remuneration for services to be continued to Mr. Edward Smith, R.N.; and a legacy of £5,000 to Henry Ashworth, Esq., as an acknowledgment of his professional services. He bequeaths the residue to his eldest son, to whom he has devised the real estate. The executors will communicate with the Queen, intimating the wish of her Majesty King George IV., when Prince Regent, and by the officers of the Hussars, he bequeaths to his eldest son, to be retained as an heir-loom with the Earldom of Uxbridge

THE will of Vice-Admiral Hyde Parker, who died in May last, was proved on the 4th inst., the executors being Sir William Hyde Parker, Bart., and the sons, Hyde Parker, Esq., Commander, R.N., and Captain William Parker, 23rd Regiment of the army. The late Admiral's will is dated 30th July, 1852. The personalty, £20,000, is left amongst his sons and daughters.

FRANKLIN EXPEDITION TO THE POLAR SEAS.—The wills of some of the officers forming the expedition (which sailed nine years since, and of whom no tidings have since been heard) the presumption being that they have perished) have now been brought into the Prerogative Court for probate. That of James Fitzjames, Commander, R.N., second in command of the *Erebus* bears date May, 1845, when lying off Woolwich he leaves the whole of his property to a particular friend, to whom letters of administration have been granted as the universal legatee, there being no executor appointed: the personalty sworn under £1,500. That of Henry Thomas Dundas Leigh Vesconte, R.N., made on board the *Erebus*, dated 15th May, 1845, proved under £400, containing several specific and pecuniary bequests; and that of Alexander Macdonald, surgeon on board the *Terror*, another of the vessels joining the expedition: this will bears date October, 1841; the effects sworn under £3000, leaving all to his father.

Her Royal Highness the Duchess of Gloucester was honoured with the presence of the Queen and the Prince Consort at a fête given by her Royal Highness to the Princes and Princesses of the Royal Family, and the Diplomatic Members of the nobility, on Monday afternoon.

Miss Burdett Coutts had an assembly on Thursday evening, at her mansion, in Stratton-street.

The Marchioness of Westminster had a reception, at Grosvenor House on Friday (yesterday).

The Chancellor of the Exchequer left town on Saturday, for the residence of the Hon. Mrs. Talbot, Addenbridge, Kent.

Viscount Palmerston had an assembly on Saturday evening, at his family mansion in Carlton gardens. A brilliant circle of the aristocracy responded to her Ladyship's invitation.

STATISTICS OF THE UNITED STATES.—In 1851, the value of the imports was £48,784,800, and the exports £46,410,443. The tonnage of vessels that entered inwards was 4,731,949, and that cleared outwards, was 4,697,547. The tonnage of vessels that were built in the same year was 398,183. Comprising, in seven areas in the free states and the slave states, respectively, the former was found to contain twenty five large towns, and the latter nine or

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

JULY is not generally a month particularly rich in booksellers' advertisements. It is also a spare diet month for authors. Albemarle-street and the Row are looking after their half-yearly accounts. Our Tonsons and Lintots are busy about balances, not about new books. There is no chance for an author just at present. Publishers are puzzled, and unwilling to hear of new suggestions. They are thinking of their country-houses and the seaside. Indeed, they are in that general mood which they adopt towards new poets—that of giving a flat refusal. Their July issues are their ledgers and their stock accounts. The better page of copy they can see is a balance in their own favour, and a very small remainder in the warehouse of the pet book of the last half-year. When booksellers are in this mood, it is idle to expect an announcement of any importance. The great forefathers of the Row made no kind of announcement for the summer term. Jacob Tonson went to Ledbury, and Bernard Lintot to Horsham. Their thoughts were in Herefordshire and Sussex. In July, Paternoster-row is removed to Chorley Wood, and Albemarle-street to Wimbledon Park. Need we add that we have looked in vain to the new numbers of the *Quarterly* and *Edinburgh* for announcements of any literary importance. They are singularly barren of any kind of promise.

The Royal Academy closes next week; and Mr. Leslie—our great "Queen Anne" and "Molière" painter—has set aside his palette, and is, we are glad to learn, actively at work, pen in hand. All who had the pleasure of hearing his lectures, and any one who has read his "Life of Constable," will be delighted with an announcement of "A Handbook for Young Painters," from the pen of Mr. Leslie. His "Handbook" is to be a winter fruit; but, come when it will, it cannot come wrong. What good sense is to be found in the brief extract from the author's preface, with which Mr. Murray favours the public in his announcement of the "Handbook":—

> The road to Art is proverbially a long one; and it is often made longer than it need be by our own mistakes. If, therefore, anything I can say should tend to shorten it to younger artists, it will be in a great measure owing to discoveries of some of my own errors—which, though made too late to be of much benefit to myself, may possibly be of use to those whose habits are not so formed but that they might be abandoned, if wrong.

If Mr. Leslie's work is written in this spirit, it will indeed be a permanent service to Art and the literature of the Fine Arts.

Dr. Waagen has made his appearance in print, in the columns of the *Times*. He writes about Mr. Hunt and the Pre-Raphaelites. He sees (as might be expected, from his customary good sense) much that is valuable in what they are doing, and have done; but he will not follow Mr. Ruskin through Venice—he cannot see in the particular works what that gentleman affects to see in them. With all his admiration of Perugino, he naturally prefers Raphael to Raphael's master. He tacitly admits that the race of Virgin Mary painters expired with Raphael; but he sees much to admire in the school of the Caracci; and properly cautions young aspirants in art against confining their attention to the forerunners of Raphael and Leonardo. For an artist to restrict his admiration to Van Eyck and Giotto is only to be compared in folly to a poet who copies Marlowe and Lily and neglects Shakespeare. Dr. Waagen's letter should be read by all who are in any way interested in Art, either past or present.

A valuable literary discovery has just been announced. We do not allude to the lost books of Livy, or to the remaining portion of the half-told tale of Cæmbuscan bold. Our *find* (as the coin collectors call it) has nothing of a Pompeian or a Nineveh consequence. In its own way it is very remarkable. Who does not feel an interest in Coleridge? Who is of opinion that he has had enough of that "noticeable man"? "He would talk—Heaven, how he would talk! His conversation was finer (may we say it?) than his printed works. His table-talk savoured considerably either of the fine-coffee-House or the pulpit. He gave ideas in thick succession, he did not exchange them. It was said of Sir Walter Scott, you might write a romance from his conversation, so thick-set was it with anecdote and story upon story. So with Coleridge, who should have had a short-hand writer everlastingly by him, when in the vein for talking. Well, Coleridge was a frequent lecturer in public; but he did not license from a book or rather form his ideas upon paper. He preached (we use Charles Lamb's phrase) extempore. His lectures were admired; but we have only an imperfect record of them. The *find* we thus dilate upon is connected with these lectures. Mr. Collier (whose services to Shakspeare cannot be too much appreciated) attended these lectures and took ample notes of them. Mr. Collier wrote short-hand, and among his manuscript treasures he has dug up more than will make a volume, of notes taken at the time. We are once more to hear Coleridge anew—we are to have (thanks to Mr. Collier) another volume of the works of the old man eloquent.

We were at Cambridge, and saw the Archæological Museum; but missed (much to our regret) hearing Professor Willis on the early architecture of Cambridge. The feature of the Museum was its fine collection of carved ivories, and the contrast between the Museum at Oxford and the Museum at Cambridge rested chiefly on the collegiate plate—which Oxford would not lend, but Cambridge did. Willis dilated (with his customary skill) on the recently-restored Early English chapel of Jesus College; and drew an instructive parallel, as he went on, between the monastic and collegiate buildings of the two great Universities. Everybody was pleased, and everybody seemed to think that Prince Albert went away with a liking for archæology. His Royal Highness will find archæology anything but a dull pursuit. He will soon discover that its paths are strewn with flowers.

We have been delighted with a characteristic story of Chantrey, hitherto (we can answer for it) not in print. Allan Cunningham asked Chantrey to visit the neighbouring studio of a young artist, then unknown, but now deservedly distinguished. We shall tell the story dialogue-ways, just as it occurred:—*Cunninghame*: M——ll wants you to see his statue. He is a clever fellow, and is anxious to obtain your opinion about it. *Chantrey* (taking snuff): What statue? *Cunninghame*: "A statue of Adam." *Chantrey* (another pinch of snuff, and one of his significant glances): "Is it like?" Chantrey's little regard for the poetry of his art is here most characteristically put forth.

CHESS.

TO CORRESPONDENTS.

B. D. V. BLAKE DIAGRAMS.—For our own sake, as well as for the sake of numberless amateurs who are in the habit of resorting Chess problems, we are glad to learn that Mr. Blake's Diagrams may now be procured in any quantities at the office of the *Chess Player's Chronicle*, 23, Paternoster-row, at the trifling cost of 3s. per hundred.

ARIETES.—See the notice to "R. D. V."

AN OLD MEMBER.—The annual subscription to the St. George's Chess-club, is two guineas per town and one guinea for country members. For the rules, list of members, &c., you must apply to the Secretary, at the Club-house, No. 83, St. James's-street.

PAWN-AND-TWO.—Look again.

CAMOLUS.—It shall appear among our Enigmas

P. K. H.—Solvable in two by a different move.

M. P.—THE MATCH AT CHESS BY ELECTRIC TELEGRAPH BETWEEN LONDON AND PARIS.—The score of this interesting contest was despatched, as per agreement, at one o'clock; even at the moment in progress for sending it out, and if no cause of serious wound probably have the pleasure of seeing the game concluded before the end of next week.

MAXILLA.—The pamphlet by Don Ambrosio Lozano, "Satos del Caballo," shall have attention, though we believe all interest in the subject is not the subject itself, has long been exhausted.

SOLUTIONS OF PROBLEM No. 541, by Argus, P. T. W., H. G., P. R. M. P., M. P., Omega, Septimus, Phis. J. P., Derevon, R. W. B., Ellesmere, J. M. of Aberdeen, T. T., Von Jaden, Utrecht are correct

SOLUTIONS OF No. 542, by Severus, Orpx, M. P., Milo, Argus, Omega, Phiz, Rob Roy, J. P., Derevon, Amphion, E. H., Norwich, Trebor, Liverpool, are correct. An others are wrong.

SOLUTION OF PROBLEM No. 541.

12. Q takes K B	Kt takes Kt	25. Q R to K Kt sq	P to K R 4th
13. P takes Kt	R to K R sq (ch)	26. Q to Q 4th	Kt to K B 3rd

And, after a few more moves, White resigns.

(*a*) This is not considered a good move by the authorities

(*b*) By this sacrifice, Mr. Breen obtains the position, as to the book opening, which Mr. Kolsey, White, in one of his early games, played against Staunton. Mr. Breen, however, improves upon Mr. Kolsey's play, and obtains a much more favourable position.

(*c*) This advance is premature, now. Black to extricate himself without so ruinous a sacrifice, but Black is to blame in not observing and preventing the attack, the consequences of which are very serious.

(*d*) The situation is remarkable. Black has lost a piece, and his forces, for the most part, are cooped up at home, yet, save in the strength of his Queen and Bishop, as now posted, the Black forces will have some interest in the game.

(*e*) He has many choices of moves, for Mate is always staring him in the face.

(*f*) Well played.

(*g*) White might have drawn the game, we believe, by persisting in playing the King to Kt sq and K R 2nd, and we are surprised he did not do so, under the circumstances

CHESS IN BELGIUM.

Instructive game. M. DE RIVES giving Mr. ALLIX the odds of the Pawn and move.

(Remove Black's K B Pawn from the board.)

WHITE (Mr. A.)	BLACK (M. De R.)	WHITE (Mr. A.)	BLACK (M. de R.)
1. P to K 4th	P to K 3rd	16. Q to Q B 7th	Kt takes Kt
2. P to Q 4th	P to Q 4th	17. P takes Kt	K R takes Q P
3. P to K 5th (*a*)	P to Q B 4th	18. Q takes B	Q R† Q Kt 2nd
4. K B to Q 3rd	K Kt to K 2nd	19. Q to K R 6th	Q R to K sq
	P takes B	20. K R to Q B sq	Q to Q B 7th (*d*)
5. Q B to K Kt 5th	Q Kt to Q B 3rd	21. Q to K Kt 6th	Q to Q Kt 6th
6. Q to K R 5th (ch)	K to Q 2nd	22. Q to K 3rd	Q takes Q
7. P takes Q B P	Q to Q R 4th (ch)	23. P takes Q	Kt to K 4th
8. P to Q B 3rd	Q takes double d P	24. K R to Q B 3rd	K R to Q Kt P
9. K Kt to K B 3rd	P to K Kt 3rd	25. Q R to Q B sq	Kt take K Kt P
10. K B take K Kt P	Kt takes B (*c*)	26. K R to Q B 7th	K to K sq
11. Q B to K B 6th	R to K Kt sq		
12. Q takes P (ch)	K Kt to K 2nd	27. K R P takes Kt	Q R takes P (ch)
13. Castles	P to Q Kt 3rd	28. K to K B sq	
14. K Kt to Q 4th	K B to K R 5th		

And the game was given up as a drawn battle.

(*a*) Better to take Pawn with Pawn

(*b*) P to K Kt third is considered preferable.

(*c*) This exertion was unasked for. White had so fine a position, that, with ordinary prudence, no war cry of victory.

(*d*) Ingenious certainly. Yet we venture to suggest another move, which M. De Rives will believe, will confess to be much stronger. This is K to K B 4th—a move that was a never-Black. For supper—

19.	K to K B 4th	21. Kt to Q B 3rd (best)	R takes Q
20. Q to K R 7th (ch), or *	R to K Kt 2nd	22. R takes Q	P takes R, &

*20	Kt to Q B 3rd	21. R takes Q	P takes R, & c
(*e*) Again M. De Rives could not be persuaded to take it. He should have taken the Kt. Even, checking, and to no purpose. For		Q R to K B 3rd	Q to K Kt sq
20.	Q R to K Kt 3rd (*e*)	22. R to K B 3rd	Q to K B 2nd
*	K takes R, or		

(If he play K to B square or B square, he is mated in two moves)

		21.	Q to K B sq

And White cannot save the game.

* 21.	K to K sq (best)	23. K takes R	Q to K Kt 5th (ch)
22.	K to K sq, or †	And can give mate in two or three moves (double ch)	
† 22.	Q to K 3rd	Q takes Q	23. P takes Q
		And White is bad in not losing	K R to Q 7th

Lord Howard de Walden, her Majesty's Minister at Brussels, has left, for a lengthened absence. Sir Thomas Wallet is acting as Charge d'Affaires during his absence.

The estimated charge of the embodied and disembodied militia of Great Britain and Ireland, amounting to 124,074 officers and men, as determined by the Select Committee, is £998,000.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The appointment of principal Harbour Master of the port of London vacant by the death of Mr. Charles Rowland, has been filled up by the Navigation Committee in favour of Mr. Charles Henry James, next in seniority in that department.

The state of health of the heir to the Russian empire, the Czarowitch, occasions the greatest anxiety at St. Petersburg. His disorder is said to be rapid decline.

In the Dublin Law Courts Lord Claremont has obtained £250 damages from Mr. Joseph Carlan, proprietor of the *Dundalk Democrat and Peoples Journal*, for libel.

A few days ago, a writer at Dundee received 1136 letters from the Dead Letter Office. They consisted of intimations of objections to electors.

The Senate of Connecticut has passed a bill, providing that, hereafter, no gaol, court house, or other public building of that state shall be used for the custody of a fugitive slave.

M. Louis Neyret, manager of a private telegraph company at Marseilles, has been condemned to a fine of 500 f. and a month's imprisonment, by the Correctional Tribunal of Marseilles, for transmitting false news relative to the war in the East.

Some coins of the reigns of Edward IV., Henry IV., VII., and VIII., of the Emperor Maximilian, of Ferdinand and Isabella, of Pope St. Martin, of Duke Sigismund, and of Ladvic of Bavaria—all of the fourteenth and fifteenth centuries—have been found by the labourers employed in sewering the streets of Southampton

The Roman Catholic Bishop of Mauritius has refused to allow his clergy to administer the sacrament of the holy communion to a member of the Council of Government, on account of his being a Freemason.

The Russian Minister, Count Arnim, has gone on six weeks' leave of absence to one of the Bohemian baths.

Recent explorations at Pompeii have brought to light a new bath-house, larger than that discovered in 1824; and a circular piece of glass.

A consignment, consisting of 17,000 live quails, was lately received by a dealer in Clerkenwell. They were shipped at Alexandria and at Naples—those from the latter place having been captured in the wild districts of Calabria, where they are exceedingly abundant.

An arrangement is said to be on foot amongst the friends of temperance, offended by the sale of wine, &c., at Sydenham, to purchase the Surrey Zoological Gardens, and to erect a Crystal Palace there.

A mountain of mineral paint of Spanish brown is said to have been discovered near Elytown, Alabama. It is described as almost inexhaustible.

The Archduke Francis Charles and the Archduchess Sophia left Vienna on Friday for Prague; thence they will proceed to Reichstadt, and afterwards to Germany.

A deputation on behalf of proposed accommodation for scientific and literary bodies in Burlington house, had an interview with Sir William Molesworth, on Saturday, at the office of Public Works.

The harvest is finished in the greater part of the Roman States, and the crops are most abundant.

The prosecution against the Preston delegates, Messrs. Cowell and Co., concerned in the recent strike, has been withdrawn.

The subscriptions for a monument to Vincenzo Gioberti amount at present to 30,140 francs.

Riza Pacha, Minister of War, and Omer Pacha, Generalissimo of the Turkish army, have been named Grand Crosses of the Legion of Honour

During last week, several of the ship-bread bakers in Liverpool received an order for 500 tons of bread for the French army. One house alone was offered an order for 400 tons of bread; but such is the state of the trade that the request was refused.

Grandoni, one of the persons arrested at Rome on charge of having been concerned in the murder of Count Rossi, has hanged himself in prison.

A large demand for under-clothing for the army and navy has given an impulse to employment at Leicester and the neighbourhood. It is reported that more than fifty tons of yarn will be required to complete the orders.

Graf Von Konigsmarck is about to be dispatched from the Prussian Court to St. Petersburg to congratulate the Empress of Russia on her birthday, the 18th instant

The arguments in the motion for a new trial, in the case of the Duke of Manchester and his children, closed on Monday week, in the Vice Chancellor's Court; and Vice-Chancellor Sir J. P. Wood delivered judgment on Tuesday in favour of the motion.

Several ecclesiastics in Prussia having been, of late, in the habit of preaching political sermons, in which they implored the Almighty to accord the triumph of the Christian over Russia over the Pagan ensigns of the Cross, the Minister of Public Worship at Berlin has issued an order prohibiting, for the future, any political allusions from the pulpit.

The Dean and Chapter of Exeter have taken the initiative, and abolished the vergers's fee of 2s. a head, for showing the cathedral. The bunting is now open free, daily, from ten to four o'clock.

On a communication from the Government of the Two Sicilies, the Neapolitan Board of Health has ordained a quarantine of ten days on arrivals from Paris

The King of Portugal proposes to visit the principal towns of Belgium next week. He has adjourned his journey to France to September. On leaving Belgium, he will repair to the Hague, Berlin, Vienna, and Gotha.

On the 28th of June the police report of the cholera gave the number of cases in treatment at St. Petersburg at 405, the day previously it was only 134, on the 1st of July there were 850. It is understood that it is making great ravages amongst the garrison of Cronstadt.

The *Dirrega*, which sailed from the Mersey on Thursday week, with 420 Government emigrants on board, returned to Liverpool on Monday, several deaths having occurred, and about 100 passengers suffering from diarrhœa. By the time the vessel had reached Queenstown, the disease had become so alarming that it was deemed prudent to return to port.

The late King of Prussia had bequeathed half a million of thalers to the railway which should first unite the Eastern provinces of the kingdom to the Western. Two lines now claim the legacy, that from Cologne to Minden, and the Thüringian line. As the Government refuses to pay either, the latter line has brought an action against the State for the recovery of the sum.

During the last two or three weeks the chief magistrate at Bow-street, has been called upon, almost daily, to issue his warrant for the apprehension of convicts who have been liberated under the ticket of leave system.

Mr. Pollock, the enterprising purchaser of the West Estate, county Galway, has, instructed his agent to suspend the works of improvement which are in progress ove. the property. This will throw a number of poor persons out of employment.

Letters from Washington affirm that the Sandwich Islands are ceded to the United States, and that the act will be authentically announced in a short time.

Mr. and Mrs. Rose, South Ieff, Glasgow on Thursday week for Lochlomond and the West Highlands. Their intention is to return via the Trossachs and Stirling.

At Samara, on the Volga, a fire has destroyed 70 stone-built houses, besides 5 wooden dwellings and four factories.

Mr. C. Moore, of Bath, has presented a collection of geological specimens to his fellow-citizens, and the Board of Guardians have appropriated additions to the museum, in which the specimens and the collection shall be safely kept.

In the Isle of Man the duty on tea is now only half, or three-pence per pound. On refined sugar a trifle more than a penny per pound, and on foreign spirits.

Serious coal mines have been discovered in various parts of Italy. On the Apennines an attempt at research has taken place in Tuscany, near Carrara, which will probably be successful.

The power-loom weavers of the district which is formed in Preston—that of Messrs. Horrocks, Miller, and Co.—have had an advance of 5 per cent on their wages, between one week and the next.

Trade is very depressed in Paris. The theatres, generally speaking, have never had so little to do at this season, except in revolutionary periods. There are few visitors, and the shops are not half filled.

The application for bail, in the case of Mr. Carden, charged with the attempt at abduction, near Clonmel, has not been successful.

A public meeting of the chemists' and druggists' assistants throughout the metropolis, to consider how the present long hours of business could be shortened, was held in the Freemasons' Tavern, on Tuesday morning, at a quarter to five o'clock.

The whole quantity of gold produced and exported from the Californian mines, from the discovery in 1848, down to the close of last year, amounted to £64,000,000.

Mormonism is making great progress in Denmark: there are now Mormons in the smallest hamlets. In the Isle of Amack, near Copenhagen, almost all the women have become Mormons.

NATIONAL SPORTS.

LIVERPOOL JULY MEETING.—WEDNESDAY.

The weather was fine, the running ground in excellent condition, and the muster of company of an average strength; but the amount of sport in regard to the number of competitors, fell short of expectation. The list is as follows:

Croxteth Stakes.—Orestes, 1. Knight of St George, 2.
Mersey Stakes.—Lady Palmerston, 1. Sicily, 2.
Sefton Stakes.—Rosaline, 1. Struan-say, 2.
United Kingdom Trainers' Stakes.—Billy Richardson, 1. Lady Yconsby, 2.
Lancashire Oaks.—Midsummer, 1. Sister of Mercy, 2.
Selling Stakes.—Child of the Mist, 1. Gold Dust, 2.
Handicap Plate.—Miss Emma, 1. Andromache, 2.

THURSDAY.

Derby Handicap.—Orestes, 1. Snowden Dunhill, 2.
The Cup.—Ammonite, 1. Typee, 2
Eglinton Stakes.—Sicily, 1. Struan-say, 2.
Selling Stakes.—Dear me, 1. Coleraine, 2.
Queen's Plate.—Dowling, 1. Aribbas, 2.

FRIDAY.

Handicap Plate.—Rosaline, 1. Dear me, 2.
Lancashire Produce Stakes.—Cloud, 1.
Licensed Victuallers.—Helena, 1. Catharine Parr, 2.
Produce Stakes.—Pilatot, 1. Miss Whip, 2.
St. Leger Acrobat, 1. Arthur Wellesley, 2.
Bentinck Plate.—Aribbas, 1. Game, 2.

RACES NEXT WEEK.—The meeting at Stourbridge takes place on Monday and Tuesday; at Stamford, on Tuesday and Wednesday; at Knutsford, on Wednesday and Thursday; and at Nottingham, on Thursday and Friday.

THE HOOD MEMORIAL.

On the afternoon of Tuesday next, at three o'clock, the admirers of Thomas Hood are invited to attend at Kensal-green Cemetery, to witness the uncovering of a Testimonial, raised by "public subscription," after a lapse of nine years from his death, to the memory of that distinguished poet and humourist. Upon this occasion an inaugural address will be delivered by Mr. R. Monckton Milnes, M.P.

The Memorial is an appropriate and tasteful composition, and will add much to the reputation of the sculptor, Mr. Matthew Noble, of Bruton-street. It consists of a large bronze bust of the Poet, elevated on a pedestal of polished red granite; the whole twelve feet high. In front of the bust (which is pronounced an excellent likeness, and has been modelled from authentic portraits) are placed three wreaths (in bronze), formed of the laurel, the myrtle, and the *immortelle*. On a slab beneath the bust appears Hood's simple self-inscribed epitaph:—

"He sang the 'Song of the Shirt.'"

Upon the projecting front of the pedestal is carved this inscription:—

In Memory of THOMAS HOOD.
Born, 23rd May, 1798; died, 3rd May, 1845.
Erected by Public Subscription, A.D. 1854.

Beneath, at the base of the pedestal, a lyre and comic mask (of bronze) are flung together—suggesting the mingled pathos and humour in every page of Hood's writings.

The most attractive portions of the Memorial, and those in which the sculptor's ability has been most fully developed, are the medallions inserted in the sides of the pedestal. These are oval in form, and illustrate Hood's fine poems, "The Bridge of Sighs" and "The Dream of Eugene Aram." In the first-named composition, the poor victim of deluded hope and love is seen just raised from the watery grave, into which she had rushed headlong to escape from the pangs of cureless remorse and shame, and the consequent "burning insanity" which had rendered life insupportable:—

Mad from Life's history,
Glad to death's mystery
Swift to be hurled—
Anywhere, anywhere,
Out of the world!
* * *
Take her up tenderly
Lift her with care;
Fashioned so slenderly,
Young and so fair!

Mr. Noble has shown a complete sympathy with the touching description of the poet, and has embodied the story with much success. The unfortunate and beautiful girl is represented as being indeed taken up "tenderly" by two compassionate men, while a youth stands wondering by, and struck with emotion at the wreck of so much loveliness.

In the second medallion there is a terrible moral conveyed: the observer is made to feel, by the whole character and bearing of the principal figure, that "Woe, woe, unutterable woe," is the sure fate of those who spill "life's sacred stream." The haggard countenance and the shuddering aspect of Eugene Aram powerfully portray the dread workings of a guilty conscience:—

The crimson clouds before his eyes,
The flames about his brain;
For blood has left upon his soul
Its everlasting stain.

In striking contrast to the mental agony depicted in this figure, are the studious boy lying near, and the happy children released from school playing in the distance.

HOOD MEMORIAL RELIEF.—"THE BRIDGE OF SIGHS."

THE HOOD MEMORIAL, AT KENSAL-GREEN.

Like sportive deer they coursed about,
And shouted as they ran,
Turning to mirth all things of earth,
As only boyhood can;
But the usher sat remote from all,
A melancholy man!

For the entire monument Mr. Noble will receive £400, that being the sum left at the disposal of the committee, after the purchase of ground at Kensal-green, advertising, and other expenses. This amount, it will be readily seen, is insufficient to remunerate the sculptor for the time, labour, and costly materials employed in the production of so important a work; but Mr. Noble has warmly sympathised with the feelings of those who subscribed to the fund, and generously relinquished all thought of profit in the transaction.

Objections are frequently urged to the erection of monumental tributes to literary men; it being asserted that an author's writings form his best monument. Miss Mitford's donation to the fund, was accompanied by the following remark:—"It is not so much for Hood's sake, as for the honour of England, that such a testimony is needed;" and thousands of grateful admirers have confirmed that estimable lady's opinion, with which we most cordially agree. The subscription list is an interesting one, and proves how Thomas Hood's writings have endeared him to all classes of his readers.

The Duke of Devonshire placed his name at the head, with a liberal donation of £25, and "a few poor needlewomen," remembering Hood's eloquent cry on behalf of that suffering class, were among the earliest contributors. Among the literary brethren and sisters of the poet who have testified their fraternal admiration of him, are Thomas Babington Macaulay, Benjamin Disraeli, Samuel Rogers, Alfred Tennyson, Charles Mackay, W. M. Thackeray, Douglas Jerrold, Thomas De Quincy, Barry Cornwall, Monckton Milnes, Westland Marston, Charles Swain, Lady Morgan, Mrs S. C. Hall, Miss Martineau, and Miss Eliza Cook. We also observe in the list the names of Lords Brougham, John Russell, Carlisle, Ellesmere, St. Germans, Dudley Stuart, and John Manners; Messrs. W. C. Macready, R. Stephenson, C. R. T. Cresswick, R.A.; Rowland Hill; Mrs. Theodore Martin, and Miss Cushman.

The amount subscribed was raised chiefly in small sums; these were forwarded from almost every part of the United Kingdom. Contributions were also received from the United States, from Rome, Paris, and other remote places.

It would be unjust to omit stating that the existence of the Hood Memorial, and the success of the movement in which it originated, is chiefly due to Miss Eliza Cook, Mr Murdo Young, and Mr. John Watkins, whom the subscribers at a general public meeting appointed trustees to the fund. Miss Cook having, about a year and a half since, directed attention, in a spirited poetical composition, to the neglected condition of Hood's grave, a committee was at once formed, consisting of gentlemen connected with the Whittington Club, and active exertions were commenced to repair past neglect: Miss Cook accepting the office of treasurer, and Mr. Watkins undertaking the duties of honorary secretary, which he has discharged with untiring zeal.

Many literary celebrities are expected to attend the inauguration of the monument; and the only son of the poet, it is said, will be present.

THE SONG OF THE SHIRT.

PAINTED BY ANNE E. BLUNDEN.

IN connection with our Illustration of the Hood Monument, now completed, we have great pleasure in inserting an Engraving from a picture by Miss Blunden, embodying in a very forcible manner the sentiment of the famous "Song of a Shirt," exhibited in the Gallery of the Society of British Artists. The poor sempstress is seated at a garret window, and, looking out disconsolately upon the roofs of the crowded city, her hands clasped, as she sings the doleful lines:—

For only one short hour,
To feel as I used to feel,
Before I knew the woes of want,
And the walk that costs a meal

THE HARVEIAN ORATION,

AT THE ROYAL COLLEGE OF PHYSICIANS.

THE Harveian Oration, in commemoration of the founders and benefactors of the Royal College of Physicians, was delivered by Dr. Alderson, in the Theatre of the College, on the 1st inst., in the presence of the President and Fellows, and a large and distinguished company, including the Earl of Yarborough, the Bishops of Oxford and St. Asaph, Lord Beaumont, Mr. Baines, M.P.; Sir Benjamin Brodie, Sir Henry Holland, &c. Although there is but little scope for originality in the treatment of the subject, Dr. Alderson succeeded in acquiring the high appreciation of his audience; and the expressions of applause, which were frequent during the delivery of his address, were repeated in a still more marked and emphatic manner at its close. Of the oration—which was, as usual, in Latin—we subjoin an outline:—

We meet to day (said Dr. Alderson) for the 200th time, to commemorate the benefactions of the earliest and worthiest of the members of this college. Those, our honoured predecessors, strove by learning and moral strength to win for the professors of the healing art a position in the world's race worthy of their usefulness; and the founder of this annual oration caused their good example to be thus recorded, that future generations might follow in their steps, and thus increase the influence of the profession, and enlarge its power to do good. Passing the long line of benefactors in review before us—men of worth and powerful intellect, who, without many of our means, anticipated much of our success; who, when the lamp of science had scarcely glimmered either on chemistry or physiology, were led by their own acute perceptions to many a just, though still unproved, conclusion, we notice Halford first; latest—almost one of our own times. If less deeply versed in science than his successor, the present president, yet, to the profoundest knowledge of the art of medicine he added the choicest classical attainments, and his manners were an example of the most refined urbanity. By Halford's influence, the building in which we now meet was erected and dedicated to the uses of the College. Receding from our own times, Baillie appears next, surrounded, and, in his career, assisted by relations scarcely less distinguished than himself—Hunter, Denman, Croft—a race since honourably represented, both in law and medicine, by Denman and by Brodie.

HOOD MEMORIAL RELIEF.—"THE DREAM OF EUGENE ARAM."

Harvey presented to this College their former habitation. During the Commonwealth—at which time he flourished—the property had been wrested from the Church, and it was sold to him by public auction. The building stands yet, near St. Paul's Cathedral—no mean specimen of the architecture of the times. Gilstion and Crovin founded Lectureships in the College. Caldwell, also, in connection with Lord Lumley, founded a Lectureship. Lord Lumley was a Fellow of this College, and studied medicine, as was then sometimes the custom, for knowledge sake, without intent to practice. It was in these Lumleian Lectures that Harvey first announced his great discovery of the circulation of the blood. In Harvey's honour—greatest of discoverers, the founder of this day's observance, and a pecuniary benefactor, having presented to the College his patrimonial estate in Kent—let us dwell in longer panegyric. Where was this great man prepared for such exertions? What spark of truth lighted up the torch which dispelled such confused shades of error? Cambridge claims him as her *alumnus*: and Padua furnished his chosen science. Padua was then the first school of medicine: how many illustrious spirits still hover around her now deserted halls? So it is with seats of art and learning, as with imperial cities—they rise, they flourish, and decline. Thus our northern Athens, once preferred to all among our schools of medicine, now gives way to this metropolis. Wherever industry and talent throng, there science loves to join them. Harvey's Cambridge training, however, or his Paduan teaching, or even his own bright perception, would have failed to raise him to his pinnacle of fame, had he wanted his amazing perseverance. He was modest, also, and loved truth—not for his own preferment, but for her sake alone. His discoveries had to bear the test of factious opposition. Claiming erroneously his bright example, many a false and vain discoverer is ready to attribute such counter argument to envy—and to appeal to Harvey's persecution as if it proved the truth of his own pretensions. Miserable boasters! Opposition does not prove the truth; the final triumph only shows its existence. Were it not so, the most ridiculous absurdities would, merely because controverted, seem most true. Let not our order yield to fallacies which require such vain arguments for their support; and let not mesmerists, table-prophets, homœopathists, mountebanks, or any of the tribe, pollute the honoured name of Harvey by claiming his example in favour of their presumption. Truth is, indeed, indestructible, and cannot be extinguished by oppression; therefore Harvey triumphed finally. He lived to see his discoveries acknowledged by his generation. Linacre closes the list of benefactors. He was the first person who taught Greek at Oxford, and he founded professorships in medicine at both the ancient universities. By his influence this College was instituted, and he obtained from Henry VIII.—to whose elder brother he had been not only physician but preceptor—the Royal charters by which it is governed. Until that time, medicine had been cultivated in the cloisters; and physicians, licensed by the Bishop of the diocese and the Dean of St. Paul's Church, were united only as a society. Well have the laws, framed after Linacre's suggestion, worked out their object. Witness the literature which has adorned the College, the science which it has improved. Witness the men among its members—Sloane, Addington, Denman, and others—whose descendants are now numbered among the aristocracy of the land! Witness such men as Friend and Radcliffe, who to professional labour added their services in Parliament! Were their example followed now, the task of legislating for the immense body of medical practitioners would not, as at this moment, be abandoned to certain members of the House, whose connection with the profession does not entitle them to represent it, nor incline them to regard its general interests. Justice and expediency alike suggest that this should not remain the only unrepresented one of all the learned bodies of the kingdom. Have, then, these chartered privileges fostered so much excellence? Let us guard them, and, if changing times require that our laws be modified, let us at least seize the spirit of the ancient charter, and perpetuate in a new one what is good. To recur again to Harvey. This College voted him a statue, yet no honour was bestowed upon him by his country. But, if we speak of living merit, there is one whom I would single out, whose labours have enriched the store of new discoveries, and who has won no less the public favour than his brethren's applause—Bright, whose well-earned fame is not restricted to the shores of England. Neither let us fail to greet with honourable acclaim those Fellows of our College on whom, since last we met to celebrate this institution, the Sovereign's favour has descended. To Holland, learned, accomplished, and energetic, let us wish a lengthened period to enjoy his prosperous career. Let Burnett and Forbes, also, receive our willing congratulations. Would that these public honours—showered freely on all other callings—were to ours more frequently accorded. Let us, however, call to mind that, whether our worthier members be neglected or rewarded, it is ours to raise our intellectual and moral standard for the sake of doing good. Let us not forget that it is the office of this College, whose founders we have now extolled, to guide opinion throughout the profession. Let us in all reforms listen to the general voice, and yield to varying circumstances; but let us yield so that we may not cede our special mission to widen and improve the portal through which talents and learning are to enter, and, for the service of the public, become accredited.

"THE SONG OF THE SHIRT."—PAINTED BY A. H. BLUNDEN.—FROM THE EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

Visit of the Queen to Chiswick.—The last flower-show of the season took place on Saturday last in the Society's grounds at Chiswick, and attracted a very large number of fashionable visitors. The Queen paid her expected visit in the afternoon, when the gardens were crowded. Her Majesty, who looked in excellent health and spirits, wore a white muslin robe, deeply flounced, and trimmed with lace, a white silk mantle, and bonnet of white lace, with blue trimmings. She carried in her hand a magnificent bouquet of flowers. The Royal party, attended by the members of the council, proceeded leisurely through the tents, examining the many beautiful and rare specimens of horticultural and floricultural skill therein displayed. On arriving at the extreme end, near the grand conservatory, the illustrious visitors halted for a few minutes, but the Queen did not sit down. They then returned through the tents, taking the opposite side, and spent some time in examining the curious collection of exotic plants. The Royal visitors left the gardens at twenty minutes to seven o'clock, proceeding through the Duke of Devonshire's grounds to Buckingham Palace. The morning was gloomy and threatening; but the evening turned out extremely fine. Many people were deterred from visiting the grounds in consequence of the sky being overcast till the afternoon.

DR ALDERSON DELIVERING THE HARVEIAN ORATION, IN THE THEATRE OF THE ROYAL COLLEGE OF PHYSICIANS

MUSIC.

THE musical annals of this week are quite uneventful, and may be comprised in a few lines. At the ROYAL ITALIAN OPERA Grisi continues her round of farewell performances.—At DRURY LANE Mr. Sims Reeves, recovered from his severe illness has re-appeared in his favourite part of *Edgardo*, in "Lucia di Lammermoor," and has been received as enthusiastically as ever.—The French Company, at the ST. JAMES'S Theatre, have produced Auber's well-known comic opera, "Les Diamans de la Couronne," with great success. It was performed on Monday and Wednesday nights to crowded houses. There was nothing at all remarkable in the *ensemble* of the piece. The performers were barely respectable, all but Madame Marie Cabel, whose acting and singing in the character of the heroine were so graceful, brilliant, and charming that everybody was captivated. The opera itself, moreover, is so delightful, the subject is so gay, and the music so sparkling, that its intrinsic beauty is sufficient to make up for the defects of even an indifferent performance.

THE principal CONCERTS of the season have come to a close. The QUARTET ASSOCIATION had their last performance on Thursday; and the ORCHESTRAL UNION give their concluding concert to-day. Both these societies have done much for the cultivation of chamber music, and the other for that of orchestral music, have had a very successful season and, we trust, have established themselves on a firm and permanent basis.

MADAME DREYFUS had a Concert at the Hanover-square Rooms on Monday morning. This lady is a performer on the harmonium, and is doing a good deal towards bringing this fine instrument into general use. She shows that it is not only admirably adapted for solo playing; but that, as an accompanying instrument, it surpasses every other in the variety of its powers; being able to produce the effects of a small orchestra. Mdme. Dreyfus employed it in accompanying several songs, and instrumental solos; and its rich and delicate harmonies delighted the large and fashionable audience.

THE THEATRES.

OLYMPIC.—A new farce was produced on Monday. It is denominated "Perfect Confidence." The hero is one *Mr. Easy* (Mr. Robson), who professes to despise suspicion and jealousy, but is consumed with doubts and fears in regard to his wife, who, by temporary participation in a good-natured intrigue, soon gives him occasion to manifest his real temper. *Mrs Easy* (personated very pleasingly by Miss Marston) is placed under the necessity of feigning an attachment for an old admirer, *Herbert Athelry* (Mr. Robinson), a rattling young fellow, who makes love to every woman he meets, and who is cleverly hit off by his histrionic representative. He is brought into humorous contact with *Mr Easy*, who is mightily perplexed between his disposition and his wish to conceal it. But the propensity is too strong for him, and he corrdescends to the meanest of subterfuges and tricks, in order to discover the proofs of his wife's supposed infidelity. Mr. Robson gave many of the characters and elevated the incidents to their most advantageous position. We regret, however, that the piece did not afford more salient points for the actor's genius. It is, indeed, only a trifle, but might have been more effectively worked, with a little more dramatic vigilance on the part of the writer.

SOLDIERS' WIVES CAMPAIGNING.—These women, that worked or loitered about the camp at Devna, went with their wretched, seedy-looking shawls drawn over their heads, their faces were flushed with the sun, and perhaps with strong drink, and their features wore that settled expression of suffering, discomfort, and despair, which at length, hardened and bronzed with depravity, stamps the face of the confirmed camp follower.—Now that no one can deny because, the Government has graciously allowed to attach themselves to the baggage-train of the army? How they live and what they live on is a mystery to the poor of the soldiers, and perhaps to the women themselves, for it is evident that, after giving them a passage out, the War-office has made no further provision for the support of the regimental women. They really and truly wonder about and know not whence they are to get rations. It appears that no tents are provided for them, and that with the cavalry no provision is made for the transport of the women from place to place. They are a burden to themselves, to the officers, to the soldiers; and in a great many instances the poor creatures are hated and scouted by the soldiers generally. *Letter from Schumla.*

CINQUE PORTS.—The Bill for the Better Administration of Justice in these ports, brought in by the Government, abolishes the jurisdiction of the Lord Warden in civil proceedings. It provides that the jurisdiction of the Courts of Law and Equity shall extend to the Cinque Ports as to other places, and writs and other matters shall be directed and executed there as in other places. Persons holding office under the Lord Warden are to receive compensation from the counties of Kent and Sussex. The bill is not to affect the Court of Admiralty of the Cinque Ports.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Owing chiefly to the large sales of stock, and the comparative scarcity of money, the market for all national securities has ruled exceedingly inactive this week, and we have to notice a decline in the quotations of 1 per cent. This is rather an extensive fall, considering the div dend pays ents; but we may observe that the sales have been mostly on account of parties, who purchased largely prior to the shutting of the transfer books, solely for the purpose of receiving the dividend. The falling off in the imports of bullion, which have not exceeded £50,000, has contributed to weaken the market; but really, with the exception of our being engaged in an expensive war, we see nothing to justify alarm as regards future prices.

Consols were very flat on Monday, and the quotations gave way. The Three per Cents Reduced were done at from 92½ to 92¾; the Three per Cent Consols, 92⅝ to 92¾; the New Three-and-a-Quarter per Cents, 93¾ to 93⅞; and Consols for Account, 92⅝ to 92¾. India Bonds were 207s to 209. India Stock, 280. India Bonds realised 4s.; and Exchequer Bills, 1s. to 2s. premium. Exchequer Bonds marked ¾ pm. On Tuesday, the Three per Cents Reduced were 92¾ to 93; the Three per Cent Consols, 92¾ to 93⅛; the New Three-and-a-Quarter per Cents, 93⅞ to 93½; and Consols for Account, 92⅝ to 92¾. Bank Stock, 207½; Long Annuities, 1860, 9 5-16. Exchequer Bonds, 97s to 99s; India Bonds, 4s. to 1s. pm.; Exchequer Bills, 2s. pm. to 1s. dis.; Exchequer Bonds (Scrip), ¾ pm.; Very little was doing on the following day The Three per Cents Reduced varied from 92¾ to 93; the Three per Cent Consols, 92¾ to 93⅛; the New Three-and-a-Quarter per Cents, 93½ to 93⅝; and Consols for Account, 92⅝ to 92¾. Bank Stock, 210; India Stock, 283. Long Annuities, 1860, 9 5-16. Exchequer Bonds, 98s to 99s; India Bonds, 1s. to 1s. pm.; 1858, ½ pm. On Thursday the market opened heavily, at 92⅝ for the Three per Cents; but it subsequently became brisk, at 93⅛, closing at 93⅜. The Three per Cents Reduced were 93⅛ to 93⅜; the New Three-and-a-Quarter per Cents, 93⅝ to 93⅞. Exchequer Bills were 1s. dis. to 2s. prem. Bank Stock was firm, at 208½ to 210. India Bonds, 1s. to 3s. prem.

There has been very little doing in the Foreign house, and prices almost generally have not been supported. The following are the leading quotations:—Grenada—One-and-a-Half per Cents, 19½; Mexican, Five per Cents, 24; Russian Five per Cents, 96½; Ditto, Four and-a-Half per Cents, 87 ex div.; Spanish Three per Cents, 37¾ ex div.; Belgian Four-and-a-Half per Cents, 80; Dutch Two-and-a-Half per Cents, 59; and Dutch Four per Cents, 90. We understand that the subscriptions for the new Russian and Austrian loans have come in very slowly.

Joint-Stock Banks have been very dull and drooping:—Australasia have sold at 82½; British North American, 64; Chartered of Asia, 4¾; English, Scottish, and Australasian Chartered, 2¼ dis.; London Chartered of Australia, 21 ex div.; London and Westminster, 39½; South Australia, 43 ex div.; and Union of Australia, 74¾. All Miscellaneous Shares have met a dull and drooping market:—Australian Agricultural have been 45 to 44¾; Canada Six per Cents, 107 ex div.; Crystal Palace, 4¾; Electric Telegraph, 20¾; North British Australasian, 5½; Peninsular and Oriental Steam, 85¾; South Australian Land, 16 ex div.; Submarine Telegraph, 3; Van Diemen's Land, 12¾. Canal Shares have sold as follows:—Ashton and Oldham, 154; Coventry, 215; Grand Junction, 58; Grand Surrey, 19½; Loughborough, 61½; Rochdale, 190; Oxford, 15½; Regent's, 16¾; Stafford and Worcester, 40?; Stourbridge, 285; Worcester and Birmingham, 32. In Waterworks Shares very little has been doing:—Grand Junction, 72; Ditto, New 19¾; Kent, 80; Lambeth, 97; Southwark and Vauxhall, 83¾; West Middlesex, 101; Ditto, New, 16⅜. Gaslight Companies Shares have been exceedingly dull. Imperial have marked 104; Phœnix, 27; Ratcliff, 70; Westminster Chartered, 56. Insurance Companies' Securities have been very inactive:—Albion, 90; County, 125; Crown, 20¾; European, 19¾; Globe, 127; Guardian, 87; London, 29¾; Pelican, 6⅝; Provident, 6¾; Rock, 72; Royal Exchange, 229 ex div.; Sun Fire, 260; Ditto Life, 65. In Bridges, very little doing, as follows:—Hungerford, 12; Waterloo, 6; 10s to Old Annuities of £6, 28; and Vauxhall, 21.

The imports of bullion have been under £50,000, chiefly from New York. The shipments have rather exceeded that amount; but the demand for gold on Continental account has been by no means active.

Foreign Shares have been dull and drooping. The account has passed off heavily each day, but many parties have had very high "continuation" rates. The following are the official closing prices on Thursday.

ORDINARY SHARES AND STOCKS—Aberdeen, 23¾; Bristol and Exeter, 98; Caledonian, 67; Eastern Counties, 13¾; Great Northern, 85¾; Ditto, B Stock, 122; Lancashire and Yorkshire, 64¾; Leeds Northern, 14¾; London, Tilbury, and Southend, 11; London and Brighton, 109; London and North Western, 102¾; Ditto, Midland, 84¾; London and South-Western, 83¾; South-Eastern, 62¾; South Wales, 33¾; York, Newcastle, and Berwick, 73¾; York and North Midland, 59¾.

PREFERENCE SHARES—Great Western Four-and-a-Half per Cents, 100.

FOREIGN—Northern of France, 38; Paris and Lyons, 41¾; Paris and Strasbourg, 37¾.

Mining Shares have commanded very little attention In prices, scarcely any change has taken place.

Friday Evening.

Several large sales of Money Stock having been effected to-day, the market for Consols has been rather excited, and prices have fluctuated to a considerable extent The Three per Cents are marked 91¾ down to 91¾; the Three per Cents Reduced, 91¾ to 92; and the New Three-and-a-Quarter per Cents, 92¾. In Foreign Bonds and Railway Shares very little has been doing.

THE MARKETS.

CORN EXCHANGE (Friday).—The quantity of English wheat received up to our market this week, constitutes, the supplies from all quarters, fresh up to Monday evening were scanty, and the show of samples was limited; yet the demand for all kinds was confined to immediate want, at 2s per qr. decline. The foreign wheat we now have to supplies and we have to report a fresh arrival, amounting to nearly 17,000 quarters. Last trade for all description was heavy, but we have to notice changes in notice in prices. In floating cargoes next to nothing was doing The show of barley was no extra, at last the sale for most kinds was inactive, on former terms. In bonded corn, no change, and prices showed a tendency to decline. The oat trade was dull and the quotations were rather easier. Bean, peas, and flour remained very inactive.

ARRIVALS—Wheat, [illegible] 790; malt, 3190; oats, 1830; flour 450 Irish oats, 950 Foreign—Wheat, 5300 oats, 21,720; flour, 1350; barley, 1,480 beans.

English.—Wheat, Essex and Kent, red, 71s. to 80s.; ditto, white, 74s. to 85s.; norfolk and Suffolk, red, 70s to 77; ditto, white, 74s to 84; rye, 4s to 5s; grinding barley, 31s to 32s.; distilling ditto, 35s to 37s; malting ditto, 40s to 41s; Lincoln and Norfolk malt, 70s to 74s; brown ditto, 60s to 71s.; Kingston and Ware, 72s, to 75s; Chevalier, 72s to 76s; Yorkshire and Lincolnshire feed oats, 21s to 24s; poland ditto, 24s to 28s; Essex and Kent ditto, 25s to 27s; potato ditto, 24s to 26s; beans, 44s to 46s; grey peas, 44s to 46s; maple, 47s to 48s; white ditto, 46s to 50s; tick beans, 42s to 44s; harrow ditto, 42s to 44s; Suffolk, 34s to 35s; Stockton and Yorkshire, 26s to 30s. per 280lbs. Amsterdam, 37s. to 40s. per barrel.

Seeds.—We have to notice a moderate inquiry for canary, at full prices. All other seeds move off slowly, at barely last week's rates.

Linseed, English, sowing, 74s to 76s.; Baltic crushing, 44s. to 48s.; Mediterranean and Odessa, 46s to 48s.; linseed cake, 6l 5s. per quarter. Coriander, 10s to 12s. per cwt. Brown mustard-seed, 10s to 13s.; white ditto, 10s. to 14s.; and tares [illegible] per bushel. Trefoil [illegible] per cwt. Rapeseed [illegible] per last. Linseed cake, 5l 5s to 5l 10s per ton. Rapeseed cake, 5l 5s to 5l 10s per ton.

[illegible] yellow Linseed, 31s. to 34s.; fine white ditto, 40s to 42s per cwt. Hempseed, 40s to 42s per quarter. Canary, 40s. to 44s.; and new to fine grocery, 44s to 48s. 6d. per cwt. The total consumption on Saturday last was 3,31,872 cwts., against 3 225,152 ditto in 1853.

Coffee.—The demand for most kinds is steady, at full quotations Good ordinary native has changed hands at 42s. 6d to 44s. per cwt.

Rice Our market is dull, but we have no change to notice in prices.

Provisions.—The demand for Irish butter is steady, and prices have advanced fully 2s. per cwt. Fine Irish is 4s to 5s higher than last week; while English is in demand at more money. The home market is steady, at full quotations. In other articles, we notice no change.

Tea [illegible] About an average business is doing in our market on higher terms [illegible] sugar has changed hands at 30s. to 32s.; and [illegible] at 30s. to 31s. 6d. Refined goods are very inactive at 34s. to 36s. 6d. per cwt. Fish oils are unaltered. Cocoanut is quoted at 46s.; American, 4 s. to 4s 6d. per cwt. Stockholm tar 23s; Archangel, 20s. per barrel.

Spirits.—The market for rum is heavy, and we have sellers of proof Leewards at 1s. 10d. to 2s. per gallon. Brandy is steady. In Genera and corn spirits very little is doing.

Hay and Straw.—Meadow hay, 70s to 90s.; clover, 75s to 105s.; and straw, £1 14s to £2 0s per load

Wool.—The public sales have commenced, and prices show a tendency to decline

Potatoes.—Imports are good and a large business is doing, as follows: English, 9s. to 7s per cwt. Scotch, 4s. to 6s. per cwt.

Coals (Friday).—Chester Main, 18s.; Holywell, 19s 6d.; Tanfield Moor, 17s 3d.; Hosforth, 18s. 6d.; Hetton, 18s 6d., 20s 3d.; Wylam, 20s 3d.; Stewart's, 20s.; Haswell, 19s 6d.; Kassop, 20s. 6d. per ton.

Hops (Friday). The very unfavourable accounts from the plantations have produced considerable firmness in our market and prices have advanced 6s. @ 20s per cwt. The duty to-day's market was 145,000 cwt. The imports were 2,615 bales from Belgium. Mid and East Kent pockets, £10 @s. to £13 15s.; Weald of Kent, £6 12s. to £11 11s.; Sussex, £5 5s to £11 0s per cwt.

Smithfield (Friday).—To-day's market was well supplied with beasts as to number, but their general quality was inferior. For most breeds we had a fair demand, at Monday's prices. Sheep—the attendance of buyers was limited, at a decline of 2s. to 4s per 8lbs. There was a slight fall off in the sale for lambs, but no change took place in their value. Prime calves were in request. Hogs—owing to the weak trade we have to quote 2s. to 4s lower.

Per 8 lbs. to sink the offals. Coarse and inferior beasts, 3s. 4d. to 3s 6d.; second quality ditto, 3s 8d to 4s 0d.; prime large oxen, 4s 2d to 4s 4d.; prime Scots, 4s 4d to 4s 6d.; coarse and inferior sheep, 3s 8d. to 4s 0d.; second quality ditto, 4s 2d. to 4s 4d.; prime coarse-woolled ditto, 4s 6d. to 4s 8d.; prime Southdown ditto, 4s 10d. to 5s 0d.; large coarse calves, 3s. 4d. to 4s 4d.; prime small ditto, 4s. 6d. to 4s. 10d.; large hogs, 3s. 6d. to 3s. 8d.; neat small porkers, 4s. 2d. to 4s. 4d.; suckling calves, 14s to 20s.; and quarter old store pigs, 28s. to 32s. each. Total supply, Beasts, 2810; cows, 140; sheep and lambs, 16,000, calves, 300; pigs, 450. Foreign: Beasts, 350, sheep and lambs, 5600; calves, 420.

Newgate and Leadenhall (Friday).—The general demand ruled steady, and prices were well supported.

Per 8 lbs. by the carcase:—Inferior beef, 3s. 8d. to 4s. 4d.; middling ditto, 3s. 6d. to 3s. 8d.; prime large ditto, 4s. 6d. to 4s. 8d.; prime small ditto, 4s. 8d. to 5s.; inferior mutton, 3s. 4d. to 3s. 8d.; middling ditto, 3s. 8d. to 4s 2d.; prime ditto, 4s. 4d to 4s. 8d.; small 3s. 4d. to 4s. 8d.; small pork, 4s. 2d to 4s. 10d.; lamb, 4s. 6d. to 5s. 6d.

No. 4, Lower Area, Hungerford-market. JOHN TATTERSALL.

A GRAND BAZAAR and FANCY FAIR, in aid of [illegible] Parish, will be held on [illegible] and 28th of JULY, in a NEW Building on the Goodwood, in the parish of [illegible]

[illegible]
The Right Hon. the Lady Wenlock
The Right Hon. the Lady Leigh
The Hon. Mrs. A. Campbell — Mrs Alston
The Hon. Mrs. Adderley — Mrs Chadwick
The Hon. Mrs. Adderley — Mrs Tyrrit
Lady Chetwynd — Mrs. Terry
Lady Hastop — Mrs. Bedford, sen.
Lady Stone — Mrs. Forster
Mrs. Manley — Mrs. Webb
Mrs. Grove — Mrs. Baron Webster
Mrs. Hawksley — Mrs. Anastasius Thomson
Mrs. Newington — Miss Steele Perkins
Mrs. Fox-Shaw

Contributions in WORK or SALEABLE ARTICLES are solicited, [illegible] Ladies, who have kindly consented to preside at Stalls—

The Hon. Mrs. R. Jervis — Mrs. Chevasse
Lady Fairlop — Mrs. Belloche
Lady Scott — Mrs. Sadler
Mrs. Holgrave — Miss Rhoda Bedford
Mrs. Chadwick — Miss Steele Perkins
Mrs. Lucas Webster

It is earnestly and respectfully requested that Contributions may be sent on or before the 24th of JULY, as the days fixed for the Bazaar are the 27th and 28th, and no time

[illegible] Committee; or to any of the following Treasurers, addressed to the Committee; or to any of the following Ladies, who have kindly consented to preside at Stalls—

The Hon. Mrs. R. Jervis — Mrs. Chevasse
Lady Fairlop — Mrs. Belloche
Lady Scott — Mrs. Sadler
Mrs. Holgrave — Miss Rhoda Bedford
Mrs. Chadwick — Miss Steele Perkins
Mrs. Lucas Webster

SPACIOUS AND COMMODIOUS TENTS

[illegible] ARTICLES will take place, and which will [illegible]

PLEASURE BOATS

will be launched on the adjacent beautiful Lake

TWO BANDS OF MUSIC,

under the direction of Messrs Hayward and Synyer, will perform [illegible]

[illegible] of the best quality, and at moderate prices, will be provided by Mr Green, of Birmingham

There will be a PUBLIC LUNCHEON [illegible] Mr. Green, and Tea, Confectionery, Ices &c., [illegible] [illegible] erected for the purpose.

Viewing for Horses and Carriages will also be [illegible]

BUTTON PARK,
the attractions of which are [illegible] as to need no comment, is only seven [illegible] from the principal towns of Sussex—Arundel, Chichester, Petworth, Midhurst, and Worthing—and is a delightful contemplation for the genera. convenience of Visitors from all the [illegible] Railway Stations, and to the town of Birmingham

Prices of Admission—First Day, 2s.; Second Day, 1s. 6d.; Third Day, 1s. Children under ten years, 6d. each day.

A DELAIDE, PORT PHILIP, SYDNEY.—A PASSENGERS and GOODS LANDED at Melbourne free, Saloon, 34th October, £25 to £30; Intermediate, £15 to £20. Steerage, £10. Children half-price. Intermediate berths, per let-ness Ships. Apply to WM. BARNETT and CO., 35, Philpot-lane, London, Merchants, Colonial Shipping and Gen. Commission Agents.

LIVERPOOL BLACK BALL CLIPPERS.—These splendid Ships SAIL EVERY FORTNIGHT, for MELBOURNE, Geelong, Sydney, Adelaide, and Launceston. They are all first class, and have been fitted for passengers on record. Cash orders issued in Australia from £1 upwards, and parcels forwarded. Apply to Jno. Jeffrays and Co., Great Howard, Liverpool; to the owners, James Baines and Co., Cook-street, Liverpool.

THE MAIL STEAM SHIP for AUSTRALIA, [illegible] 1,200 Tons Burthen, [illegible] CAPTAIN [illegible] will [illegible] and [illegible] Ports of [illegible] Melbourne, on the 6th AUGUST next. This vessel has been [illegible] for the accommodation of [illegible] and [illegible] and has a large [illegible] for the reception of [illegible] Passengers will carry the Mails and full [illegible] and [illegible] Particulars as to rates of Fares, Freights, &c., may be had on application at the Company's Offices, 103, Fenchurch-street, London. And at the Company's Superintendent of the Cargo Department, where parcels, packages, and publications will be received for Hobart Town, Launceston, Port Phillip, Sydney, Moreton Bay, Rio de Janeiro, and Rio de Janeiro freight being prepaid.

Goods taken on through freights outward to Bahia and Rio de Janeiro, and homeward from Rio de Janeiro, Bahia, Pernambuco, St. Vincent, Lisbon, and Oporto, at low rates of freight.

Passengers are recommended to make early application for securing proper berths.

Return tickets issued, available for twelve months, with an abatement of 25 per cent on the passage-money

50, Moorgate-street. E. CHAPPELL, Secretary.

EASTERN COUNTIES RAILWAY.—To MARGATE and HERNE BAY, via TILBURY. On and after the 17th JUNE, the Steamer CROWN will leave Tilbury Fort for Herne Bay and Margate every TUESDAY, THURSDAY, and SATURDAY, on or [illegible] Tilbury Fort at 10.30 a.m. Margate at 3.30 p.m., Ramsgate 4.30 p.m., Herne Bay 5 p.m. Mondays 9.27 a.m., and Stratford at 10.27 a.m.; and will leave Margate every Tuesday, Thursday, and Friday, at Half-past Nine a.m. in conjunction with a Train direct from Tilbury to London Passengers may also [illegible] through, to, or from, either of the above-named Stations. Fares: First-class, and Saloon, 5s. 6d.; Second-class and Deck, 3s. 6d.; Children, 2s. 6d. A Fast Packet will shortly be placed on the Station for a Daily Service. For further particulars, apply to the Station Superintendents, Shadwell Station; or the Superintendent's Office Fenchurch-street Station, Liverpool-street.

May 22nd, 1854.

THE GREAT NORTHERN RAILWAY.—The prices of COALS brought to London by this Railway have been reduced, and are at present as under:

Delivered within five miles of the Station.

FROM THE COUNTY OF DURHAM.

House Coals, Best Quality.	
Lambton's Wall's End, screened	21 6 per ton.
Adelaide Tree Wall's End, screened	22 0 „
WEST HARTLEPOOL NEWCASTLE COAL FIELD.	
House Coals, Best Quality	
Silkstone, screened	21 6
House Coals, Second Quality.	
Elsecar, screened	20 0 „
Steam or Furnace Coals.	
Isaac Lord	21 0 „
Whitwood	20 0 „

Orders can now be promptly executed.

Beyond five miles from the King's-Cross Station, 1s. per ton per mile extra. Screenings, an additional charge of 2s. per ton is made for deliveries at Hampstead and Highgate. Cash to be paid on giving the order, or on delivery

The above coals will be brought to London by the Great Northern Railway is within this Station, and care should be taken to address them to the Great Northern Railway, Sole Agent for the sale of Coals consigned to the King's-cross Station, or to the Secretary

By order,
J. B. MOWATT, Secretary.

King's-cross Station, London, May 8, 1854.

YARMOUTH and LOWESTOFT.—Seaside Residences for Families and Invalids.—The Public are informed that the EASTERN COUNTIES RAILWAY COMPANY have made the following arrangements for the conveyance of Vis tors to and from the above named old established and fashionable Watering-places

Family Tickets to Yarmouth and Lowestoft, and back (for not less than four persons), will be issued by the Company within 14 days from the date of issue, and which give the holders the privilege of travel ing by any train (including the Express) are issued at £1 each Return Tickets by second-class In addition to which, a number of each family party is entitled to extra journey-tickets, to be used by any train during the term of the above named Family Tickets, at the following fares—

	First Class.	Second Class.
For the [illegible]	40s.	27s 6d
For [illegible]	20s.	15s.

And [illegible] may also travel at the [illegible] and second class Return Tickets issued to the carriages reserved for a family.

Horses and carriages accompanying family parties booking under these arrangements are conveyed at very reduced rates for the journey to and fro.

The Express Trains occupy four hours only on the journey between London and Lowestoft, or Yarmouth

For further particulars, apply to the Coaching-Superintendent, Bishopsgate Station.

Bishopsgate Station, June, 1854.

ORTHOPEDIC INSTITUTION, 9, Royal Avenue, Sloane-street, founded, 1841, for the Treatment of SPINAL and CHEST DEFORMITIES and DISEASES of the JOINTS, &c., without cruelty, or restraint for confinement in the reclining position By Mr HAMON Author of several Works on the cause, and Remedy of Deformities

ACCIDENTAL DEATH INSURANCE COMPANY. Capital, £1,000,000 fully subscribed. CHAIRMAN—RICHARD BAGSHAW, Esq., Q.C. DEPUTY CHAIRMAN—Henry Duff Mayne, Esq. Accidents by railway, sea, road and the public streets, insured against, either by single or annual premiums, at very moderate rates

ACCIDENTAL DEATH INSURANCE COMPANY. Accidents by Sea, Fire, and Travelling, or from any other cause, insured against. Payments can be secured weekly, in addition to doctors' bills, in case of non-fatal accidents, and by a fixed sum in case of death.

ACCIDENTAL DEATH INSURANCE COMPANY. War Risks, either by Land or Sea, or in the Pass of the Enemy insured against.

No persons, attendance or medical examination required No persons, attendance or medical examination required Prospectuses and further information can be had on application at the Company's Offices, or of any of their Agents

7, Bank-buildings, Lothbury WILLIAM YOUNG, Secretary.

ROYAL SOCIETY for the PREVENTION of CRUELTY to ANIMALS. Established 1824.

Patron—The QUEEN
President—The Right Hon. the Earl of Westminster.

At the Monthly Meeting of the Committee, held at the Office, No. 19 Pall-mall, on Monday, July 10th, 1854, the Report of the Superintendent, just then read, it appeared that the operations of the Society during the past quarter had resulted in One Hundred and Twenty-eight prosecutions for the following Offences:

Owners, for causing Horses to be driven in unfit state	63	Ill-treating Oxen	7
Carters, &c., for driving Horses with wounds	33	Ill-treating a Sheep	1
Ill-treating Horses	10	Ill-treating a Dog	1
Ill-treating Asses	2	Ill-treating a Cat	1
Ill-treating Donkeys	2	Assaulting Officer	1
Stabbing a Donkey	1		

The punishments inflicted for these offences included sentences of Imprisonment, with hard labour, for periods varying from one week to fourteen days in four cases, and the following pecuniary fines:—Seven of £1 line or £1 15s.; Eight of £2, one of £3 10s. and Five of £5, and the remainder under £1, exclusive of costs in Courts of Law.

By order of the Committee,
July 10, 1854. [illegible] Secretary.

CITY of LONDON HOSPITAL for DISEASES of the CHEST. Under the patronage of her Majesty the QUEEN and his Royal Highness PRINCE ALBERT, K.G.

President—The Right Hon. the Earl of Harrowby
Treasurer—H. Edmund Gurney, Esq.

The Hospital at Victoria Park is now completed, and only requires to be furnished to be fit for the reception of Patients. The cost of the building has, however, exceeded the estimate, and when all the statistics now can reader are included, there will be a debt of nearly £3,000 on the Hospital, and a further sum of £2000 will be required for the Furniture. The Committee have, therefore, been most urgently compelled to defer opening the Building till sufficient funds are obtained to justify it in incurring that responsibility, but, deeply conscious, as they are, of the necessity for further relief being afforded to the numerous and unfortunate sufferers from Diseases of the Chest, especially in the City and the Metropolis generally, appeal to the Public for further aid, in the confident hope that the Institution will meet with the sympathy and support of the benevolent and influent and benevolent.

Donations and Subscriptions will [illegible] thankfully received by the Treasurer, at the Banker's-house, the Bankers, Messrs Barclay and Co., Messrs Coutts and Co., and Messrs. Ransom and Co.; by the Honorary Secretary, 31, Old Broad-street; and at the Hospital, as the Offices, 5, Liverpool-street, Finsbury

H. SEWELL, Honorary Secretary
RD. HAND, Secretary

NORTH LONDON, or UNIVERSITY COLLEGE [illegible] Since the announcement that they do not intend to have, this year, a Public Dinner for the benefit of the Hospital. They are bound to add, that they are not, nevertheless, in great need of assistance, and may trust that the funds of the Hospital will receive as much support as if an annual festival were held.

The expenses are usually about £600 per annum The year they will be [illegible] £1,000, in consequence of the [illegible] of the [illegible] The certain [illegible] reduce do not exceed £300. A debt of £800, however, remains [illegible] and which, annually, by great economy, the committee have been able to continue to its original amount. A new ground rent [illegible] Farrow Building [illegible] and, as a considerable annual saving, the Committee are about to incur a extra expenditure of £300. In this emergency and from the benevolent is earnestly hoped.

The Hospital affords relief annually to 16,000 persons, of whom 1600 are in-patients, and nearly 900 are women in childbirth, attended at their own abodes. It has room for 200 in patients, but, for want of funds, the foundation is obliged to limit the number of beds to 120.

Received since the last Advertisement.

THE SCOTS GREYS LEAVING NOTTINGHAM FOR THE WAR IN THE EAST.—(SEE PAGE 38.)

(*Continued from page 38.*)

o make its tour of the town, offering prayers at divers altars, erected (temporarily) at different points on its route. The procession was very long, representing the history of Our Saviour, St. John, the Virgin Mary, &c. The whole being followed up by the priest, bearing the Host under a canopy. Arrived at the ramparts, the priest left the procession, and, with a few others, ascended them, mounted an altar put up for the occasion, and, after a few prayers, faced the sea, and gave it his benediction, amidst a salute of 21 guns. Having rejoined the procession, it returned in the same order to the church.

The Sketch represents the elevation of the Host at the time of the Benediction.

At this fête the fishermen's wives make offerings to the Church, and soon afterwards all the fishing-boats leave for the North Sea fisheries, where they remain eleven weeks.

CEREMONY OF BLESSING THE SEA, AT OSTEND

SUPPLEMENT TO THE
ILLUSTRATED LONDON NEWS

No. 693.—VOL. XXV.] SATURDAY, JULY 15, 1854. [WITH TWO SUPPLEMENTS, 1s.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

SCHUMLA, June 20, 1854.

THE operations of the united armies are likely to assume an active character after the lapse of another week. The entire English force is now landed at Varna, and encamped in the neighbourhood. The French will be ready with 30,000 men in seven or eight days, and they only await the arrival of General Bosquet's division of 6000 men, from Adrianople, to move forward at once. General Bosquet left Adrianople on the 15th, and is expected to reach Pravadi in two days. In the meanwhile reconnoissances have been made by the French and English forces in the direction of Bazardjik and the Wall of Trajan; and these operations have given rise to a rumour that the first move will be made in the direction of Tusla—a place situate on the coast, in the centre of a bay of that name, at the point where the old Roman lines touch the sea. It is also added, that such a movement as that just mentioned is rendered necessary by the position of the Russians, who have directed a large portion of their main force hitherto in the vicinity of Karasu, towards the chain of lakes which defends the entrance to the Dobrudja, between Karasu and Rassova.

The Turkish force continues to move in the direction of Silistria, and though they are no great distance from Schumla, they were ready to move forward at a moment's notice. This morning, Captains Burke and Bent, of the Engineers, left this place for Silistria, which they are to help in defending. The Russians have not made any assaults on this place since the day when Rifaat Pacha entered the town, and that is now a period of twelve days ago. On that occasion they had been informed of the intended entrance of the new Governor into Silistria, and they attacked him on his way in, but the entrance was made good. Later, thinking to take advantage of the confusion likely to be caused by the arrival, the Russians assaulted the Arab Tabia, but were again repulsed. In order to understand the persistence of the enemy in attacking this point, it is necessary to explain in some sort the position which it occupies with reference to the town. Silistria is situated on a bend of the Danube, the bank of which forms a segment of a circle. At 2500 yards outside, as the Danube flows, is the extreme point of a hill, on which is situated the Arab Tabia. Nearer Silistria, and on the side of the same rising ground, is another fort, called the Illanli Tabia. This latter outwork has also been frequently assaulted by the Russians as unsuccessfully as the Arab Tabia. It was discovered not long since that the enemy had made a covered way leading to the Illanli Tabia. The Turks sallied out and filled it up. The Arab Tabia itself, which was large enough to contain 2500 men, has been so damaged by shells, that an immense redoubt has been made, with a fosse and parapet of high profile. The new redoubt, however, is not large enough to contain more than 1000 men. For fear the Russians might succeed in making their way between the Illanli and the Arab Tabia, the Turks have also made a new redoubt midway between the two, and a little in the rear.

There is no news of any important engagement, except the assault on the day of Rifaat Pacha's entrance. But the attack on that day is said to have cost the life of two Russian Generals, Paniloff and Selvan.

Bairam Pacha, who had made his way into the besieged fortress, has left it, with his brigade, in the direction of Toutracan, where, as my last letter informed you, several battalions of Russians have landed. To-day the troops hitherto concentrated at Tirnova will march in here, bringing their prisoners and guns taken near Slatina.

CAMP LIFE AT VARNA.

THE several Correspondents from the seat of the war agree as to the immense extent of the camp of the Allied troops collected under the walls of Varna, though Canrobert's division of 10,000 men is away some six miles off, near the camp of our light infantry division. The greater part of the 3rd division of Prince Napoleon has landed, and several French regiments have arrived overland from Bourgas, and are under canvas a little to the north of the town, between the tents of our troops and those of the Egyptians and Turks. Next to these are posted the division of Sir De Lacy Evans, with the 55th Regiment; and south of these again come the Duke of Cambridge's division of Guards and Highlanders, with troops and batteries of horse and field artillery. Below all, and close upon the shores of the lower lake, are some 5000 Turkish cavalry and infantry, with a force of about 40 pieces of artillery. Four complete Turkish regiments, 1200 strong, have also joined the camp of their fellow-countrymen. Altogether, the force now here cannot be far short of 55,000 men of all arms, of which 20,000 are English, 22,000 French, and about 12,000 Turks and Egyptians. When the rest of our cavalry and Sir R. England's division arrive, with the French who are *en route*, we shall move from here some 80,000 strong; and, with the Turkish contingent under Omer Pacha, are likely to take the field upon the Danube with an effective strength of 120,000.

The routine of a day in camp is thus described:—

Between six and half-past six o'clock the seven regiments parade, each in front of their own encampment; but nearly two hours before that time, the stranger, unaccustomed to the sounds of the camp, if he has been able to sleep through the challenges of the sentries along the lines, and the monotonous cry running from man to man, "Number One! All's well?" "Number two! All's well!" &c., will be awakened by the bugles and trumpets sounding the *reveil*, the noise of conversation around his tent, and the chopping of wood for the camp fires. Parade over, there is a general rush for breakfast, which takes place at eight o'clock.

The heat in the day is great; but, perhaps, it does not much exceed the average temperature of a fine sunny day in England about the same time of year. The nights are colder, and heavy dews are frequent. When recall is sounded, and all the bands have ceased playing, the silence which reigns over the camp would be profound; but that the vigorous breathing of the sleepers frequently attain the dimensions of snoring, and that the challenges of the sentry to the straggl'ers for half-an-hour or so are frequent. Ere dusk, outlying pickets are appointed, and reliefs are sent out about half-past two o'clock in the morning. These pickets are posted around the camp at the distance of two or three miles.

The accompanying Illustration, from a Sketch by Lieut. E. C. Gordon, R.E., shows the accommodation afforded by an officer's camp to a few dinner guests.

INTERIOR OF AN OFFICER'S TENT, AT VARNA.

FORTIFICATION AND SIEGE OPERATIONS.

A FEW NOTES—HISTORICAL AND DESCRIPTIVE,

FOR GENERAL READERS.

In devoting a few columns to the subject of Fortification and Siege Operations, it is almost unnecessary to state that we shall not pretend, within such restricted limits, to go into scientific details, in a manner to be practically available, but simply to give such a popular view of the principles, and such explanation of the nomenclature employed, as may render the reader to understand the accounts of military operations which are likely to be pronounced in the course of the war.

Fortification.—Of two kinds. Permanent Fortification, being the permanent structures erected for the defence of towns, citadels, &c.; and Field Fortification, or works temporarily erected for the defence of an army in the field. We shall restrict ourselves, on the present occasion, to what concerns permanent fortification; and so much of field fortification as is involved in siege operations undertaken against permanently fortified places.

Ancient Fortification.—Before describing the system of fortification, such as is now in present use, it may be proper to glance briefly at the ancient system, that in vogue, with but slight modification, from the earliest period of history down to the time of the invention of gunpowder. The defence of a town consisted, in those days, of the main part of high walls surrounding it, with the addition of towers at intervals, for the purpose of commanding the lines of the main curtain walls, and *machicolated* copings of galleries running round the top, from which missiles could be hurled down upon the assailants. Outside the ditch, or *fosse*, was a wide and deep moat, which could be filled with water, and a *barbacan*, or fortified gateway, at the entrance, and on the latter, completed the permanent main works.

Besides the attack was made by scaling the walls, or undermining them, or battering them down, wholly or in part. The former was effected by means of mounds of earth, called *counterscarp*, which were piled up high enough to allow of a ladder being placed from the top of them, or of movable stages, or galleries, protected by a roof, upon which small parties were hoisted to the top of the fortification. Innumerable examples of such works are found in the records of ancient history; and the recent discoveries in Nineveh bring to light illustrations of them which are highly curious.

On the other hand, the defensive operations of the besieged consisted chiefly of hurling missiles from the walls at the besiegers, and of frequent sallies, for the purpose of still further disturbing them, and also of destroying their offensive mounds and moving galleries against the last of which fire was frequently employed.

To conclude this brief sketch of an order of things long superseded, but of which the pages of Homer, Josephus, Tacitus, and the Holy Scriptures themselves, contain so many illustrations, it may be observed, as a principle, that the art of defence in ancient fortification had the advantage over that of the attack, the latter requiring great numerical superiority, and unwearied labour and patience on the part of the besiegers in effecting their approaches, as well as immense physical energy and dauntless courage in the final assault, when the besieged still fought upon equal terms with them.

The discovery of gunpowder, though it at once effected considerable changes in military operations generally, did not so soon lead to any material alteration in the principles of fortification. The matchlocks and small field-pieces of early construction presented no new terrors to the stone walls which had long stood the test of ballista and catapult; and, for some ages, those arms were only used in conjunction with the latter. The most remarkable instance of this admixture of systems was the memorable siege of Constantinople, by the Turks, in 1453, so splendidly described by Gibbon ("Decline and Fall," chapter 68). Fourteen batteries of guns, among which were three pieces capable of throwing stones weighing from 600 lb. to 1200 lb., were pointed against the double walls and towers of ancient Byzantium; but, employed in addition, were engines for throwing darts, and rams for battering walls; and a broad ditch being at length filled up, a moveable turret was advanced on rollers up to the walls, where, however, it was destroyed by the fires of the besieged. The guns of the Greeks are said to have been of small calibre, the ramparts not being broad nor solid enough to permit the use of heavy artillery upon them.

In course of time, as the calibre of artillery became greatly increased, and iron balls were substituted for blocks of stone, it became apparent that the system of defence must be altered to meet these more formidable weapons of assault. As a principle, it was soon discovered that, beyond a certain point, fortifications derived no additional strength or security from the height of their walls, which battering cannon could effectually breach; but rather in extending the defences laterally—that is, in width—by extended ditches and outworks, so as to keep the besiegers at a greater distance; the ramparts being reduced to a lower level, so as to be as far as possible concealed and protected by the extended outworks.

Nevertheless, the changes so suggested were not suddenly effected; the first attempts to meet the new difficulty, as evidenced in the works of the fifteenth and sixteenth centuries, were rather to add to and remodel portions of existing fortifications, in which the lofty walls and angle-towers, and the ancient drawbridge, with its barbacan appendage, were still retained. At the siege of Metz, for instance, A.D. 1552, the Duc de Guise, who commanded, raised mounds of earth outside the single turreted wall of the town, with parapets formed of large gabions, upon which to plant cannon; and within the walls, which were breached by the enemy in several places, he erected retrenchments of earth, strong enough to resist cannon-shot.

The Bastion System.—At length a new and important change took place in the very principles of fortification, by the introduction of the *bastion* and its *ravelin*. And here it must be explained that the portion of straight wall between two towers, or fortified angles, is generally styled a *curtain*; and it soon became apparent that the ancient towers were no longer able to protect these portions from the artillery of the besiegers. The plan then adopted, was to substitute for the towers large earthworks, called *bastions*, having two faces and two flanks each; and to construct between each pair of bastions, and in front of the curtain, another projecting earth-work, called a *ravelin*, in level somewhat lower than the bastions, the guns of which should "cover" the approach to the bastions themselves, whilst they directly defended the approach to the curtain.

We owe the first attempts at the bastion system to Italian engineers, and their example was afterwards followed in the Netherlands, France, and in the Continent generally. Amongst the earliest who treated on this subject, and with success, were Castriotto, Marchi, Errard de Bar le Duc, de Ville, and Count de Pagan; but it was Marshal de Vauban (a distinguished General, under Louis XIII. and XIV.) who first reduced it to anything like order, and laid down mathematical rules for the direction and proportion of all the lines to meet all circumstances. The plan he proceeded upon was to inclose the place to be fortified within straight lines, forming a polygon, and to treat each line of the polygon under his rules as a line of fortification; to be flanked by bastions, the curtain lying between. The length of the side of the polygon under his rules varied from 360 to 500 yards; in order that the whole might be commanded by the artillery in the bastions. De Vauban built no less than thirty-three new fortifications, besides improving no less than 300; and, in the course of so doing, invented three systems, or rather added to his first system, at two successive periods, additional works, with a view to prolong the defence after a first breach should have been made.

Vauban's First System.—We now direct the reader's attention to a diagram of what is termed a *front of fortification*, upon Vauban's first system; which comprises all the main works common to every front of fortification. We should here explain, that a front of fortification comprehends all works raised upon one of the lines of the polygon surrounding the town, as a base; and in this case consists chiefly of two half-bastions and a ravelin, or demi lune:—

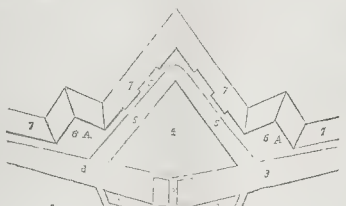

Fig. 1.—FRONT OF FORTIFICATION UPON VAUBAN'S FIRST SYSTEM.

Here 1 1 is the Curtain; 2 2 are the two Half-Bastions, their flanks adjoining and projecting from the curtain, and their faces looking out towards the exterior; the Main Ditch, 3 3 3, runs along bastions and curtain in a continuous line, 4 is the Ravelin, or Demi Lune, having only two faces (and no flank), being situate on the exterior side of the main ditch, but having a ditch of its own (5 5), which communicates with the main ditch. Beyond the main ditch and the ravelin ditch, is (6 6 6), the *covered way* being a raised ground intended for the movements of the soldiers in the work of defence, and protected by the crest of the *glacis* (7 7), which is the outer ground of all, sloping down gradually to the open country. The large spaces in the covered way (6A 6A) are called Places of Arms, for the assembling of the troops: that at the apex is termed the *Salient* Place of Arms, from its position at the apex; the other two, marked 6A, *Re-entering* Places of Arms, from being placed in the *re-entering* angle of the counterscarp; (8) is the *Caponnière*, a small work, consisting of a double parapet, communicating between the gorge or rear of the ravelin, and the *Tenaille* (9), a low work in the ditch in front of the curtain and between the flanks of the bastions, serving for the protection of the troops in moving from one place to another after a breach has been effected in the shoulders of a bastion. The tenaille is only used as the mode of communication with the ravelin when the ditch is a dry one; when it is a wet one, bridges have to be used instead. All within the main ditch is termed the body of the place, or *enceinte*; the works without the main ditch—the ravelin, covered-way, caponnière, tenaille, &c.—are termed outworks. The great principle involved in this system is that all the works mutually protect one another: the fire from the faces of the ravelin scour the country in front of the faces of the bastions, whilst the fire of the faces of the bastions commands the ditch of the ravelin, and the glacis; and that of the flanks thereof commands the main ditch, scouring the approaches to the curtain.

It may here be explained, that all angles projecting outwards from the body of the place are called *salient* angles; and all angles projecting inwards, towards the body of the place, are called *re-entering* angles. Thus the two faces of the ravelin form a salient angle; the same with the two faces of the bastion; the same with one of the faces and the adjoining flank of the bastion; but the flank of the bastion, with the curtain, forms a re-entering angle. The whole extent of rampart comprehending the right face and right flank of one bastion, and the left flank and left face of the opposite bastion, and the curtain between them, is termed a front of fortification, or line of defence.

Works intended for mutual defence should never exceed an angle of 120 deg., nor be less than one of 60 deg. The medium of 90 deg., which forms a right angle, is generally considered, the best for the above purpose. Where batteries stand at such an opening that their direct fire, or that which is vertical to their face, is parallel with the front of the part they flank, it is called *rasante*, or grazing fire; but when the angle is less than 90 degrees, so that the direct fire would strike upon the face of the work to be defended, it is termed *flchante*. When two lines form a very acute angle with each other, they no longer are defences; for, in case the enemy should take either of them, he would be able to work its battery against the other.

Vauban's Second and Third Systems.—When Vauban introduced the simple system of works for mutual defence, above briefly described, the art of attack was very little improved upon the old method. The artillery was still brought to bear, as heretofore, directly upon the faces of the bastions and ravelins, and pursued the work of attack laboriously and slowly, exposed all the while to the fire of the besieged, from positions much superior to those temporarily thrown up by themselves. In short, the defence still maintained the superiority against the attack. It was Vauban, himself, who, after methodising his first bastion system, devised a system of attack which completely set at defiance all the precautions upon which it was based, and gave the attack a decided superiority. At the siege of Philippbourg, A.D. 1688, this great commander (acting, it is surmised, upon a hint derived from observation of the operations of the Turks at the Siege of Candia, some years previously), determined to alter the position of his batteries, placing them at right angles to and opposite the prolongations of the faces of the works; and then so regulating the charge and elevation of his guns, that the shot, instead of striking the battery point blank, should sweep the whole length of the covered-way, and within the pallisade; and, by frequent bounds, dismount the guns, and place the defences *hors de combat*. This mode of firing is called the *ricochet*, and is a species of *enfilade* firing; the only difference being, that in it the charge of powder is considerably less—a half, or even a quarter charge—and the gun a little elevated. So successful was this mode of firing found to be, that a few years afterwards (1697) Vauban, by means of it, took the fortress of Ath—which he had himself constructed, and which he considered his masterpiece—after thirteen days of open trenches; with a loss of only 80 killed and 180 wounded.

It was to counteract this terrible mode of attack that Vauban introduced *traverses*, or projecting parapets, across the covered way (to be shown presently in Fig. 2) which had some effect; but not sufficient, by any means, to balance the powers of attack and defence; and the great engineer saw the necessity of resorting to further complications for protecting a portion, at least, of the garrison, from the terrible ricochet-fire; and additional works, for defending the enceinte after a breach had been formed in the face, or shoulder of a bastion. In his second system, which he employed at Landau and Befort (1684 and 1688), he separated the bastions from the body of the place by a ditch, about forty feet wide, in order to enable the latter to make a second defence; and fortified the angles of the bastions by small pentagonal towers of masonry, called tower-bastions, under which were casemates for two guns, &c. In his third system, employed at Neu Brisach (1698) he increased the size of the ravelin, and added to it a redoubt; and also increased the size of the tower-bastions, and altered their arrangement, and that of the casemates.

Coehorn and Cormontaigne.—Coehorn, who was contempory with Vauban, introduced some additional variations upon his system, which, however, it is not very important here to particularise, as the best of them are comprised in the *modern system*, shortly to be noticed. We pass on to Cormontaigne, who, about thirty years after Vauban's death, was the author of some very important changes, the usefulness of which is generally acknowledged. In the first place he lengthened the faces and shortened the flanks of the bastion, which gave greater space for interior defence within the work itself, and also brought the flank closer to the object which it had to defend. In the second place he reduced the width and extended the projection of the ravelin, making it more salient, so that it should cover the central part of the enceinte, and give better defence to the bastions, inasmuch as it thereby became impossible for an enemy to cover the glacis of a bastion till he had got possession of the two collateral ravines, on account of the reverse fires, which, from these, might be made upon him in his approaches. Thirdly (not to go into minor particulars), he increased the size of the redoubt of the ravelin, to which he added casemated flanks, from which the besieged might be enabled to have a reversed fire upon the besiegers, when the latter, after making a breach in the bastion, should be about commencing the assault.

The Modern System.—Not to particularise each succeeding improver or improvement, we now proceed to give a general sketch of a portion of a fortification, upon what is called the modern system; that is the method of Cormontaigne—itself an improvement upon the systems of Vauban, with such additions as modern engineers have thought it proper to introduce, and which are usually adopted. Some additions to those systems, which are only occasionally adopted, we shall, in this description, disregard. The portion here represented comprises two bastions, a ravelin, and two half-ravelins, illustrating the command of the latter over the bastions just spoken of.

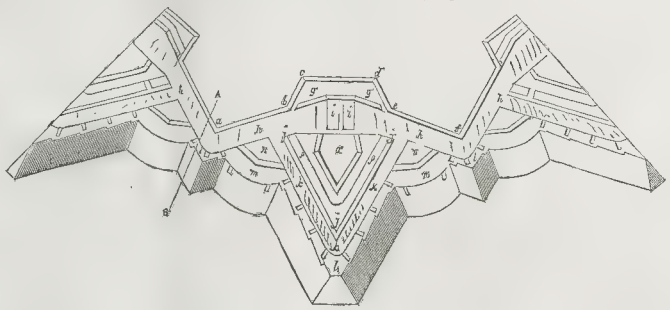

Fig 2.—PLAN OF FORTIFICATION, ON THE MODERN SYSTEM.

Fig. 2 is a plan of the work, and Fig. 3, a section across the points A B, that is from the salient angle of the bastion to the glacis; and Fig. 4, a section through the curtain, tenaille, and salient angle of the ravelin.

In Fig. 2, the portion *a b c d e* is a front of principal works, comprising two half-bastions and a curtain, the raised ramparts within which are formed of the earth dug out of the main ditch, *h h h; g g* is the tenaille; *i i*, the caponnière; *j j j*, the ravelin; *k k k*, the ditch of the ravelin; *l l l*, the covered way; *m m*, the re-entering places of arms in the covered way; *n n*, redoubts, in order to increase the strength of the

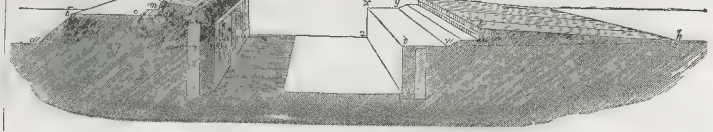

Fig. 3.—SECTION OF BASTION-RAMPART, MAIN DITCH AND GLACIS.

covered way, and to facilitate the making of sorties upon the enemy. The descents into the ditch, by which these sorties are made, are generally inclined planes, called *ramps*. Within the ravelin are *coupures*, or cuts, marked *p p*, to prevent the enemy taking the redoubt of the re-entering place of arms, before the redoubt of the ravelin itself is taken.

In Fig. 3, *b c d* is the *terre-plein* of the rampart, upon which are placed the troops and cannon for the defence, and which is generally from 30 to 40 feet broad; within which terre-plain, *a m*, is the *banquette*, or step, on which the soldiers stand to fire through the embrasures in the parapet, the height of the latter, *d e*, being so regulated as to afford sufficient cover for the cannon and men. The superior slope of the parapet, *e f*, is directed to the edge *s* of the opposite side of the ditch, so as to command the covered way *t u*; *f i* is the exterior slope of the parapet, made of earth, and about equal in height to the width of its base; *p p, n n, o o*, are *merlons*, or solid facing of the parapet, which is strengthened within at intervals by buttresses, or *counterforts*, *o p*; the front of the parapet which is so *revetted* with brickwork is called the *escarp*, as the revetted front on the opposite side of the ditch, *x s t s*, is call. I the *counter scarp*, the front of which is also supported by a facing of masonry *t u x y*, is the covered way for the occupation of troops for the defence, and which is usually limited to 30 feet in width. The mass *a l h i* is the *parapet* of the covert-way; and the superior slope *k h* the *glacis*, which descends till it meets the natural level of the country at *k*.

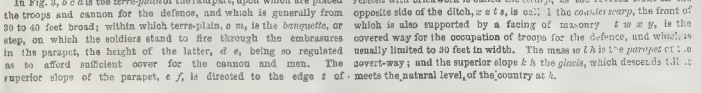

Fig. 4.—SECTION OF CURTAIN, TENAILLE, RAVELIN, AND GLACIS.

In Fig. 4, *a* is the *curtain*, with its *postern* running through it; *b b'* the main ditch (the *caponnière* being situate at the point *b'*); *c*, the *tenaille*, with its postern; *d*, the *ravelin*; *e*, the *redoubt* of the ravelin; *f*, the *ditch* of the ravelin; *g*, the *covered-way*; and *h*, the *glacis*.

Objections to the Bastion System.—The Bastion system has been much opposed from an early period, and its merits are still in dispute—as indeed, is the very principle of continuous lines of fortification—a point which we shall refer to presently. To complete our historical sketch, however, it is proper here to mention the name of Montalembert, a French General, who, in 1776, published a work in eleven quarto volumes, promulgating an entirely new system of defence, the main principle of which was, that of abandoning the Bastion system, and in its place substituting one of alternate salient and re-entering angles; the enceintes within the main ditch being multiplied, and casemated for the better protection of the troops, material, and stores. At the period of the French revolution, Carnot, a great admirer of Montalembert, proposed to improve upon his system, and still further to increase the advantages of the defenders, by affording the means of making powerful sorties, and discharging volleys of stones, balls, shells, &c., from mortars fixed from elevated casemated ramparts; of one of which we give a representation in section.

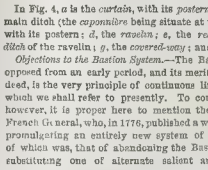

Fig. 5.—CASEMATED RAMPART—CARNOT.

We have hitherto chiefly confined ourselves to a description of the works immediately enveloping the space fortified; we now proceed to say a few words about the means by which the strength of such fortifications may be increased; or those descriptions of works which are used, when occasion suits, but which do not all necessarily enter into every scheme of construction. In so doing, we shall give the definition of one or two technical terms which have entered, without explanation, into the foregoing account.

The Additional Works for strengthening a Fortress may be either interior or exterior.

Interior retrenchments consist of small fronts of fortification within the enceinte; for the prolonging of the defence, after the outworks have been carried, and also for the retreat of the garrison, as they contest it in step by step. The *redoubt* has already been mentioned in connection with the ravelin, and the places of arms in the covered-way. The *cavalier* is an elevated work in the enceinte of a fortress, commonly within a bastion, to give a command over the enemy. A *barbette* (Fig. 6.) is a raised platform near a parapet, to enable the guns to fire over its crest instead of through the embrasures; guns so placed are said to be *en barbette*. *Casemates* (Fig. 6.) are vaults of brick or stone to cover artillery, or to lodge troops, generally formed in the mass of the rampart, and always bomb-proof; towers, bastions, &c., are said to be casemated when they are so covered in, and the guns thereby protected, instead of being exposed in open ramparts. *Counter-guards* are works solely destined to cover others of a more important character, in such a manner that, without obstructing their fire, they shall preserve them from being breached until after the counter-guards themselves have fallen. Interior retrenchments are better adapted to spacious than small works; as, where the area of the enceinte is already restricted, the addition of them would tend further to impede the free circulation of the troops.

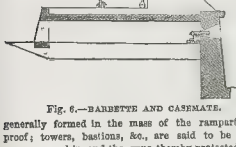

Fig. 6.—BARBETTE AND CASEMATE.

Exterior works are more appropriate to small fortifications generally, and are of use in all cases where it becomes necessary to occupy some space contiguous to or at a short distance from the main fortification, and whether it be on the same or another level. Of exterior works, *advanced works* are such as are constructed beyond the covered-way and glacis, but within the range of musketry of the main works, and *detached works* those which are situate beyond the range of musketry, and are, consequently, left chiefly to their own resources. An *horn-work* consists of two half bastions and a curtain. A *crown-work* is composed of a bastion and two half bastions, and presents two fronts of fortification. *Double crown-works* consist of two bastions and two half bastions: when these works are connected with the main works by their extreme fronts, the name *couronnée* is given to them. An *advanced covered-way*—that is, a covered-way beyond the glacis—is of use in many cases: a common application of it is in the case of a rivulet passing along the foot of the glacis, when, a covered-way being formed on the other side of the stream, favours the garrison in making sorties, and watching the enemy's movements. *Lunettes* are a species of ravelin or bastion, which are found attached to the faces of ravelins, upon the salients of the covert-way, and in other like positions, commanding and protecting the same.

Defensive Mines are an important contrivance for counteracting the operations of the besiegers. They are passages, called *galleries*, constructed under the wall of a rampart, of extended sometimes beyond the out-works, for the purpose either of blowing up the works and ground above, or of listening to the operations of the enemy. Should the enemy be employed in mining towards the fortress as a means of attack, the besieged, being already possessed of a good system of mines, have generally the advantage of him in this particular.

Siege Operations.—The taking of a fortified place may be attempted either—1st, by surprise, or *coup-de main*; 2nd, by sudden assault; 3rd, by blockade out of reach of gun-shot; or, 4th, by regular siege. We shall confine our remarks to the last-named process, of which the following admirable general description is extracted, in an abridged form, from the Preliminary Observations on the Attack of Fortresses in the first volume of Sir John Jones's "Journals of Sieges":—

The first operation of a besieger is to establish a force equal to cope with the garrison of the town about to be attacked, at the distance of six or seven hundred yards from its ramparts.

This is effected by approaching the place secretly in the night with a body of men, part carrying entrenching tools, and the remainder armed. The former dig a trench in the ground parallel to the fortifications to be attacked, and with the earth that comes out of the trench raise a bank on the side next the enemy, whilst those with arms remain formed in the meantime ready to oppose the sallies of the garrison. Batteries are then constructed on the side of the road next the ramparts to oppose the guns of the town, and in a short time by an enormous fire, principally against the flanks of the salient angles of the bastions, the ramparts are then constructed on the side of the road next the ramparts to oppose the guns of the town, and in a short time by an enormous fire, principally against the flanks of the salient angles of the bastions, the parapets are thrown down, and the ditches filled up, and the counterscarps destroyed, so as to render the breaches practicable. This is the first parallel, and the bank of earth raised till it forms a second road, called the *parallel*, embracing all the fortifications to be attacked, and long roads and waggons, and men, securely and conveniently sheltered from the view and the resolve of the garrison. Batteries

REVIEW OF THE DIVISION UNDER PRINCE NAPOLEON BEFORE THE SULTAN, AT SCUTARI.—Z. CAVE, LEF[illegible]

H.B.M. FOOT GUARDS ENCAMPED AT SCUTARI.—FROM A DAGUERREOTYPE BY MR. ROBERTSON, OF CONSTANTINOPLE.

THE ALLIED TROOPS IN TURKEY.

(From our Special Correspondent.)

CONSTANTINOPLE, 10th June, 1854.

THE only incident worth recording that has transpired since my last was the review of the French troops by the Sultan. After several adjournments, it was arranged that this ceremony should take place on Saturday last; and, so great was the excitement created by the news of this extraordinary event, that, for several days previous, not a vehicle or horse was to be had in Pera for "love or money." The place chosen for the review was the Daoub Pacha Barracks, situated at the distance of about a league and a half from Pera, on the south side of Stamboul, and about three miles from the gates. These barracks were the first barracks ever constructed in Turkey for regular troops; and are, as may be supposed, not in the best condition. The corridors are paved, like the streets of Constantinople, and the troops have been compelled to abandon them for their tents. The French troops at Daoub Pacha are not half so well off as the English troops are at Soutari. The barracks of Soutari are in a splendid state. Indeed, we doubt if there are finer in the whole of Europe. Their proximity to a large town is another advantage which is not possessed by the barracks at Daoub Pacha; and while the English soldiers are driven about in droskies, set aside entirely for their use, the French soldiers have to walk several hours beneath a scorching sun before they come to a shop. The officers complain loudly of this inequality of position, but no bad feeling has been engendered between the Allied troops, as everybody is aware that it is solely owing to the mismanagement of the French Government; although it would be as well to avoid such contingencies in future, in order that the perfect harmony which exists between the united forces may not be disturbed.

The review was characterised by the same absence of Turks as on former occasions, and when the Sultan passed along the streets of Constantinople on his way to the barracks, no crowd collected in his rear to follow him thither. I was utterly astonished at the European aspect of the crowd. But for the arabas, and the four square towers of the ugly barracks just peeping above the horizon, one might have fancied himself on the commons at Ascot or Epsom. The whole European population of the surrounding districts, and especially those of Pera and Galata, had flocked thither in great bodies, some in vehicles, some on horses, some on donkeys. Representatives of almost every province and of almost every creed were there in motley groups, the most conspicuous being the Armenians, Greeks, and Jews. It was evident the whole country had made a holiday of it, and was determined to make the most they could of the opportunity.

The Sultan arrived on the spot at one o'clock, in the very best spirits

BRITISH INFANTRY OF THE LINE ENCAMPED AT SCUTARI.—FROM A DAGUERREOTYPE BY MR. ROBERTSON, OF CONSTANTINOPLE.

and health, as far as outward appearance went. He was accompanied to the grounds by the Marshal, who had come forth to meet him; and was attended by his own staff, which, with the exception of two or three pachas, or officers, certainly had a most shabby appearance. He was mounted on a fine black charger, and wore a plain frock coat, white trousers, and fez; only he had this day an *aigrette* of diamonds, and a star on his long cloak.

The Sultan seemed thoroughly in earnest during the inspection. He examined everything with the greatest care and minuteness; and his eye seemed to dwell on every man he passed. He walked across the line of troops, and often turned round to ask some one of the officers in attendance a question. He frequently much delighted those around him by a somewhat rare display of his accustomed solemnity of expression—a somewhat rare display, because, in general, and with Sultans in particular. After having passed along the French lines, he galloped, as a mere matter of form, along those of the Turkish troops, consisting of two regiments of foot, [illegible] and one of artillery.

When [illegible] had taken his stand beside his tent, the review commenced. Prince Napoleon marched forth at the head of his division, saluting the Sultan with his sword in passing, wheeled round, and took his stand in front. It is well known that the Sultan never speaks to any one, and he did not deviate from the general rule on this occasion, though it is rumoured that the Prince evinced great dissatisfaction at receiving no inclination of the head in return to his salute.

The Chasseurs de Vincennes next defiled *au pas gymnastique*, and with bugles playing. The magnificent divisions of the Zouaves next sallied forth, and conducted themselves in an admirable manner, which was thoroughly appreciated by the Sultan and his corps, notwithstanding that they wore the green turban, which, being the privileged colour of the Emirs, would, it was supposed, have given great offence. All those foolish ideas, however, about particular colours are fast disappearing in Turkey. Next came the splendid Regiment of Marines; the two Regiments of Infantry *Légère*; the artillery, consisting of two batteries; and a squadron of Spahis (Hussars), who executed a sort of Arabian fantasia; just recalling what you may have seen in the pictures of Vernet, or in the admirable drawings of Raffet. The French cavalry was only represented there, with the preceding exception, by Light Cuirassiers—something in the Astley's style. The ground was kept by French gendarmes. The shakos had been taken away from the men two days previously, which was a pity, as they would have greatly added to the appearance of the troops during the review; although, of course, the comfort of the men is the first thing to be considered. The *képi* (or small cap) is now the only head-dress worn in the French army; and it is to be hoped the example will be followed by the English. Epaulettes for officers have also been done away with, the distinction of grades being shown by the number of small lace bands on the sleeves, above the cuffs, like the officers of the Spahis. In spite, however, of the extreme simplicity of their costumes, the troops presented a very fine appearance.

After the French troops had passed in review before the Sultan, the Turkish troops defiled. One regiment, I observed, had gaiters, an innovation of great interest, and until very recently, much objected to on account of its *irreligious* tendency; although it seems no easy matter to conceive what gaiters can have to do with religion.

After the review was over, Madame de St. Arnaud, who was in an open barouche, accompanied by Madame Yousouff, wife of the Franco-African General, rode up to the Sultan, on receiving a message by an Aide-de-camp, and was introduced to his Highness. This is said to be the first time that a Christian lady was ever introduced to the Sultan, and it was considered fortunate that no Turks were near at [illegible] Madame de St. Arnaud stood up in her carriage; the [illegible] was in great etiquet e, but nodded in a most significant [illegible].

[illegible] French, and is said very often to converse with [illegible] He actually speaks any European language. I have so often [illegible] that he does not, and that, too, by people who have lived in Constantinople for years, that I have always entertained that belief myself. A gentleman in the service, however, and one who, from his position, is as likely as any man to know the real state of the case, assures me that the Sultan Abdul-Medjid speaks the French language remarkably well. This is only on private occasions, however, such as when he talks to his music-master, Donizetti, for instance, or his gardener, an Alsacian who is in high favour with the Sultan. The reason for his not speaking French in public is that, like the Pope, he enjoys the privilege of being considered infallible, and would, of course, compromise that privilege if he exposed himself to the danger of committing blunders in French, the Mahometans look upon Christians in the light of inferiors, and would consider it a great compromise to their dignity to make use of the "tongue of a Giaour." It is said that the present Sultan is above such prejudices; but the infringement of the revered customs of his country would damage his reputation among his people.

It is a great pity that no pains have been taken to make a more favourable impression on the population of Constantinople than has been made by the Allied troops quartered in that city. The population of Constantinople, strange as it may appear, have not the least idea of what the British and French troops really are. A *promenade militaire*, through the streets and principal parts of Stamboul, with drum and bugles sounding, would not have failed to produce a great [illegible] among the inhabitants, notwithstanding the alleged apathy [illegible] nationality of the Eastern people. Hitherto, it is only the [illegible] and the diplomatic circles who have had the benefit of [illegible] By having [illegible] two regiments of Zouaves were embarked on [illegible] the steam-frigates, *Long*, to join the arsenal, the *Roland*, [illegible], and *Isly*, now [illegible] for Varna; and on Monday the [illegible] Marines (1100) and three companies of Marines [illegible] On Monday the whole of the First Division will be in [illegible] Thursday the 20,000 English already arrived, and the [illegible] will have passed the Bosphorus last week, the army [illegible] will amount to some 40,000 troops.

[illegible] division of cavalry, commanded by General D'Allonville, and [illegible] about 1800 men (two regiments of Chasseurs d'Afrique [illegible] goons), must have arrived at Adrianople by this time.

[illegible] upon there are very few left—a regiment of Cuirassiers, some [illegible], and two squadrons of Hussars. These last are not yet [illegible]. It was a folly not to bring horses here—a most stupid economy, to say the least, to be sure. The French Cavalry Commander-in-Chief has been sitting at the Seraskier's for the last three days, has managed to obtain a hundred, out of which fifty-seven were found serviceable!

The new organisation of the Bashi-bazouks is not in a very advanced state. Ever since it was made known that they were to be under the command of English and French officers, these men desert by hundreds, and disappeared no one knows where. The fact is, they do not much like the notion of being disciplined, drilled, shot, and do not seem to think our military system at all agreeable. [illegible] more is this to be said for them, they get no regular pay, and no booty from the Russians, as they were led to expect. They are still now enjoyed amongst the Bulgarians the faculty of doing much harm to these poor peasants, but no good to themselves General Yousouff, an Arabian, who has been raised to that rank in the French Armée d'Afrique, now resident at Varna, and Colonel [illegible], of the Indian Irregular Cavalry, resident at Schumla, are to superintend the formation of these corps; but, hitherto, all candidates (amounting to some thousands) have been applying for Colonelcies! Nobody is humble enough to accept the grade of Captain or Lieutenant.

Hotels in Pera are "crammed to suffocation" with mustachioed and spurred gents—in Albert Smith's acceptation of the word—who are ready for entering in campaign. After having remained a few days at Varna and Schumla, they return here, pretending to be disgusted with the delays; but, in reality, highly piqued on account of the coldness with which they have been received in their capacity of candidates for colonelcies or [illegible].

No news from the seat of war. Silistria continues in a state of defence, though nobody expected that it would have held out more than six or seven weeks, at the most. Omer Pacha has succeeded in reinforcing the garrison with 2000 men, who easily entered the town. Not a single house is left standing. No trench has been opened yet. Omer Pacha remains in Schumla, not daring to move a step.

It has been reported that the Anglo-French army would not begin operations this year, Marshal St. Arnaud having intimated that he would not do anything unless he had 150,000 men.

The overflowings of the Danube, with the equivocal position of part of the Russian army, has been the cause of many rumours as to an intended attack of the combined forces. Marshal St. Arnaud and Lord Raglan are, it is here, to be created Knights of the Bath and Sir Sidney Smith, at Varna. Omer Pacha does not stir from Schumla, and the fleets have resumed their usual inactivity.

CONSTANTINOPLE, June 29.

Admiral Bruat's fleet—two line-of-battle ships, three steamers, and a number of transports—passed here yesterday, *en route* for Varna. Some grand *coup* is expected in the Black Sea—perhaps an attack on Sebastopol. There seems to be no likelihood of anything on land, by our troops, this season, since the raising of the siege of Silistria.

I visited, a few days ago, a very large hospital here, not yet all constructed, which is destined for the French troops. The officers there told me that it could not be made useful before three months; and added, "What does it signify? it will not be needed this year."

The review of the troops at Scutari, is thus described by the Correspondent of the *Morning Chronicle*:—

The first sight that met my eye as I pantered on towards the great barrack of Doud Pacha, which lay about half a mile to the right, was a detachment of about twenty African Spahis, who were plunging about the ploughed fields at a full gallop, for what purpose I could not make out, digging the sharp eight-inch stirrup which is fastened to their stirrup into [illegible] their unfortunate steeds. They were very picturesque, well, [illegible] and certainly a most extraordinary, I will not say disagreeable exhibition. These Spahis are attached to the staff of Marshal St. Arnaud. The troops were drawn out along the plain, which extends from the barrack of Rauis Tchiflick to that of Doud Pacha. The whole division of Prince Napoleon was there, number 12,000 men, and consisting of two battalions of the 20th Regiment Light Infantry, two battalions of the 22nd Regiment ditto, two battalions of Infanterie de Marine, two battalions of Zouaves, one battalion of Chasseurs de Vincennes, and two batteries of 12-pounders, each with six pieces. This, with the 30 Spahis, and about 20 Cuirassiers, formed the whole French force. Four battalions of Turkish infantry, one squadron of cavalry, and one battery of artillery of six guns were also on the field. A large green tent had been constructed for the Sultan in the centre of the field. He arrived at a little after one o'clock, and was met by Prince Napoleon, Marshal St. Arnaud, and a numerous staff. Abdul Medjid was mounted on a jet-black Arabian, and rode down the ranks, closely followed by Prince Napoleon, Hassan, Ali, and a numerous staff, amongst whom figured several British officers. The Sultan several times pushed his horse to a canter, and, after having inspected the troops, he advanced towards a phaeton, in which were seated Madame la Marechale St. Arnaud and another lady, and addressed them in French. This act of the Padisha's greatly astonished his subjects the Turks. "The Sultan to speak to a mere woman!" Very extraordinary!" M. de Benedetti, the Chargé d'Affaires of France, and all the *personnel* of the Embassy, attended in full uniform. The French troops looked well, smart and active. The Zouaves have an especially business-like look about them, and their dress is well adapted to the land and the climate. They are mostly large men, [illegible] a good figure also amongst the French, going through the evolutions with equal ease and quickness. Their artillery is excellent in every respect; and that they will fight well they have proved ever since the commencement of this war. No manœuvres were gone through. After the Sultan had ridden along the ranks, he was accompanied to the tent, where he took up his stand, together with Prince Napoleon, the French Marshal, and the staff. He did not, however, dismount from horseback. The troops marched past with bands playing; and by half-past two o'clock they returned to their quarters. The ground was covered with carriages and horsemen; and there were many ladies on horseback. They were mostly from Pera and Galata. Scarcely any Turkish women were there, though there were plenty of Turks.

NOTES ON THE DISEASES OF TURKEY,

IN REFERENCE TO EUROPEAN TROOPS; AND MEMOIR ON THE REMITTENT FEVER OF THE LEVANT.

THE first of these medical essays is by Dr. Schulhof, and the last by Dr. Charles Bryce; and both are of great national interest at the present time. The immediate importance of Dr. Schulhof's work cannot be overrated. Probably, as he remarks, the only English physician possessing personal knowledge of the country, which is now the theatre of war in the East, his experience has been invited by our Government, in a manner at once honourable to himself, to the seekers for his intelligence, and to science, and essential to the well-being of our brave compatriots on the banks of the Danube, and their gallant associates of France and Turkey. Dr. Bryce's memoir is also of present application and permanent value; but our attention is more peculiarly attracted to this paper by the unassuming title of "Notes," which, in spite of infinite service to the medical staff and military officers, to whose guidance has been committed the comfort and safety (as far as circumstances permit) of so many thousands of the most precious sons of gallant old England. The trust is infinite; and towards its efficient discharge, the light shed over its needful duties by this pamphlet must largely contribute. The condition of the Russian hospitals has been, and is, even horrible; and wounds, disease, and death have committed havoc among the devoted troops, compared with which, the casualties and fatalities in the field of battle, dreadful as they have been, are as trifles in the balance. To be taught by skilful knowledge, how best to prepare against so miserable a state of things, and how to meet the inevitable evils that must arise, was a wise measure in the medical department of our Army and Ordnance, and the prompt response to the inquiry so seasonably instituted, equally valuable and salutary. No doubt the instruction and counsels here given are already in the hands of every professional man and official in the East, to whose charge the care and health of our army and navy has been committed.

It is not for us, however, to enter upon abstruse points expressed in technical phraseology; and the reader of a popular journal will not expect from its disquisitions on the Etiology, Prophylaxis, and treatment of the diseases which prevail in the Danubian provinces, our glance must be more general; and the useful application of the principles laid down be left to those who are engaged in this momentous service.

The geographical position of the territories, now covered with hostile arms, is that of an irregular triangle, at the apex of which the Danube enters from the Austrian dominions, and loses to the Black Sea, having its right bank flanked by the Ligh Mountains of the Balkan (from [illegible] to their termination below Varna), and its left by the less elevated branches of the Carpathians tapering away into the hills of North Bessarabia. The Euxine, between Odessa and Bourgas, may be considered the base, sustaining the province of Bulgaria, as the right half; whilst Greater Wallachia, South Moldavia, and South Bessarabia (the left half of the triangle), into which region the war now converges, present an immense plain, unbroken by a single hill. The river flowing through this flat clayey country, converts vast tracts into swamp and marshes, exhaling a very pernicious malaria—the left shore being most exposed to the intensity of the poison; and the very ground where he Russian corps, defeated before Silistria, is at present reorganising with additional strength, towards the Delta, formed by the embouchures of the Danube, is subject to the most dangerous exhalations of the miasma, so fatal to human life, especially when exposed to such a climate, unsheltered by day or night.

But, leaving the brief spring behind us at the end of April, we come to the summer months, two of which have already passed, and three are yet to speed away in hostile operations—at the end of which, thick fogs and tremendous showers, with piercing cold winds, will necessitate another condition of things—we find the temperature most trying to the human constitution, and disease prevailing to a frightful extent. Dr. Schulhof enumerates a ghastly phalanx—a roll-call, that must rapidly thin the strongest musters:—

Rheumatism, of the most serious character, prevals throughout Wallachia, and all Bulgaria nearest to the Danube. Strangers must dress warm, and keep their heads well covered, in order to avoid this painful malady. How are our soldiers' uniforms and caps suited to these requisites? We fear, not well; and yet, here, the laughed-at big grenadier bear-skin may be discovered to be no indifferent protection to the heads that wear it.

Pleurisy, and other disorders, are caused by exposure to rains, sleeping in the fields, marching in swamps, checks of the perspiration, and by all of which the human frame is prostrated. Dr. S. states that the Turkish physicians are apt to make an injudicious use of the lancet in these cases, and advises a different treatment.

Ophthalmia is rife, and warning is given to the men not to use each other's towels or brushes in barracks; and cod-liver oil is recommended to be applied to the eyelids, when glued together—a remedy which may be worth trying at home.

Coup-de Soleil is frequent; and the scarcity of trees in South Bessarabia, Bulgaria, and Roumelia, increases the risk of the stroke.

Boils occur oftener on the right than on the left side of the "triangle" described; and individuals of delicate skin, like the English, are most liable to their disabling attack.

Pneumonia and *Bronchitis* are more perilous and destructive, and are induced by the damp and chilly evenings after the excessive heat of the day, to which our gallant countrymen must be exposed.

Ague is a Turkish disease *par excellence*, and lasts all the year round, and the liability of troops engaged in war to its severest attacks is comprehensive and imminent, for they are brought on by muscular fatigue, exposure to vicissitudes of heat and chill, fatiguing marches, excitement, sleepless nights, irregular meals, fasting, improper food, encampment in the open field, and a hundred ills which the poor soldier is doomed to encounter. Let us trust that quinine is abundant in our medical chests in the East, so that we need not be driven to the Turkish prescription of Amulets, nor even to Hahnemann's homœopathic cure, by administering the billionth part of a grain of bark; on which our author observes, with a quiet humour, "considering all circumstances, I must give the prize to the Amulet."

Fevers, and, alas! the unsatisfactory catalogue of the dread array, grows darker and darker; dangerous fevers absolutely reign in the Dobrudja and the Delta, and are very severe. They appear most generally as the swamps dry up; and the quicker the process goes on, the worse they are. The heat and rapid evaporation more than decimated the Russian army in 1829; but it is to be hoped that with our commissariat, and forewarned, the British force will not be found, as the Russians were, half-clad, half starved, or living on the most miserable food, so as to fall before the rage of remittent fever—often mistaken for, and mistakenly treated as, typhus and plague. It is bad enough; but with ample provision of every kind, careful officers, and a well-informed and watchful medical staff, there is happily less to fear than may be imagined from the precedent of devastation twenty-five years ago. "If medical aid is called in early enough (we rejoice to add Dr. Schulhof's opinion) the progress of the disease may be stayed." It is, nevertheless, apt to degenerate, if neglected, into continued fever; an eruption of black spots, delirium, gangrene, and other fatal symptoms ensue, and the sufferer sinks rapidly into the grave. This is the Dobrudja putrid fever.

Dysentery, "the scourge of armies," is not far off, for the predisposing causes of that destructive disorder and of ague and fever, are the same; and indulgence in fruits or raw vegetables in almost certain to create this malady.

Diarrhœa is also predominating. The tone of the bowels is impaired by some of the foregoing diseases, to prevent which good and dry boots are a chief desideratum. Our Highlanders are advised to imitate the native mountaineers, and take to their leggings: they will never take to their legs before an enemy. Last we shall name (for plague is rare, and typhus entirely internally as recommended for it), is

Typhus and *Typhoid Fever*, the sources of which abound in the Danubian Provinces to an extraordinary degree—the sky, the soil, and the folly of man contributing their quota towards their production. Strange to say, disaster and retreat will carry terror and death by this affliction into the ranks of a disheartened foe, whilst, on the contrary, a victorious army may defy its ravages, and find health restored "by the laurels verdant leaves."

Feeling that it cannot be otherwise than most deeply interesting to every British heart, to know the perils to which our brave defenders are exposed, we have thought it expedient to run through this alarming list; and we have done so, we have here, but to allay public anxiety, by showing that Government has sought the best information for its guidance—that such information has been liberally communicated—and that the means and appliances of the medical staff have been called into most active requisition to supply everything, especially including necessaries which, experience, precaution, and science could suggest as necessary for the preservation of our noble bands in the pestiferous East. With such knowledge, and such precautions, we may confidently trust in Heaven that a large proportion of their dangers will be averted, and their sufferings, when they do occur, be alleviated.

On themselves much also depends. Simplicity in diet and avoidance of strong alcoholic liquors are of the highest importance; and Dr. Schulhof lays down many other rules for regimen, and particularly mentions as nutritious a species of pilchard caught near Varna and along that shore. The meat and vegetables in Wallachia he tells us, are of first-rate description, and the wine excellent. In the swampish districts the water is generally bad; but in most towns and villages there are good wells, sufficient for small supplies, though not for numerous armies. A small mixture of brandy is, however, recommended to foreigners, and we hope the French stores have not been forgotten in cognac. But these, and other matters touching supplies of every sort, though of vast consequence on the spot, need not be dwelt upon here. As for the Principalities, Russian intrigue and "occupation" have utterly impoverished them, and sapped every principle. The population live in gross ignorance and brutalising dependance, and the boyards and a few wealthy individuals are only educated into refined selfishness and ambiguity of character, to understand which, says our countryman, let know more than the Wallachians themselves. The rescue may be now: let us pray that the time has come, and a fine race about to be restored to the dignity and happiness of human nature.

Of Dr. Bryce's memoir on the Levant fever, we are not called upon to speak. His publication on the etiology of fevers, in 1832, is familiar to the Faculty; and a reiteration of its views is not suited to our columns. We therefore take our leave of the work before us, with our thanks to Dr. Schulhof for the able and exemplary manner in which he has performed the painful duty to which he was invited by the highest medical authorities.

[We have just received a private letter from the Camp near Varna, in which our Correspondent (an artillery officer) states that only one case of cholera had occurred, but that dysentery was prevalent among our countrymen. Several soldiers had been drowned while bathing, in spite of caution not to go among the reeds; and, when liquor was readily procurable, the temptation was not so firmly resisted as the friends of the service might desire.

SWEDISH LITERATURE.

RUNEBERG'S POEMS.

IT has been said in Sweden—" Our loss of Finland is repaid, more than repaid, by the songs of Runeburg." Perhaps this expression may seem rather exaggerated; perhaps it may be considered a profanation to compare the loss of a land, the destiny of a people, with some little poems of a living poet. But we must not forget that events greater than Finland's succumbing to Russian arms and gold, have been preserved in the memory of mankind, solely by the glow of inspiration which they have kindled in a poet's soul. Or tell me, what were to us Troy and the battles under her walls, on Scamander's waves? What were to us Priam, Helena, Hector, and Achilles, had Homer not chosen them as the subjects of his songs? And are then not his songs more to us than all these heroes of antiquity, with their bloody combats and strange adventures? And, to cite another example—What is to the world Hamlet, and his tragical history; what are King John and King Richard, and the history of their times, compared to the dramas of Shakspeare.

Runeberg is not only the modern Homer of Finland, but of all the lands of the north. In a new epic form he has sung the fierce battles, the almost superhuman exertions and sufferings of Finland in the war of 1808-1809, against Russian violence and treachery; the many traits of individual courage, and noble emulation, between the sons of Finland and Sweden; their self-sacrifices, endurance, and contempt of death. And verily, should barbarism overwhelm Europe, uproot its civilisation and drive back our literature, the songs of our bards, into the depths of the forests, the songs of Runeberg would live on there in the people's mind, and a future time would gather them from the people's lips, even as we have gathered from ancient times the songs of Homer, of Ossian, and Calevala.

As we have spoken of Runeberg's poems, we would mention more particularly the "Tales of Ensign Stal."* These detached pieces form, as it were, the epic cycle of the Finnish war, prefaced by a spirited lyrical invocation "to his Fatherland," and further introduced by a description of the poet's first acquaintance with the old soldier, Ensign Stahl, who told him, by the light of the evening fire, the deeds of the brave:—

> Thou lov'st, dear youth, the minstrel's lay,
> Thou lov'st our legends old;
> Perchance that thou wilt sing one day
> The tale that now I've told.

So speaks the old man to the young poet, who listens with filial reverence to his legends, and publishes them by the name of "Ensign Stal's Tales."

We have desired to introduce them to the English public, as they have been in like manner, within the last two or three years, introduced to the German public, which has received them most favourably. We have thought that these songs notwithstanding their peculiarly national character, would find sympathy in English hearts, through their purity and deep feeling, their noble spirit, and the great simplicity of their style, whereby they present a strong contrast to the more florid kind of poetry which has long prevailed in the north, and on this account their appearance may, without exaggeration, be said to form a new epoch in northern poetry.

But the English reader will, we hope, better enter into the genius of these songs, through the songs themselves, than through any description of ours.

SVEABORG.

(Translated from the Swedish of J. L. Runeberg.)

During the war in Finland, in 1807, General Cronstedt betrayed the impregnable fortress of Sveaborg into the hands of the Russians, under the pretext that the English had a garrison of two men, had sufficient provisions and ammunition to enable it to maintain itself for a whole year. He was induced to commit this treacherous act by Russian bribes, as well as forged newspapers, introduced into the fortress, containing false accounts of the losses sustained by the Swedes. By this, as well as other acts of treachery, Finland fell into the hands of Russia, notwithstanding the bold and valiant exploits of the Swedish Generals Adlercreutz, Döbeln, Sandels, Klingspore, &c., who did their utmost to defend the unhappy country against Russian invasion. The same Cronstedt, who now acted such a despicable part, had previously distinguished himself by gaining the battle of Svenskasund, one of the most decisive naval engagements upon the Swedish vessels beat 200 Russian, destroying 50 of their ships with a loss of only two themselves; the Prince of Nassau, who commanded the Russian fleet, being mortally wounded, while attempting to escape by swimming. This great victory was gained on the 9th July, 1790. Sveaborg was strongly fortified by Count Ehrenvard, in 1749, and was always considered impregnable: the fortifications extend over seven islands, situated at the entrance to the harbour of Hesingfors, the capital of Finland.

When evening shades began to flit,
And bright the firelight shone,
Old Ensign Stal and I would sit
And talk of times bygone.
Mid jests and jokes the hours advanced,
When Sveaborg to name we chanced.

I spoke but carelessly the while,
When straight the old man frowned;
"Mast seen the wave-encircled isle,
By Ehrensvard's bastions crowned?
That proud Gibraltar of the north!"
Thus moodily his words broke forth.

"It glanc'es far o'er sea and sky,
With eyes of granite stone;
And years devour'ed sword on high
And proudly calls 'Come on!'
That sword deals not in idle threats,
It flashes—and annihilates.

"Near not that isle with boastful mien
On battle's blood-red path!
Rouse not the haughty Ocean Queen
In her dread hour of wrath.
She'll send these back some fierce death-salute,
Through thousand cannons' gaping throats.

"To me back was Finland's armed
Yet our flags were flashing
And high our spirit rose:
Well might we brave all hostile powers
So long as Sveaborg was ours.

"What lightnings flashed in every glance
When e'er that name was said;
All fears and murmurs died at once,
Even cold and hungry fled.
The Finnish bear from slumbers woke—
It raised its paw, and dealt the stroke.

"How oft, as in cold nights he lay
Upon his sty bed,
Far, far from earth and home away,
That word the soldier said.
It was his tent when snowdrifts fell,
In distant lands his home—his all.

"'Twas then a whisper flouted by;
Dark rumour we could trace,
That spoke of shame and treachery,
And of our arms' disgrace.
From rank to rank the news was borne,
But only met with haughty scorn.

"But wh— —e bead shall e'er
Forget the shame, the gloom,
When, like a thunderbolt or fear,
The fatal truth was known,
That all our last, fond hopes were o'er,
That Sveaborg was ours no more.

"Had ocean's waves, with fearful crash,
Engulfed each battlement?
By thunderbolt or lightning's flash
Were those strong bulwarks rent?
Were none left the walls to guard?"
We asked; but no reply was heard.

"From many a bosom, scarred and torn,
Now burst the groan of pain;
From eyes that never wept before
The tears gushed forth like rain:
Your Fatherland was dead, ye brave,
And men stood weeping o'er the grave.

"Ah me! the man whose deed of death
Now caused those tears to flow,
Once gained the laurel laurel-wreath
That e'er decked hero's brow.
Our navy owns a brightest gem,
The victory of Svenskasund, to him.

"Yet, even if world's from his right hand
Now ta'en all light should gain—
If sunk should pale before his brand,
He'd only reap disdain—
Meet guerdon for such deed of treachery
Wrought on the rock of Gustavsvärd's fame.

"Thou lov'st, dear youth, the minstrel's lay,
Thou lov'st our legends old;
Perchance that thou wilt sing one day
The tale that now I've told.
Then, give his black deed to the light,
But spare, like me, his name in might.

"Conceal his lineage, hide his race—
The crime be his alone!
That none may blush for his disgrace—
Let it be all his own!
He who his country brings to shame,
Nor race, nor sire, nor son may claim.

"Call him a serpent false and vile,
That wretch devoid of faith!
Call him disgrace, and scorn, and guile,
Sin, infamy, and death!
Oh! call him by no other name,
To spare thy hearers grief and shame.

"Take all the dark blackest of the tomb,
And all of sin thou'rt wont,
And weave of them some name of gloom,
And give it to the accurst.
It could not wear a deadlier shade
Than he, who Sveaborg betrayed."

* Pronounced Stole.

† "Gustafsvard"—the Sword of Gustavus is the name of one of the rocky islands on which the outworks of Sveaborg are built.

SVEN DUFVA.

A sergeant was Sven Dufva's sire, worn, old, and grey-haired now,
He served his king in eighty-eight, nor then was young I row;
A little farm supplied his wants, as poorly as it might,
Nine children flocked around his board, the youngest Sven was light.

Now, if within the old man's brain enough of wit did dwell
To share among so many heads, is more than I can tell;
Yet, sure it is the elder sons, more than the younger had ta'en,
For to the son who last was born, there scarce remained a grain.

Meanwhile Sven Dufva grew apace, waxed broad of limb and strong;
He cleared the woods, and in the fields he toiled the whole day long;
Was kinder, fayer, gentler too, than many a wiser wight,
And did whatever he was bid—but never did it right.

"In Heaven's name, my poor, poor boy, what will become of thee?"
Thus spake the old man many a time, and pondered anxiously;
Until his son grew tired to hear the song so oft renewed,
And he began to think himself, as wisely as he could.

When, therefore, Sergeant Dufva now one day began again,
To sing the burden of his song, "What canst thou be, oh Sven?"
The old man scarce believed his ears, so thunderstruck was he,
When Sven, his broad mouth oped and said, "A soldier I will be!"

The aged sergeant gazed awhile with scorn upon the youth;
"Dull boy will thou a soldier be, and carry arms, forsooth?"
"Yes," said the lad, here all goes wrong, or awkward is my hand,
Perhaps 't will easier be to die for King and Fatherland."

Old Dufva stood amazed and moved, a tear gleamed in his eye;
Sven slung his knapsack on his back, and sought the quay hard by.
His form had reached the standard height, was broad and stout to boot,
So he in Duncker's company at once was made recruit.

Young Dufva was now to be drilled, and learn to exercise—
It was the drollest sight to see that ever met your eyes.
The corporal hallooed and laughed, laughed and hallooed again,
But his recruit remained unchanged, in pleasure and in pain.

He practised with unflinching zeal, more patience none could show,
He stumped till earth beneath him quaked, and the drops stood on his brow;
But when the word was given to turn, he blundered worse and worse—
When ordered right or left was he, did just the reverse.

His gun to shoulder he was taught, and lower it in turn,
And by degrees his bayonet to handle he could learn;
But when commanded to present, he lowered his arms full oft,
And when to lower them he did so bad, he brandished them aloft.

Thus fame reported far and wide how Sven went through his drill,
And all, both officers and men, smiled at his want of skill;
But he went calmly plodding on, unmindful who might flout,
And always hoped for better times—and better times came out.

Now when the troops prepared to march, some question rose again
If Dufva had got wit enough to join in the campaign,
He let them talk, stood calmly by, and said in coolest tone:
"If I may not with others go, then I must go alone."

His gun and knapsack slung on, as any other might,
Was serving man in hours of rest, a soldier in the fight;
And if he served, or if he fought, he still was calm and cool,
And none had called him coward yet, though some might call him fool.

Brave Sandels to retreat was fain, borne back by Russian force,
And step by step his host he led along a river's course
Now somewhat in advance of them a bridge the current crossed,
A little outpost there was placed, scarce twenty men at most.

These men had lately been dispatched, the highway to repair,
And lay in peace, their labours o'er, far from the din of war;
While in a farmstead near at hand, their wants they all supplied,
And let Sven Dufva wait on them, for he was brave beside.

But suddenly the scene was changed, for down at headlong speed,
Came gallant Sandels's Adjutant, all on his foaming steed:
"Off to the bridge, my lads," he cried, "for God's sake, charge the foe!
'Tis said the enemy prepares to cross the stream below!"

"And, Sir," unto their leader thus his hasty orders ran:
"Break down the bridge, if possible, or fight to the last man!
The army is lost, if here the foe should burst upon our rear;
You shall have help, the General himself will lead it here!"

Away he galloped. But the troop scarce reached the bridge below,
When high upon the bank beyond was seen its approaching foe.
They spread, they like a host appear to look, and, ere a volley round,
And, at the first volley, eight Finns lay dead upon the ground.

It was too much, they staggered back—to tarry, now, were vain;
Another volley, and but five of their brave band remain.
So all obey the sergeant's order to retreat with them;
Sven Dufva only he mistook, and lowered his bayonet.

And when the other faced about, he blundered more and more,
For, far from turning back at once, down on the bridge he bore;
And thus he stood, erect and firm, beside its stone nook,
Prepared to show that, henceforth, none his skill in arms might mock.

Nor was it long ere he could prove he had not learnt in vain,
For in a moment, o'er the bridge, the foe poured forth like rain;
They thundered onward, one by one, and fell around Sven's feet,
He struck them right and left about, until the flies they fell.

To cut this giant down in vain they strove with headlong ire,
The foremost foe still sheltered him against the others' fire;
Yet fiercer far they grew to rid their host of one so dearly bought,
When Sandels with his band drew nigh, and saw how Dufva fought.

"Ha, brave, brave!" he exclaimed, "keep on, my champion bold:
Let not one devil cross that bridge—thy place a moment hold!
'Tis true a ball should fight—and man we well may soldiers call:
Fly to his rescue charge, my lads! This one has saved us all!"

Soon as the fierce invaders found that all assault was vain,
The Russian squadrons slowly turned, and swept back o'er the plain.
When all was o'er, the General alighted from his horse,
And asked for him who on that bridge had braved the hostile force.

They pointed out Sven Dufva then. He little now was o'er,
Bravely and boldly he had fought, but he would fight no more.
It seemed as he had sunk down to rest—tired out and war;
Perhaps not calmer than before, but only paler far.

And Sandels bent him down, and gazed on him that slept in peace—
It was no stranger that he saw, full well he knew that face.
But 'neath his heart even as he lay, the grass was stained and red,
A treacherous ball had pierced his breast, and he was cold and dead.

"That bad knew well where it should hit, this saying is most true,"
Thus gravely spoke the General, "far more than we it knew;
It left his brain untouched, for that was but his weakest part,
And struck as what was dearer far, his noble, gallant heart."

And through the army, far and wide, these words like wildfire flew,
And all with one accord agreed that Sandels' words were true.
Poor Dufva's wit was scant, they said, to serve in woe or weal;
His head was weak, but all goodness, his heart was true as steel.

ENSIGN STAL'S FAIR-DAY REMINISCENCES.

"Ho, good people, men and women, is there any who will hear,
Who will listen to the ditty of an aged grenadier?"
I first began a simple ballad, which when last in town I heard
On the market-place one morning: you shall hear it word for word.

It was fair-day—crowds were gathering—goods on all sides met the eye,
But the crowd was dull and cheerless, nor was I inclined to buy;
Thus in absent mood I wandered, till a narrower street I gained,
When a carriage stood before me, by the passing crowd detained.

If by force compelled I know not, but the driver stopped amain,
Whilst a liveried lackey shouted to the gathering crowd in vain.
But a gentleman sat leaning in the carriage unconcerned,
Costly furs were wrapt around him, glittering stars his breast adorned.

As I stood and gazed upon him, scenes long past awoke again,
Surely I had seen those features years ago—but where and when?
'Twas at Lappo, 'twas at Salmis, where he bravely fought of yore;
I had known him then as Captain, now a General's rank he bore.

And a change had come upon him—not the work of time alone:
'Twas perchance the mark of greatness, in life's lofty pathways won.
Was it pride alone? I know not; but his air and bearing, grand
Mid its stiff and icy stateliness, bore the stamp of calm command.

Pleasant 'tis to meet with comrades from the warlike days of old;
But on him, with orders glittering, I could gaze unmoved and cold:
"Art thou grown so proud?" I muttered. "Once thou midst our ranks hast stood,
Humbler far, though decked more nobly, in thy crimson-trickling blood.

Then began that simple ditty, in a quavering voice and shrill,
O'er the market-place resounding, through the crowd I heard it thrill:
"Ho! good people, man and woman, is there any who will hear,
Who will listen to the ditty of an aged grenadier?"

I was one who then would listen, I was of the self-same mould,
So I turned away in silence from the magnate stern and cold.
Sideways then I bent my footsteps, steering through the busy throng,
Till I reached the aged soldier, as he sat and sang his song.

Tall and straight, with head uncovered, on a flight of steps he sat,
With his thin left hand supporting on his knees his tattered hat;
With this hand—the sole remaining—he must seek a pittance small,
For the right was lost in battle, shattered by a cannon-ball.

And he sung to the assemblage, all who chose might hear the strain,
But his song was poor, and scanty was the pittance he could gain;
Nearest to him, round the staircase, in familiar company,
Stood a merry, young collegian and some ragged boys and I.

And he sung of former greatness, of the glorious days of yore,
Of bold deeds, now scarce remembered, of mute tears that fell no more:
And he sung of Finland's struggles, of our country's latest strife,
Of our victories and our sorrows, and the days with glory rife.

"I have heard," he sung, "the cannon roar in six-and thirty fights;
I have passed both cold and hunger, I have watched for days and nights,
I was once a sturdy soldier, now all crippled and forlorn,
With one arm shot off at Utne, and the other bare and worn.

"Midst this younger generation is there any that was by,
When the cry was heard, 'To battle, for the foe is drawing nigh!'
There was fire and spirit in us, men were then of other mould,
Then the poor old heart was glowing, that will soon be icy cold.

"Tavasthus! I'll ne'er forget thee, when, from Hattelmala's height,
First I saw thee stretched beneath me, steeping in the pale moonlight.
It was late; the air was biting; long and wearily we'd marched,
Yet I thought not of reposing, nor for hearth and home I searched.

"No! 'twas for thy frozen valleys that my bosom yearned the while—
There was more than hearth and homestead, more than sister, wife, or child.
Finland's host was there assembled—young and gallant, free and brave;
And our country's eyes were on us, and for her our blood we gave.

"Now, hurrah! for brave old Klerciker, endless honour is his due,
Twenty years of toil had tried him, as a man and soldier, too;
His white head I well remember, as amid the ranks he rode,
Mustering his brave boys with glances where a father's fondness glowed.

"He the scattered troops had gathered, every movement he had planned
We had met from various quarters—we remained at his command;
And he found us all assembled, and his visage beamed with hope,
And to him as the preserver of our country we looked up.

"With six thousand sons around him, equal to the foe in strength,
We with bold and lyous spirit longed to face their host at length.
Doubt we knew not, fear we felt not, battle was our watchword grim;
And we trusted in each other—he in us, and we in him.

"Then came Klingsporr, the Field-Marshal, with his bearing proud and high,
With his mean and coward spirit, and his single lowering eye;
Then came Klingsporr—seized the office due unto his high estate,
And gave orders, prompt as Klercker's; but the order was—retreat!

"Oh! thou night of starry glories, mid the snows of Tavasthus,
Years have passed since then, yet memory paints thee still in brightest hues;
Though our faith was basely bartered, and our hearts were like to break,
Though our dreams of victory faded, for a heartless bastard's sake.

"When shall he be brought to judgment? how escape the sentence dread,
For his baseness in perverting when the charge he should have led:
For the shame with which he blackened our fair fame at last?—Avaunt
mood!
For the tears that he wrung from us, when we should have shed our blood?

"Did we yield at Sikajoki, to the foeman's fierce attack?
Did our hands or heels best serve us in the field of Savolax?
Adlercreutz full well might answer, Cronstadt, too, and many more,
But alas, the brave are sleeping where no answer gains our shore!

"I have named those gallant canes, brought on here their honour dim,
Many of their brave companions now repose in peace with them.
Duncker, Döbeln, both are slumbering; wouldst thou hear their valiant deeds?
Now the only witness left them is a worn-out invalid's.

"Oh that I had also fallen when my nobler comrades fell,
When the gallant Finnish army played its fearful game so well,
When our glory shone the brightest, when at Alavo we stood,
Or at Sikajoki, Salmi, or on Lappo's field of blood.

"Then I'd not been doomed to wander to the northern snows again,
Nor to see our joy triumphant turned into despair and pain;
Nor to mourn over our country's ruin, for long ere we should behold,
Stiffening in the ice at Tornea, or at Kalix basely sold.

"Heavy end of all our sorrows, mournful parting from our land!
Soon I came with some few stragglers down to Westerbothnia's strand;
Then to Sweden ever faithful, on its shores my blood I shed—
Now behold me here among you, singing for a crust of bread.

"God preserve our country, brethren, let the rest be as it may,
For a soldier must be ready life and limb to cast away;
God preserve our country! ever with best wishes I and my strain,
Though its subject oft may vary, th- the burden shal- remain."

And he rose, the aged soldier, went about among the crowd,
Many turned unheeding from him, some a trifling coin bestowed;
And he came unto the carriage, where the haughty Magnate sate,
Bowed his hoary head submissive, and stretched forth his tattered hat.

But the General high and mighty, with his ribbons, stars, and gold,
Took the hat with angry gesture, tore it from the old man's hold,
Gazed on him and on the people, gazed—and ere a moment passed,
All the old man's treasured pennies o'er the market-place he cast.

Speechless stood the aged soldier, but these words the General said,
"I have heard thy song, I also for that land my blood have shed,
Even in life's despite the memory of those days is dear to me,
I am proud of it, I tell thee, far more proud than thou canst be.

"True it is that fortune failed us during many a bloody fight,
True it is that all our triumphs soon were turned to scorn and flight;
Yet to never bend demean us, never bow our heads with shame.
I can wear my hat with honour—thou, old man, mayst do the same."

As he spoke, a kindling glory o'er his noble features spread,
And with manly pride he thrust the hat upon the soldier's head.
Oh, my heart still burns within me, ever shall my soul rejoice,
When I think upon his bearing, and recall his words of noble voice.

"Fortune's favours fall unequal, such is the Divine decree
I have wealth, and lands, and honours; thou hast want and poverty.
But the best I own in common—faith that God will ne'er betray,
Honour with our life-blood purchased, and a conscience clear as day.

"Therefore we are comrades, brother, therefore come and take thy rest;
Let us share all lesser blessings, even as we have shared the best.
I've a home and bread to give thee, and my treasures shall be thine,
Sing to me thy pleasant ditties, I will cheer thy life's decline."

Soon beside him, in the carriage, sat the aged grenadier,
And the crowd made way rejoicing—he led the sight with many a cheer.
To the carriage, rolling onward, long I listened with delight
But my eyes were dim with tear-drops, and it soon was lost from sight.

Translated from the Swedish of J. L. Runeberg.

IMMENSE FAILURE IN THE CORN TRADE.—It is announced from Trieste, that a house which had carried on for many years speculations in grain to an enormous extent, has just failed. The firm had purchased great quantities of corn in the Black Sea and the Sea of Azoff, when Russian Government have prohibited its exportation. In the event thus created, the head of the house lately proceeded to St. Petersburgh to solicit from the Emperor some relaxation, obtaining an advance of £100,000 from capitalists at Vienna and Trieste, to avert a general crash. In the meanwhile, his banking business, and the suspension of the house is therefore announced. The lowest amount at which the liabilities are estimated, seems to be £250,000, as it is said that the grain purchased by him in the Sea of Azoff alone, was to the value of £150,000, and that in the Black Sea the total amount was still more considerable.

A BRITISH GRENADIER.—A rather amusing circumstance occurred a few days since at the police-office, Chesterfield, affording a gratifying illustration of the enthusiasm and ardour prevailing among the British troops with reference to the Russian war. Sergeant Greenwood, of the Grenadier Guards, applied to the sitting magistrate for the requisite forms to enable him to forward a deserter to head-quarters. The deserter who was a remarkably fine and well-proportioned young man was dressed in the garb of a "navvie," and had evidently been working himself, as he was anxious to join his regiment before they embarked at the seat of war, for he understood that they had been ordered on active service. It appeared that he had deserted from the Grenadier Guards thirteen months previously, from London, owing to having grown weary of his inactive life, but since he understood that his comrades were going to seek laurels in the East, he wished to join them immediately; if he had foreseen the present war he would never have deserted.

THE CZAR AND ENGLISH FRIENDS.—As an indication of the altered state of feeling with respect to the Emperor of Russia in the minds of his quondam friends, induced by the systematic conduct and ambition recently pursued, it is stated that at Chatsworth, the splendid residence in this country, the fall length portraits of the Emperor and Empress, at the foot of the grand staircase, and other remembrances of imperial house, have been turned with their front to the wall. The latter fact, too, which was once named after his Russian Majesty, has changed its relationship, and now bears the more loyal appellation of Victoria.

THE BOMBARDMENT OF ODESSA BY THE ENGLISH AND FRENCH STEAM

We are now enabled to present to our readers a View of this memorable attack, by the Allied fleets, upon the principal mercantile city in this part of Russia, situated on the northern shore of the Black Sea. For this representation we are indebted to the pencil of Lieutenant Montagu O'Reilly, H.M.S. *Retribution*. The details of the bombardment were published in the official despatches. We quote the principal incidents:—

At 5.30 a.m. Saturday, April 22nd, 1854, the steam squadron weighed; consisting of—

FIRST DIVISION.

Samson	English	Descartes	French
Tiger	English	Vauban	French

SECOND DIVISION.

Retribution	English	Mogador	French
Furious	English	Caton (repeating-ship)	French
Terrible	English		

The following was the attacking force:—French, *Mogador*, *Vauban*, *Descartes*, *Caton*; English, *Samson*, *Terrible*, *Tiger*, *Retribution*, *Furious*; and a detachment of rocket-boats under Commander Dixon. The *Sanspareil* and *Highflyer* noted as a reserve.

At five o'clock on the morning of the 22nd of April, the signal was made for the steamers to commence an attack on the Imperial Mole, and the fortifications in its neighbourhood. The steamers entered in two divisions. The first consisted of the *Samson*, *Furious*, *Vauban*, and *Mogador*.

The *Samson* fired the first shot at the Imperial Mole, and the fire was instantly returned. When within about 2000 yards, each steamer delivered the fire of her enormous guns, then wheeled round in a circle of about half a mile in dismeter, each taking up the fire in succession. The guns in the mole answered steadily, and in the course of an hour the *Vauban* came towards the fleets, on fire from red-hot shot, and riddled in several places. Happily, the fire was got under, and she returned to her post.

At seven a.m. the second division received the signal to stand in, consisted of the *Terrible*, *Tiger*, *Retribution*, and three French steamers. *Retribution* led the way, closely followed by the other steamers. The had laid down a "lump," that is, an old vessel was anchored to mark tance their guns would carry. The Allied division went within this m therefore exposed themselves to loss from the shot of the enemy. The stood further in than the rest, and commenced firing red-hot shot a time a loud explosion was heard. The Imperial magazine had bee up by a shot from the *Terrible*, and great part of the mole on which was rent in pieces. This relieved the Anglo-French squadron from the formidable opponent, the battery on the Imperial Mole. The *Terr* tinued to fire red-hot shot. A Russian frigate in the harbour took fire to the water's edge, and blew up.

Each of the vessels which remained out of action had sent a rocket firing 24-pound rockets, and these caused terrible destruction. The

attack on Odessa was skilfully and bravely conducted. The rocket-
were adroitly managed under a galling fire from an enemy every way
repared; but nothing could surpass the cool determination of the united
steam squadron. When we consider the cruel hostility which the unfor-
Tiger met with on the rocks, it is to be regretted that a bombardment,
cessfully commenced, was not carried to a more effective result We be
Mr. Montagu O'Reilly, Senior Lieutenant of the *Retribution*, was the
commissioned officer wounded.

The *Moniteur* has just published a despatch from Vice-Admiral Hamelin, Commander-in-Chief of the French squadron in the Black Sea, giving some details of the damage done to Odessa during the late bombardment:—The ten pieces of artillery that defended the entrance and heads of the mole were all dismantled; the powder magazine constructed to provide the wants of the battery was blown up, and nearly all the men employed on the battery were killed by the explosion The Government storehouses, containing all the *matériel* for the Government steamers in the Black Sea, were entirely consumed. A barrack for the Cossacks shared the same fate, burying men and horses in its ruins A large storehouse, full of grain and provisions, was also burnt. The mole itself, struck by a great many balls, was seriously damaged. The field-battery of four guns—16 pounders—which attempted to reply to the artillery of the steamers, was almost totally destroyed, with men and horses. The Imperial port contained fifty-three sailing vessels, three steamers, and five dragging-machines. Of the three steamers, one, the *Dniester*, an iron boat of 40-horse power, belonging to the Government, having received various shots, filled and went down in five minutes. Unsuccessful attempts have been made to raise her. Another iron steamer the *Lutes*, sank after receiving sixteen shots in her hull; it is not thought that she can be again set afloat. A third steamer of 90-horse power, the *Aurlia*, was sunk, but has since been recovered. Of the five floating dragging-machines, the newest was totally destroyed. The four others have been more or less damaged. Of the fifty-three sailing-vessels which were in the port of Odessa, one, the *Nicholas I.*, of about 600 tons, was burnt, two brigs were totally consumed, as also a schooner, laden with coals, from Newcastle, bound for Ismail. The remainder, coasting vessels of different tonnage, were all more or less damaged, and many of them sunk. From private information, it results that the number of killed was not less than 200. The above information comes from a person who was present at Odessa during the bombardment. The despatch is dated Baltschik, June 29, on board the *Ville de Paris*.

THE PRINCIPLES OF CRIMINAL LEGISLATION AND THE PRACTICE OF PRISON DISCIPLINE INVESTIGATED. By GEORGE COMBE. Simpkin.

The momentous question of the fit disposal of criminals has recently acquired augmented importance by the refusal of the Australian colonies any longer to receive the convicts of the Mother Country. So long as transportation remained possible, and our population could be purified by the comparatively easy process of [illegible] drega, attention of the reformation of the criminal attracted in England but small share of public attention. Our own interests did not [illegible] directly concerned, and the voice of humanity, through ignorance or [illegible] difference, remained unheeded. But now, when it has become a matter of certainty that English [illegible] must in future be lavished by [illegible] taking of a large proportion of those criminals who, under the former regime, would have been sent into banishment, it becomes a question not only of most serious import but also of [illegible] urgency, to decide upon the course that best promises to prepare the [illegible] for a proper enjoyment of recovered liberty, and to guard society against contamination and future outrage.

But are the means now in use inadequate for the [illegible] of these ends? Mr. Combe proves them to have [illegible] and the facts which he adduces in support of this conclusion [illegible] have no hesitation in saying, thoroughly convincing. Judging from the operations of the present system, we are driven to [illegible] is generally regarded in the light of a [illegible] which could accordingly be treated by certain specific remedies, such as solitary confinement, the treadmill, and crank-wheel, while the mental and bodily constitution of the prisoner, and the nature of the circumstances in which he was previously placed, are left entirely out of the question. The wonder is, not that such [illegible] a success, but that it should ever have found [illegible] credit. It seems to have been forgotten that a criminal [illegible] is in a state of debasement, is still a member of the human family, and subject to the laws of our common nature; for, on what other ground can we for a moment excuse the infliction of solitary confinement till the [illegible] system is prostrated by disease, or the imposition of labour [illegible] hesitating that suicide is had recourse to for relief? These melancholy mistakes are the natural results of ignoring the relation that subsists between mind and organisation, and of [illegible] the [illegible] be modified independently of the condition [illegible] rule, the governors of our prisons are men who have received [illegible] education or training for their important [illegible] retired officers of the army, and consider their functions to be limited to the maintenance of strict discipline among the prisoners. But even were it otherwise, and were they men capable, [illegible] and appropriate training, of seeing and deploring the evils of the system committed to them for administration, they have no power to apply a remedy. Their field of action [illegible] which has enacted that, according to [illegible] reformation of criminals must be carried out, no matter what may have been their previous history, what [illegible] present mental and physical condition.

Mr. Combe aims at a thorough reform. He starts from the fundamental principle, that no successful treatment of criminals is possible, until the aid of physiology is invoked, and every man is considered on his own individual grounds. Different criminals have different constitutions: one is weak, and sensitive; another strong, and callous; and thus, different causes operating on different individuals produce similar crimes; while, in other cases, similar causes produce dissimilar crimes. Hence the absurdity of seeking to reform several hundred different natures by the indiscriminate application of the same uniform system. Instead of this general routine, Mr. Combe proposes to send every individual convicted of crime to a reformatory prison, where [illegible] conducted on the following principles:

> Persons compe ently skilled should examine him, and draw up a record of his age and stature, and of the proportions which the abdominal, respiratory, and circulatory organs, and the head and face, bear to each other in size and brain, measured round the base, from the top of the nose to the spinous process of the occipital bone, and thence to the nose again; from the top of the nose, through the forehead and skull, to the above-named process; and from ear to ear, on the line of the eyebrows, and, again, separately from ear to ear, on the line of the spinous process. These measurements, stated in inches and decimals of inches, will precisely tell whether the brain was small, large, or of a medium size, and show whether we were dealing with a feeble, average, or powerful-minded person—an indispensable element of knowledge in the disposing of his case. Every convict is an *individual*, and individuals differ from each other in physical and mental qualities, through the whole range from the Azteo idiot to Socrates or Napoleon Bonaparte. It would be as rational to treat all patients, whatever their ages, sexes, constitutions, and diseases might be, in one and the same way, with a view to their cure, as to treat all convicts alike with a view to their reformation.
>
> Having recorded these particular items of the constitution, the next thing should be to state the size of the different regions of the brain, viz., the anterior lobe, coronal region, and basilar region, and their relative proportions, according to the best estimate that could be formed; for it is impossible as ascertain these dimensions with mathematical precision This would go far to show the relative and relative power of the intellectual, moral, and animal faculties with which we had to deal. Next, the predominating, the medium, and the deficient organs should be noted; and stated. This would show, for example, whether the individual was naturally vivient and open, cruel, yet reserved and deceitful; inclined to theft; the jovial, reckless, and daring victim to sensual pleasures, but not malevolent, and so forth; also, whether he was naturally insensible to justice, to religious emotion, to benevolent feeling, or the reverse; also whether his intellectual powers were feeble or strong, and whether these were deficient in the observing department, in the reflecting department, or in both.
>
> These particulars of the constitution would prepare the way for estimating the temperament which should also be observed, and recorded, whether it be nervous, sanguine, fibrous, or lymphatic, or a combination of these. This also is an important article of knowledge for our guidance in the treatment, since it depends largely on the activity and power of resistance of the organism generally, and particularly of the brain.
>
> This record of the bodily system being completed, the next inquiry should be into the history of the individual. Who were his parents? Were they sane or insane? drunken or sober? What kind of employment were the occupying? What training and instruction did they give the convict? What trade was he taught? What does he now know, and what can he do?
>
> Answers to these questions, considered in connection with the record of his corporeal constitution, would present a tolerably precise view of the real nature and condition of the being upon whom we intended to operate They would reveal the causes of his crimes—whether it sprung from feeble mind and body, inherited from diseased or drunken parents; from strong natural vicious dispositions; or from neither of these, but from sheer mind-reading, ignorance, and unfavourable circumstances. Convicts, who had become such from these different causes, would require very different modes of treatment. When once possessed of this information, we should be able to classify prisoners more successfully than has hitherto been done, and to apply a mode of treatment to each class suited to the natural qualities and circumstances of the individuals who compose it.

To those who are in the habit of considering phrenology as destitute of any foundation in nature, these ideas will appear simply ridiculous, but they may be inclined to pause before they decidedly reject them as absurd, if they will first consider the following opinion, prefixed to the pamphlet, which is signed by Sir Benjamin Brodie, Sir James Clark, Sir Henry Holland, Professor Owen, Sir John Forbes, Dr. Conolly, and Professor Carpenter—men whose "names are great in mouths of wisest censure":—

> Having been requested to state our opinion of the annexed pamphlet, we, without being understood to become answerable for the accuracy of all the facts, or the soundness of all the reasonings which it contains, have no hesitation in giving our opinion that [illegible] is a fundamental principle which pervades it—namely, *that Criminal Legislation and Prison Discipline will never attain to a scientific, consistent, practical, and efficient character, until they become based on physiology, and especially on the physiology of the brain and nervous system*—is a sound principle, and most strongly entertaining

[illegible] Combe's views to the consideration of [illegible] on subjects.

[illegible] permit us to enter [illegible] ourselves by referring to [illegible] which bear the impression of [illegible] science.

TRANSCAUCASIA: Sketches of the Nations and Races between the Black Sea and the Caspian. By Baron Von Haxthausen. Chapman.

[illegible] is advantageously known by his [illegible] investigates the internal and economical state of that empire, and the work before us will add to his literary fame. Starting from Redoot Kaleh, on the Black Sea, our traveller landed at Redoot Kaleh and proceeded to Mingrelia, where he speaks [illegible] of the forests, particularly of the beech-trees, "surpassing [illegible] of Holstein and Jutland." Arrived at Kutais, [illegible] the latter describes the system of landed [illegible] aristocracy are not a class of independent landed proprietors under the Crown, the monasteries, or the nobles. [illegible] ve, probably, been regarded as serfs only since the [illegible] country; but in fact all these are still free." [illegible] means by which Russia proposes [illegible] Elizabeth, the ancient residence of the Czars. According to tradition it was built by [illegible] is supposed to be one of the most [illegible] d Dr. Lyall, in his "Travels," states that [illegible] and contained eighty thousand [illegible] traveller next arrived at Tiflis, [illegible] the most influence in elevating [illegible] and last [illegible] Some interesting [illegible] culture. The farms have no strict [illegible]

[illegible] a son in his minority, the nearest [illegible] th the taxes to which it is liable [illegible] on of the proprietor himself), and the [illegible] ment, [illegible], but only in a few places is it [illegible] core districts is commuted [illegible] In some places I found [illegible] pay one kod of wheat or [illegible] In a bad year the taxes are remitted, [illegible] the generous favour of the military intervention of the [illegible] as I was told, but the Crown demands two kod from every family, levied according to the census: for this the parish is responsible, [illegible]

In a second edition, the translator would do well, in a foot note, to explain the English weight and measure of "one kod."

[illegible] ing highly interesting particulars of the Jews [illegible] it appears that the Talmudist Jews are met [illegible] The Karaim Jews live [illegible] they assert their [illegible] Jewish, which was led to Babylon.

In the district of Derbend there is said to be a sect of Jews named Uriadi, who are [illegible] but without acquiescing in their observance of the Jewish law in its full extent. They keep holy only the Sabbath-day, and adhere strictly to all the injunctions and usages of the law, following the example of their ancestors, who rejected the pretensions of Jesus of Nazareth to be the Messiah, and who likewise enjoined obedience to the Law. It is said that they claim to be a remnant of the tribe of Benjamin, who during, or after, the captivity, moved northwards from Assyria. At the period of the birth of Christ they assert, their sect was announced that the Messiah was born in Bethlehem, and, in consequence, they sent thither two of their number, named Longinus and Zelus, to ascertain the fact among the seventy disciples of Christ. After the Crucifixion and Resurrection, the latter returned to their brethren, taking with them the under-garment of Christ (the seamless coat, which is preserved and worshipped in the Cathedral of Mzchet), [illegible] Londinus said to have committed to writing the [illegible] say, in a book which they assert is still in existence—Or, at least, a transcript of it, but is preserved with great secrecy. They have no knowledge of the New Testament. [illegible] of the original interest to the religious reader, which very different from the truth; but how important the discovery of a book which might, in any degree form a corroboration of the Gospel. The fate of the Israelite tribes in Assyria, it is known, still remains a matter of doubt: they were, unquestionably, dispersed throughout Asia, and a large portion penetrated to the Caucasian countries, although they are not found there in any considerable numbers at the present day. In the time of Cyrus, King of Persia transplanted 71,000 Jewish families from the towns of Armenia into Persia.

Armenia is celebrated for legends about Noah and the Ark, which rested on mount Ararat. When Noah left the Ark at the foot of Mount Ararat, he beheld dry ground, and on that spot Erivan is said to be built; for, in the language of Armenia, Erivan means "Visible." Here he planted the vine which is still shown, but, owing to the size of man kind, it does bear grapes yielding wine. The town of Nakhchevan signifies the first spot on which Noah alighted. "There is a marked distinction between the Armenians and Georgians; whilst the constitution of the latter people is strictly feudal in its character, the political state of Armenia is essentially democratic. The family constitution and domestic life of the Armenians are quite of a patriarchal character; but in one respect they differ fundamentally from the Asiatic nations; the social position which woman occupies, the recognition of her independence, and her claims to an equality of respect and dignity. Among the Mohammedan people a woman is regarded only in the light of a semi-human creature: she is the born slave of man." This is the popular opinion; but there are passages in the Koran, quoted in Mr. Robinson's paper, and brought to bear upon the question, which render the matter in a totally opposite sense. Thus Mohamed expressly states, that "Whosoever doeth good works, either man or woman, and believeth, shall enter into Paradise." In another passage, he says, "Believing men and women shall enter into the heavenly Paradise." Thus, the most possible testimony, efficiently refutes the vulgar error

[illegible] exist in Armenia. They believe in the same God as the Armenians, regard Jesus as the Son of God, and venerate Mary as the Christians, they are "devout worshippers." The following is what Haxthausen learned about this curious sect:—

> The Yezidis are Monotheists, and are ignorant of the doctrine of the Trinity. Of the Holy Spirit they know nothing. They designate Christ as the Son of God, but do not recognise his divinity. But every one sheep (Sheitan) was the first created, greatest, and most exalted of the archangels; that the world was made by him at God's command, and that to him was entrusted its government, but that, for esteeming himself equal to God, he was banished from the Divine presence. Nevertheless, he will be again received into favour, and his kingdom (this world) restored to him. They suffer none to sing, ill or satan; if the Tatar Mohammedan curses, "Accursed be Satan," they are bound either to slay the speaker or themselves. On a certain day they offer to Satan thirty sheep; at Easter they sacrifice to Satan, but only one sheep. Christ, they say, is merciful, but Satan is not so readily propitiated. The sacrifices take place, usually, in the open country, but sometimes near the Armenian churches. They offered only Satan, sometimes to Christ and the Saints; rarely, or never, directly to the Supreme Being."

When the period of Satan's exile from the dominion of the world he created is over, the Yezidis expect that he will reward them, who alone have never spoken ill of him, and have suffered so much for him. On which our author exclaims—"Martyrdom for the rights of Satan! Strange confusion of ideas with something nevertheless touching."

The devil-worshippers, however, are not confined to Armenia. They exist in Siam, and regard Satan as a vizier in disgrace, who may some day be restored to power; and they worship him from prudence, lest he should punish them when reinstated in his grandeur.

The celebrated convent of Etchmiadzin, the residence of the Patriarch of the Armenian Church, was visited by our traveller. It is about seventeen versts from Erivan, or about twelve English miles. "The Armenians say that this was the site of Paradise; and that the fire-vomiting Ararat was the flaming sword of the Angel who guarded the entrance against Adam and his posterity. The Flood destroyed the Garden of Eden, and quenched the fire, but likewise obliged Noah to land upon the mountain, so that the human race was distributed a second time from this spot. Here Noah saw the rainbow of reconciliation; and here he found the vine, the last remnant of the delicious fruits of Paradise. This famous convent is not remarkable for its size—its length being only fifty yards, its breadth forty-eight, and its height thirty-five. The Byzantine, Gothic, Moorish, and Italian styles being all blended in the structure, is evidence of its having been built at different periods. It is richly endowed, possessing five villages, containing 3459 inhabitants, and some scattered estates in Georgia. "The relic of the Holy Lance, preserved at Echmiadzin, is believed by the Mohammedans of Bazand to be the only remedy for the plague, which is said to return every seven years. It is carried, therefore, in solemn procession, and is asserted to have invariably arrested the disease." In this chapter will be found much valuable information as to the relation in which the Patriarch stands to the Russian Government, and also to the [illegible] Rome. The eleventh chapter is filled with Armenian legends, of a highly poetical character, which will amuse the lovers of romance and of ingenuous fiction

Among the Ossetians, Baron Haxthausen discovered a strong resemblance to the manners and customs of the ancient Germans. The hearth in their houses, and the manner of suspending a kettle from an iron hook fastened to a cross beam, precisely resembling those "in the peasants' cottages of Westphalia and Lower Saxony. The stalls for the milch cows are on each side of the dwelling-room, that they may be under the eye of the mistress, who, as in Westphalia, can overlook them from the fire-place. The Ossetes, like the Germans, brew beer from barley, and give it the same name. They use drinking-horns like the Georgians, and, to my astonishment, wooden beer-cans, and on particular occasions wooden beakers, exactly like those used from time immemorial in Germany." The whole of this chapter is full of research on the migration of races. The volume, as a whole, is most instructive, and is most opportunely published now, that war has called public attention to the Caucasus, and the Transcaucasian provinces of Russia.

EVENINGS AT ANTIOCH; with Sketches of Syrian Life. By F. A. NEALE, Esq., author of "Eight Years in Syria." Eyre and Williams.

Antioch is one of those places which have a voice; it is one of those eloquent and warning spots to which Sulpicius would have pointed, to rebuke the freakish sadness or the unreasonable repining of a Cicero, or of any less illustrious murmurers. It has been one of the most notable cities of the East; it is one of the oldest; over few have such vicissitudes passed; to few have happened such catastrophes; it has had memorable visits from war, fire, tempest, and earthquake from the vengeance of Emperors, and the rage and greed of barbarians; its wealth has been enormous, its importance and fame were once world-wide. But all this interest is in remembrance only; the day of the prosperity of Antioch the noble is gone "to join the past eternity." Paul and Barnabas would not, in its present state, select it as affording the same mighty concourse of souls to be gained to the new law through their Apostolate.

The world, however, is such, that thousands relish with peculiar keenness an account of the present aspect of sites of ever-faded greatness, and delight in reading the modern adventures and experiences of some person like themselves, among monumental and historical scenes, which it is not their own lot to visit, but among which the very contrast between the things that now occur and the things which the place calls to mind, is a distinct and real, though by the reader often undefined, source of entertainment.

Such is Mr. Neale's subject in his "Evenings at Antioch," and the subsidiary lights which he throws on existing manners in Syria. He was connected with the Consular service; besides that, he used to practise the healing art in that country. It may be inferred that he enjoyed good opportunities of learning the character of the inhabitants, and their customs; and some very clear and pleasant information on these points is given in his conversation, where he also relates a few striking anecdotes, one of which is truly horrible, though, for all that ever was known of Ibrahim Pasha, there is no rational ground for pronouncing it incredible, it is truly horrible, and, before, horribly true also. We have been very much interested with this introduction

The work itself, which is short, consists of a graphic delineation of seven evenings, as they would probably be passed, and as the author has passed them, and as he supposes they have passed such, hundreds of times, in modern Antiochian society. It is a good idea, by means of which Mr Neale, in a light and agreeable, though sometimes flippant, method, takes us into a familiar with every variety of that motley community, and bows us how it is proceeds in a time of danger, the most famous, the most memorable, the cheapest, and the most de[illegible] are in the w[illegible]

LETTERS FROM THE NILE. By J. W. CLAYTON, 13th L[illegible] Thomas Nosworth.

We took up this production of our Light Dragoon, without the slightest attention of reading much of it, but with the purpose of a little cursory glance, skipping and dipping, so as to lose no more time than could be helped. But the work held us tenaciously. Perhaps this is one of the greatest commendations that it is possible to bestow on a light and unpretending book of travels. It is not every man who can write travels interestingly. A mere itinerary may be useful as a guide, but it cannot be pleasant reading. In general the most stupid method in a sermon, is that in which the preacher tells his auditory beforehand all the parts of his discourse; and this dull and unenterprising form into which a traveller can throw his reminiscences is that of a diary. To keep a diary as a future track-line for what he has to tell, is a wise plan in an author; but to preserve the manner and ledger-like rules of it in his book, is the worst of blunders. Mr Clayton keeps to quite a different school of writers. The reader never knows what he is next to read, any more than the narrator, at the date of the occurrences, knew what he himself was next going to do, to be, or to suffer. This is the right plan, and the true secret of ingaining attention, and of awakening an ever fresh interest. There is the effect of adventure in the perusal.

And that the style—which we cannot, by the way, praise as always quite grammatical—is, nevertheless, full of sap and vivacity, effluvia, racy, joyous, with a fair sprinkling of satirical humour, and you will acknowledge that this short series of letters must constitute a very recreative and cheering work to peruse. Indeed, from London-bridge to Alexandria, we never once felt tired of Mr Clayton's company. He is clever, observant, hilarious, entirely free from the pervading modern defect of affectation, and quite instructed enough to hold his own against all chance comers. He is a master of joking, and many a smile he moves, as he travels on with you through the various points of scenes which separate the Thames from the Nile. This is a fair description of the little book, whose intrinsic merits drew us onward in its perusal, [illegible] our intent, till we knew not how it [illegible] drawn and finished. In the essays of this epistolary conveyance, we get from Town to Avignon, where a retrospective reflection breaks from the mind of the military conductor. "A few days ago," cries he, "we were [illegible] great seats in the chill October of England, when here [illegible] light sailor's jacket of [illegible]

Now, having said a good deal in praise of the little book, and to all [illegible] nding that we believe that whoever travels as far as Marseilles with our [illegible] will close the seas on our hands, and will finish the tour in company so cheering—we must take leave to express our dissent from some of his views. We have not time to give examples, nor is the case worth such toil; and we hope the author will believe that this is not unlucky.

As to the style, which is gemmed with a thousand felicities, and even noble expressions, we have already noticed the occasional revolt against grammar. A little care, which would remedy that evil, would also cure another—we mean the rhetorical fault which is called that of "mixed metaphors." For instance:—"He must be less than human who can gaze without emotion upon that column of moonlight slumbering on the silver bosom of the halcyon sea," &c. *Columna* (or *pilare*) neither was nor is upon occasions peculiar to animal life. At the same time, the "column of moonlight" is a happy and good expression, as any gazer from the decks of far-wandering ships will avouch; more the pity that our gallant chronicler should think of putting this luminous column to bed. We hope he will write again.

MANUFACTURES OF GOLD WARE.—In consequence of the impediments experienced in many of the manufactures of gold ware in the United Kingdom from the existing law, which prohibits a lower standard than nine carats, a bill has been introduced by the Government to enable persons to Crown to an Order in Council, with the adoption of a lower quality, [illegible] and silver wares may be brought [illegible] manufactured.

THE SPIRIT RAPPERS.—The [illegible] people in the spirit-rapping movement in the [illegible] have been holding a convention in New York, and have formed themselves [illegible] of Spiritual Knowledge, Universal [illegible] of the Associated

POETRY BY CHARLES MACKAY. MUSIC BY MRS. JOSEPH KIRKMAN.

Moderato maestoso.

crescendo *diminuendo.* *p*

Who dare dis - turb the lands, Arm - ing their fe - lon bands, Lift - ing their blood - red hands?

Let them ad - vance! Two migh - ty States combined, Both of one heart and mind,

f *p*

Com - bat for hu - man kind, Eng - land and France!

cres. *dim.* *p* *ff*

I.

Who dare disturb the lands,
Arming their felon bands,
Lifting their blood-red hands?
Let them advance!
Two mighty States combined,
Both of one heart and mind,
Combat for human kind,—
England and France!

II.

Friends of the rightful cause,
Guardians of Europe's laws,
Guilt in its schemes shall pause,
Awed by their glance!
Where their twin banners wave,
Freedom shall bless the slave,—
Glory attend the brave
England and France!

III.

Foes of our peace and right,
Tempt not the useless fight,—
Vain is your arm of might,—
Vain sword and lance!
True hearts repeat the cry,
England and Liberty!
England and Victory!
England and France!

ODESSA.—THE THEATRE.

ODESSA.

THE accompanying Views present striking specimens of the public buildings of the city of Odessa, the bombardment of which is illustrated in the present Number. It has already been described as the most flourishing port of the Black Sea, and these handsome edifices will bespeak its opulence. The princely mansion of Count Woronzoff, which was destroyed during the late bombardment, was situated on the cliff at the end of the Boulevard, and is shown in the View engraved in the ILLUSTRATED LONDON NEWS for May 13; and in our Journal for May 6 will be found three other Views. The New Exchange, the colonnade of which we now engrave, is situated at the extremity of the Boulevard, opposite to Count Woronzoff's Palace. The interior is handsome; and balls are held in the principal rooms during the winter season.

The Theatre, which we also illustrate, is in the large square, near the Hôtel de Richelieu. Italian Operas and French Plays are performed here throughout the year: here is likewise a Russian Theatre.

MEDAL IN COMMEMORATION OF THE UNION OF FRANCE AND ENGLAND.

ANGLO-FRENCH COMMEMORATIVE MEDAL.

MR. HART, the celebrated Medallist of Brussels, has just struck this very fine Medal, commemorative of the alliance of England and France on the Eastern question. In the centre of the principal side is an excellent portrait of the Sultan, surrounded with the words "Abdul-Medjid Khan, Empereur des Ottomans." On a very richly-designed border, surrounding the central figure, are a series of small shields supported by swords and banners, emblematic of England, France, and Turkey; in addition to scrolls bearing respectively the names of "Redschid," "St. Arnaud," "Raglan," "Redcliffe," "Napoleon," "Riza Omer," "Cambridge," "Baraguay," "Dundas," and "Hamelin." On the obverse, "History" holds a laurel wreath, and is recording upon a pyramid the words "Victoire Napoleon, 1854—" La Mer

ODESSA.—COLONNADE OF THE NEW EXCHANGE.

PERSIAN SOLDIERS IN THE PAY OF RUSSIA.—FROM AN ORIGINAL SKETCH.

Noire et le Danube seront libres" Around the medal are the words, "La France et l'Angleterre unies pour la Défense du Droit;" and at the foot of the seated figure, the words "Dieu le Veut." The design is, throughout, well conceived, and has been admirably executed by the medallist.

PERSIAN SOLDIERS IN THE RUSSIAN SERVICE.

THIS regiment, commanded by General Prince Béboudoff, is the most picturesque in attire of any in the Russian service, and the *tout ensemble* presented by the appearance of the soldiers, when mounted on their Arabian steeds, has quite a gorgeous effect. The material of their clothing is fine cloth for the surcoat; the underdress, tight fitting, is of silk, as also the lining of the long loose open sleeves, and full Turkish trousers. Although the costume is the same in all, the colours are varied in each individual, exhibiting a variety of rich contrasts, and profusely decorated with gold and silver lace. Their peaked caps are of the short soft black wool of the Caucasian lambs. These Persian soldiers are slim and well made, with long oval faces, handsome features, and olive complexions; and their bearing and manner are frank and chivalresque.

One of these, in the accompanying Sketch, by name "Dodashe Beg," whom the Prince politely sent to the Artist's residence, when at Warsaw, as a study for the pencil, on being offered a present of money for his trouble, declined it with an air of dignity, but craved, as a great boon, a portrait of himself to forward to his lady-love, somewhere in the interior of Persia—a request that was, of course, complied with.

This regiment was lately reported to have distinguished itself in the Caucasus.

Our Engraving recalls some interesting facts. Among the many methods employed by Russia in her pursuit of unlimited dominion, two are remarkable. They are practised chiefly towards her less civilized and less powerful neighbours. One is to keep a body of Russian troops by friendly agreement in the territories of some other State, serving that State, and receiving its pay, for a given period. The other is to raise a force (and this also, if possible, in an amicable and preconcerted manner) among the inhabitants of a foreign but contermínous region, to draught that force into Russia, to maintain it with Russian money, and to incorporate it, more or less permanently, in the Russian army. Both these expedients have, respectively, important effects. The first teaches the Russian soldier everything that a future invader might find it necessary to learn of the resources, manners, temper, and geographical condition of the people amid whom he is thus temporarily domesticated. He notes the weak points and the strong, and can hereafter clearly show to his own Government what should be avoided—what may be seized—what precautions are requisite—what opportunities exist—how

INTERIOR OF THE FORT OF CHANAK-KALESSI, ON THE ASIATIC SIDE OF THE DARDANELLES.—SKETCHED BY LIEUTENANT M. O'REILLY.—(SEE NEXT PAGE)

the whole work of occupation should be [illegible] *long reconnaissance*, and on a great [illegible] *coming enchantment*.

In the other case, where Russia [illegible] into her own territory, and [illegible] They are not, like those Russian troops [illegible] and whom the Czar lends to a neig[illegible] like these troops, disciplined soldiers, [illegible] officers (and these officers careful[illegible] nunication with their com[illegible] No; they are foreign troops, [illegible] are troops who are taught at [illegible] the control of Russia, and who see only a [illegible] When Russia withdraws her auxiliary contingents, she withdraws spies; but, when she disbands the other class of troops, and sends them back to their own land, she sends [illegible] proselytes, who prepare the way in their simple homesteads for the coming of the double-headed eagle unmo[illegible] for the coming, moreover, of more [illegible] purchaser, having displayed supe[illegible] induced to naturalise himself in Ru[illegible] a bore or two loads him with credi[illegible] Jew, disbanded and re-armed to[illegible] something of the defences of Ru[illegible] contingent can give the converse [illegible] equal. There is no question of ever [illegible] feebler communities; but in Russia their [illegible] business quite within practical [illegible] The double system has been [illegible] East, a round its lower frontiers, [illegible] of Azof, down to those of the B[illegible] Caucasus who could be brought into th[illegible] among the dependencies of Persia.

We present our readers with a view of [illegible] latter country, serving under the colours of the Cz[illegible] picturesque equipment of their own nation. [illegible] Persians were capable of making good sol[illegible] been among the best of the Asi[illegible] have left seldom enjoyed, good [illegible] and country suited to their [illegible] trained be able to face succes[illegible] to the scene. However, recent events have done much to change the opinion that used to prevail, regarding Russian military value altogether of the Russian military system. [illegible] become good soldiers themselves, before they can make [illegible] others. Certainly, if the Persians, in their hands, be not more redoubtable than their teachers, little [illegible]

There is, as our readers will perceive, some [illegible] between the dress and air of the soldiers, [illegible] and those of their neighbours, the [illegible] always excepting the peculiarity of [illegible] have seldom enjoyed, good [illegible] and country suited to their [illegible] trained be able to face succes[illegible] to the scene. However, recent events have done much to change the opinion that used to prevail, regarding Russian military value altogether of the Russian military system. [illegible] become good soldiers themselves, before they can make [illegible] others. Certainly, if the Persians, in their hands, be not more redoubtable than their teachers, little [illegible]

Dish, Mercury Baths.	Glass—And the finest assortment of Glass in England
Buff Leathers.	Gilding Dissolvent

Every thing else of the usual choice of paper prepared. Instructions given, or half a hour taught on the premises.

N.B.—41, Ludgate-hill, and Crystal Palace, Sydenham.

TRURBY HOUSE SCHOOL, WOODFORD, Essex. (Established Sixty-six Years). Conducted by Mr. TODD, and experienced Masters. The Midsummer Half Year will be resumed on MONDAY, the 24th JULY. A few Vacancies. References unchanged.

ITALIAN or LATIN TAUGHT, by a Catholic Priest, well versed with the most classical and superior different methods of teaching can be chosen; either the one often or practical a accent will prevail, if required. French, English, and Music may also be taught. Terms, 1l. 1s. per month. The subject of lessons will be constantly given. For further explanations and references, apply to Rev. P. F., care of C. Stokes, 16, Featherstone-buildings, Holborn.

PRIVATE TUITION.—A MARRIED CLERGYMAN, late Fellow and Public Tutor, of University College, Oxford, and Examiner at Sandhurst, Occupying a commodious House in a healthy locality, near a large town, has VACANCIES for a few PUPILS, whom he can prepare for the Universities, Army, or Civil Service; or he is ready to undertake the Tuition of Pupils during the Summer Vacation. Satisfactory testimonials and references. Address Rev. J. B., Mr. Andrew's Library, Ludlow, Salop.

HANWELL COLLEGE and PREPARATORY SCHOOL.

The Vacation will close on the 26th instant.

"Hanwell College, conducted by Dr. Emerton, is fully entitled to the high character it has acquired. We find that former pupils of Hanwell College, either high wranglers or first-class men of our Universities during the present year and that in the twenty-first instance of success at Sandhurst or Addiscombe we have had to record within a short period."—Daniel Sevenoaks Beattie, 1853.

Prospectuses may be had on application to the Rev. Dr. Emerton, Hanwell College, Middlesex.

GEOLOGY and MINERALOGY.—Elementary Collections to facilitate the study of this interesting science, can be had, from Two Guineas to One Hundred, of J. TENNANT Geologist, 149, Strand, London

ASHLEY'S HOTEL, Bolton-street Corner of Piccadilly, commands the finest view of the Park, is in the healthiest situation in London, and is replete with every modern convenience. Bed, breakfast, and dinner, 8s., private sitting-room, 3s. A family table-d'hote. Attendance charged, 1s. per day.

THE ILLUSTRATED LONDON NEWS

No. 694.—VOL. XXV.] SATURDAY, JULY 22, 1854. [WITH A SUPPLEMENT, SIXPENCE.

POSITIONS AND PROSPECTS OF THE WAR.

After long, but neither interminable nor incomprehensible delays, the war appears to have reached a point when delay will be no longer practicable. Diplomacy is still spinning its cobwebs, but events are upon the march. It is not for subtle intrigue to unravel the knot that Russia has wound round herself and her neighbours. The sword is the only negotiator, and bids fair to have much to do before the Czar is reduced to a proper state of mind. The man who could dictate such a document as that which bears the signature of Count Nesselrode, and is addressed to Baron Budberg and the Boyards of Wallachia, is evidently rendered so furious by fanaticism as to be incapable of understanding any argument but that of brute force. A more atrocious manifesto was never penned. But the hand of the avenger will speedily be upon him. It is difficult to say at which extremity of his empire the first great blow will fall; but it is not unlikely that he will be struck simultaneously from two, if not from three different sides. The departure for the Baltic of the first division of the gallant French army is the most important, as well as the most interesting, episode of the struggle. The patriotic reflections, and the national pride which it excites in the minds of both Englishmen and Frenchmen, are of themselves no mean reward for the sacrifices which each of the two nations has made. The long wars between France and Great Britain are not only ended but expiated. The fraternisation of the two peoples is even more complete than that of their armies and navies. The conveyance of French soldiers in British ships of war, to attack the enemy of European liberty and independence in his main stronghold, on his own sea, and in the very mouth of his capital, is a combination of circumstance and purpose that has already had an immense moral effect in every part of Europe. After such a union as this, England and France, who in their own interest and that of humanity ought always to have been friends and allies, are not likely to be again dissevered. It is but fifty years ago that the first Napoleon assembled an army at Boulogne for the invasion of England, and may we not hope that if it have taken fifty years to convert such ancient opponents into such firm and faithful friends, it may take thrice fifty years to re-convert them into enemies?

While these powerful reinforcements are steaming to the Baltic, and preparing for a blow that may deprive the Czar of Finland, if it do not also drive him from his capital, the Swedes, the Danes, the Prussians, and the Austrians are severally influenced by the tidings. The Finlanders begin to see a hope of liberty. The Swedes give louder utterance to the patriotic ardour that made them a Power on the earth in the days when their Gustavus was as formidable a name as that of Nicholas is now. Even the Danish Court has its misgivings that the instinct of the people is often a safer guide than the calculations of Cabinets.

The presence of a French army on the shores of the Baltic may well induce the King of Prussia to ask himself the momentous question, whether, in continuing, even at the eleventh hour, to sympathise with and support Russia by his tortuous and obstructive policy, he is sure of the allegiance of his own people? Many prophecies provide the means for their own fulfilment. The abdication of the King is an idea that has long been familiar to his subjects. It has been written ere now on his palace walls, and is traceable even upon the faces of his "beloved Berliners," as a satisfactory solution of all difficulties that his conduct may create. Had it not been for his torpid but baleful influence, the Austrian army would, a fortnight ago, have been in a position to give battle to the Russians in Wallachia. Yet, after all, the policy of Prussia is a matter of but little moment, except to the Prussians themselves. It cannot prevent, or sensibly retard, the triumphant action of Great Britain and France, either in the North or in the South. When the oppressor shall be humbled, when the final victory shall be won, and when those who have achieved it, shall decide upon the punishment of the vanquished, and the securities to be exacted of him for the future, Prussia will have to retire into the background and to keep her own counsel. She will no longer be a leading Power of Europe. She will have voluntarily descended from her high position, and must fall into

THE 48TH FRENCH REGIMENT OF THE LINE EMBARKING ON BOARD "THE ST. VINCENT" ENGLISH SHIP, AT CALAIS.—(SEE NEXT PAGE.)

the second rank. The nations who can win battles without her or in spite of her, are not very likely to admit her to their deliberations after the fight is fought. If to play so minor a part does not suit the temper of the Prussian people, it is for them to settle the matter with Frederick William. It is not for the Allies to give themselves any further concern about a Sovereign who seems to have no other function than to darken counsel, who has neither sagacity enough to see the right course nor courage to pursue it.

On the banks of the Danube, Omer Pacha, reinforced by the British and French auxiliaries, has driven the Russians across the river, with great slaughter. The obstinate and brilliant battle of Giurgevo, adds a new laurel to his victorious brow. The Turks, at this position, are in full possession of both banks of the Danube, and of the islands in the midst. Omer Pacha's head-quarters are at Rustchuk, where he commands a force of 30,000 Ottomans, exclusive of 15,000 British and French. Fresh reinforcements continue to arrive daily from Varna. The head-quarters of the Russians are at Fratesehi, a small post between Giurgevo and Bucharest; and the disposition of the opposing forces is such, that a pitched battle appears to be imminent, either at that town or under the walls of Bucharest. The Ottoman armies are finished, not only with the brilliant defence of Silistria, but with the equally brilliant results they have obtained at Giurgevo. Their Allies are full of health and spirits, and eager to make a decisive onslaught upon the foe. The Russians, on the contrary, are foiled, beaten, and dispirited. Some of their best Generals are slain, others are mortally wounded, and veterans, whose lives have been passed in the service of the Emperor, have been snubbed and superseded for counselling a retrograde movement when policy and strategy commanded it, and nothing but the desperation and recklessness of the Emperor dictated an advance. When two such armies meet, it will be strange indeed if ignominious discomfiture be not the punishment of the evil-doer. The public has been so long accustomed to look to the capture of Cronstadt or Sebastopol as the earliest fruit of the war, that it will, perhaps, be surprised if it should hear the first shouts of victory from the banks of the Danube; but the present probability seems to be that a speedy triumph of the Allies will be achieved on Wallachian soil, and that the might of Russia will be crushed and humbled on her own chosen battle-field, never more to be set up again for men's wonder and admiration with the same lustre as before.

Nor have the fleets in the Black Sea been idle while this issue has been ripening. The Russian forts at the Sulinah mouth of the Danube have been captured and destroyed, and their garrisons and commanders made prisoners. A similar operation has been performed at the Kilia mouths of the river, and upon all the Russian forts between Kilia and Odessa.

The work has thus begun in earnest. We may, perhaps, hear some further faint whispers of protocols, and memorandums, and conferences from Vienna, and of dribbling dotardisms from Berlin, but even of these we shall speedily hear the last. The combatants are at length brought face to face, and the world awaits the result with the cheerful hope that the punishment of Russia will be as mighty as her wickedness; and that the fruits of the treachery, the cunning, and the rapacity of a century will be torn from her grasp in one day. Europe may then say to the victorious Allies, as insolent Nicholas said to Baron Bunsen, with a somewhat different application, "Be severe—very severe to these lawless Russians: the more severe the better!"

EMBARKATION OF FRENCH TROOPS IN ENGLISH VESSELS.

Upon the preceding page we have Engraved one of the spirited scenes presented at Calais last week by the Embarkation of the French Expeditionary Force for the Baltic. The details are given in the narrative accompanying other Illustrations, sketched at Calais upon the same occasion, in the Supplement published with the present Number.

NAVAL AND MILITARY INTELLIGENCE.

It was currently reported at St. Thomas's, that two privateers, under Russian colours, were in those seas; and the British war-steamer *Devastation* left that port on the 16th on a cruise.

The Screw Company's vessel *Jason* has been taken up by the Admiralty, and is being fitted with all expedition for carrying 500 horses to the East. They will embark at Woolwich.

Recruiting for the Army.—From some cause, hitherto unexplained by the Secretary-at-War, the system of encouraging men to volunteer from the Militia for the Line has been deviated from. Now that soldiers are much wanted, and an excellent nursery for recruits established, why is not the original method resorted to? As an instance of what has been effected towards completing the ranks of the regulars, the following statement gives the correct number of volunteers from the Militia, added to the permanent force, from the 18th of July to the 15th of November, 1799:—To the Artillery, 344; First Foot Guards, 45; Second 557; Third, 220; Fourth, 1024; Fifth, 1268; Ninth, 1045; Fifteenth, 1048; Sixteenth, 761; Seventeenth, 1058; 20th, 1047; Thirty-first, 955; Thirty-fifth 1764; Thirty-sixth, 760. For 8th, 1506; Forty-sixth, 696; Fifty-second, 1061; Fifty-sixth, 774; Sixty-second, 1043; Sixty-third, 776; Eighty-second, 709 total, 24 977.

Orders were received at Chatham on Tuesday, that as soon as another company of the Royal Sappers and Miners can be organized for their duties, they are to be sent to the Falkland Islands, Captain Jones. A special parade was formed, and a number of experienced men were selected for forming the company.

The steam gun-vessels to operate against the Russians in the Baltic are rapidly approaching completion, the *Arrow*, *Cruiser*, *Wrangler*, and *Beagle* having been launched in the port of London: the first three are nearly ready for sea. The *Swallow*, launched at Devonport, is being brought forward with all expedition.

The clipper-cutter *Wool-packet*, which has been chartered to convey wines, spirits, and dry goods for the Baltic fleet, at the particular solicitation of a number of naval officers in command in the Baltic, sailed from Sheerness on Wednesday, with a fine fresh breeze from W.S.W.

Notice has been posted at the Woolwich Dockyard gates that "letters for the Baltic fleet will be dispatched by her Majesty's steam-frigate *Vulture* on the 24th inst., from Sheerness." Letters for seamen, marines, and boys, serving in the Baltic will be forwarded by this opportunity, if posted in time and marked "by her Majesty's steam-frigate *Vulture*, Sheerness." The postage of one penny must be paid on the letter at the time of posting.

A Long Gun.—A new carriage and cannon of peculiar formation as regards the bore have been sent to Sheerness from the Ordnance department for shipment on board the *Vulture*, to the *Edinburgh*, Rear-Admiral Deads. It is intended for the use of the 600-pounds projectile. It weighs 94½ cwts., and is calculated to throw a projectile nine inches by eight inches. The carriage is of a new construction, and adequate to carry a long 95 cwt. gun for shot or shell. All ships in the Baltic capable of carrying these guns are to have them put on board immediately.

The *Bojah* steam-transport, hired of the Peninsular and Oriental Steam Navigation Company, left Portsmouth on Wednesday for the Baltic, with a full cargo of provisions for the fleet, stores, &c.

Captain Ommanney and the White Sea Squadron.—*Euryalus*, 17, screw, Captain Lyon; and *Brisk*, 15, screw, Commander Seymour, have been heard of. The English and French ships were at Vardehuus about a month since.

FOREIGN AND COLONIAL NEWS.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

Schumla, June 24, 1854.

In the course of my peregrinations through the lands which border on the Danube, I have often wondered at the rarity of ancient specimens of art in the Christian provinces of the Turkish empire. It was difficult to conceive that all trace of painting, sculpture, and architecture should have disappeared; yet, in the whole of the country through which I had passed, not a relic once met my view. In the houses and cottages of Bulgarian peasants, I had seen the quaint but feeble imitations of the early Greek art, which Giotto and Cimabue imbued with life. The same formulas, which the Italians immortalised, were to be found repeated everywhere, the Scriptural and traditional attributes of the numerous Saints of the old church were strictly preserved; but I found no traces of an older and more perfect art.

It was, therefore, with no small interest that I received information of the existence, in a village not far distant from Schumla, of some sculptured remnants worthy of a passing notice, with which the people of this place were generally not acquainted. Accompanied by two friends, I started on the road to Derman (so the village is called), on one of those hot and oppressive days which are common to this country. The object of our search was in sight outside the gates of Schumla; the village being situate at the foot of a rocky range which overlooks the whole country to the westward. We knew that the sculptured relics which we sought were cut in high relief upon the face of the range, and though we were many miles distant from the spot, we strained our eyes in hopes of seeing it. But as we rode, and mile after mile was left behind us, the rocks appeared to increase in size although it seemed as if the distance which separated us from them was greater than when we started. Gradually, however, we found ourselves approaching the foot of the range at the base of which was snugly nestled the village of Derman. A young Turk, who had evidently an idea of what we sought, offered himself as a guide, and we began to ascend the ground which formed the base of the rocky precipice before us. The bold forms of the grey stones which lay piled up before us, had gained considerable altitude, and the wildness of the scene was increased by the screeching of innumerable eagles, which alternately skimmed the perpendicular surface or took refuge in the numerous crevices with which the place abounds. We were still straining our eyes in search of the sculptures, of whose existence we began, notwithstanding the assertions of our guide, to have considerable doubts. At last we approached the very base of the rock, and we discovered at a height of fifty feet above us a colossal figure on horseback, very much damaged by the wear of centuries. There were still the energetic forms of a horse stepping out with a certain grace; the figure of the man was nearly obliterated, but he seemed to be in the act of spearing a beast of some kind, on which the horse was trampling. Behind this group was a dog running, and this was the best-preserved portion of the work. Vague remains which seemed to have been once an inscription were of no use in determining the period of this sculpture; but the subject—apparently St. George and the Dragon is sufficient to fix a limit of age; and the work must have been produced by some enthusiast of the early Christian period, when the votaries of the new religion were subjected to persecution. We were rather confirmed in this supposition by further investigations, in which we were assisted by a Turk older than our first guide, who offered to guide us up the face of the rock, to some other curiosities of the place. Although the weather began to change, and the hour was late, we acceded to the request of our guide, who began immediately to ascend, with so much agility, the surface of a steep and rugged rock, that we feared for a moment that we should be unable to follow. One of our party refused to face the giddy ascent, so that only two of us commenced to follow, as best we could, the footsteps of the guide. After climbing the first rock, on the face of which were notches cut for the purpose of support, we crawled up a crevice, which brought us to a small table, over which the precipice seemed to hang. There was a ticklish step to get over: we had to pass along the face of a perpendicular rock at a considerable height, with no support for our feet, except the asperities of the stone, and a few notches made for the hands to hold on by. We were wondering all the time to whose patient labour we were indebted for these facilities in our journey. Having passed this spot, we crawled along a ledge of under wood growing out of the rock, swung ourselves round a projection, and found ourselves at the entrance of a chasm, sinking obliquely into the ground, and which seemed to be of considerable depth. We entered, and, like Minnar in the Tales of the Genii, inquired, in somewhat fearful tone, whether that was all our guide had brought us to see. He answered by rushing down the chasm, and pointing to certain marks upon the stone, which we proceeded to examine. We discovered upon the face of the grotto five Greek crosses, deeply cut and in perfect preservation, which had evidently been the work of leisure moments, during the stay of some unfortunate and persecuted Christians. These crosses, and the notches in the rock, for the purposes of ascent, were evidently the work of the same hands; but, as to their date, it is difficult to discover; the villagers of Derman knew nothing of them; and the only wonder is that, Turks as they are, they should so long have left these Christian relics standing.

The weather, which had gradually become less sunny as we ascended was totally overcast after the descent; and, as we looked towards Schumla, the opening in which it lay was covered by a dark bank of cloud, of which the outer edge appeared advancing towards us like a vault of burnished steel. We put our horses to a gallop for the purpose of reaching home before the storm should burst in all its fury; and our beasts, conscious themselves of some atmospheric phenomenon, snuffed the air and went without the spur. Schumla was quite in sight, and lay within half a mile of us in three-quarters of an hour. The vaulted clouds had gathered above us, and huge uncertain gusts appeared to rush from under them. The town itself had gradually disappeared in a dreary pall of dust, of which a column was seen advancing towards us with great rapidity. As it reached the plain it revolved upon itself, and swept over the ground, darkening all around it. It came upon us with the greater force, as we were going against it. I was thrown, with my head against my horse's tail, whilst one of my legs beat the air in an alarming manner. I heard a laugh behind, which sounded like some devil taunting me in the storm. It was one of my companions who had recovered from a momentary state of blindness, and who had just caught sight of me in my distress. As for the third of our party, his horse had absolutely refused to move during the passage of the whirlwind, and he was out of sight. By a desperate effort I raised myself upon my saddle, and recovered my position without failing to the ground. In ten minutes we galloped into Schumla, partially wet, and as black as Bashi-bozouks from Arabistan. In ten minutes more the sky was clear and serene, and the remnants of the storm were visible scudding away in the direction of Varna.

Now that the Anglo-French Army is ready to back him efficiently, Omer Pacha has regularly assumed the offensive. The whole of the left bank of the Danube from Kalafat down to Oltenitza is in the hands of the Turks, as will be seen by the following summary. On the 9th July, Sali Pacha, the commander of Nicopolis, crossed the river with a considerable force somewhat below Clemunda, and attacked the 8th Infantry Division of the 3rd Infantry Corps, under General Popoff. After a desperate conflict, during which their commander was severely wounded, the Russians retreated; but the Jager regiment (Kremenatchek) managed to get into the cross fire of a part of the Turkish artillery. On the 10th, Sali Pacha occupied Turnul, and was enabled to establish a communication with the Turks at Islaze, a place somewhat further west. On the 12th, the Turks at Giurgevo were throwing up tremendous entrenchments, but the expected pitched battle had not been fought. The engagements of the 10th was a forced reconnoissance made by Omer Pacha. The main Russian army in Wallachia was, on the 11th, concentrated on the right bank of the Argish. On the 10th, 5000 Turks, the vanguard of a stronger detachment, crossed the Danube below the confluence of the Warda or Wedia (this river is not marked in the map), and proceeded to the north, in order to cut off the retreat of the Russians across the Argish. The engagement at Oltenitza on the 8th was even more sanguinary than that which took place on the 7th and 8th at Giurgevo. The Bucharest correspondent of the *Wanderer* gives some particulars relative to this last battle. The division under General Chrulieff, consisting of 6000 or 7000 men, in the evening of the 7th occupied a slight elevation to the north of Giurgevo. While the battle was going on close to the bank of the Danube, 6000 Turks crossed that river below Giurgevo, and managed to get unperceived into the rear of Chrulieff's troops. A second Turkish division also crossed the river above Giurgevo, and at break of day the Russians found themselves regularly surrounded. The end of the affair was, that the troops under General Chrulieff suffered very severely, and particularly three squadrons of Russian regular cavalry. According to the Turkish accounts, the Russians had 900 killed and 2000 wounded. The Turks were inferior in number to the Russians at Giurgevo. The division commanded was 12,000 strong; that under General Chrulieff consisted of about 8000 men. To these must be added three infantry regiments, two cavalry regiments, and one regiment of Cossacks, belonging to General Baumgartner's division. The Turks might have counted some 20,000 men. At Oltenitza, on the contrary, the Turks were far stronger than the Russians. The most important piece of news, in a strategic point of view, is the occupation of Czernavoda, on the 8th, by Mehemed Chirib Pacha. After a battle, which lasted five hours, the Russians were forced to retire to the left bank of the river.

OMER PACHA IN THE ENGLISH CAMP.

The telegraph sends us intelligence of the Turkish Commander in-Chief having crossed the Danube; and the most recent letters from the English camp speak of his having previously paid a visit there, on his way from Silistria to Varna, and of his having seen a review of the English troops in that neighbourhood. Lord Raglan having heard that Omer Pacha was likely to call, in passing, on the 4th instant, the Colonels were ordered to hold their regiments ready to turn out after dinner in about half an hour after words he arrived in the camp, attended by his staff. As he rode by, the troops presented arms, and when he had reached the end of the line they broke into column, advanced and performed some simple field-day manœuvres, to the great delight of the Pacha. As the men moved off, after exercising for about three-quarters of an hour, the cavalry came up at full trot and at once riveted the attention of the Pacha. There were one and a half squadron of the 17th Lancers, a troop of the 8th, and a troop of the 11th Hussars. The Artillery horses and Dragoon horses were out at water. There were two or three magnificent charges, and the Pacha is said to have declared that such infantry and cavalry could dash over any troops in the world. On the return of Omer Pacha from a cavalry review, the men of some of the regiments of the Light Division thronged round him, cheering loudly, and throwing their caps in the air; while cries of "Bono Johnny," the invariable medium of communication between our men and the Turks, resounded from all sides. Omer Pacha seemed, on the whole, pleased, though somewhat astonished; and, although he evidently admired the *physique* of the men, he is reported to have hinted somewhat significantly, that it must be no easy task to keep them in order.

It was expected that he would have returned from Varna on the following day (Wednesday), but he was so busily engaged in transacting affairs and consulting with the French and English Generals, that he did not pass by till Thursday, the 6th inst. as the Heavy Cavalry under Brigadier General Scarlett, and the Horse Artillery and Artillery Battery, had not been inspected by him on the 4th, orders were given that they should parade on the same ground on the following day at seven o'clock in the forenoon. Omer Pacha left Varna early, and on arriving at Aladyn he found the Duke of Cambridge's division ready to receive him. He expressed in the most lively way his admiration at the magnificent appearance of the Guards and Highlanders; and, after the review, he retired with his Royal Highness the Duke to his tent, where he remained for some time, partaking of some refreshment. About two o'clock Omer Pacha's travelling carriages, escorted by Turkish cavalry, arrived at Devna. The Pacha, mounting one of his led chargers, and followed by a small suite of aides pipe-bearers, &c., rode up towards the review ground, and was received by Lord Raglan, Sir George Brown, Brigadier-General Scarlett, the Brigadiers of Division, &c. He was dressed simply, except that he wore a star on his left breast, and he seemed vivacious and pleased as he entered into conversation with the English Generals. After a brief pause, one went past in splendid order, and then the two troops of Royal Horse Artillery and the Battery followed at a trot, which was gradually quickened into a dashing gallop, so that the six-pound and nine-pound guns, and carriages, and tumbrels went hopping and bounding over the level sward. The evolutions were simple, but effective and imposing. A charge in line, which shook the very earth as men and horses flew past like a whirlwind, wreathed in clouds of dust, particularly excited the Pacha's admiration; and he is reported to have said, "With one such regiment as that I would ride over and grind into the earth four Russian regiments at least." He was particularly struck by the stature of the men, and the size and fine condition of the horses, both Dragoon and Artillery; but these things did not lead him away from examining into the more important question of their efficiency; and he looked closely at accoutrements, weapons, and carriages. At his request Sir George Brown called a dragoon and made him take off his helmet. The Pacha examined it minutely, had the white cover taken off, and asked that the sabre should be asked whether it was comfortable or not. The soldier replied that it was very much so; and it is to be hoped that the Turkish cavalry may get something better than the wretched *fez* to put on their heads now that the Pacha sees that brass helmet and leather can be combined so as to protect the skull without any inconvenience to the owner. The usual field-day manœuvres were performed by the artillery, just to show what they are wont to do when his Royal Highness Sage Some-Place-or-other Cambridge wishes, moving like one man, wheeling as if men, horses, and guns formed part of one machine, sweeping the plain with the force and almost the speed of steam-engines, and thundering past, taking them to places, putting them together, and vanishing in columns of dust. The inspection was over at half-past three o'clock, to the great delight of the men; and Omer Pacha, who repeatedly expressed his gratification and delight at the spectacle, retired with the Generals to Sir George Brown's quarters, and in the course of the evening renewed his journey to Schumla.

Up to the 8th inst., the British army was slowly advancing. The Light Division was then at Devna, and the 1st Division at Aladyn; but Sir De Lacy Evans had pushed up his (the second) division to a position half-way between the Guards and Sir George Brown's camp, and Sir Richard England had advanced his (the third) division to a site halfway between Aladyn and Varna. The line of the lakes, which stretch from Varna up to Devna for a distance of nearly twenty miles, was thus occupied by the four divisions of the British army, at distances of about four miles apart, with their left resting on the crest of the hills which run at right angles to the lake, and their fronts extending over the ridges and plateaux of those hills, with the face towards Schumla.

OPERATIONS IN THE BLACK SEA.

The only work reported of any consequence, in the Black Sea, lately, has been the destruction of the Russian batteries at the Sulinah mouth of the Danube, which was effected on the night of the 26th-27th June, by the *Firebrand* and *Fury*. A number of Russians were killed, and some, including the Commander of the fortress, were made prisoners. The rumour that the fleet had sailed to attack Sebastopol was unfounded. On the 8th inst., Admiral Dundas was still at Varna, to attend the review of the French army, which is nearly all there, and to confer with the Generals. There was, however, a rumour that something had been done at Anapa or the neighbourhood; and the *Swenden Blatt*, of Wednesday, states that Admiral Brust had forced the entrance to Novorosk ch, south of Anapa.

The Commander of Odessa having signified his acceptation of the terms of exchange offered by the British, the *Fury* was dispatched to Constantinople to take away the Russian prisoners, and on Saturday (June 8th), is sailed with them for Odessa.

Lieutenant Glyn, of the *Britannia*, and Prince Ernest of Saxe Leiningen, with thirty petty officers and seamen, have just been detached from the fleet, and placed under the command of Lord Raglan. They left Varna on the 6th, for Rustchuk, in company with a party of sappers. Lieutenant Glyn expects to find some Turkish gun-boats at Rustchuk, which the seamen from the fleet will man. If he should report favorably, more men from the squadron will follow. One object of this expedition will, doubtless, be to capture the Russian Danube flotilla.

THE FLEETS IN THE BALTIC.

The latest dates from the Baltic fleet are to the 10th, from Baro Sound, to which anchorage the Commander-in-Chief of the fleets had returned, having found, on account of cholera, which had broken out in several of the ships.

Rear-Admiral Plumridge was absent on his sharp service mission, up the Gulf of Bothnia. Intelligence from him was anxiously expected.

The *Locust*, 3, paddle gun-vessel, Lieut. Commander Day, and *Otter*, 3, paddle gun-vessel, had joined the fleet, from Portsmouth.

The *Dauntless*, 33, screw, Captain Ryder, was at Copenhagen on the 11th inst.

Letters from Dantzic, of the 7th inst., mention that the Russian Government had repeated to the commanders of the strong places situate along the coast of the Gulfs of Finland and Bothnia, and of the other localities of that portion of the Russian Empire, the previous orders given to them, to remain on the defensive, and avoid all engagement with the fleets of England and France.

THE STATE OF AFFAIRS AT ST. PETERSBURG.

The melancholy accounts from the Danube, and, above all, the disgrace of Prince Paskiewitsch, is said to have caused great sensation at St. Petersburg. Much dissatisfaction is said to prevail, but the Emperor's gifted eloquence will, sooner or later, manifest itself in insurrection, and bring about a catastrophe." As for the Czar, he is described as being more than ever under the influence of the old Empress.

He will not make the sacrifice of one of his ideas, and he persists in believing, in spite of the checks experienced by his troops, that the moment has arrived for the accomplishment of his designs. About the beginning of the month large bodies of troops were taking the route to the capital, and reinforcements were every day directed towards those parts of the coast that were the most menaced by the Allies in the Baltic. Information obtained from all sorts of quarters, and laid under an apparent calmness their uneasiness. Notwithstanding the movements of the troops many important points on the coast are without defence, or defended imperfectly. It is now quite evident that the military resources of Russia have been much exaggerated, in the same way as its other resources have been. The truth is, that Russia is in want of men and money, and the immensity of her territory, of which she is so proud, and for the extension of which she made so many sacrifices, and so indefatigably intrigued, opposes to-day to her defence the most serious material obstacles. Russia is paralysed by her very size. Those same material elements have not allowed her to maintain an effective force of more than 120,000 or 130,000 men in the Principalities, notwithstanding all assertions to the contrary, and these obstacles also prevent her, in spite of her exertions, and her successive appeals, to line her coasts, along the Baltic and in Finland, with a force sufficient to defend them....

VIENNA, Thursday.—Prince Daniel of Montenegro has dispersed some rioters who took possession of a convent. The ring-leaders died. The calm body of the Montenegrins is peacefully disposed towards the Porte.

It is said that the great mass of the Turkish army is marching towards the mouth of the Danube, and that Gurgevo is held merely by a division.

UNITED STATES.

The steam-ship *Canada*, which left Boston on the 8th inst., arrived at Liverpool on Sunday. The news received possesses considerable interest. The Washington correspondent of the New York *Daily Express*, writing on the 3rd inst., announces that the Senate in Executive Session had on the previous Saturday, *rejected the Reciprocity Treaty*. In the Senate the bill to establish a line of mail steam-ships between California and Shanghai—touching at the Sandwich Islands and ports in Japan, had been taken up, and Mr Seward entered into an eloquent exposition of its prov sions. After an animated debate, the bill was ordered to a third reading by a vote of twenty to nineteen, and then laid aside. The bill appropriating the 800,000 dollars to meet the stipulations of the Gadsden treaty was forced through with astonishing celerity, there being but six votes in the negative. The treaty had been ratified, and the Mexican Minister received a check for 7,000,000 dollars, payable in the current coin of the Republic.

The Canadian advices add nothing of importance to those before received. Party spirit ran very high in Quebec, and the Opposition papers were not very scrupulous in the charges they made against the Government. As an example, we quote the following:—"It has been said that the Government intend to discharge all public officers who refuse to vote as ordered at the next ensuing elections!!! If this monstrous tyranny be perpetrated, it will but add to the burthen of their political sins, and the odium attaching to it will more than compensate for this '*thumping*' of the public servants."

By the United States mail steam ship *Atlantic*, which arrived at Liverpool on Wednesday afternoon, we have news to the 8th inst. The cholera was raging with great severity in Boston, and the towns in the immediate vicinity. A number of disturbances connected with religion had taken place in the New England States. At Manchester, New Hampshire, there had been a riot between parties of Americans and Irishmen, on the 4th of July. At Dorchester, Massachusetts, a Roman Catholic Church had been blown up with gunpowder; and at Bath, Maine, the Roman Catholic Church had been burnt to the ground, on the 4th of July.

THE OVERLAND MAIL

By the arrival of the Overland Mail, we have received files of papers and correspondence from Bombay to the 7th June; Calcutta, 10th May; Alexandria (Egypt), 7th July; and Malta, 10th July. There is no China Mail.

Everywhere over India, except in the Nizam's dominions, there is perfect quiet, and the ordinary course of events goes on undisturbed. A police force is being organised, for the protection of life and property in Burmah. Part of it will consist of river police for the Irrawaddy, and for the creeks and rivers of the Delta.

A good deal of sickness prevailed at Peshawur, and it had been visited by a slight shock of earthquake. Disturbances have been some slight disturbances among the tribes in the Kohat Pass, from difference among themselves about the money which we pay to them for keeping that pass. A contemplated alliance with Dost Mahomed has given rise to a good deal of discussion, for the most part unfavourable to the project. Officers had great difficulty in getting leave of absence from Peshawur. The *Delhi Gazette* still continues to publish letters from Cabul, notwithstanding the disclaimer of the *Gazette of St. Petersburg*, and the double throne on their authenticity by well-informed Indian journals. Its last letter is dated 10th May, and tales that the Ameer has warned the British Government of the increasing influence of the Persians and Russians at Herat and Candahar, and has asked for English money to aid him in resistance. He has sent a reinforcement towards Balkh, which country is threatened by the King of Bokhara, but he still maintains communication with Russia and Persia.

The last mail from China to Bombay which arrived had brought intelligence of very serious riots at Singapore. For eight or ten days it was in a very critical state. The riots arose from the bad feeling between the Hokien clan, and the Chinchew, Macao, and other Chinese. On the 8th May a bloody fight began in the bazaar, and the efforts of the police to suppress it were quite insufficient. A number of shops were plundered, and had not the Governor and magistrates made their appearance in the principal streets, attended by soldiers, the rioters would, doubtless, have committed still worse excesses. On the succeeding days the riotous Chinese grew bolder, and committed many most atrocious murders.

The most important piece of news from Madras is the formation of the new Indian Reform Association. It was formed at a public meeting of the inhabitants, convened by the Sheriff of Madras, and Mr. James Ouchterlony occupied the chair. The resolutions moved and adopted were very moderate in tone, and calculated to meet the views of many Indian Reformers.

AUSTRALIA

By the arrival of the *Magdalena* at Southampton, on Monday, we have intelligence, via Panama, from Australia to the 10th May. The production of gold remains at very much the same rate as by last intelligence. No new discoveries of any importance had taken place, and the stock of gold in Sydney was lower. Business was flat, and the news from Europe had not induced speculation to any great extent, but had caused holders to retain their goods. Stocks were heavy. The bank had refused its rate of discount to six per cent. The last harvest was very good, and saved in good condition. The knowledge of England being at war with Russia has caused some attention to be drawn to the question of defences for the Australian harbours. The colony was in a quiet and tranquil state. The General Screw Steam Shipping Company's vessel, the *Crassus* was filled with passengers for her homeward trip and many took passage by the *Golden Age*, by which ship we have received this news. The *Bosphorus* arrived out on the 7th May.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, JULY 20

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inch s.
	Inches	°	°	°	°			Inches
July 14	29·720	65·2	49·0	55·7	— 6·4	93	S.W.	0·01
„ 15	29·787	71·5	54·3	60·2	— 1·9	89	S.W.	0·05
„ 16	30·049	70·1	51·6	61·5	— 0·6	46	S.W.	0·01

„ 20	30·47	77·8	52·0	63·9	+ 2·0	73	CALM	0·00

The corrected reading of the barometer decreased from 29·72 inches at the beginning of the week, to 29·49 inches by the afternoon of the 11th; increased to 30·05 by the 16th; decreased to 29·91 by the 18th; increased to 30·05 by the 20th; and decreased to 29·92 by the end of the week. The mean for the week at the height of eighty-two feet above the level of the sea, was 29·949 inches.

The mean daily temperature of the 14th is the lowest mean temperature recorded on that day since the year 1841, when it was 54°. During the time the mean daily temperatures were below their average values (viz., on every day from June 27 to July 17), the mean defect was 4·8° daily.

The mean temperature of the week was 61·1°, being 0·9° below the average of the corresponding week during thirty eight years.

The range of temperature during the week was 29°, from the 14th reading between the lowest reading of the thermometer on the 14th, and the highest on the 20th.

The mean daily range of temperature during the week was 21·2°. The least was 15·2°, on the 14th, and the greatest, 28°, on the 19th.

Rain fell during the week to the depth of seven-hundredths of an inch.

The weather, on the 14th and 15th, was dull, and the sky completely overcast, from the 16th to the 19th the weather was fine and clear; and on the 20th it was fine but the sky was covered with clouds.

Lewisham, July 21, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending Saturday, July 15, the births of 1495 children were registered within the metropolitan districts: of these, 752 were boys and 743 were girls. In the nine corresponding weeks of the nine preceding years the average number was 1274. The number of deaths were 1045, slightly exceeding that of the previous week, in the ten corresponding weeks of the ten preceding years the average number corrected for increase of population was 1020. Therefore, the mortality of last week was below the average number, but only to a small amount. In the previous week, the number of deaths arising from diseases of the zymotic class, were 373; this week they number 270; whilst the average is 339. Every class of the previous week is duly multiply to diarrhœa, which, with cholera now shows a disposition to become more severe. To diarrhœa 66 deaths are referred, being 21 above the number in the previous week, and 14 above the number in the previous ten years.

LITERARY INSTITUTE OF THE BRITISH EMPIRE.—An adjourned public meeting was held on Wednesday evening, at the Freemasons' Tavern, for receiving the report of a committee appointed a month ago to inquire into the best mode of forming a [illegible] and professional incorporation. Mr. Scholefield, M.P., [illegible] and the report of the committee was read by Mr. [illegible]. It contained a detail of various plans that had been considered by the committee, and proposed the formation of a society on the most possible basis, under the above title. The report was unanimously adopted, and resolutions for forming such a society were duly passed by the meeting, seconded by Mr. Johnston Neale, Mr. [illegible] and Mr. Cranstoun Fleet. Considerable support, it was stated, had already been promised to the proposed institute, and a great number of literary gentlemen present signed their names as subscribers towards its support and as founding members of the society.

MISSIONS TO THE HEATHEN.—A meeting, in connection with the Society for the Propagation of the Gospel, was held at the Egyptian-hall, Mansion-house, on Wednesday, for the purpose of raising funds for the extension and maintenance of missions to the heathen within and on the borders of the British Empire, especially in South Africa, New Zealand, Melanesia, Borneo, China, &c. The hall was crowded, there being upwards of 2000 persons present, including a large number of ladies. Amongst the distinguished prelates, clergymen, and other gentlemen upon and adjacent to the platform, were the Archbishop of Canterbury, the Bishops of London, Chichester, Oxford, Barbadoes, Graham's Town, New Zealand, Natal; the Lord Mayor of London, Mr. Alderman and Sheriff Wire, Sir George Grey, Governor of the Cape; the Governor of the Bank &c. The proceedings were opened by the Lord Mayor, who stated that the society had already done a vast deal of good, by disseminating the light of the Gospel over the nations of the earth. It had secured the appointment of no less than sixty bishops in Asia, Africa, and America. Resolutions in favour of the objects for which the meeting was called were moved by the Archbishop of Canterbury, the Bishop of New Zealand, and the Bishop of Oxford; and seconded by the Bishop of London, Sir George Grey (late Governor of New Zealand), and the Bishop of Natal. Sir George Grey spoke in strong terms of praise of the exemplary, and self-denying lives of the missionaries in New Zealand.

THE ROYAL FREE HOSPITAL CASE.—The long-protracted investigation into the circumstances attending the death of Alfred Richard Dixon was brought to a close on Tuesday. The verdict of the jury was as follows:—"We find that the deceased, Alfred Richardson, died of inflammation, caused by an operation unskilfully performed by Mr. Thomas Wedeles Cooe and Mr. Thomas Wakley, jun. The jury had great great difficulty in coming to a satisfactory conclusion respecting the other matters referred to them by desiring to give any opinion on that head." The Coroner inquired if the Jury wished to prefer a criminal charge against any one, which was replied to in the negative by the foreman of the Jury.

THE RELIGIOUS WAR IN BELGRAVIA.—A meeting of the parishioners of St. Paul's, Knightsbridge, and St. Barnabas, was held at the Riding School, Motcomb-street, Belgrave-square, on Tuesday, to protest against the Romish practices and doctrines of the Rev. Mr. Liddell and his curates, and to appoint a committee to support Mr. Westerton in his efforts to secure the simplicity and purity of Protestant worship in these churches. In the absence of Viscount Combermere, who had promised to preside, Admiral Harcourt took the chair. The Rev. J. Liddell then opened the meeting with prayer, in the course of which he was interrupted by a band of malcontents, who were ultimately removed from the place of meeting. Resolutions were passed expressing regret, on account of the innovations and superstitious practices lately been introduced in many of our parish churches, and calling upon all sincere Protestants to do all in their power to support Mr. Westerton. It was also resolved that Mr. Westerton ought to be supported in his efforts to secure the simplicity and purity of worship in the parish of St. Paul's, Knightsbridge, and St. Barnabas, and a committee was appointed for that purpose.

MEETING OF THE ROYAL AGRICULTURAL SOCIETY, AT LINCOLN.

(From our Special Correspondent.)

THE sixteenth annual meeting of the Royal Agricultural Society, now being held at Lincoln, promises to be at least as successful, in number and quality of the stock and implements exhibited, as that held at Gloucester last year; and certainly, from the nature of the spot and the character of the local visitors, has more living interest.

The first meeting of the Society took place at Oxford, in 1839, when 22 implements were exhibited: since that period, every year a meeting has been held successively at Cambridge, Liverpool, Bristol, Derby, Southampton, Shrewsbury, Newcastle, Northampton, York, Norwich, Exeter, Windsor, and Gloucester. At Liverpool, in 1841, the implements entered for exhibition had increased to 219; and since that period have gone on increasing until they reached 1309 (at Newcastle) in 1846, and 2000 (at Gloucester) last year, and rather more than 30,0 at Lincoln. Within the same period great improvement has taken place in stock, especially in sheep and pigs; and a considerable increase in the number and average quality of good live stock has taken place through out the country, of which we shall have to speak when we come to report on the live stock at the present Show; but there is no question that the Royal Agricultural Society have done good service by the Exhibition, where, putting the prize system entirely on one side, there are still the advantages of competition, comparison, and a great social gathering of parties interested in the same pursuit, who, less than any other body in the kingdom, have the opportunity of travelling and comparing notes.

The Lincoln show of implements is more remarkable for useful improvements than startling novelties, either in matters of form or action. In Lincolnshire this part of the show will be more or looked and less stared at than in Shropshire or Devonshire. The Lincolnshire men are and have long been accustomed to see the best implements in use. Although the high price of coal has long retarded the progress of the steam-engine, there is no county in which it is so easy to introduce a new implement, if it is really needed. Take, for instance, the water-drill, which, recently invented, is already making rapid progress in the turnip lands.

In wide-land drainage, the greatest improvement of the agricultural age. By draining necessitated the invention of the beautiful spades and other tools of a shape and quality well worth the attention of the Government department which chooses the tools of Sappers and Miners.

Some men who made steel-edged spades, thought of applying steel to digging forks—hence an implement best known as "Winston's steel fork" although made by several manufacturers, which enables a boy to do a man's work. But the drain dug required tiles at a cheap rate. Hence followed a series of tile-making machines, which have reduced the price of those indispensable aids to good farming by sixty per cent from their original cost.

A volume might be filled with accounts of the revolution which has been produced in the tillage of the soil by the substitution of iron (both wrought and cast) for wood in ploughs and harrows. In many parts of England clumsy wooden ploughs still keep their ground; and, although seventy years ago a patent was taken out for using the case-hardened cast iron ploughshares, which every intelligent farmer employs as a matter of course, we heard them recommended, the other day, by a Herefordshire squire, as a valuable novelty. What a blessing it will be to Herefordshire, when the completion of the railway will enable the Agricultural Society to take its army of implements makers into their fertile districts of the wide-land. The iron cultivator, with its prongs, naturally followed the iron harrow. And so land, in fine tilth and clean, required or deserved quick sowing, and more regular than the primitive broadcast. One hundred and twenty years ago Tull recommended the drill and the horse-hoe. There are parts of England where turnips are now the cheapest, and, of course, the horse-hoe is out of the question. Fine cultivation and the drill-machine were the result of the introduction of the turnip.

The turnips drilled give increased demand for an improved horse-hoe, and now we see, at Lincoln, not for the first time, but with improvements since the last show, a water drill for sowing turnips, which has been heartily adopted by the Wold farmers with immense advantage, and is reported of distributing superphosphate; and a rotatory turnip thinning hoe, the invention of a Norfolk mechanic.

Now, having got our crops on the ground, they must be got in, and here again the Snow-yard, confuses us with numbers and ingenuity of implements, the name of which would have been considered treason a few years ago; for, according to the political economy and poor law system of that day, farmers sought to multiply, and not diminish, the labour, for which needed, or not needed, they had to pay.

Now hay-making machines, for which the demand is enormous, and horse rakes, make us less dependent on the wandering Celt, and brings with our load to the disputed question of "one-horse carts," or waggons. Our agricultural ancestors would stare at the idea of Crossskill's cart-wheels made by machinery, and turned out at the rate of thousands per annum.

Proceeding in due order from hay crops to corn crops, we reach the real reaping machines, which have not yet succeeded in cutting grass; and here we have an agricultural romance in the reaping machine which the Scotch minister, Bell, invented, which, not needed in the superfluity of labour, lay neglected, like many other machines of the same class, for long years. Then came, in America, where the dearth of labour had sharpened men's wits, the mechanical scythe was clearing off acres by the thousand, and thus, in the Great Exhibition, came back to us as a great discovery. Since that memorable year, reaping machines have made a large step in the manufactures of simple wood workers.

The corn cut, our next step is to the barn machinery. In the Lincoln show-yard we see the whole barn managed with all the regularity and precision of a cotton or paper mill; the corn, thrashed by a steam-driven machine, is winnowed, cleaned, put into sacks, and weighed, without manual labour; while the straw is turned over to the straw house to be cut into chaff, if needful, and the chaff is blown into the chaff house, in the midst of barn machinery respectively exhibited by Garrett and Co., and by Clayton, Shuttleworth, and Co.

And now, to descend from generalities to particulars, nothing could have been more pleasantly planned than the Lincoln Exhibition, except for always the arrangement of the Society, by which every one, including the press, was excluded from the implement yard. The trial ground for field implements was situated at the top of a hill overlooking the rail from Boston, about three miles from the town, and consisted of light land in old pasture; a large field of rye for trying the reaping machines, another for the horse-hoes and harrows; and a stiff fallow for the strong land and subsoil ploughs.

The plou hing trials ended, both in deep and light land ploughs, in a dead heat between Messrs. Ransome and Messrs. Howard. In the first instance there were six; in the second fifteen, competitors. These fifteen were reduced to eight; but further trials reduced them to the Arcadian pair—Howard and Ransome.

Among the ploughs which were exhibited as specialities, the most remarkable was a new Patent Subsoil and Trenching Plough, the invention of Mr Cutgreves, a farmer—manufactured by Ransome—which made excellent work.

About Fowler's Improved Draining Plough, worked by steam, which was tried on Tuesday, it is not possible to say much, nor is it necessary, as it has already been described and delineated in the ILLUSTRATED LONDON NEWS. It did its work beautifully, bored the holes and delivered the tiles on a wire rope, in a manner which must be seen to be believed. It can be used in a moderately-level country, where there are no stones. Whether it can profitably supersede hand labour we will not venture to guess.

In harrows, there was nothing better than Barrett, Exell, and Andrews' well-known implement. Biddle has still the best scarifier; and Bentall, the best broadshare. There were many horse-hoes, but nothing better or cheaper than Garrett's.

The practical farmers flocked in crowds round Chandler's Water-drill for sowing turnips with superphosphate. It has received, we found, a thorough trial at the hands of two eminent farmers during the last two seasons, on the wolds and lowlands near Great Grimsby, and Slaiter; and, although they have have had to lead the water up wards of half a mile, they find it a most valuable means of securing a good rapidly-growing crop, so that the plant is forced beyond the power of the fly to injure it.

The trial of the reaping-machines, of course, created a good deal of excitement. The contest lay between three Garretts, Dray's Improved Hussey, Crosskill's Bell with new knives, Crosskill's work was beautifully done, and complete without manual assistance, but it seemed to try two horses; and the cutting-knives seemed more liable to clog than Dray's. Dray's did its work beautifully, but it required the hard work of a man to take off the corn as cut. The automaton reaper was, also, tried, but proved a total failure.

A small, one-horse French reaping-machine cut the corn very cleverly; and, by an ingenious arrangement, the cutting beam could be turned over at the end of a field, so as to cut on either hand. The machine power was also neatly covered in; but the arrangements for delivering the corn were very imperfect. It was thought probable, by good judges, that this will be the germ of a very much improved reaping-machine. In the north, reaping-machines are decidedly coming into favour. A great Yorkshire farmer mentioned that in 1852, with a reaper very inferior to those on the ground he found the cost to be 4s. 6d. an acre, against 16s. for hand reaping, counting nothing for his horses' labour. Among the things in the yard, well worth noticing, are complete improved stable fittings, with a self-feeding manger. A cart saddle, which can be made to fit equally well a flat-sided or round-backed horse. A great variety of churns, but none better than the old Cheshire cradle churn.

The Cattle Show opened to the public on Thursday; when the peaceful grand rounds, and red, white, and white-faced short-horns, Hereford and Devon bulls, Downs, Lincolns, Leicesters, and Cotswolds; and Suffolk blacks, of Clyde-dale formed a magnificent display which, with the aid of the pencil of Mr. Harrison Weir, we shall illustrate next week.

MEETING OF THE ROYAL AGRICULTURAL SOCIETY AT LINCOLN.—SEE PRECEDING PAGE.

THE ALLIED FLEETS AND ARMIES AT VARNA.

VIEW FROM THE CAMP OF ALADYN, NEAR VARNA.

SAPPERS REPAIRING THE ROAD BETWEEN SCHUMLA AND VARNA.—(SEE NEXT PAGE)

SKETCHES FROM THE SEAT OF WAR.

We are indebted to three officers of the Expeditionary Force for the accompanying sketches from Varna and its neighbourhood.

First, we have the Allied Fleets and Armies at Varna, sketched on June 24. The scene is deeply interesting. In the bay, part of the English, French, and Turkish Fleets are lying at anchor; dozens of English and French transports are also there. The Allied Army lies encamped on the plains near Varna, looking over the fresh-water Lake of Devna. The whole force of the Allied Army approaches 50,000 The best feeling prevails among the officers and men on both sides; and all are now only waiting for the word to advance. The View is taken from a Turkish fort, at a short distance from Varna.

The View from Aladyn is the subject of the second Illustration. The Camp of the English Forces, eight miles from Varna, is beautifully situated. It is on the reverse side of the ridge, which is the foreground of the accompanying Sketch: here are rugged rocks laid bare by the sand, which the winds drift away, and arrange in new shapes, according to their fancy Nevertheless, all kinds of showy flowers find a place here—the wild geranium for one. Then comes a thick hill-side of trees to the right, above the tops of which rocky points, with more trees, are visible. The sheet of water is a portion of the long Devna Lake, a run or river which winds through the rich meadow to the left (full of cattle) connecting it with the narrow lake on this side. In whatever direction you look, the country is wooded, not with tall, but very flourishing, trees. The village of Aladyn, a mile and a half from the camp, is marked in the Sketch on the left, sheltered among rocks and trees.

The third Illustration shows a party of Sappers repairing the road between Schumla and Varna, preparatory to the march of the army.

The march of the first division from the neighbourhood of Varna to Aladyn, with the thermometer from 80 to 90, must have given the troops a tolerably good sample of Turkish campaigning The roads even after all that had been done to them, by the Sappers and Miners, were in the most primitive state, so that it is not surprising that the journey should have occupied pretty nearly double the time ordinarily calculated for performing the same distance, in heavy marching order.

CALENDAR FOR THE WEEK.

SUNDAY, July 23.—6th Sunday after Trinity.
MONDAY, 24. Insurance Offices first established in London, 1720.
TUESDAY, 25.—St. James.
WEDNESDAY, 26. St. Anne.
THURSDAY, 27.—Almanac duty repealed, 1834.
FRIDAY, 28. Hot days commenced, 1736.
SATURDAY, 29.—French Revolution of Three Days commenced, 1830.

TIMES OF HIGH WATER AT LONDON-BRIDGE

FOR THE WEEK ENDING JULY 29, 1854.

TO CORRESPONDENTS.

EGILLUM.—The piece in question is a Nuremburg counter, by Wolff Laufer, who lived between 1619-1645 Obverse legend: "ICH. HAB LIE. ANGENEME LYSOTT. DIE MACHT GERICHTET: V. GVNST" (Translation: "I possess the pleasure of that virtue justice and favour"). Reverse legend: "WOLFF LAVFFER. RECHPENG MACHER." (Translation: "Wolff Laufer, maker of counters"). Reverse legend: "GELT. MACHT. SCHELCH." (Translation: "Money makes rogues.")

J. M., of Sherborn.—The impression sent is from a half-guinea of William III., 1699; the coin in the cabinet may have answered "by" replace: by some sale of the die-sinker. The coin is of no value in so bad a state of preservation.

SHIELD.—The Dukes of Newcastle and Satherland both use Ducal Coronets

X. Y. Z.—Lord Auckland, Bishop of Bath and Wells, is married to Mary, eldest daughter of Francis Edward Hurt, Esq., of Alderwasley, county Derby.

GEOLOGY.—The Mount Garrett title and estates are now the subject of litigation. The House of Lords have deferred their decision until an affidavit of ejectment coming on this assize at Kilkenny, is disposed of.

Captain Sir James Clark Ross is third son of George Ross, of Balsarroch, co. Galloway, and nephew of Sir John Ross, C.B.

J. W.—The next higher grade to Captain, in the Royal Navy, is Rear-Admiral of the Blue. The precedence is as follows:—1, Admiral of the Fleet; 2, Admirals of the Red; 3, Admirals of the White; 4, Admirals of the Blue; 5, Vice Admirals of the Red; 6 Vice-Admirals of the White; 7, Vice-Admirals of the Blue; 8 Rear-Admirals of the Red; 9, Rear-Admirals of the White; 10, Rear-Admirals of the Blue; 11, Captains; 12, Commanders; 13, Lieutenants; 14, Masters; 15, Mates; 16, Second Mates; 17, Midshipmen. A Rear-Admiral of the Red becomes, on promotion, Vice-Admiral of the Blue.

Now ready, price 21s., Volume XXIV., of

THE ILLUSTRATED LONDON NEWS

Expressly bound in cloth, gilt edges, rich in Illustrations of the Events of the last Six Months; together with a mass of useful and highly-interesting Articles on Art, Literature, and Science.

The COVERS for VOLUME XXIV., with the New Design, price 2s. 6d. each, may be obtained, by order, of all Booksellers, &c., in the Kingdom; as also all the previous Volumes.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JULY 22, 1854.

THE leaders of the military revolt in Spain have developed their plans and extended their base of operations. Disappointed at the first onset in obtaining the military support, on which they seem to have exclusively calculated, Generals O'Donnell, Dulce, and SERRANO, have appealed to the Spanish people. The success, which at first seemed hopeless, is now all but certain. Though Madrid remains a quiet though not uninterested spectator, all accounts agree in representing the insurrection to be in rapid progress. In answer to the manifesto of the associated leaders—declaring their object to be the re-establishment of the Constitution of 1837, the implied maintenance of the throne of Isabella II., and the no less significantly implied dismissal of the Camerilla and the Queen Mother—some of the most important towns and provinces of the kingdom have given in their adhesion to the movement. Valladolid, Saragossa, Granada, St. Sebastian, Tarragona, Lerida, Vittoria, Burgos, Salamanca, and Barcelona are amongst the most recent of the pronunciamentos. The Captain-General of Catalonia has declared in favour of the insurgents; and O'DONNELL, in full march through Andalusia, is preparing to ask—and, no doubt, to receive—the co-operation of Seville. We cannot anticipate that the Court will make any lengthened or effectual resistance. The doom of the present system was long ago written. Sooner or later it was certain to be overthrown, either by vigorous external opposition, or by internal rottenness and collapse. The Queen Mother, to avoid expulsion, appears to have beaten herself to Paris; and we may daily expect to hear that Isabella II. has yielded to a necessity which she is unable to control, and consented to receive new advisers, at the hands of the victorious party.

Whatever may have been the original motives of O'Donnell and his coadjutors, or whatever may be the force of the impetus which events may give to their ambition or their patriotism—for as yet we hardly know by which of the two names to designate their proceedings—we do not believe that there is any powerful party in Spain that desires either to overthrow or to weaken the Throne or the dynasty. The experiment of Constitutional Government has not been such as to satisfy the Spaniards themselves, or to raise the credit of their nation. But it must be said that the experiment has never fairly been carried out. The internal factions are too many, too irreconcilable, and too irreconcilable, to permit the easy development and natural growth of free institutions. But, though powerful to retard, faction has been unable to destroy the prosperity and progress of Spain. If Queen Isabella have no great hold upon the affections of the country, there is no system but that which she represents which can be said to have any hold whatever, either upon the judgment or the affection of any considerable party. Spain neither wishes for Absolutism nor Republicanism, and has no desire to gratify the crazy and perilous ambition of the Orleans family, by transferring the Crown from Queen Isabella to the Duchess of Montpensier; neither do we suppose that any one of the multitudinous Spanish Generals, after the fashion of their brothers in blood in Mexico, or the Rio de la Plata, meditates the establishment of a new dynasty in his own person; or that, if any one among them were absurd enough to do so, he would find another person in Spain as outrageous as himself to back him. There seems, therefore, to be nothing left between the *status quo* and the cause which O'Donnell has undertaken.

It is probable that the Constitution of 1837 will rally around it the greater part of the men, whose services at this moment Spain has a right to expect. The Queen has received from these events a rather ominous warning of the danger of the courses into which her weakness and her evil counsellors have betrayed her. Considering how cruelly she has been used, both as a woman and as a sovereign, by those whose duty it should have been to protect her, it is impossible, notwithstanding her many errors, to avoid a feeling of sympathy and commiseration for the misfortunes that seem impending over her. Let her be warned in time. She is as yet the best resource of Spain, and the Spaniards have loyalty and chivalry enough not to make her responsible for all the evils of her reign. We have, as yet, heard nothing of General Espartero. We trust that in this crisis public opinion will not appeal for his services in vain, and that his patriotism and sagacity will have their due weight in balancing and readjusting the dislocated framework of the body politic.

LAST Monday was to have been a grand field-day in the House of COMMONS. The long pent-up discontent of both sides of the House was to have exploded on the question of voting the expenses of the new War Minister and his department. From the one side the public was to have heard the epigrammatic accebitics of Mr. Disraeli, and the solemn denunciations of Sir John Pakington, levelled in full force against the Administration, for not appointing a more warlike War Minister than the Duke of Newcastle, and for not consolidating under his dread command half a dozen or half a hundred heterogeneous and conflicting Boards. From the other side, were to have been launched the more placid objurgations of Lord Dudley Stuart and other metropolitan members, on the impolicy of appointing any man but Lord Palmerston to an office, of which we cannot but think they greatly exaggerate the importance.

But nothing came of all this bubbub of expectation. Lord John Russell having made a preliminary announcement, that Parliament is next week to be asked for a large credit on account of the expenses of the War, the House proceeded to vote the moderate sums demanded for the support of the new War Department. It performed this task with a quiet equanimity, very appropriate to the circumstances, but somewhat unexpected, after all the external heats and animosities which had been excited.

The disposition to underrate the services and attainments of the Duke of Newcastle, will now, it is to be supposed, subside, and his Grace will in due time receive that credit for his zeal, attention, and administrative ability, which he so justly merits. Perhaps the exemplary decorum of these Parliamentary proceedings may be in some degree attributed to the friendly gathering of the forenoon, which took place by invitation of Lord John Russell, at the official residence of the First Lord of the Treasury, in Downing-street. One section of the usual supporters of the Government, appear, even at that time, to have harboured mutinous ideas—that Lord Palmerston, as War-Minister, would be a name and a thing of greater terror to obstinate Nicholas, at St. Petersburg, than the name of Newcastle, or any other, however weighty and respectable. But the easy, conversational, and even affectionate character of the proceedings at that happy meeting, appears to have obliterated all distrusts and animosities. The Ministerialists met to forgive and be forgiven. Mutual short-comings were confessed and condoned. Every member who had a crotchet, whether it were upon Church-rates, upon the Newspaper-stamp, or the peaceable behaviour of the Emperor Nicholas, gave utterance to it, more in sorrow than in anger. The one hundred and eighty gentlemen present, though they disagreed on many minor points, and even upon questions that need not to be considered minor ones in those halcyon days ere the ferocious Menschikoff gleamed like a meteor on the troubled atmosphere of Constantinople, were all agreed on the one great question, upon which the interest of Great Britain, and of all Europe, is, at the present time, concentrated. It was felt by all, that if, under the imperious pressure of the war, Lord John Russell had consented, but not without a pang, to postpone for the session, perhaps for ever, the great question of Parliamentary Reform, with which his name is so honourably and so imperishably associated, the Government, both in its collective or individual capacity, might be excused for imitating, in smaller matters, so great an example. Church-rates, Newspaper Stamps, and even that *quæstio vexata* of Tenant Right—to the interminable drone of which Mr. Vincent Scully had well-nigh succeeded in emptying the official reception-room of all the guests but himself and Lord John Russell—are questions that will keep till calmer times Whatever rebuffs the Opposition may have in store for the Ministry, it is not likely, after the demonstration of Monday morning last, that their own friends and supporters will give them any further trouble during the remainder of the Session; and, indeed, unless Mr. Disraeli shall deem it incumbent on him to refuse the war funds which Lord John Russell is to ask for next week—a feat which so discreet a statesman is not likely to attempt—we do not see what Parliamentary troubles can arise to mar the festivities at the usual Ministerial whitebait dinner, which will have so shortly to be ordered.

THE COURT.

Her Majesty and Prince Albert, with the Prince of Wales, the Princess Royal, Prince Alfred, the Princesses Alice, Helena, and Louise, Prince Arthur, and Prince Leopold, left Buckingham Palace at seven minutes past two o'clock on Monday afternoon, for Osborne, Isle of Wight. The Royal party left the Palace in six of the Queen's carriages, escorted by a detachment of cavalry, for the private station at Vauxhall, of the London and South Western Railway, and proceeded by a special train to Gosport, whence they crossed the Solent in the *Fairy* Royal yacht, arriving at Osborne at six o'clock.

On Saturday the Queen held a Court at Buckingham Palace, when the following presentations took place:—Mr Macinnis, by the Earl of Clarendon, Secretary of State for Foreign Affairs, to take leave on proceeding to the Court of Sweden as her Majesty's Minister Plenipotentiary. Mr. Jermingham, by the Earl of Clarendon, on being appointed her Majesty's Representative to the Court of Wurtemberg. On the same day the Queen, attended by the Hon. Mat lda Paget and Lord Alfred Paget, paid a visit to her Royal highness the Duchess of Gloucester at Gloucester House. In the evening her Majesty and his Royal Highness, with the Prince of Wales and the Princess Royal, honoured the Opera Comique with their presence.

On Monday the Queen held a Court for the reception of Count Bernstorff, who had his first audience of her Majesty, and presented his credentials as Envoy Extraordinary and Minister Plenipotentiary from the King of Prussia.

The Countess of Desart has succeeded the Countess of Gainsborough as the Lady in Waiting to the Queen.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary will leave the Royal apartments at St. James's Palace this day (Saturday), for Cambridge Cottage, Kew, for the season. Their Royal Highnesses honoured Miss Coutts with their company at dinner, on Monday last.

Her Royal Highness the Duchess of Kent honoured Mr. Claudet with a sitting for a stereoscopic portrait, at his studio in Regent-street, on Tuesday morning.

Her Royal Highness the Duchess of Gloucester visited her Royal Highness the Duchess of Kent on Wednesday, at her residence, Clarence House, St. James's.

His Excellency Count Bernstorff, accompanied by the Countess and family, arrived at the Prussian Legation on Saturday night, from Berlin, in order to assume his diplomatic duties as Minister from the King of Prussia at the Court of St. James's, in the room of Chevalier Bunsen.

The Marchioness of Westminster held a morning "reception" on the 4th inst., at Grosvenor House, which was honoured by the presence of their Royal Highnesses the Duchess of Cambridge and the Princess Mary, and a large number of the leading members of the aristocracy.

The Earl and Countess of Listowel and family have left Kingston House, for Convamore, Ireland.

Mr. Harcourt and Frances Countess Waldegrave have been entertaining a large party at Nuneham during the past week.

APPROACHING MARRIAGES IN HIGH LIFE.—We understand that a matrimonial alliance is arranged to take place between the Earl Spencer and the Hon. Miss Seymour, Maid of Honour to her Majesty. A marriage will also shortly take place between the Lady Dalmeny, widow of the late Lord Dalmeny, eldest son of the Earl of Rosebery, and only daughter of the Earl Stanhope, and the Lord Harry Vane, younger brother of the Duke of Cleveland. The Lady Sophia Hare, third daughter of the Earl and Countess of Listowel, will shortly be married to Mr. Arthur Macnamara.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Prebendary:* The Rev. J. B. Whetley to Templebryan, Cork. *Canonries:* The Rev. P. Freeman, Rev. J. P. Redgwin, Rev. J. A. Ewing, Rev. J. G. Cazenove, and Very Rev. S. Hood, to Cumbrae. *Rectories:* The Rev. E. Hallam to Kilsmanagh, Wexford; Rev. J. Haskell, to East Hackwell, Lincolnshire; Rev. W. Jones to Bedwas, Monmouthshire, Rev. R. W. P. Huntley Ryton, Herefordshire; Rev. F. A. Saunders to Yemanton, Yeovil; Rev. R. B. Smith to Barkby Fleetham, Yorkshire. *Vicarage:* The Rev. E. E. A. Ien to Willeme, Cumberland. *Incumbencies:* The Rev J. B. Burne to Aldermaston, near Reading; Rev. G. Morgan to St. Paul's Church, Poole, Dorset; Rev. G. A. Seymour to the Holy Trinity, Westminster.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem: The Rev. W. Quekett, Incumbent of Christ Church, St. George's East, by the communicants and parishioners, on his removal to the Rectory of Warrington, Lancashire; the Rev. H. V. Russell, Curate of Sandrop, by several of the parishioners, on his leaving the parish; the Rev. J. G. Edwards, by the principal inhabitants of Wherton; the Rev. H. J. Turrel, by the parishioners, on his retiring from the Assistant Curacy of St. Peter-le-Bailey, Oxford.

THE FIRST "RAGGED CHURCH" IN LONDON.—On Monday afternoon was laid the foundation stone of a space of worship about to be erected in Mile-end New Town, intended for the educational children of the poor. The building will hold 800 persons.

THE RUSSIAN CROSS.—The richly-carved and gilt cross which the Russians presented to the Ignorant population to be carrying to Constantinople to plant it on the Mosque of St. Sophia, has been taken back from Bulgaria by order of the Russian commander, and placed in the Servian church, at Bucharest, for the present.

WAR PRICES IN RUSSIA.—A letter from Warsaw, of the 3rd states that, in consequence of the state of war, the corn trade of Poland which supplied St. Petersburg and the central provinces of the empire, and which was affected by the Vistula and Dunaberg was gravely imperilled. Conveyance by land is difficult and expensive, and in consequence all kinds of provisions were becoming dearer and dearer in Russia.

ACCORDING to the *Lloyd*, of Vienna, a Russian division of 6000 men had so suffered from heat, that only one half had reached Kempina from Bucharest.

THE navigation of the Danube is re-established. The packet-boat of the Austrian Lloyd's Company has arrived at Galatz. The Anglo-French troops now occupy Scutari; and the Russian flotilla, threatened on all sides, is wandering about on the river.

THE total amount of men and horses of the British and French are in that branch of the service up to Saturday, the 8th instant, from 24th March, were—English troops, 31,478; horses, 4928. French troops, 46,272; horses, 7926. Forming a total of Allied troops of 77,745 men.

SEIZURE OF A RUSSIAN PRIZE IN GRIMSBY DOCKS.—About three weeks ago a vessel with Prussian papers, called the *Johann Christoph*, came into the port of Grimsby. After remaining there a little time she was suspected of being a Russian in disguise, was seized by the Customs-house authorities, and moored in the dock, under the charge of the officers of the Manchester, Sheffield, and Lincolnshire Railway Company. Some irregularity in the seizure having been feared, however, had the vessel released, and it was intended that she might leave the dock. He replied, however, that God had given him the vessel, and if it was His will, God might take it away again; and, therefore, he should not go till he was ready. He remained there six days, and on the morning of the third, a telegraphic message came from London to the effect that the seizure must be made; and this was immediately done, the vessel being moored on each side with another, to detain her securely. The vessel is awaiting the usual process of condemnation, after which a question will arise of a very novel character namely, how far the railway company, as owners of the dock, are entitled to share in the prize-money.

THE ENGLISH CAVALRY HORSES.—The French soldiers at Varna are lost in admiration at the beauty, the symmetry, and the activity of the English cavalry horses. "To be possessor of a cheval Anglais, pur sang," is the crack thing with young mon-yed Frenchmen; and when they see a lot our cavalry mounted on such cattle as would make the reputation of one of them at Longchamps, the surprise knows no bounds. There is, however, a drawback to them; it is thought by the Frenchmen as well as by some people in the English army, how are they to be fed. Will these pampered creatures stand the rough work of a campaign, on short and sometimes bad rations—moreover, as a change of diet from sugar and hay is said to be bad? Hitherto they have shown no signs of failing, but it is imagined that the forage brought on shore with the men is not yet exhausted. No wonder that the French admire them, for their artillery horses, which are the only cattle they have landed here, are of that heavy Norman breed which may be seen all over France, showing traces of everything but blood.—*Letter from Varna.*

LATEST INTELLIGENCE.

THE SPANISH INSURRECTION.

PARIS, Thursday Evening.—According to advices from St. Sebastian of the 18th, the inhabitants of Sarugoza and all the garrison have pronounced for the movement, and General Ignacio Gurrai had taken command of the place.

The Duke of Victory (Espartero) has left Logrono, in order to put himself at the head of the movement. The Army of the North is under march in order to put itself under the Duke.

General Zabala has written to Bayonne, ordering the soldiers and officers of the Cordova Regiment, who had fled the country, to return to Spain, and to meet him at St. Sebastian.

Despatches from Madrid announce that General Narvaez has offered his services to the Queen, and was busy in forming a new Administration. A telegraphic despatch from Bayonne, dated the 21st, announces that Madrid and its garrison have pronounced against the Queen.

The Premier, Count San Luis (Sartorius) has fled from Madrid.

General Espartero is marching on Madrid at the head of the Army of the Centre, and General Zabala is marching in the same direction with the Army of the North.

Valladolid, Saragossa, Grenada, Tarragona, Burgos, Vittoria, Gerona, and Lerida are said to have given in their adhesion to the *pronunciamento*.

The Three per Cents closed to-day at 70f. 75c., and the Four and-a-Half per Cents at 97f. 50c., for the end of the month.

SPAIN.—Advices have been received from Madrid of the 18th inst. The insurrection was master of Madrid during the night. At two in the morning the troops engaged acted vigorously against the barricades. The *Gazette* publishes a list of new Ministers. Three are Moderates:—Duke Rivas, President and Marine; Mayaes, Foreign Affairs; Rios Rosas, Interior. Three Progressistas:—Lacerna, Justice; Estero, Finances; Rodo, Public Works.

The whole of Catalonia has risen. The Captain-General leads it. There has been fighting on different points. Valladolid has pronounced. The Captain-General and Governor have been made prisoners.

LATEST FROM CONSTANTINOPLE.

By the telegraphic despatch from Marseilles we learn that the reply of the Emperor of Russia to the Austrian note reached Baron de Bruck on the 8th, and that gentleman at once communicated it to the Divan, and to the Ambassadors of the Allied Powers. The rumour was prevalent that this reply was so evasive that a rupture with the Cabinet of Vienna was inevitable. In consequence of the communication made by M. de Bruck to Redschid Pacha, the Ottoman Cabinet met and held two Councils on the 9th. The next morning an aide-de-camp from the Minister of War was dispatched to Varna, and another to Schumla, with despatches for Marshal de St. Arnaud and Omer Pacha. The object of these despatches was, it is said, to inform these Generals of the resolutions come to by the Ministry, and to recommend them to advance. It is already known that the Generals had not waited for their recommendations, but had already, on the 4th, decided on the plan of attack which has been executed on the line of the Danube.

The Allied squadrons were still at Baltschik on the 7th. It appears, however, that they were preparing to quit their anchorage, and were only waiting for siege material, which was every moment expected. Their departure was looked on at Constantinople as so much the more important, as several captains of merchant vessels coming from the Black Sea pretended that the Russian fleet had come out of Sebastopol, and was seen at some distance from the coast. That assertion, however, appears altogether unfounded. The news from Asia was more favourable, the Russians having experienced a check on the frontier. The Porte has already sent troops and money to the army in Asia. The last reinforcement consists of 8000 men and twenty pieces of cannon.

OPERATIONS ON THE DANUBE.

The Sulinch mouth of the Danube is occupied by British and French troops. The Russian coast has been closely reconnoitred, from the Kilia mouth of the Danube to the mouth of the Dniester. Three steamers of the Allied fleets guard the mouths of the Danube to prevent the escape of the Russian river flotilla; while the party of British seamen which has gone overland to Kustchuk from Varna will unite with the Ottoman river fleet in an attack on the enemy's boats.

OMER PACHA'S ARMY.

The last intelligence from Wallachia announces that the Turkish troops were fortifying themselves at Giurgevo, so as to render that place an important strategical point. The Russians were continuing their concentration at Bucharest.

It is said in Vienna that the great mass of the Turkish army is marching towards the mouths of the Danube, and that Giurgevo is held merely by a division.

Omer Pacha has sent a corps, under Halim Pacha, up the Aluta, which will endeavour to turn the right flank of the Russo-Wallachian army.

CHOLERA AT ST. PETERSBURG.

Private accounts from St. Petersburg, of the 10th, report that the cholera was raging with great violence, and had imposed a sacrifice very distressing to the imperial court. The Grand Master of the Ceremonies, Count Worontzow-Daschkoff, formerly envoy at Stuttgart, Turin, and Munich, died at Peterhoff, on the night of the 8th, from the effects of this malady. The Count felt ill on the 4th, but went on the 5th to Peterhoff, in opposition to medical advice, and there celebrated the anniversary of the Emperor's birthday. Here he was seized with cholera, and vainly attempted to cure it by taking large draughts of Seltzer water and effervescent lemonade.

THE FRENCH BALTIC TROOPS.

A letter from Kiel of the 15th, in a Berlin newspaper, says:—"Persons ordinarily well informed, state that the French expeditionary army of the Baltic will disembark provisionally in the island of Seeland, and that Denmark will shortly abandon her neutrality."

The *Nicolai I* arrived at Duntzig on the 20th. She left Baro Sound with Sir Charles Napier's and the French fleet on the 18th. The fleet went to the Aland Islands.

ARRIVALS FROM AUSTRALIA.—The *Iris* arrived on Thursday from Adelaide with 10,304 ounces of gold, and the *Parsospore*, from Melbourne with 20,212 ounces. The *Leander* from Sydney, has no gold on freight. The *Marion Moore* arrived at Liverpool on Thursday from Melbourne, with 36,500 ounces: in all 67,016 ounces of gold.

CRYSTAL PALACE COMPANY.—At a meeting held on Thursday, the attendance was remarkably numerous and the report adopted with general expressions of confidence. The chairman explained in detail the causes which had necessitated an increased outlay, and mentioned that the £50,000 which it was now proposed to borrow, would fully cover every requirement. An expectation was also stated that the main portion of the building, and the interest on loans, will be covered by the receipts from season tickets, refreshments, and exhibition rents, and that the money from daily visitors will all be applicable to dividends. With respect to the contemplated proposal for admitting shareholders on Sunday, it was announced that a legal opinion has been given of the possibility of its invalidating the charter, and the point was, therefore, for the present withdrawn.

NATIONAL FESTIVAL IN CELEBRATION OF THE UNION BETWEEN ENGLAND AND FRANCE.—Yesterday (Friday) an influential meeting of the Lord Mayor's Committee appointed to promote the above object was held at the Mansion house—Lord Ebrington, M.P., in the chair—to take into consideration the report of the General Purposes Committee. The report was to the effect that £40 0 had been subscribed for the festival; that communications had been addressed to the Mayor of each municipality, to the sheriff of each county, and to the various bodies in the metropolis, and power was also granted to appoint not more than three persons to proceed to Paris for the purpose of ascertaining whether the month of October—or, if not that month, what other period—would be convenient for the guests generally. Letters were read from the Lord Mayor and from Mr. Laing, M.P., strongly urging the postponement of the festival to another year on account of the season being so advanced. Several gentlemen having addressed the meeting mostly in favour of the festival being held this year—the report was ultimately received; the Committee pledging itself "to continue its efforts to carry out the object in a manner worthy the great occasion."

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE speech of Mr. Milnes at the unoovering of the monument to Thomas Hood, in the Cemetery at Kensal Green, has just been printed, from a copy corrected by its author. It is a sensible, and appropriate speech touching with a skilful hand on the literary merits of the man commemorated. That Hood deserves a memorial of the kind, no one can doubt; but the erection of this monument is suggestive of the graves of other eminent Englishmen that are still unmarked. If we are raising a monument in this country to wit and humour, the author of "Hudibras" surely should have been the man whose unmarked grave in Covent-garden might have been pointed out to passers-by as a spot containing all that is mortal of so great an author. If the Scotch wanted to commemorate the union in one person of English humour with Scotch humour, they might find, in a churchyard in Piccadilly, all that remains in mortal flesh and bone of Arbuthnot, the chosen associate of Pope and Swift. In the very cemetery in which Hood reposes lies the Rev. Sydney Smith, without, we believe, a monument to mark the spot—certainly without any monument to his memory raised by public subscription. Some six years ago there was a parochial attempt, in Covent-garden, to mark the grave of Butler—but it was only an attempt. One active and influential person, known in literature and known to society, might soon remove this growing scandal. Why should not Mr. Milnes take it in hand? He will remember one line, at least, of a remarkable epitaph on a London worthy—"He knew immortal Hudibras by heart." Strange that the grave of the illustrious author should be unmarked, and that the grave of the unknown who had learned his "immortal" poem by heart should be thus distinguished.

A kind of useless sigh has been uttered during the present week over the demolition of the gateway from Great George-street, Westminster, into St. James's Park. Our contemporaries treat it as a piece of antiquity, and carry us back to the times of Mr. Storey, who, in the reign of King Charles II., was keeper of the ducks (of the feathered sort) to the Merry Monarch, and had a house on the site of the gate which bears his name. When Mr. Storey gave his name to this park gate, Storey's Gate was nothing more than a wicket from Westminster to the Vo'ary, in what is still called Birdcage-walk. Storey's-gate has no associations like Temple-bar: the building just demolished could hardly remember Jack Wilkes. It has gone, as it deserved to go—like the Halfpenny-hatch, Little turnstile, and the Marsh Gate Turnpike.

A contemporary, distinguished for his pertinacity in putting in blows (often well warded off) against every candidate to be considered the author of "Junius," has just been distinguishing himself in a different way, by two long criticisms on an advertisement of the forthcoming edition of Pope. The critic has lately been spending a fortnight in Sussex, is evidently well up in the Caryll genealogy, and has gone with care into the Burrell collections for the county of Sussex. He is a man of means; he is a gentleman at large; above all, he is a curious, and, therefore, necessarily, a successful inquirer. He, of course, has no ground of quarrel with the advertised editors of the forthcoming edition; nor does he quarrel with them: he gives them rather the puff preliminary. From his liking for parish registers, one would almost suspect that the critic was Mr. Croker himself; but this we can confidently pronounce it not the case. We can recommend the articles more for the new letters and tombstone information they bring to light, than for the inferences made from them by the critic. The critic is wrong about Addison and the Guardian; right about the stupid confusion between Craggs and Caryll; too boastful about his supposed discovery of Pope's residence at Chiswick—a fact obvious to all who have looked with any care into the original MS. of Pope's Homer; and entitled to every credit for unearthing a Mrs. Weston, the "Mrs. W." supposed to have been the heroine of the "Elegy on an Unfortunate Lady." If advertisements are not to be exempt from criticism, that folio of four pages, or quarto of twenty-eight, "which not even critics criticise," will, doubtless, come under the tender talons of the critical claw.

"Bibliomania," we are told, has revived. Where is Dr. Dibdin? Here we have the Roxburgh Club-days restored—and the times, once more, of Richard Heber and his stout Jackall, Mr. Thorpe. The Hasle woods and Dibdins of to-day may now revive the Roxburgh Revels, so amusingly lashed by Hood; for, as far as Shakspeare is concerned, a sum of a like amount was never before given for a single volume, as was given on Saturday last for a first folio Shakspeare. The clear and agreeable face of Mr. Wilkinson was never seen to greater advantage. His hammer, some six years ago, had knocked down the very same lot (can we call such a volume a lot?) for one hundred and fifty-five pounds. There it was, again under the same hammer—to realise what? Mr. Wilkinson was confident he saw the right sort of men before him, and his eyes foretold a triumph. There was the Rev. A. D. and G. D., and Mr. C. of Manchester, P. C., and many more of name, all spectators of the race. To continue in jockey language, the volume was entered well. Mr. Lilly (warmed with a touch of the fire of Thorpe, Rodd, and Pickering) made a spirited start at one hundred guineas. He had immediately other competitors at ten and twenty-guinea leaps; Mr. Wilkinson put aside his hammer—he could have no use for it for some time yet. The room shared his feeling. At one hundred and fifty guineas it did stop for a time. It was now at a sum more than Mr. Gardiner had given for it—at a higher sum than had been given before for any copy of the same book. Another five guineas started a fresh heat, and at two hundred guineas Mr. Wilkinson's hand was seen on the move towards the hammer, though his eyes were still fixed on some long-pocketed competitors, who would not see the hammer drop at such a figure. Nor did it drop. Mr. Boone stood to his guns—in fact, was compelled to retire before Mr. Lilly, to whom it was knocked down for the princely sum of £250. Mr. Lilly never looked more smiling—you would have fancied from his healthy and good natured face, that he looked for a plaudit. He certainly deserved one.

Art flourishes in April and May, and when the Academy closes in July—easels wear additional coats of dust, and palettes are no longer in painters' hands. The pre-Raphaelites are laughing at the number of painters on the move towards watering-places—trying to see what Mr. Frith saw and rendered so charmingly, "Life at the Sea-side."

MARSHAL RADETZKY AND GENERAL HESS.—Letters from Venice, of the 14th, state that the Austrian Government is sending large bodies of troops from all parts of the Austrian forces intended to operate against Russia. He openly declares that he has been passed over, not because he is unfit for the service, but because he could do the work in earnest, and that the Government of Austria knows he would do so. He, moreover, adds, that General de Hess is a Russian agent, and that he has been so acted simply because it is known he will do nothing. When her the old man's ire warps his judgment as to the intentions of his Govern ment or not remains to be seen. At all events, the Austrian Government is making preparations as if it were determined to set about the business in right earnest. The conscription is not confined to Venice; it is carried on with equal vigour in all the Italian provinces of Austria.

KING'S COLLEGE SCHOOL.—On Saturday Mr. James Hann, late Mathematical Master of this school, upwards of seventeen years, was presented with a purse of money, as a testimonial of the gratitude and esteem of his pupils.

MEETING OF GOVERNMENT SUPPORTERS.

A meeting of the usual supporters of the Government was held in Downing-street, at the official residence of the First Lord of the Treasury, at one o'clock, on Monday. The meeting was called by circulars, which were issued on Friday, and the object of it was mainly to see what can be done to restore that harmony between the Government and their friends which has been so much disturbed lately. The members of the Government present were—Lord John Russell, Sir G. Grey, Sir James Graham, Mr. Sidney Herbert, the Chancellor of the Exchequer, Lord Palmerston, Sir W. Molesworth, Mr. Cardwell, Sir John Young, Mr. James Wilson, Mr. F. Peel, Mr. R. Lowe, the Solicitor General, the Lord Advocate, Lord Elcho, Mr. Hayter, Lord Mulgrave, Mr. Grenville Berkeley, Mr. Fortescue, Mr. W. Cowper, Lord E. Bruce, Mr. Monsell.

Lord John Russell said he had thought it advisable to assemble those members of the House of Commons who usually gave the Government their support, in order to consult with them upon the present state of affairs, and to remove any misunderstanding or misapprehension which might exist upon any point. Having made a few remarks in explanation and defence of his conduct with reference to the Reform Bill and various other measures, he went on to speak of the War. Nothing was yet known as to the ultimate resolution of Prussia and Sweden. As regarded Austria, should the answer to the summons sent to Russia by the German Powers be unsatisfactory, "there could be no doubt whatever that Austria would at once go with the Maritime Powers." But the events of war were uncertain. A great struggle with one of the first military powers of Europe must necessarily involve this country in a very great and serious expenditure, and Government would be obliged to apply to the House of Commons for a very considerable sum. The Government, of course, must trust to the House placing confidence in them with respect to this necessity. He did not for a moment mean to deny that no other Government was possible but the present. He did not know what combinations might be formed. He did not know whether Lord Derby and his friends, or any other persons, might be able to form a Government. But so long as himself and his colleagues constituted the Government, and had upon them the responsibility of the war, of course they must appeal to the House of Commons for its generous confidence and support, for no Government which had not the support and confidence of the House of Commons could hope to carry on a great contest like the present to that successful issue which every person in the country most anxiously desired to see.

Mr. Vernon Smith complained of the conduct of Government with reference to the admission of Dissenters to Oxford, and found fault with the choice which had been made of the Duke of Newcastle as Minister of War.

Mr. Horsman also complained of that appointment. A large number of Lord John Russell's usual friends were of opinion that under the circumstances of war, it was unfortunate that Lord Aberdeen should be Prime Minister. They could not, from Lord Aberdeen's well-known views, anticipate that the war could be carried on in a manner consistent with the power and dignity of this country, so long as the noble Earl held the chief place in the Government.

Mr. Hume approved of the position of Lord Aberdeen in the Government, and said he was very glad to see the manner in which the Peelite party had joined the old Liberal party. At the same time he blamed Lord John Russell for opposing measures which were supported by three fourths of his usual supporters. He was taking the most effectual course to break up and destroy the Liberal party.

Mr. Bright said, he had so often opposed the Government this session, that he had hardly any right to be called on for advice. He thought the difficulties in which the present Government was placed arose from its want of a definite policy. As regarded the disaffection complained of by Ministers, it was owing to the course taken by Government. Lord Palmerston on the Ballot, and Lord John Russell on the Church-rate question, differed entirely from the majority of their supporters. On the newspaper question, also, Ministers were opposed to the views of their friends. Ministers were also without a policy as to the conduct of the war. Could Lord John Russell tell the House what was now the fact, and upon what terms peace would be accepted? As to Lord Aberdeen, he had, for his part, great confidence in the noble Earl; and was extremely sorry to see the bitter and malignant attacks which were made upon him.

Lord D. Stuart spoke strongly in favour of Lord Palmerston's fitness for the situation of War Minister.

Mr. Layard expressed some apprehensions with regard to the conduct of Austria.

Mr. V. Scully introduced the question of tenant-right in Ireland. But by this time the attendance had become very thin; and, after Lord John had thanked members for their presence, the meeting, which lasted more than an hour and a half, broke up.

THE HOOD MEMORIAL.—On Tuesday last the Hood Memorial—of which we gave an illustration and a description last Saturday—was inaugurated at Kensal-green Cemetery, in presence of a large number of persons, including several intimate friends of the lamented poet and humourist. Previous to the uncovering of the monument, Mr. Monckton Milnes delivered an oration on the author of the "Song of the Shirt," well worthy of the subject and the occasion. It was rather a French than an English habit, he said, to make eulogistic orations at the tombs of their friends. The custom was not quite congenial to our taste; but there were reasons why on particular occasions, like the present, it could not be displeasing. In the present instance a character especially distinguished for wit, gaiety and humility, it was that of the late Thomas Hood; and it would, therefore, be most unbecoming to indulge a species of eulogy, which, if he were among them, would be displeasing to himself. In his own expressive words, he loved

> To kneel remote upon the simple sod,
> And see us *forma pauperis* to God.

And, bearing in mind this touching sentiment, all they (his friends) had to do was to commit him, with all his errors, such as they were, to the mercy of God, but at the same time to keep his memory dear, and his position right among men. Mr. Milnes then proceeded to draw a concise sketch of Thomas Hood, as a poet and a humourist; and, after a graceful allusion to the prompt humanity evinced by the late Sir R. Peel, he then introduced that Mr. Hood was in distress, concluded his address by expressing a hope that all present would bear away with them the reflection, that the fame of which an honest man should be ambitious was such as belonged to one who was among them a brother and a friend, and whose works were of such a nature as to make us grateful to the race and country of which we were common citizens and men. At the close of the address the monument was uncovered, and the people thronged around it to examine its merit and characteristics.

WE understand that, on Saturday last, his Royal Highness Prince Albert, attended by Colonel Seymour, honoured Mr. Noble the sculptor, with a visit to his studio, to inspect, and think, the colossal figure of the bas-reliefs for the memorial to Thomas Hood; the colossal statue to Wellington, now in progress for the city of Manchester; the marble statues of the Hero-Duke, prepared for the East India House; and of Sir Robert Peel, for St. George's hall, Liverpool, his Royal Highness was pleased to express his high admiration of these important works, and also of two fine busts of the Marquis of Anglesey and Professor Faraday, recently produced by Mr. Noble.

THE NEW REREDOS FOR ELY CATHEDRAL (engraved in our Journal of last week) is the gift of one munificent individual, J. Dunn Gardner, Esq., a gentleman of wealth, who has for his only child, an invalid, erected the monument to his deceased wife. In the panels will be other monumental sculpture; among which are small busts of the major Prophets and the Doctors of the Church. Many parts will probably be enriched with metallic work of antique and other marbles, and the spiral shafts with cornelians and bloodstones; other parts will also be enriched (but sparingly) with gilding. The whole will be one of the richest pieces of ecclesiastical work of the kind which has been executed of late years. The general execution of the work is by Mr. Rattee, of Cambridge, the figure-sculpture by Mr. Philip, of Rochampton-street.

THE MUNICH INDUSTRIAL EXHIBITION was opened on Saturday last, with all the pomp, by the King. The number of exhibitors amounts to 6588: of these, 2331 are Bavarians; 1477 Austrians; and 767 Prussians: Würtemberg gives 443, and Saxony 446.

THE CRYSTAL PALACE.—The return of visitors to the Sydenham Palace this week is highly encouraging. On Monday 16,703 persons paid for admission at the doors, and 834 season-ticket holders received their visits. On Tuesday 16,659 paid the admission fee, and 1151 season-ticket holders were admitted. On Wednesday there were 17,115 visitors; and on Thursday, 17,415—which, with 1,81 season-ticket holders, made altogether 18,696 visitors in that day.

THE ANTI-SLAVERY CONVENTION AT MANCHESTER.—This convention, which commences its labours on the 1st of August, will receive an additional interest in the presence of the Hon. John Van Buren, a prominent American politician, and son of Martin Van Buren, ex-President of the United States. Mr. Van Buren visits this country to be present at the forthcoming Anti-Slavery Convention, and to advise with his fellow-workers in the noble cause of negro emancipation in the United States with which his father, as well as himself, has for several years been identified.

"FRUITS."—PAINTED BY GEORGE LANCE.—FROM THE EXHIBITION OF THE ROYAL ACADEMY.

EXHIBITION OF THE ROYAL ACADEMY.

THE Exhibition will close this day (Saturday). We present to our readers three of the choice works in the collection, which we have hitherto been prevented inserting by the great pressure of subjects of less pacific interest.

"Fruits"—a very attractive picture in the West Room—is Mr. Lance's solitary contribution to the present Exhibition. From his known dexterity of hand, we should have expected other pictures from his pencil; but when we reflect on the extent of his canvas, and the labour successfully bestowed throughout, it is easy to see that his time has been fully employed. He has chosen his own motto

HENGRAVE HALL, SUFFOLK, THE SEAT OF SIR THOMAS R. GAGE, BART.—(SEE PRECEDING PAGE.)

Fresh from the teeming lap of bounteous Earth,
Nursed by the dews and summer's glowing sun,
To juicy, gushing ripeness, fit to fill
The golden vases of an emperor's feast
Where kings are guests.

All that nature and Covent-garden can supply in the way of the best fruits of the earth Mr. Lance has copied with a deceptive pencil. He has robbed, and for the same picture, the Zoological Society's Gardens of one of its finest birds, and has sought to represent the beauty of manhood in the owner of such treasures. The man, we must confess, we should have liked to have seen a little more manly: he has been fed too much on his own stores—melons and peaches.

Mr. Physick (the sculptor of the next Illustration) is distinguished for the spirit of his conceptions and the delicacy of his modeling. While he is bold, he yet remembers that repose is an essential requisite in sculpture. It is true that you constantly track him in what Dryden calls the snows of the ancients; but he follows great works and men—as we observed of Mr. Foley—with anything but a servile adherence: he has confidence in his own creative powers; and where you find him warming his own genius by the fire of others, you soon see that he does not borrow from poverty, but from choice. "Defend the Fatherless" is the subject appropriately selected by Mr. Physick for the portico of the new School of Industry for Female Orphans, Grove-road, St. John's-wood, for the reception of about sixty orphan girls who have lost *both* parents; and who are clothed, educated, maintained, and trained for domestic service. The charity was instituted in 1786, upon a small scale, under the pastoral superintendence of the late Rev. Basil Woodd; and, by recent efforts, has been greatly extended. It is supported entirely by voluntary donations and annual subscriptions. Four hundred and twenty-eight orphan children have already been benefited by this charity. The model has yet to be executed in stone.

Mr Hook, to whom we owe the next really clever picture, is deservedly looked upon, both within and without the Academy, as one of the most promising of the young Associates. He is not a prolific, but he is a careful, artist. His soul seems to dwell in Venice; and he would appear never to put his palette upon his thumb without a thought turning towards Titian. We will not say with Jervas, the painter, "Poor little Tit, how he would stare;" although what Jervas supposed was true of his head of Lady Bridgewater, that he had painted it in the style of Titian, is not altogether untrue of Mr. Hook in some of his best compositions. The Venetian masters, to whom Mr Hook seems so decidedly addicted, were not famous for design, though they occasionally brought more figures upon the canvas than can be found in the compositions of any other school. Their great merit was colour. When we think of Titian and Tintoret and Paul Veronese, we see before us all the treasures of the palette—all that Van Eyck introduced, and Rubens turned to such glowing account.

The subjects chosen by Mr. Hook show his Venetian and Titianesque tendency: "Othello's First Suspicion," the "Defeat of Shylock," "Bianca Capello," "An Escape from the Emissaries of Galeazzo Visconti,' "A Dream of Venice," "The Rescue of the Brides of Venice." This year, however,' he has sought to vary his style—but not with his old success. We find, in the subjects that differ from his beaten path, that his hand—

Has lost that sprightly ease
Which marks security to please.

He fails to command attention by his "Rest by the Wayside" (No. 117), and by his "Few Minutes to Wait before Twelve o'Clock" (No. 147); but it is impossible for the eye to rest on his picture from the "History of France in the Sixteenth Century" without feeling that here we are arrested by no common hand. He has chosen a tumultuous scene—a period of religious strife—the "Time of the Persecution of the Christian Reformers in Paris, in 1559." We are not sure, however, that religious animosities are altogether fitting subjects for the pencil of the painter: we will readily admit that they afford striking points, and pictorial contrasts; but are they, in themselves, subjects which come home direct to the sympathies of all? Religion is so staid and holy, that we shudder at the representation of persecutions, so contrary to the better feelings of a Christian mind. Mr. Hook, in his well-told story, has represented the Roman Catholics of France in 1559 triumphant in the streets, singing canticles before images, inviting all who passed by to join in their devotions, and insulting and beating those whose belief led them to a contrary worship. Observe the insult that is offered to the Christian Reformer in the very centre of the picture. How well the incident is told! Mark the triumph of the priest and the seemly forbearance of the persecuted. Mr. Hook has seldom been more successful in catching and rendering contrasts of this pictorial, though, as we must repeat, in some respects, this disagreeable nature.

GROUP FOR THE SCHOOL OF INDUSTRY FOR FEMALE ORPHANS, GROVE-ROAD, ST. JOHN'S WOOD.—BY M. G PHYSICK.
FROM THE EXHIBITION OF THE ROYAL ACADEMY.

HENGRAVE HALL.

We engrave upon the opposite page this fine ancestral house, which was recently visited by the Archæological Institute. Hengrave, the seat of Sir Thomas Kookwoode Gage, Bart., is a noble and unique example of the "stately embattled Manor-house," at the period of the Tudor dynasty. There are very few houses built at the commencement of the sixteenth century remaining in this country; and of these most are in ruins, or so altered as to retain little of their original character. The Manor of Hengrave, having been held for more than two centuries by a knightly family of that name—viz., from the reign of Henry II. to the reign of Henry V., passed to Humphrey Stafford, Duke of Buckingham; and on the marriage of Lord Henry Stafford, the Duke's third son, with Margaret, Countess of Richmond, the mother of King Henry VII., the Duke settled upon them the Manor of Hengrave, and it was afterwards the Countess' Dowry-

"TIME OF THE PERSECUTION OF THE CHRISTIAN REFORMERS IN PARIS, IN 1559."—PAINTED BY J. C. HOOK, A.R.A.—FROM THE EXHIBITION OF THE ROYAL ACADEMY.

house. It continued in the possession of the princely house of Stafford until the attainder of Edward Duke of Buckingham, who perished on the scaffold in the reign of Henry VIII. From this Duke Hengrave had been previously purchased by Sir Thomas Kytson Knight, a person of great wealth, and at that time Sheriff of London. He commenced the building of the present mansion in 1525, and completed it in 1538. By the removal, in the seventeenth century, of the outer court, and later of a range of building on the east and north sides of the mansion, the house has been reduced one-third, at least, from its original size. The Church, which, since its consecration in 1689 with the adjoining parish, has been used only as a mausoleum for the owners of the hall. It is a small edifice, with a round embattled tower, now completely mantled with ivy, and is of very early date. The chancel contains some fine monuments, erected to the Kytsons and Bunchiers, Earls of Bath, in the reigns of Elizabeth and James I., and others of a later period to the families of Darcy, Earl Rivers, and Gage.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

The Earl of MALMESBURY postponed his motion for papers relating to the cession of the Danish Principate of by the Americans.

The Merchant Shipping Bill passed through Committee, and was reported with amendments.

Lord GRANVILLE moved the third reading of the Public Revenue and Consolidated Fund Charges Bill.

Lord MONTEAGLE opposed the third reading, and moved that the bill be referred to a Select Committee.

After considerable discussion, the Government acceded to this proposition, and the bill was accordingly referred to a Select Committee.

HOUSE OF COMMONS.—MONDAY.

THE VOTE OF CREDIT.

Lord J. RUSSELL gave notice that he should next week move, in a Committee of the whole House, a vote of credit for the purpose of carrying on the war. He hoped, he added, that he should be able to lay the estimate upon the table by Thursday next.

THE MINISTER OF WAR.

The House having resolved itself into a Committee of Supply, Lord J. RUSSELL, in moving an estimate to defray the expense of the department of the Secretary of State for the War Department, gave an outline of the changes in contemplation in the military departments. The great change would be the separation of the civil from the purely military departments of the Army—the Commander-in-Chief and the Master-General of the Ordnance retaining all the military patronage, the civil appertaining to the Secretary of State, so that the House of Commons would have before it the whole military expenditure, under the responsibility of the Secretary of State. The changes in contemplation must, he said, be carried in effect from time to time. It was impossible to accomplish all of them at the commencement of a war, and he asked for time to effect them under the responsibility of the Government. In connexion, he moved a vote of £17,800.

Sir J. PAKINGTON said, he had listened to the speech of the noble Lord with feelings of the greatest astonishment and disappointment. They had appointed a Secretary of State for the War Department, who had determined what were to be the duties of that important office. Before making for a vote, they were bound to make up their minds upon the subject.

Mr S HERBERT entered into details, in order he said, to make more clear what were the intentions of the Government. He explained and justified their views, observing that the Government were bound, at this critical period, not to throw the whole military volume out of gear, but to feel their way, and maturely consider the changes before they were adopted.

After a few words from Colonel Dunne and Mr. G. Butt, the resolution was agreed to.

THE BRIBERY BILL.

The House then went into Committee upon the remaining clauses of the Bribery &c., Bill.

On the 26th, which imposed certain penalties, including the guilt of a misdemeanour, upon a person paying expenses of an election except to the candidate or election officer, the words "guilty of a misdemeanour" were, on the motion of Lord J. Russell, struck out.

The 29th clause, which required the returning officer to publish in a newspaper an abstract of the bill of election expenses, underwent a long discussion and some amendments. It was carried, upon a division, by 178 to 94.

On reaching the 33rd clause, the Chairman reported progress.

The House next went into Committee on the Stamp-duties Bill, to which several new clauses were added.

The Standard of Gold and Silver Wares Bill passed through Committee.

The Joint-Stock Banks (Scotland) Bill was read a third time and passed, as well as the Poor-law Commissioners Continuance (Ireland) Bill, after an ineffectual attempt by Colonel Dunne to limit its operation to two years, instead of five.

HOUSE OF LORDS.—TUESDAY.

The Ecclesiastical Courts Bill was read a third time and passed.

The Court of Chancery Bill, the Merchant Shipping Acts Repeal Bill, the Turnpike Trusts Arrangements Bill, and the Towns Improvement (Ireland) Bill were read a second time.

HOUSE OF COMMONS.—TUESDAY.

The Vaccination Act Amendment Bill went through Committee.

The Ecclesiastical Capitular Estates Management Bill was considered in Committee, and several clauses passed.

The report from the last Committee of Supply was brought up and agreed to.

The Jamaica Loan Bill, the Royal Military Asylum Bill, and the Criminal Justice Bill were severally read a third time and passed.

Mr. G. LLADAS moved for copies of certain correspondence, documents, and minutes of evidence regarding the quarrel that has arisen between Dr Reid and the Board of Works relative to the ventilation, &c., of the new Houses of Parliament.

The motion was opposed by Sir W. MOLESWORTH, and negatived without a division.

Mr. POWYS moved for the appointment of a Select Committee to inquire into the claims of the representatives of the late W. Surgeon and the Lord Routined, at the Peace of 1815 by the French Government, to compensate the losses suffered by British subjects through the confiscation of their property. After a short discussion, the House divided: —For the motion, 89; against it, 40.

Admiral WALCOTT moved for a Select Committee to inquire into the claims of Captain Dickenson, respecting the bullion and property returned by his exertions from the wreck of the *Thetis*, was also lost by a majority of one.

FLOGGING ON BOARD THE "STAR."

Mr. WILLIAMS moved for returns of the number of floggings and discharges that had occurred on board her Majesty's ship *Star*, with the particulars of each alleged offence, and the nature of the punishments inflicted. Much cruelty and tyranny had, he alleged, been committed by the captain of the *Star* in the Baltic station, which demanded investigation. The hon. member enlarged upon the inexpediency of maintaining the system of corporal punishment in the navy, and charged the Board of Admiralty with testifying an inveterate attachment to its severities.

Sir J. GRAHAM, after repudiating the charge of fondness for corporal punishment on the part of the Admiralty Board, proceeded to deny the accuracy of the statements on which the motion was founded. The conduct of Commander Vansittart in the case had been thoroughly scrutinised by the superior authorities; the matter was now closed, the vessel had gone to the Baltic under another commander, and the crew were perfectly attended and orderly. He deprecated any interference on the part of the House with the delicate question of discipline; and, in the case before them, he contended that there was no occasion for doing more than the Admiralty had already done with all the parties concerned.

After some remarks from Mr. L. Heyworth and Admiral Berkeley, Mr. WILLIAMS withdrew his motion.

A motion was carried for the appointment of a Select Committee to consider the cheapest and most efficient mode of providing for the printing required by the legislature or for the public service.

On the motion of Mr P. UNIACKE, a Select Committee was ordered to be appointed to inquire into the management of the loan fund societies of Ireland.

The India Appointments Bill and the Spirits (Ireland) Bill were respectively read a second time.

HOUSE OF COMMONS.—WEDNESDAY.

BUSINESS OF THE SESSION.

Lord J. RUSSELL, in moving that the order of the day for considering the Lords' amendments to the Oxford University Bill should be read for the purpose of postponement, referred to the present state of legislative business in that branch of the Legislature. The Peers had passed a resolution setting forth that no new bills, other than supply bills, or under special circumstances, should be considered in their House after July 25. Thinking this resolution reasonable, and wishing to adapt the proceedings of the Commons to its requirements, he proposed to urge forward all the measures which now stood for progress, and which it was desirable to carry during the present session, so as to send them up to the other House by Monday next as latest. Among these bills he considered the Bribery Bill as of chief importance, and accordingly intended to go on with it both at the morning and evening sitting on Thursday if necessary. On the other hand, such bills as had already passed the Upper House should be postponed; and the noble Lord accordingly moved that the Oxford University Bill should stand for consideration, as amended, on Thursday the 27th inst.

CHURCH TEMPORALITIES BILL.

The adjourned debate on the Church Temporalities (Ireland) Bill was resumed, and Mr. Serjeant SHEE replied at considerable length to the objections which had been urged against his measure. The session, he remarked, was so advanced that the House could not be troubled further with this bill; and, therefore, there need be no reluctance to give him leave to lay it on the table.

Some discussion took place, in which Mr. Napier, Mr. Frewen, Mr. Ogden, Mr. Newdegate, and Mr. Bowyer joined. The House then divided—For leave to bring in the bill, 84; against, 117: majority, 86.

REFORMATORY SCHOOLS BILL.

The consideration, in Committee, of the Reformatory Schools (Scotland) Bill was resumed.

The opposition to the measure, on the part of the Irish members, was renewed, upon the plea that Roman Catholic children might be sent to the schools for the purpose of various proselytising efforts.

Mr. LUCAS, Mr. V. Scully, Mr. Serjeant Shee, and Mr. F. Scully urged objections on this point, and the last named hon. representative was still speaking when the clock pointed to a quarter to six, and the Chairman reported progress.

The Jury Trial (Scotland) Bill passed through Committee.

Sir J. YOUNG obtained leave to bring in a bill to Provide for the Establishment of a National Gallery of Painting, Sculpture, and Fine Arts in Dublin.

Leave was given to Mr. Sotheron to bring in a Bill Continuing the Existing Acts relating to Friendly Societies; and to Sir J. Graham for a Bill Altering and Amending Certain Provisions which regulate Process in the High Court of Admiralty.

HOUSE OF LORDS.—THURSDAY.

The Merchant Shipping Bill, and the Portland, &c., Chapels Bill were reported with amendments.

The following bills passed through Committee, viz.—The Court of Chancery Bill, the Merchant Shipping Acts Repeal Bill, the Savings-banks Bill the Towns Improvement (Ireland) Bill, the Acknowledgment of Deeds by Married Women Bill, and the Marriages (Mixed) Bill, the Highway-rates Bill, and the Turnpike Trusts Arrangement Bill, were severally read a second time.

HOUSE OF COMMONS.—THURSDAY.

The House met at twelve o'clock.

CRIMINAL PROCEDURE BILL.

Mr. AGLIONBY, owing to the lateness of the session, withdrew this bill; but, at the same time, gave notice that he should renew it the very first opportunity next session.

BRIBERY BILL.

The committee on this bill was then resumed; and the remainder of the day, up to four o'clock, was occupied with a discussion upon the 33rd clause, which was ultimately agreed to.

The House met again at six o'clock.

THE PROPOSED VOTE OF CREDIT.

Lord J. RUSSELL, in reply to Mr. Disraeli, stated that the Royal Message requesting the vote of credit would, he believed, be brought down to the House to-morrow (Friday), and it was the intention of the Government to take the opinion of the House upon it the first thing on Monday. The noble Lord further stated, in reply to a second question, that the amount of the contemplated vote was £8,000,000.

BRIBERY BILL.

The House then went into Committee again upon the Bribery Bill.

The remaining clauses of the bill having been agreed to,

Lord R. GROSVENOR proposed the addition of a clause, to prevent candidates expending money upon vehicles conveying voters to the poll, or upon refreshments for such voters.

Lord J. RUSSELL expressed himself favourable to the latter part of the proposition, but did not think that it would be just or reasonable to declare it illegal for a voter—who might be a poor, sick, or feeble man—to be conveyed to the poll in a vehicle hired by a candidate.

After much discussion the Committee divided, when the numbers were—For Lord Grosvenor's clause, 86; against it, 190: majority against the clause, 104.

Mr. STANHOPE then brought forward a substantive proposition, to allow voters refreshment tickets, at 2s. each, to be issued to such as chose to ask for them.

Upon a division the numbers were:—For Mr. Stanhope's resolution, 126; against it, 142: majority against the proposition, 16.

After a few further remarks the Chairman reported progress, and it was agreed that the bill should be submitted to the Committee in a reprinted form, at six o'clock to-morrow (Friday), and that it should be read a third time on Monday.

The other orders of the day were then disposed of.

HOUSE OF LORDS.—FRIDAY.

THE POLISH SUBJECTS OF THE CZAR.

The Earl of HARRINGTON inquired whether it was true that the Government had requested Lord Westmeath and Sir John Tobin, Bart., of Victoria that the Polish subjects of Russia would not be allowed to cooperate with us in the East, or to follow the standards of the Allied army?

The Earl of ABERDEEN said that no such instructions had been given to Lord Westmeath or to the noble Earl imagined. The question of whether the subjects of Russia were to co-operate with our forces was a matter which rested with the Commander-in-Chief.

THE WAR MESSAGE FROM THE QUEEN.

The Earl of ABERDEEN said he had received a Message from the Queen.

The LORD CHANCELLOR then read the following Message:—

"Victoria Regina"—Her Majesty, deeming it expedient to provide for the additional expenses which may arise in consequence of the war in which she is now engaged against the Emperor of Russia, relies upon the affection of the House of Lords for their concurrence in such measures as may be necessary for making provision accordingly."

The Earl of ABERDEEN moved that the Message be taken into consideration on Monday next, and the Lords summoned.

The following bills were read a second time—viz, the Valuation of Lands (Scotland), the Friendly Societies, the Registration of Bills of Sale (Ireland), the Jamaica Loan, the Sheriff and Sheriff Clerk of Chancery (Scotland) Bill, the Joint Stock Banks (Scotland), and the Crime and Outrage (Ireland) Bills.

The following bills passed through Committee—viz, the Highway Rates, the Turnpike Trusts Arrangements, and the General Board of Health bills.

The following bills were read a third time and passed—viz, the Court of Chancery, the Portland, &c Chapels, and the Savings Banks Bills.

The TOWNS IMPROVEMENT (Ireland) Bill, and the Acknowledgment of Deeds by Married Women Bill were severally reprinted with amendments.

HOUSE OF COMMONS.—FRIDAY.

The Irish Appointments, &c., Bill, and the Returning Officers Bill were severally read a third time, and passed.

The following bills were ordered to be read a third time to-morrow (Saturday), viz., the Spirits (Ireland); the Borough Rates; the Sale of Beer, &c; the Reformatory Schools (Scotland), the Ecclesiastical Jurisdiction; the Sale in Trade Exemption; the Enclosure of Land; the Common, &c., Rights (Ordinance); the Admiralty Court; and the Friendly Societies' Acts Continuance Bill.

THE QUEEN'S MESSAGE.

The CHANCELLOR of the EXCHEQUER brought up a Message from her Majesty, which was then read. The Royal communication was exactly to the same effect as that read in the House of Lords, about the same time.

Mr. DISRAELI said, he had every wish to facilitate the course proposed to be adopted by the Government. It was quite right that provision should be made for carrying on the war in a manner befitting the honour and dignity of the country; but at the same time he trusted that her Majesty's Ministers would be prepared on Monday next to state whether it was their intention to call Parliament together in the autumn or not.

The subject then dropped.

THE LATE INQUEST UPON THE CHILD RICHARDSON.

Lord D. STUART asked Lord Palmerston whether he would have any objection to lay upon the table copies of the short hand writers' notes of the proceedings at the Coroner's inquest lately held upon the body of a child named Richardson, who died after an operation in the Free Hospital, Gray's-inn-road?

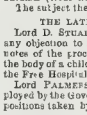
Lord PALMERSTON said that no short-hand writers had been employed by the Government; but, if the noble Lord desired it, the depositions taken by the Coroner should be laid upon the table.

BRIBERY BILL.

The House then again went into Committee upon this bill, with a view of considering the clauses to be proposed by private members.

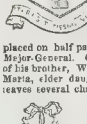
OBITUARY OF EMINENT PERSONS

MAJOR GENERAL EDWARD CARLYON.



THE death of this respected gentleman, the representative of a very ancient Cornish family, occurred at his seat, Tregrehan, on the 4th inst., in his 71st year, just three weeks after that of his wife.

Major-General Carlyon entered the Army in 1803, as Ensign, in the 66th Foot. During ten years, he was employed in a variety of services in India, and so expanded his regiment in the expedition under Sir David Ochterlony against Nepaul, for which campaign he received a medal. His benevolent efforts in the institution of the Indian Orphan Asylum for the Daughters of British Officers in India are still deeply appreciated. On the retention of the second battalion of his regiment at the termination of the last war, Major Carlyon was placed on half pay, and was promoted by the late Brevet to the rank of Major-General. General Carlyon succeeded to the estates at the death of his brother, William Carlyon, Esq., of Tregrehan. He married Anna Maria, elder daughter of Admiral Sir Thomas Pasley, and leaves several children, of whom the eldest, Major Carlyon, of the 3rd Dragoon Guards, is successor to the family property; the second, Edward Augustus, is a Barrister-at-Law; and the third, George Gwavas, a Captain in the 1st Foot, is now in Turkey.



LADY ELIZABETH ALEXANDER.

HER Ladyship, who died on the 10th inst., at her residence, in Fitzwilliam square, Dublin, was daughter of James, first Earl of Caledon, by Anne, his wife, second daughter of James Crawford, Esq., of Crawford-town, County Down. She was born June 21, 1776 and had, consequently, just completed her seventy-eighth year. Lady Elizabeth's nephew is the present Lord Caledon.

WILLIAM BUNDELL, ESQ., OF CROSBY HALL, LANCASHIRE.

MR BUNDELL, of Crosby, a magistrate and Deputy-Lieutenant for Lancashire, and the representative of one of the oldest families in that county, died at Taunton, on the 11th inst., aged sixty-eight. He was son and heir of the late Nicholas Peppard, Esq., who assumed, in 1772, the surname and arms of Blundell, on succeeding to the estates of his mother, the heiress of Crosby, who was great-granddaughter of William Blundell, Esq., of Crosby, who had a ship broken at the siege of Lathom House, fighting on the Royal side.

The late Mr. Blundell, of Crosby, whose death we now record, married Catharine, daughter of Sir Thomas Stanley Massey Stanley, Bart., of Hooton, in Cheshire, and leaves several children.

COUNT CASIMIR BAITHYANY.

COUNT CASIMIR BATTHIANI-STRATTMAN was a scion of that illustrious Hungarian house of Batthyany, which, during centuries, has given distinguished patriots to obey, reformers, and warriors, to Hungary. The deceased was hereditary Governor of the county of Vas, in Hungary. Count Casimir Batthyany enjoyed a well-deserved European reputation for his varied accomplishments. His patriotism in the Hungarian war for liberty deserves acknowledgment, and the more so because it was free from ambition and selfishness. He desired rather to be useful than to shine. In the struggle for independence he spared neither his blood nor his fortune; his estates, confiscated by Austria, amounted to from 13,000,000 to 20,000,000 francs.

Count Casimir died poor, and in exile—at Paris, on the 12th inst. He was married, but leaves no issue.

TABLE-RAPPING EXPLAINED.—Dr. Schiff, of Frankfort-on-the-Maine, after an investigation into the mystery of table-rapping, finds as to the conclusion that the raps are produced by the voluntary displacement of the tendons of the knee of the shin bone (*muscle long peronnier*) from the sheath in which it glides in passing behind the external ankle bone (*malleole externe*). In fact, Dr. Schiff has been able to produce in himself phenomena entirely similar to what had taken place in "spirit-rapping." The phenomena are most easily produced when the fibrous sheath which terminates the long shin bone glides in weak or relaxed. It can be done without any perceptible movement of the foot.

ST. ANDREW'S CHURCH, WATFORD.—The external walls of this new church are nearly completed, and the architect, Mr Teulon, states that a further sum of £500 beyond the funds already subscribed, will be required to complete the roof, under these circumstances, the committee have no alternative but to let it remain, for the present, the further prosecution of this good work, and they must pause until they shall be furnished with the necessary funds, although each day's experience proves the necessity of increased accommodation at the Watford Station has not been experienced. A sermon will be preached in Watford Church on Sunday next, the Lord Bishop, by the Hon. and Rev. H. M. Villiers, in aid of the funds for completing the new church.

The statue of Ebenezer Elliott, the Corn-law Rhymer, has arrived at Sheffield, and is to be put up temporarily in some convenient place for private view.

BOU MAZA.—It has already been stated that Bou Maza had received permission from the Emperor Napoleon to offer his services to the Sultan in the war against Russia, and that the Emperor had generously announced his intention to defray the expenses of the outfit. The Porte having accepted the offer of Bou Maza, and appointed him to a command in Circassia he was to leave Villers-Cotterets, where he has been residing for some time, for his new post.

THE steam-ship *Simla*, with the 4th Light Dragoons, brought up in the Plymouth Breakwater at one o'clock on Wednesday. After receiving her powder and ammunition, she sailed for the Mediterranean.

IMPROVEMENTS IN PIMLICO.—Six of the houses at the corner of James-street, facing Buckingham Gate, St. James's Park, were this week pulled down, for the purpose of commencing the new street, which is to run up into the Vauxhall bridge-road. As soon as the improvement upon the new plot on of these houses have been completed, there will be an uninterrupted view from Storey's-gate at the end of Great George-street to the Vauxhall-bridge-road.

MUSIC.

THOUGH the London Musical "Season" cannot be said to be over while the greatest musical entertainment of the metropolis—the Royal Italian Opera—continues open, yet the season is virtually at an end, in as far as its musical affairs are calculated to excite any interest. Nothing new, of any consequence, is now to be expected. At Coventgarden we certainly shall have nothing of the kind; when Grisi has finished her round of "farewell nights" the theatre will close. Novelties are still announced at Drury-lane, but these announcements have been made without fulfilment all the season, and we have no longer any faith in them. With the exception of the performers engaged at these two theatres, the host of musical artists who have passed the season in London are absent, all separated, except those who are retained by their provincial engagements for the autumn.

In the provinces, besides the Concerts to be given by vocal and instrumental parties, now in course of arrangement, there are to be two great Festivals: the "Meeting of the Three Choirs," which is to be held this year at Worcester; and the Festival at Norwich. The Worcester meeting is to be held in the first week of September. The oratorios to be performed entire are, "The Messiah, "The Creation," "Elijah," and "The Last Judgment;" and, among the secular pieces to be given at the Evening Concerts are, selections from Mendelssohn's "Midsummer Night's Dream" and Weber's "Oberon," and the fragment of Mendelssohn's unfinished opera, "Lorely." The vocal strength is greater, we think, than on any previous occasion. It includes Madame Clara Novello, Madame Castellan, Madame Viardot, Miss Dolby, Mrs Weiss, Mr. Sims Reeves, Mr Lockey, Signor Gardoni, Herr Formes, and Mr Weiss The instrumental band and chorus will exceed three hundred performers The Norwich Festival will take place the week following; but its arrangements have not yet been made public.

THE THEATRES.

HAYMARKET.—A troupe of Spanish dancers appeared on Wednesday, bringing with them a reputation from Paris, where they had enjoyed the patronage of the Emperor, during their engagement at the Gymnase. Their dancing is qualified by intense and exceeding liveliness, excessive agility, and repeated surprises. The rapidity and force of their movements were extraordinary. The performances consisted of a series of national dances, slightly connected with the shadow of a plot. Some of the dancers were distinguished by the audience; Senorita Guido having received an encore, and Senora Neau being much applauded throughout.

STRAND.—An extravaganza, founded on Goethe's poem, but entitled, after the fashion of the French adaptation, "Faust and Marguerite," was produced here on Monday. It is written by Mr. J. Halford, who also performs the part of *Mephistopheles*, which he reads, acts, intones, and makes up in the manner of Charles Kean so completely that the performance is more than an imitation—it is an identity. It is, in fact, the most marvellous thing in our theatrical experience, and should attract the town as to a "special wonder." The overture and music have been supplied by Mr. J. H. Tully, and comprise clever adaptations of some pleasing airs, which were well received. The whole performance is excellent, and the house was full.

ADELPHI.—"The Courier of Lyons" was produced on Saturday, in a version but slightly differing from Mr C. Reade's—the parts of "the less and the worst of men" being supported by Mr. Leigh Murray, who, in the last scene, succeeded in exciting himself and the audience to a climax of frenzy and expectation, that brought the curtain down to immense applause. The saloons, we find, and the minor theatres, have their various versions of this melodrama, each competing with the other, no doubt to the injury of all.

MARYLEBONE.—Mr. Wright has been so successful at this theatre as to command box audiences. Important alterations have been commenced in the building; a portion of the walls is already down, in order to enlarge the stage, which we are informed will, next season, be of greater capacity than at present. It is to admit of spectacular representations of the great tragic drama, for the support of which Mr. and Mrs. Wallack have shown that they possess the appropriate talent Next week, we find that these performers are to appear at the Birmingham theatres, and, with their strong acting, cannot fail of becoming immense favourites.

ROYAL POLYTECHNIC INSTITUTION.—The improvements in this establishment prove to be attractive, and have indeed drawn the attention of her Majesty and Prince Albert, who have shown laudable curiosity, in relation to Dubrocq's electrical experiments. Turner's Views on the Loire, also, are objects of great interest, and the clear statement of them given by Mr. George Hodder, in his accompanying lecture, is the theme of general admiration.

MR. CHARLES MATHEWS announces his benefit for next Wednesd y, the 19th, as intended to consist of a selection of pieces, contributed for the occasion by his brother managers—Messrs. Buckstone, Kean, Wigan, Webster, Gye, and Smith.

NATIONAL SPORTS.

STAMFORD RACES.—TUESDAY.

Sweepstakes of 50 sovs., for colts.—Blue Beard walked over.
Sweepstakes of 10 sovs.—Lucy Banks filly, 1. Mariposa, 2.
Sweepstakes of 100 sovs.—Boer, 1. Rasbee, 2.
Burghley Stakes.—Eldorado, 1. Cock Pheasant, 2.
Sweepstakes of 200 sovs.—Almond, 1. Pugnator, 2.
Sweepstakes of 200 sovs for fillies Habena, 1. Benka, 2.
Pandicap Plate of 50 sovs.—Blue Beard, 1. Florist, 2.
Selling Stakes.—Economy, 1. Sweetness, 2.

WEDNESDAY.

Sweepstakes of 15 sovs.—Chessy, 1. Nagara, 2.
Kirton Stakes.—Nicholas, 1. Rodo Meh, 2.
Stamford St. Leger.—Weathercock, 1 Blue Beard, 2.
Sweepstakes of 50 sovs.—Habena, 1. Nutrimens, 2.
Gold Cup.—El Dorado, 1. Phaeton, 2.
Sweepstakes of 10 sovs.—Thessaly, 1. Sackbut, 2.
Handicap of 3 sovs.—Sweetness, 1. Scindia, 2.

NEWTON SUMMER MEETING.—TUESDAY.

Trial Handicap.—Snowden Dunhill, 1. Julia, 2.
Go Lorne Stakes.—Ellerdale Filly, 1. Resistance, 2.
Handicap Plate of 70 sovs.—Donskoy, 1.
Handicap Plate of 50 sovs.—The Cripp.e, 1.

WEDNESDAY.

St Helen's Purse.—Ellerdale Filly, 1.
Gold Cup.—Lough Bawn, 1. Morning Star, 2.
Scurry Handicap.—Miss Emma, 1. Antonio, 2.

NOTTINGHAM RACES.—THURSDAY.

Sceyborough Stakes.—Sharavogue walked over.
Rob. Hood Stakes.—Lord Alfred, 1.
Nottingham Handicap.—Sir Andrew, 1. Types, 2.
Sherwood Handicap.—Garforth, 1. (Objected to)
Short Stakes.—Jenny Wren, 1. Governess, 2.
Castle Handicap.—Domino, 1. Dagobert, 2.

FRIDAY.

Burney Park Stakes.—Helena, 1. Rosa, 2.
Grand Stand Stakes.—Dagobert, 1. View Halloo, 2.
Glasterlaw Handicap.—Domino, 1. Itch, 2
Portland Handicap.—Florist, 1. Farmer's Boy, 2.
Queen's Plate.—Domino, 1. Sharavogue, 2.

CRICKET.—One of the great matches of the season came off this week—the Gentlemen v. the Players of the Marylebone Cricket Club, which terminated in favour of the Players by ten wickets. In the first innings, the Gentlemen obtained 95 runs; second, 74: 166. The Players, in the first, 148, and second, 20.

RACING NEXT WEEK.—One event in the field takes place next week, but that one, a most important one—Goodwood—on Tuesday, Wednesday, Thursday, and Friday. Last year, the value of the stakes run for was nearly £9,000; when forty four races took place in the four days The present meeting it is expected, will fully equal the last one; and, should the weather prove fine, a very large assemblage may be anticipated. Thursday is the Cup day.

A fraudulent over-issue of stock in the New York and New Haven Railroad Company has just been discovered at New York, the par value of which is 1,000 000 dollars. Mr. Schuyler, the perpetrator of the gigantic fraud, has gone off to Canada.

CHESS.

TO CORRESPONDENTS.

F. A. S.—The parchment Italian is B. you refer to. "Compartatione del Giuoco de i Scacchi ad' uso Italiano Lucchese." per Lucio Greco detto Indi, has no date; but, from the nature of its being dedicated to the nine Muses from Apollon, and written by a Gallesian it there is no doubt of its being before 1600, when Lucio died.
F. B. G.—It is. I have at present
CLERICUS.—The discovery of earliest Chess MSS., which we announced lately, will probably come to illustrate the archæology of the game than all that has been written on the subject for the last half-century. A few studies of the most ancient sort, the "Problem" may be seen by any one interested in such curiosities.
ANTIQUUS.—The moves suggested by Mr. K., in the Cambridge Game, at move 16, was Q to Q B 6 not Q to K 3rd
JACK OF PEMBROKE and STICKLEBACK. They were correct, but received too late.
ALPHA.—Mr. Aumont wishes it to be mentioned, that the Match between Mr. Anderssen, at Breslau, and Mr. Freyebend, at Breslau, is to be played in Mr. Aumont's room, at No. 2, Bedford-row, Holborn.
BERWICK.—"Part II." in our old method, did not satisfy, as some readers once have interpreted it, by the names of those, but was to do it after what we call God-evening Problems. Forbes-Jeffrey, Paulin, &c. Terminus tenebrae. Gloucester-sign floante and rendezvous mean a soft Peel, a Precone, &c.
BERWICK.—The half-pay question is still under discussion. Twenty-one years ago, he was simply asked in Mr Brien's favour: and by a majority so decided, that the matter was not even put to the vote, in favour, only pay upon even terms.
BACCHUS.—We should not think that these diagrams may now be got of Messrs. Kent and Co., St. Paul's-churchyard, as Mr. Brien died in January last, and his stock for trade sold by Messrs. Hodges and Bell, of Portugal-street, Lincoln's-inn-fields.
GEORGE J. FORBES.—A letter was despatched on the 12th, acknowledging the safe arrival of both your last packets. Many thanks for them.
F. C., of Clare, J. B. K. of Emmanuel; E. A. M., of India; the Rev. H. B., of Norwich, Jerry Kloss, J. B., of Bridport, are cordially thanked for their communications.
PHILO-CHESS.—Of the two separate Chess Problems that have been published at least a dozen versions in England; and we have no doubt there are twice that many of translations in MS.
SOLUTION OF PROBLEM No. 543, by A. M., Phantom, J. P., Dilston, Babylon, S. G., Southwark, U. K., Anonyme, F. H. P., Newark, M. P. A., Brighton, H. F. V., Odiham, Stockbridge, H. K., Anonyme, F. H. G. M., D. D., Nile, are correct. All others are wrong

SOME OBSERVATIONS ON THE ORIGIN OF CHESS.

BY DR. DUNCAN FORBES.

CHAPTER II.—CHATURANGA.

THE term' Chaturanga is compounded of the two Sanskrit words *chatur*, "four;" and *anga*, "a member," or "component part." As an adjective it is very nearly equivalent to our word "quadripartite," and is generally applied to an army, composed of certain proportions, of four distinct species of forces. These were, anciently, elephants, horse-ships (or more recently chariots), and infantry. In this sense we find it used subjectively by the ancient Hindû poet, Vâlmîki, in his celebrated epic the "Râmâyana." b ok II. cap. 31. "*Chaturangeyam hyapi valam sa-mahat prasahemahi*," i.e. "we may, indeed, subdue this most mighty quadripartite force."

Chaturanga, as a neuter substantive, denotes the "Game of Chess," which or gually represented an image of ancient warfare; the manner of force therein employed being precisely the four species above described It has been objected to this primitive game that the introduction of the ship or boat is an anomaly; but the objection is more plausible than valid; and, in fact, it forms one of the best proofs that the game is of Indian origin. It is well known that the vast alluvial plains of the Panjâb, as well as those bordering on the Ganges, are, for nearly one-third of the year, flooded with water, arising in the first place, from the melting of the mountain snow in spring, and secondly, from the torrents of rain that fall in summer It is obvious, then, that in such a country, ships and boats must have formed a very important part in the armament of an army, whether for offensive or defensive purposes. On this point the reader will find ample confirmat on in the fifth and sixth books of Arrian's history, which so graphically detail the expedition of Alexander from Câbul across the Panjâb, and thence downwards along the ladus till his return to Persia. The etymological proof of the Indian origin of Chess is still more incontrovertible. It is only in Sanskrit that the term Chaturanga, the name given to the ancient game I am about to describe, fully and clearly conveys to the mind an idea of the thing represented. The term Shatranj—used by the Persians, Arabs, and Turks—is a pure exotic in their respective languages, defying the ingenuity of their grammarians to make it their own, and a early proving that it is a corruption of the word Chaturanga. But it is needless to dwell more on this point at present. We are then inevitably led to infer that the game of Chaturanga was invented by a people whose language was Sanskrit, which brings the invention home to India; and, further, it is the representation of a mode of warfare most peculiarly adapted to that country.

The ancient Hindû account of the origin of the game is not unlike that of many other nations of modern times. It is, however, as I have already observed, the mere occasion of its invention is a point of little or no real importance; our main object, at present, is to determine the region where, and approximately the time when, it was invented Sir William Jones, in the notes on the history of his friend Nizâmi, Khamsa, hant, "that the game is mentioned in the oldest (Hindû) law-books; and that it was invented by the wife of Râvan, King of Lanka (or Ceylon), in order to amuse him with an image of war while his metropolis was closely besieged by Râma, in the second age of the world." Here, again, we find an excellent reason why ships are admitted into the game, as being of the utmost importance in such an expedition as this, which bears no remote resemblance to that of the Greeks against Troy. In short, whether we consider the game to have been invented in Ceylon, during the siege of Lanka, which is a fabulously remote period, or subsequently, in Central India, the admission of the ship, as one part of the four forces is quite in accordance with the time, place, and circumstances. The period of the siege of Lanka, according to Hindû authorities, would carry us too far back, to meet with the reader's belief, but, in what we may call the heroic or poetic age of Hindû history, we find the game familiarly spoken of in the Purânas, as then known and practised. The authenticity of these poetic histories is much on a par with that of the works of Homer and Apollonius Rhodius They are still, most probably, founded on fact, only the details are highly coloured like those original accounts of the very ancient game, to which we have yet ob ained access, is to be found in the Sanskrit Encyclopædia, entitled "Shabda Kalpa Druma," published at Calcutta in seven volumes, 4to. within the last twenty years (*vide* Vol. I., under the article, "*Chaturanga*"); also, in a work published at Serampore, in two vols 8vo, 1804, entitled, "Raghu Nandana Tatwa"—i. e. Institutes (of the Hindû Religion) by Raghu Nandana—(*vide* Vol I, page 83). In both of these sources, the text, with very slight variations, is identical, and evidently taken from the same original work—viz., that alluded to by Sir William Jones as an extract from the "Bhavishya Purâna" (*vide* "Asiatic Researches," octavo edition, Vol. II., p. 160) We may here state, however, that Sir William Jones has given us, by a mere abridgment of the extract in question, and that he has at the same time deduced from it several inferences not warranted by the original—of which more hereafter. The following is what I believe to be a fair but free version of both portions of the Sanskrit text as bear upon our immediate inquiry. I must mention, however, that the original is, in many places, so extremely concise in its style, that a mere verbal translation into English would convey no meaning. In such cases I have ventured to give the author's sense as clearly as I can, by adopting some slight degree of circumlocution.

The events narrated in the Purânas respecting the five sons of Pandu, of whom Yudhishthira was one of the most renowned, are supposed to have occurred a little more than 3000 years before our era. The game of Chaturanga had by that time become popular in the country, and seems to have attracted the notice of Yudhishthira, who applied to the sage Vyasa, the Nestor of the day, for the benefit of his instructions on a subject so well adapted to his peculiar disposition; for, be it known, that the youthful warrior was strongly addicted to gambling, and in his infancy even Chess itself was a gambling game, if I may see such an expression.

In March's "View of the History, &c., of the Hindûs," Vol. IV., page 438, where the author gives an analysis of the contents of the great epic poem of the Mahabhârata, we have the following notice of Yudhishthira:—

The game (of Dice) is sanctioned by the Shâstra. Yudhishthira first lost his estates; then, in succession, all the riches in his treasury—his four brothers, and his wife, Draupadi The conqueror's father, Dhritarâshtra was so pleased with Draupadi that he told her to ask what she would and he would grant it. She first asked for her husband's kingdom: this was granted. She was permitted to ask other blessings, till at that her husband had lost was restored. Yudhishthira again encounters Shakuna at Chess, and again loses all.

Thus it would appear, that Yudhishthira fared no better at Chess or Chaturanga than he had done with the plain dice. It is to be inferred, that he ventured on the game too soon after Vyasa's lecture, before he had sufficient time to gain experience.

(*To be continued.*)

THREE THOUSAND MILES FOR THREE-HALFPENCE.—By a new postage law just passed by the United States Congress, a single letter conveyed not more than 300 miles is to be charged 1½d., and for a greater distance 3d. For a single letter conveyed not more than 2500 miles, wholly on packet lines, and to and from a foreign country, the postage will in future be 2½d; and if above 3000 miles, 5d. The postage on all inland letters must be prepaid, and after the 1st of January next this must be done by stamps. On all letters intended for delivery in the towns in which they are posted, the postage will in future be 1d each, and all not-known letters, after being advertised will be charged each an additional 1d. In the United States all letters, the owners of which cannot be found, are advertised in the public journals.

THE GRAND EXHIBITION OF 1855.—The applications at the Hôtel de Ville for counters, &c., at the Grand Exhibition of 1855 are very numerous. In fact, they already exceed considerably the amount of space to be so apportioned. It is supposed that the committee appointed to make the allotments will be compelled to reject two applications out of three. The applications from abroad are also very numerous. The Emperor has expressed great dissatisfaction at the way in which the original plans for the building were drawn up, but, with the additions that have been ordered, the deficiency will be in a great degree remedied.

THE WINCHESTER "DOMUM"

ON Thursday week, the 13th annual celebration of "Domum" took place at Winchester College. The dinner in the ancient Hall was fully attended by old Wykehamists. On the dais, upon the wainscoting, were hung pictures of the founder, William of Wykeham, and of Dr. Goddard and Dr. Cheney, formerly head-masters. The well known election-grace having been rung, the Warden, with his usual hospitality, entertained the circle of guests in the picturesque gallery of the lodge. At half past six, the visitors began to arrive; the finely proportioned School-room was elegantly decorated; and at the east end was erected an orchestra, occupied by an excellent military band from Southampton, which played popular airs for some time, until the quadrangles, courts, and meads were filled with a brilliant assembly. The time-honoured song, "Dulce Domum," under the direction of the Prefect of Hall, was chanted, with the wonted zeal and hearty love of Wykehamists accompanied by the band of the 34th Regiment quartered at Portsmouth —in School, on Hall-court, in Meads, in School-court, in Chamber-court, and, finally, without instrumental music, under Middle-gate. The effect of the voices in the grey light was remarkably grand. A curious circumstance is connected with a perceptible omission in the band; there were no drums, for it so happened that on October 22, 1811, the 34th English regiment were engaged at Arrozo de Molinos with the 34th French regiment of the line; and captured from the enemy the drum-major's staff and the brass drums: the 34th are now under orders for the East, and with honourable good taste packed up their trophies lest they should offend our allies. Hence the band appeared without their drums—certainly a defect

The Hall was held at the St. John's house Rooms. The Ladies Patronesses were Viscountess Palmerston, Lady Erle, Lady Maria Saunderson, Lady Cranworth, Ladies Erle, Heathcote, East, Stephenson, and B Mill, and others of the chief county families.

The "Domum" was assisted by the Bishop and the Dean of Winchester, Mr Justice Coleridge, Sir William Heathcote, Bart., M.P. for Oxford University, Archdeacon Wigram, and other gentlemen of distinction. It was considered by those present to be one of the best frequented meetings that has been known for many years Mr. Walcott, in his History of the College, thus tells the touching story of "Domum":—

Quaint is the old tale, and a tear glistens in his eyes, as he speaks of the cause of that ancient custom. Three centuries have gone, more or less—the monks still sang mass in the Swithun's. Richard's vesper bell still chimed in with the bible peal of S. Mary's—since the summer holidays came and found the busy courts of the college deserted save by a few servants and such scholars, whose home lay too far off to enable them to pass up in their errand. None have ever told why the friendless boy was still kept a prisoner, and awhile chained to a pillar, his merry fellows gone; but, sad truth it is, none addressed, none heeded him as he sat sighing sore, the pale face, the bowed head, the glazing eye; none heard complaining from the poor solitary; but he thought, through the long dull hours, the lonely walk, the silent night, and the brain grew heavy with sorrow; sad and weary with longing, none came to soothe his grief, or dry the streaming tear, as night or sound reminded him that he was alone. The end came at last. The scholars came back; there was no sound in the chamber; the last sunset rays were gilding his bed, and he was rejoining in the sunrise of undying day—he had found his home. From the bank of the ancient tree, that stood where ancient sapling, the third of its race, now stands, as his memorial, with the death pang at his heart, he carved the words "Dulce Domum." Until the year 1774, the "Domum" was sung, at the wharf on Staeberg Lane at the college gates.

GRAND NATIONAL ARCHERY FETE AT SHREWSBURY.

THE Toxophilites of Shropshire held a brilliant gathering on the 5th inst., which presented a very fine picture of this national pastime. The site selected by the committee was the Shrewsbury race-ground, skirted by the bold and wooded range of Haughmond, and the more lofty summits of the distant hills. There had been all the bustle of a camp from an early hour in the morning: Lord Hill's "Waterloo tent" and the pretty marquee of the Shropshire Horticultural Society were set up; while, by their side, was another tent, devoted to a collection of photographs of interesting subjects, and specimens of "nature painting," forwarded by the Society of Arts to the Shropshire Mechanics' Institution.

The targets extended in a double row to a west length. At a quarter before eleven the bugle sounded for places; and soon after the gentlemen competitors commenced shooting the "National York Round"—viz., six dozen arrows at 100 yards, four dozen at 80 yards, and two dozen at 60 yards, which was the number prescribed for a collection of photographs of interesting subjects, and specimens of "nature painting," forwarded by the Society of Arts to the Shropshire Mechanics' Institution.

The targets extended in a double row to a west length. At a quarter before eleven the bugle sounded for places; and soon after the gentlemen competitors commenced shooting the "National York Round"—viz., six dozen arrows at 100 yards, four dozen at 80 yards, and two dozen at 60 yards, which was the number prescribed for a collection of photographs of interesting subjects, and specimens of "nature painting," forwarded by the Society of Arts to the Shropshire Mechanics' Institution.

During the shooting of the arrows at the hundred yards' distance, and which occupied until nearly two o'clock, the number of visitors to the field rapidly increased: a large concourse of spectators, including a great number of gaily-dressed ladies, were merrily engaged in crossing and re-crossing the shooting-ground as they followed the archers in their "overs" from opposite targets to target.

The luncheon was served in the Waterloo Tent.

GRAND NATIONAL ARCHERY MEETING ON THE RACE-GROUND, SHREWSBURY.

Prizes, amounting to about £370, were offered in various sums; the successful competitors being allowed to make selections of articles, to the value awarded, at certain establishments in the town. Medals of exceedingly chaste design, bearing a profile of her Majesty, and inscribed, "Grand National Archery Meeting, Shrewsbury, 1854," were also awarded with each of the prizes, except the "wooden spoons."

The shooting re-commenced after luncheon, the ladies taking their places at the targets allotted to them in the order named. The numbers specified for them to shoot each day were, four dozen at sixty yards, and two dozen at fifty yards. The gentlemen resumed their shooting, at the shorter distances, at the same time. The scene was now of a most animating and interesting description—nearly the whole length from the one side of the race-course to the other presenting a formidable front of archers, who marched in a body from side to side on the different "overs."

On Thursday the gentlemen archers assembled in strong force about eleven o'clock, the ladies very courageously taking their places at the targets a short time afterwards. The élite of Salop and the adjoining counties again graced the scene with their presence, though scarcely in such a large array as on the previous day.

At two o'clock a party of about 470 repaired to the Waterloo tent, where luncheon was served. Afterwards the archers held a meeting on the greensward in front of the marquee: Mr. W. Butler Lloyd, Mayor of Shrewsbury, being called upon to preside. Mr. Hughes, one of the judges, then presented Mr Ford with a handsome silver bracer, for having got three golds in succession at 100 yards; and Mr. Hilton with a silver medal, for having obtained two golds under the same circumstances. It was then resolved that a meeting of the archers of the United Kingdom should be held next year. Thanks were then voted to the ladies and gentlemen of Shropshire and the inhabitants of Shrewsbury for their liberal support. The thanks of the archers were awarded to Mr. W. Butler Lloyd, Mayor, for his great exertions in bringing about so successful a meeting. Thanks were likewise voted to the judges, and to Mr. Luard, the honorary secretary.

On the sound of the bugle the archers were again plying the gentle craft, and concluded the competition for the various prizes about six o'clock. In the evening there was a grand ball at the Music-hall.

On Friday, a handicap sweepstakes was contested. The handicaps were arranged on the numbers obtained in the previous matches, the unsuccessful competitors being allowed scores in proportion to those they were then behind the successful competitors. The conditions were that the ladies should shoot four dozen at sixty yards and four at fifty yards, and the gentlemen the "National York Round." The former completed their task shortly before five, and the latter about six o'clock. Thus terminated the most successful meeting yet enjoyed by the Society.

"THE DOMUM," AT WINCHESTER COLLEGE.—(SEE PRECEDING PAGE.)

SIEGE OPERATIONS AT CHATHAM.—SPRINGING A MINE.

SIEGE OPERATIONS AT CHATHAM.

IN our last publication we gave a short notice of the military manœuvres which took place at Chatham, on Thursday week, under the direction of General Burgoyne, Inspector-General of Fortifications, and this week our Artist has given an Illustration of the interesting spectacle, from which a more precise notion of the proceeding may be obtained. As the day was fine a very large number of persons from London and the vicinity were present.

Special trains were run by the South-Eastern Company as far as Tilbury, whence passengers proceeded by steam-boat to Chatham. Prince Albert left town by special train, and on his arrival at Chatham was received with a salute from the artillery, and loud cheers from the people. The Prince and his party occupied a stand on the top of the casemate barracks, near the Dockyard—a point which commanded a perfect view of the whole proceedings. The 35th Regiment, which had previously taken up a position with scaling ladders, advanced, on the word of command, and carried the right face of Prince Henry's Bastion by escalade, and established themselves within the lines. A column of Royal Marines advanced upon the 35th from Fort Amherst, and they resisted the attack, but were ultimately driven out of the fortress, and, during the retreat, a smart fire was opened upon them from the King's Bastion by the large guns. The opponents continued firing for some time, the 35th lying on the ground after returning to their original position.

Prince Albert and his staff then proceeded to inspect the parallels and double sap in operation, and subsequently visited an adverse battery of six 32 pounders and a stockade, and passed from St. Mary's Gate to the casemate prepared for his reception. A column of the 34th then advanced from Gillingham Tower under a heavy fire from the 32-pounders in the battery. The Artillery and Marines occupying the battery ultimately retired after destroying it by mines, which exploded most effectually, blowing some guns off their carriages, and covering others with the earth thrown up. A stockade and several mines were then blown up by a voltaic battery.

The defence of ditches of a fortified place against an assault by rockets, forgasses, hand-grenades, live shells, musketry, and pierriers, was the last operation, followed by the mode of throwing a body of troops with artillery across a river, upon rafts of cylindrical and india-rubber pontoons. The proximity of the river Medway rendered this experiment peculiarly interesting. The use of the helmet and diving-dress was also exhibited.

At the close of the operations the Royal Engineers gave a splendid entertainment, in their mess-room, to a large and distinguished party. His Royal Highness Prince Albert honoured the festival with his presence

LOSS OF LIFE AT A SHIP LAUNCH.

ON the morning of Thursday week, Messrs. Earle, the eminent iron ship builders, of Hull, had arranged to launch from their yard, at the east end of the Victoria Dock, a very fine iron barque, named the *Deutherpe*, which they had built for Messrs. John Beadle and Co., merchants, of Hull. This vessel is about 400 tons burthen, and has on deck two poop houses. Everything was prepared, and, as it was thought, every precaution taken to ensure success in the launching. Men were stationed at all points to prevent the people from getting on board the vessel, but without avail. At the time of launching, there were

CATASTROPHE AT A SHIP-LAUNCH, AT HULL.

between 300 and 400 persons on board; and of these, as many as could conveniently stand had stationed themselves on the roof of the poop-houses, where there was not a scrap of rope, or an inch of bulwark, to hold on by. At about ten minutes past eleven o'clock the cry of money or naming the vessel *Deutschorpe* was performed by Miss Baird; the last wedges were knocked out, and the good ship glided easily and well into the water. At this time it was found that there was too much "way" on her, and some efforts were made to check her. At the same moment the people on board, commencing "sallying" themselves in a manner from side to side to make her rock in the water, when the vessel dipped on one side, and one of the check ropes broke, bringing the whole strain on the other side, to which the people now rushed. The two lines broke, the vessel completely on to her beam ends and the miserable crowd of people who had taken their stand on the "poops" were thrown into the water. It was now feared the ship would go over altogether; but, fortunately, at this moment the dock gates in attendance, and endeavoured to resuscitate the bodies, but without success. During the confusion a tug steamer, the *Ann Scarborough*, on board of which a band of music had been placed, was sunk by the crowd of persons who got on board of her, and several of them narrowly escaped with their lives.

FREDERICK-WILLIAM AND THE CZARINA.—The irresolution deplored by King Frederick-William in a score of despatches sent to Austria, but allowances are made for his peculiar position. It is known that he is sincerely attached to his sister, the Empress of Russia and that she makes the best use of her influence over him. The Berlin correspondent of the *Oest. Deutsche Post* writes that Lieutenant Colonel Manteuffel was the bearer of a letter from the Empress, which produced a great impression on the King. The imperial writer, who addressed her brother "from the bed of sickness," says that she is likely to be one of the sacrifices to the war, as she cannot take the German baths, which are so extremely beneficial in the restoration of her shaken health. She further affirms that it would break her heart if the Prussian army should take the field against the Power which had rendered such great assistance to her father when in peril. Such appeals as the foregoing cannot but produce a powerful effect upon such a man as the King of Prussia; but he will eventually be obliged to make his private feelings subservient to his public duties.—*Letter from Vienna.*

At a recent festival given to 103 of "the oldest inhabitants" of the city of Chichester, there were seventy-four guests between 70 and 80; twenty-eight between 80 and 90; and one 94 years old. The united ages amounted to 7686 years!

THE BEARD AND THE ARMY.—The Scots Greys, who are staying in Manchester until their route for Turkey is received, have had orders to dispense with the use of the razor.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Since we last wrote, the market for national securities has been in a fluctuating state, and prices have been on a declining account. From news from the East has been regarded with much anxiety; and the declaration by Lord John Russell, that an additional loan will be announced next week, for carrying on the war with Russia, has led to several *bear* operations. The question in the minds of jobbers now is, in what way, and upon what terms will the Chancellor of the Exchequer raise more money? Evidently the market will no bear the pressure of a larger sum per of Exchequer-bills, or Exchequer bonds, notes, indeed, the rate of interest upon these is increased. Hence, it is [illegible] that the Chancellor is [illegible] to announce a new Stock loan of about £4,000,000, at 5 per cent.

There has been a steady, though not to say brisk, demand for money for commercial purposes. In Paris a good many [illegible] have taken place, but we may observe that the Bank of England, as well as the private bankers, are only lending on first-class security. For ab pure it to the Continent some rather large parcels of gold have changed hands, and upwards of £300,000, chiefly in silver, has been forwarded to India and China. The imports have been on a liberal scale; and we forgot them we may note £100,000 dust from the Brazils, £42,000 from the Brazils, and £100,000 from Australia. Since months since, we observed that a portion of the gold then forwarded to Australia would find its way back to this country. We have advices to the effect that about 40,000 sovereigns have been shipped from Sydney; and, further, that the value of the gold on passage is upwards of £1,000 000 sterling.

On Monday, the prices of Consols fluctuated materially. The Three per Cents were done at from 91¾ to 92 for money, three per Cents reduced, 91¾ to 92; the New Three-and-a Quarter per Cents 94 to 94¾; India Stock, 254 to 256; India Bonds, 2s. pm.; Exchequer bills (£100,), 3s. pm.; Do Advanced, 2½ pm.; Exchequer Bonds (£1,000), 2½ pm. The Market, on Tuesday, was steady. Bank Stock was 211 to 212 and 211. The Three per Cents Reduced marked 91½ to 92; the Three per Cent Consols, 91¾ to 92; and the New Three-and-a Quarter per Cents, 94¼ to 94¾. India Stock, 255 to 256; India Bonds 2s. to 3s. discount. In Exchequer Bills, 2s. pm.; Exchequer Bonds, 2½ pm. The Market, on Thursday, was steady. Bank Stock was 211 to 212 and 211. The Three per Cents Reduced marked 91½ to 92; the Three per Cent Consols, 91¾ to 92; and the New Three-and-a Quarter per Cents, 94¼ to 94¾. India Stock, 255 to 256; India Bonds 2s. to 3s. discount. In Exchequer Bills, 2s. pm.; Exchequer Bonds, 2½ pm. The Market, on Friday, was steady. Bank Stock was 211 to 212 and 211. The Three per Cents Reduced marked 91½ to 92; the Three per Cent Consols, 91¾ to 92; and the New Three-and-a Quarter per Cents, 94¼ to 94¾. India Stock, 255 to 256; India Bonds 2s. to 3s. discount. In Exchequer Bills, 2s. pm.; Exchequer Bonds, 2½ pm. The Market, on Saturday, was steady. Bank Stock was 211 to 212 and 211. The Three per Cents Reduced marked 91½ to 92; the Three per Cent Consols, 91¾ to 92; and the New Three-and-a Quarter per Cents, 94¼ to 94¾. India Stock, 255 to 256; India Bonds 2s. to 3s. discount. In Exchequer Bills, 2s. pm.; Exchequer Bonds, 2½ pm. The Market, on Monday, was steady. Bank Stock was 211 to 212 and 211. Embarkation of Arms, at Calais, on Friday.

EMBARKATION OF FRENCH TROOPS IN ENGLISH VESSELS, AT CALAIS.

Any one who has visited the quiet old town of Calais during the ordinary routine of its everyday existence, would scarcely believe that it was capable of so much excitement as prevailed during the latter days of last week. On Thursday morning the Grand Place, the only open space in the town, was quiet enough, save where a few itinerant fair frequenters were preparing their booths for the sale of cheap toys, jewellery, and gingerbread. Before noon, however, the troops destined for the Baltic began to pour in, and the square soon was occupied by some thousands of dust-covered and weary infantry. It took little time, however, to restore the young blood of France to its wonted activity, for whatever these gallant fellows—many of them mere lads—may have wanted in physique, was amply compensated for by superabundant animal spirits; a brief time spent in recruiting exhausted nature, and every man was occupied in the performance of some duty to himself or others: some might be seen trimming their tent poles, not much larger than walking-sticks; hundreds were down upon their knees on the paving stones, packing and adjusting their coarse grey blankets and tent canvas. Each tent, by the way, is oblong, angular, and but three feet raised from the ground, and being composed of several pieces, about half the size of an ordinary sheet, each man is made to carry his share of the nightly protection against cold and damp, and is rendered quite independent of the not always available aid of the baggage-mule or bullock-dray. The separated portions of canvas are provided with buttons and button-holes, and are thus fastened together in a few minutes, forming a comfortable, though not roomy, tent for seven men. Straw is laid down under the tent, and over the straw is placed the coarse grey blanket which each man carries. French soldiers are not restricted to be very close shavers—in the literal sense, at least; but they do shave now and then, nevertheless; and the manner in which this operation was performed in the Grand Place of Calais was somewhat amusing, from the air of cool *nonchalance* with which it was done. Every man who had his chin or cheek rasped under the shadow of Cardinal Richelieu's bust, appeared to feel that he was destined to be shaved there all his life. It was especially interesting to the English spectator (and thanks to the ministrations of the South-Eastern Railway, many hundreds of them strolled amongst the soldiers), to observe the way in which the very important office of feeding the troops was performed. Kitchens were first very soon extemporised, in places on the ramparts where the fires could not be interfered with by gusts of wind. These kitchens consisted of parallel rows of narrow furrows, about six feet long, dug in the earth, and lined with stones, where stones could be found, from eight to twelve inches deep, and from four to six inches wide. Dry sticks were broken up, and placed in the furrows. The tin mess-pots were then placed in a row, about half-a-dozen in number, over the furrow; and, the fire being lit, the process of boiling the soup, &c., was rapidly and regularly carried on. The allowance for a mess of seven men was placed in a circular tin dish—meat, rice both cold and previously boiled), and slices of bread, round white bread; and over these was poured the soup, smoking hot, and holding, along with animal juices, a fair admixture of cabbage and potatoes. Promptly was each tin removed; and still more promptly did seven spoons penetrate the mystery of the savoury mess. Dinner over, the soldiers crowded the cafés with which Calais abounds; but they had not sole occupation of the public-houses, for here and there were groups of English sailors, "liberty men" from the fleet riding grandly in Calais roads. Great was the good-humour on all sides, and intense the cordiality amongst sailors and soldiers. They could not understand each other in words, 'tis true; but the Freemasonry of the bottle made them excellent friends for all that, and never did the "cannikin clink-clink" to more pleasant purpose than on the occasion referred to. At one of these scenes we by mere chance assisted: a young gentleman of our party, seeing that the sailors were puzzled to make out the Emperor's speech, read it aloud in English. A French soldier rose, and, lifting a brimming glass aloft, shouted "Victoria!" The English sailors answered with cries of "Vive l'Empereur!" and a general fraternisation was the result. At two o'clock, p.m., on Friday, as the Emperor stood on the deck of the round-house of the yacht in which he visited the fleet, he was greeted with frequent manifestations of loyalty. He now appeared to greater advantage both as to health and spirits. The same remarks are applicable to his inspection of the troops. Of these scenes, and of the embarkation of arm-chests on the quay, our readers will find accurate representations in our Paper of this week.

During Friday, the troops marched down from their respective encampments to the quay side, where, according to previous arrangements, they deposited their arms and accoutrements in boxes, which were at once conveyed on board the ships of war by small vessels engaged for that service. Large quantities of ammunition and powder were also embarked by the same means.

At a very early hour on Saturday morning the troops were astir, breaking up their encampment and preparing to go on board. General Baraguay d'Hilliers arrived at the quay before eight o'clock, and conversed for some time with Captain Lefebvre, R.N., of her Majesty's steamer *Dasher*, to whom the arrangements for embarking the troops by means of a fleet of steamers, had been entrusted. Among the vessels employed on this service were the *Garland* and *Violet*, belonging to the mail packet service; the *Princess Clementine* and the *Princess Helena*, of the South-Eastern and Continental steam fleet; the

Scene in the Place, at Calais.

Fawn and the *Prasse-parlout*, French mail boats; the *Cocyte* and the *Corse*, French steam-corvettes; and the following vessels belonging to her Britannic Majesty—The *Fearless*, the *Wildfire*, the *Lizard*, the *Adder*, the *Sprightly*, the *Fire Queen*, the *Avon*, the *Dasher*, the *Lucifer*, and the *Echo*, and the *Douro* steam tug. This large fleet of steam-ships had been engaged with the object of precluding delay and confusion, and of effecting the embarkation in one comprehensive movement. Shortly before one o'clock the signal was given, and the different companies stepped on board the transports, Jack lending his hand in the most gallant manner to the men as they swarmed through the gangways or scrambled over the paddle-boxes. On they came with their dark uniforms—so unlike the red coats of the English—and filled the deck in one compact mass from stem to stern. The crew could scarcely thread their way, while their limited knowledge of the French tongue not ex-

THE EMPEROR ON BOARD THE SCREW STEAM-YACHT "LA REINE HORTENSE," LEAVING THE HARBOUR.

tending beyond "mounseer," they compounded a phrase, "make way, mounseer," which, happily suited to the action, was not altogether unintelligible to the new-comers, who, with the most praiseworthy exertions, endeavoured to compress themselves into as small a space as was possible with the conditions of physical existence. The first vessels to leave the port were those lying off the Quai de Marie, the tide serving them the earliest; they were *Le Cocyte*, *Le Corse*, and *Le Faun*. As the vessels glided away they were loudly cheered from the quay, and the men on board shouted "Vive l'Empereur!" and waved their hats most vigorously. The *Lizard*, which had on board four companies of the Second Legion, the colonel of the regiment, and the band, was detained some time for want of water; as was also the *Avon*, which lay on the opposite side of the harbour, and which was freighted with three companies of the same regiment. The band on the *Lizard* struck up "Partant pour la Syrie," while the men on board the *Avon* sang the words. The effect of this improvised concert was very striking. The vocal performance was conducted by an enthusiastic little man, who scaled the top of the paddle-box, and, in that conspicuous post, and in the absence of the usual bâton, threw his arms and legs about in a manner as frantic, though not perhaps so professionally correct, as the wildest movements of Jullien ever displayed. The officers standing on the gallery could not refrain from joining in the novel concert, and the English sailors, though unable to understand the words, fully appreciated the lively enthusiasm of their new allies, and at the conclusion of the concert got up a genuine bit of English "Hip, hip, hurrah!" on their own account. Jack's previous notions of a Frenchman being nothing more than "a frog-eating animal," were very rapidly dissipated, however, when he found, to his surprise, that his companions could not only estimate the value of an English cheer, but could actually throw his own "hurrahs" into the shade by the vehemence and enthusiasm with which they repeated the magic words.

At length, transport after transport had steamed out, the decks swarming with their cheering, shouting, singing cargoes—they passed along the crowded quays, which sent back their loud and constant *vivas* —by other vessels in the port, decorated with the union-jack and the tricolour, and resonant with cheerful acclamations—they passed the harbour mouth, and, for the truth must be told, they felt the uneasy ground swell of the shoal water off Calais, as the transports rolled and plunged, and "Partant pour la Baltique," stripped of its music and its romance, was felt in all the stern realities of the *mal de mer*, and many a youthful conscript from the Garonne and the Landes thought wistfully of the gardens and the vines of his earlier days. The transports having been laid alongside, the troops entered through the lower ports, and for the first time in their lives they found themselves on board an English ship of war. Tier after tier of the huge ships were traversed and explored by the wondering conscripts, till they found themselves, some 1500 in number, mustered on the spacious upper deck of the first-rates, and 900 afloat in the smaller ships. After delivering their first consignment, the steamers returned to port to take in the artillery and heavy ordnance stores to be put on board the French squadron.

The expeditionary division of the Baltic consists of two brigades. The first, under the orders of General Hugues, is composed of the 12th battalion of Chasseurs de Vincennes, the 3rd Regiment of the Line, and

THE EMPEROR LEAVING CALAIS HARBOUR, TO VISIT THE ENGLISH SQUADRON.

EMBARKATION OF FRENCH TROOPS IN ENGLISH VESSELS, AT CALAIS, FOR THE BALTIC.

the 2nd Light Infantry; and the second, commanded by General Gresy, of the 46th and 51st regiments of the Line. The first company of Sappers of the 1st battalion of the 1st regiment of Engineers, and the 4th battery of the 1st regiment of Artillery, with a detachment of the 14th battery of the same regiment, are attached to the division. By a decree of the 3rd inst., General Baraguay d'Hilliers has been appointed Commander of the Expeditionary Division of the Baltic; the General of Division, Niel, Commander of the Engineering Department; and Generals Hugues and Gresy, Commanders of the two brigades of Infantry.

On Sunday morning, at six o'clock, the squadron got under weigh for the Baltic, with a beautiful topgallant breeze from the westward, the Commodore, in the *Hannibal* taking the lead. At eight a large French transport brought up in the roads, towed from the eastward by a French steam-corvette.

THE AFFAIR OFF SEBASTOPOL.

We have received a letter from an eye-witness of this affair, which gives some additional particulars relating to it. It appears that the *Terrible* and *Retribution*, on their way to take in coals at a Turkish mine, in the valley of Geslow, on the 6th ult., had gone up to Sebastopol, to see what was going on there; and, seeing that some of the ships were out, they went closer in, upon which the ships turned back and sent out three steamers, two of them towing a line-of-battle ship each.

"We kept tantalising them," says our Correspondent, "by pretending we could not go very fast; and when they were coming too close, we would go on a little faster. After one hour and a half's chase they gave it up, and turned back. If there had only been the steamers, without the liners, we should have attacked them. The next morning, Capt. Drummond, of the *Retribution*, sent us to the fleet with all dispatch, to report to the Admiral that some of the steamers were out; we went along at a capital pace, and got into Kavarna Bay the same evening, at seven o'clock. The Admiral then sent us to the coal dépôt. When we returned, we found that the *Retribution* had arrived the next morning, and that the Admiral (Dundas) was very much displeased with her Captain in not stopping and trying to cut some of them off that were cruising.

"On Saturday, the 10th, we were again sent off, accompanied this time by the English steamer *Furious*, and the French one, *Descartes*. We went very close into Sebastopol this time; but they did not send any of their vessels out; so, after going round off their forts, we went leisurely out, and steamed along the coast of the Crimea. We were at

ENGAGEMENT OFF SEBASTOPOL, BETWEEN THREE STEAMERS OF THE ALLIED FLEET AND SIX RUSSIAN STEAMERS

our stations going into Sebastopol, the guns were loaded, and ball cartridges served out to the men for the rifles and muskets. We came to a small village the next day, but did not send any iron messengers to them, as it appeared it was a country place, although there were two forts, but I believe no guns. There were great herds of cattle feeding; no doubt they were for the Russian troops.

"On the 16th ult. we again went off Sebastopol, after having first taken a vessel out of Eupatoria, and burnt her. Six steamers and five liners came out, but the liners went back and left the steamers to chase us. We drew them off the land as much as we could, and commenced action. We struck the Admiral's ship, and knocked her paddle-box away. They could not stand our fire, and turned tail and ran for their port. We gave chase, and let them have it from our forward pivot guns. We then turned broadside on, and let them have two or three broadsides, they were too close to port, or we should have sunk one or two; they were crowded with troops. Rather odds, six to three, but they were manned by Russians. We stopped off the harbour, but they would not come out again, being satisfied with what they had got. We then steamed along the Crimea, towards Kaffa. Next day we saw a sail, and gave chase: it turned out to be a Sardinian barque going to Kertch for grain.

"Reports continually going about that sails are in sight: we go over, and they turn out to be clouds.

"We went again into Sebastopol on the 19th, and steamed easy abreast of one three-deck ship, one two-decker, two frigates, and one steamer. We did not fire. There was only the steamer in harbour that we damaged, so we suppose that the others are out somewhere. We shall have a look for them. We called in at the mouth of the Danube, and arrived at Baldjik quite safe, and without meeting any of the enemy."

ARCHÆOLOGICAL MEETING AT WINCHELSEA AND RYE.

THE SUSSEX Archæological Society has fairly earned for itself the right of being considered the first of the local antiquarian societies of this country. It numbers about 800 members, and, what is better than mere numbers, there are among them a considerable number of zealous and active antiquarians—such as Mr. Blaauw, its secretary; Mr. M. A. Lower, a name well known by many interesting publications to which it is attached; Mr. William Figg, of Lewes; Mr. Durrant Cooper, the Rev. J. Vernon Harcourt, Mr. Blencowe, and others, by whose exertions an annual volume is produced, superior in the character of its contents even to the "Transactions" of most of our metropolitan societies. On Thursday, the 13th of July, the Society held its annual meeting at Winchelsea and Rye. A special train had been provided at Brighton, which left that town early in the morning, and took up a numerous accession of visitors at Lewes and Hastings. When reached the Winchelsea Station, soon after twelve o'clock, the party consisted of not much short of 400 persons, who were received there by Mr. Durrant Cooper, the historian of Winchelsea and secretary for Sussex and Mr. Blaauw to visit the principal objects in this curious old town. They were first conducted to the Pipewell-gate, or Land-gate, the most modern of the three old town gates, having been erected at the commencement of the fifteenth century. Mr. Durrant Cooper now undertook the office of lecturer, and gave a short explanation of each object which attracted their attention. They proceeded from this gate through [illegible] long and pleasant country lane (though with the remains of the old [illegible] which to one part of the [illegible] the Dutch century. On their way [illegible] on the north side of the churchyard, where, in [illegible] preached his last open-air sermon.

On their return, the whole party [illegible] two-thirds were ladies, passed through the part of the [illegible] the scene was extremely picturesque. The [illegible] among the ivy-mantled and by [illegible] manor-house, the residence of [illegible], Esq., which, under the Tudors, was [illegible] Abbey, and the interesting ruins of the ancient church of the Grey Friars. From hence they proceeded to Winchelsea Church, which they were received by the Rector, the Rev. J. J. West. Fortunately, the weather was remarkably fine, so that there was no [illegible] to the full enjoyment of the day.

At about half past two the party proceeded by railway to Rye, where the arrangements had been superintended by Mr. Figg. On their arrival, they were received in the town by the Mayor, Recorder, and members of the corporation, who escorted the party to the Town-hall, where the annual meeting of the Society was then opened: C. H. Frewen, Esq., one of the members for East Sussex, taking the chair. After the preliminary annual business of the Society, Mr. Blaauw read an account of the visit of the Duke of Monmouth to Chichester, in 1678, from a contemporary manuscript. Mr. Holloway, the historian of Rye, then read a paper on the history of that ancient port, which concluded this part of the proceedings. The room in which the meeting was held was quite insufficient for the company assembled on the occasion, a considerable portion of which had therefore already spread themselves about the town in search of its ancient monuments, which consisted principally of the fine old church, and of the ancient tower known as the Ypres Tower, now used as the town jail. The room of the old Grammar-school had been turned into a temporary museum, and a number of interesting objects of antiquity the greater portion belonging to the Frewen family, and brought by the chairman, were arranged in it. Among the articles which attracted most attention was a curious ancient sacramental cup, of wood, exhibited by Mr. Pocock Clark, round the rim and other parts of which the following quaint verses were inscribed.—

O taste what drinke the Lord of Life doth give!
It is his ovne most deare and precious blood
Who drinke thereof eternally shall live.
Who worthily receive that drinke so good.

Such as with honest and good hearts do heare
His word sincerely often preacht and read,
They grow to assurance of salvation deare;
The Spirit of Truth do them direct and lead.

They feel the power of Christes death and passion,
Working in thess the true death of all sin,
And the power of his rayserrection,
Raysing them up a new life to beginne.

To them it is a true an I certayne token
That they from Christe shall never of be broken;
Having true faith, working by sincere love,
Their names are written in heaven above.

RICHARD ALLIN, A.B., xxii October, 1610.

Towards five o'clock, upwards of three hundred ladies and gentlemen sat down to dinner, in the upper part of a large old building, formerly part of the Augustine Friars, but now usually employed as a wool warehouse. Mr. Frewen again took the chair. The dinner was followed by a number of appropriate toasts. At about seven o'clock, the company rose from table, and returned to the railway station, highly gratified with the proceedings of the day.

THE FAUSSETT COLLECTION OF ANTIQUITIES AND THE BRITISH ASSOCIATION.—This interesting collection, of which, since the strange refusal of the Trustees of the British Museum to purchase it for that establishment, so much has been said, will form a feature in the exhibitions of the approaching meeting of the British Association at Liverpool. Mr. Joseph Mayer, of that town, who purchased the collection, had liberally yielded to the wishes of the Historic Society of Lancashire and Cheshire, to exhibit it publicly at Liverpool, in the month of June last, and Mr. Thomas Wright had acceded to the request of the society, that he should read a popular lecture on the occasion, explaining the character of the objects composing the collection, the manner of their discovery, and their bearing upon history. An alteration has since been made in the arrangements, and it is now proposed to exhibit the collection to the British Association. The town and the Historic Society will invite the Association to a grand soirée, on one of the evenings during the meeting in September, at which the Faussett collection, with an assemblage of other national antiquities, more or less illustrative of it, will be assembled, and at which Mr. Wright will deliver his lecture. This exhibition will be got together and arranged under the direction of Mr. Mayer, who will be considered as belonging to the Ethnological section of the Association.

SPECIAL PRIZES FOR THE PARIS UNIVERSAL EXHIBITION OF 1855. A notice from the Department of Science and Art has been issued, which states that forty prizes, of the value of £8 are to be awarded to those students who take medals in the greatest number of stages in each of the Exhibitions. Twenty prizes are to be awarded in the Autumn Examination of 1854, and twenty prizes in the Spring Exhibition of 1855. These prizes are to enable the most deserving students to visit the Paris Universal Exhibition of 1855; and each student will be required to make a written report of his observations on that Exhibition. They will be awarded among the students of all the schools of art throughout the kingdom.

THE CZAR AND GERMAN TRADE.—In [illegible] from Leipsic of the 13th states that the disturbance caused in Europe in business by Russia's policy has a very serious effect on the last fair in that city. Very few persons arrived from Poland, Austria, and Wallachia, so as the settlement of accounts is only making for the business transacted at the previous fair, considerable arrears remain due to the commercial men in Leipsic from those in the Principalities.

THE PARIS EXHIBITION FOR 1855.—An influential meeting of merchants and traders took place in Manchester, on Friday (last week), for the purpose of devising measures for the due representation of the staple manufactures of Manchester and the adjoining districts at the proposed Paris Exhibition of 1855: the Mayor presided.

NEW BILL REGULATING THE SALE OF BEER AND SPIRITS.—On Saturday a bill in the House of Commons was printed for further regulating the sale of beer and other liquors on the Lord's Day. By this bill, if it should pass, public houses are not to be opened on Sundays between two and six o'clock, or after nine o'clock. No spirituous liquors are to be sold on Sunday. Constables may enter, and parties offending to be summarily fined £5.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Emperor of Russia has suppressed the teaching of the French and German languages in the military school of Orenburg, and ordered the substitution of Persian, Arabic, and the Tartar language.

Government has resolved to erect a capacious building at Chelsea for the Normal School, now attached to Chelsea Military Asylum. The Board of Works have already prepared the plans of the new building.

The monthly return of the Bank of France, made up to the early part of July, shows a decline in its metallic reserve of £100,000 at Paris, and £585,000 in the branches in the provinces. The whole amount of coin and bullion in the banks is stated at about £18,000,000 sterling.

A most destructive fire occurred in Philadelphia on the 5th inst. The Chinese Museum, the National Theatre, and other buildings, valued at about a million dollars, have been destroyed.

The Chamber of the Clergy in the Danish Diet has adopted the bill for emancipating the Jews.

The Tuscan Minister of the Interior has directed the civil authorities throughout the Grand Duchy to endeavour to convince the lower classes that the vine disease is not attributable to the smoke issuing from locomotives, as the opponents of railways have induced them to believe.

The heat in nearly all parts of the United States is described as being intense. In New York the thermometer has averaged 96 in the shade.

In consequence of a rumour that there is to be, by decree, another extensive levy of men for the army in France, the insurance offices have raised their charge for substitutes. The price last week for a substitute was 3500 francs.

Old men say they can scarcely remember such a fine appearance of all kinds of crops, so early in the season, as there is in Scotland this year.

An American paper states that an experiment to test the practicability of growing tea in the vicinity of Cincinnati is about to be tried.

Letters from the coast of Abassia state that Sonaryl has forbidden the sale of women in all the tribes that recognise his authority.

The *Western Star* states that the numbers of Englishmen and Scotchmen seeking to purchase land in the west of Ireland exceeds all expectation.

The Swedish telegraph line is now opened all the way from Stockholm to Gothenburg. The first despatch was sent on the 9th, the King of Sweden's birthday, and conveyed a congratulation to his Majesty.

The General Screw Steam Company have accepted the proposal of the Mauritius Government to keep up a monthly communication between that Island and Ceylon, for the sum of £5,000 per annum; and the *Proserpine* steamer opens the line on the 20th of August.

The payments from the Irish Encumbered Estates Court last week amounted to about £136,000.

Prince Poniatowski, whose resignation as Ambassador at the Court of Tuscany has been accepted, is about to leave Pisa.

The sexton of All Saints' Church, Newcastle-on-Tyne, has been committed for trial, for stealing leaden coffins from the graves in the old graveyard.

A collision occurred recently on the Susquehanna Railroad, by which twenty-eight persons have been killed.

One of the persons who died from cholera during the recent visitation at Trimdon, Durham, had previously eaten eighteen fresh herrings at one meal.

The harvest is now over in Spain, and the produce is much more abundant than it was in 1853. The advices from Piedmont, Italy, and Germany are also very favourable.

Mr. Eccles Shorrock, of Darwen, has left £3000 to found three fellowships in connexion with the Lancashire Independent College.

Cardinal Fornari having died intestate, all his property goes to the congregation De Propaganda Fide, according to the existing law that regulates the inheritance of Cardinals; so that his relations lose all their rights to it.

The British Consul at Genoa has issued a notice to the British residents there, warning them not to contribute to the Russian loan, as such an act would render them liable to a prosecution for high treason.

An Admiralty order has been received in Limerick for £468, payable to a poor man named Hickie, as wages due to his son, Cornelius Hickie, shipwright on board the lost *Erebus* and *Terror*, exploring expedition of Captain Sir John Franklin.

It was stated by Mr. Bazley, at a public meeting in Manchester, the other day, that an improvement in the art of spinning was lately purchased from a French house, by certain English firms, at a cost of £50,000.

The price of wine is rising in Italy, owing to the grape disease. A certain measure which sold, before the blight, for 10 francs, is now 35 francs.

Among the applicants for relief last week, at the meeting of the Greenwich Board of Guardians, was a man from Yalding, aged 102.

The Calcutta papers mention the death of the well known Baboo Mutty-Lall-Seal, whose fame has reached to England, where he has often appeared before the Privy Council. He has died worth upwards of a million of money.

The King of Prussia will, it is understood, proceed, in about a fortnight, to the island of Rugguan, for sea-bathing. The Queen will, at the same time, renew her visit much to the Grand Duchess Sophie Louise.

The sum subscribed as a testimonial to the eminent chemist, Liebig, by his English admirers, has exceeded £1000, one moiety of which has been applied to the purchase of a service of plate.

There have been disturbances in Manchester for several consecutive Sundays, owing to a determination of some of the disorderly among the Irish population to put down the street preaching of the city missionaries.

The Duke and Duchess of Genoa presided at the inauguration of the Alexandria and Novara Railway, which took place with great solemnity on the 5th.

The committee of the Cheltenham School of Art have issued handbills, announcing that their pupils may, in future, become candidates for "masterships"—the same being open to competition among the "female" students.

The frontier of Lombardy, which has hitherto been open to foot passengers only, is now also open to carriages and waggons driven by Tuscan subjects, provided with passports.

Mr. Dillon, who was wounded in the arm at the Ballingarry insurrection, has received permission to return to Ireland. The announcement was communicated to him by the British Ambassador of the United States.

Four hundred and sixty-six individuals were confined in the political prison of San Severo, in Venice, during the month of June.

A little girl, five years of age, who was playing on the top of the precipice at the Niagara Falls on the Devil's Hole, approached too near the edge and overbalanced; for an instant she clung to the bushes, but losing her hold before assistance could reach her, fell into the gulf, a distance of 200 feet.

A man who calls himself the Rev. John George Lambton Young, and who pretends to be a relative of Lord Durham, has been imposing upon the credulity of clergymen in Shetland and the neighbourhood. He is now in custody on a charge of obtaining money on false pretences.

The Greek Government has selected a marble block in the Parthenon for the monument of George Washington, now being raised in the city named after him.

Four of the passengers from Australia, by the *Magdalena*, which arrived at Southampton the other day had gold to the value of their united at a million sterling.

A fire broke out at Salonica, on the 28th ult., which destroyed a large portion of the town. The damage done is said to be nearly 60,000,000 piastres.

Our average imports of Indian corn, previous to the potato failure, did not amount to more than 20,000 quarters annually. During the last four years they have averaged about 1,600,000 quarters annually.

The [illegible] in Warsaw is far less severe than it was a month since. People are permitted to let their boards grow, to wear white hats, to smoke in the streets, and the taverns are allowed to remain open until twelve, the end of the o'clock.

A boiler explosion took place at Rochdale on Saturday morning, by which ten workpeople were killed, and a large number dangerously wounded.

Cholera has been committing frightful ravages at Marseilles. The deaths have lately been upwards of 100 a day.

Count Bernstorff, the new Prussian Ambassador, was presented, for the first time, to her Majesty on Monday, at Buckingham Palace.

Madame Susanne Mesaglyti, young, sister of Louis Kossuth, has died in New York, of consumption. She was buried with public honours by the exiles.

The Oriental Gas Company have received intelligence by the Overland Mail that their contract for lighting Calcutta exclusively for twenty-one years has been confirmed.

Recent letters from Odessa state that Greek vessels were getting high freights to take produce from the Sea of Azoff to Constantinople, whence it is transhipped to this country.

THE ILLUSTRATED LONDON NEWS

No. 695.—VOL. XXV. SATURDAY, JULY 29, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE WAR DEBATE IN BOTH HOUSES.

It seems to be considered by both Houses of Parliament, but specially by the House of Commons, that, as long as no hostile vote, formal censure, or declaration of want of confidence, be resorted to in order to drive the Ministry from office, every imaginable license may be taken to impugn their motives, discredit their judgment, question their honour, and deny their capacity, and that the charges which cannot be preferred against them as a collective body may be urged against them in their individual capacity. All this may be very amusing to noble Lords and honourable gentlemen who have not the responsibilities of office to restrain their tongues; but we question whether it be fair or prudent. Do these purposeless attacks redound to the credit of those who make them? or to that of the Parliamentary system which permits the license and provides no remedy? Should this question be answered in the affirmative, it would still remain a matter of inquiry whether the moment, when the country has entered upon what is already a most serious, and may, ultimately, be a most protracted struggle, is the proper time for exposing the nation to the eyes of its allies and to those of all foreign Governments, as one that in a day of peril and effort is without an efficient executive. If Mr. Disraeli cannot form a Government, if Lord Dudley Stuart cannot triumphantly bear Lord Palmerston into the War-office or the Foreign-office, and if Mr. Cobden cannot get up a Manchester Ministry for peace *à tout prix*, such gentlemen might collectively and separately show their patriotism by abstaining from a course of opposition, of which the whole tendency is not simply to distract the counsels of the nation, at a time of great emergency, but to render the acceptance of public office a duty which gentlemen of high honour and unblemished character would rather avoid than court.

It is not to the attacks of the legitimate Parliamentary Opposition that exception can be taken. The Ministry may be well content to endure the cavil of its foes. It is quite natural and constitutional, that the men who were last in office should take every opportunity to complain of those who have superseded them. It belongs to the functions of Mr. Disraeli, that he should disapprove of Lord Aberdeen—and that he should, from time to time, strive to engage in a war of words with Lord John Russell. But that the friends of Liberal Government should follow his leadership, is neither natural nor decent. If Liberal members of Parliament will do their utmost to render a Liberal Government impossible, the sooner Mr. Disraeli is permitted to reassume office the better. We have not the slightest doubt that Mr. Disraeli and his colleagues would carry on the war with becoming spirit—with almost, if not quite, as much spirit as the existing Administration has done. Whether they would satisfy the country in other respects is not quite so clear. Perhaps those Liberal members, who object to the Ministry because Lord Aberdeen is not so ready or so out-spoken as Lord John Russell, and who in other respects seem ever the happiest when they are blaming at present, or predicting future, disunion in the Cabinet, will enlighten the country on this subject. If it be their opinion that the late Protectionist party ought, at the present time, to be in office, it is desirable that they should avow it. It would lead to a great simplification of public business if they declared themselves. It is an established axiom, that Parliamentary Government cannot be carried on without an active and united Opposition; but it is equally certain, though not so generally recognised, that Parliamentary Government cannot be carried on if the followers of a Ministry are more captious and unreasonable than its foes.

The debates that took place in both Houses on Monday night, on the reply to her Majesty's Message, for the application to the purposes of the war of a sum of £3,000,000, already provided, led, as was anticipated, to no result but to the stultification of the Opposition. All parties shrank from imperilling the existence of the Ministry; but the members of no parties abstained from adverse criticism upon its known acts or its presumed intentions. The Lords were more unanimous than the Commons; and, had the debate been confined to that House, a salutary impression would have been conveyed to every part of the Continent, that the Government was cordially supported by the Legislature. But the House of Commons produced a greater amount of adverse criticism. Mr. Disraeli remained true to his very original idea, that the war was the natural and necessary consequence of a coalition Government. The ambition and covetousness of the Emperor of Russia may have secondarily been the causes of it; but the primary source of the mischief—the *fons et origo malì*—was, according to Mr. Disraeli, the deplorable fact that Toryism being unable to form a Government, and Ultra-Liberalism or Radicalism being in the same predicament; the only possible Government, one formed by a combination of the friends and disciples of the late Sir Robert Peel, with the leading Whigs, whose principles and their own were identical, was allowed to assume power. The ex-Chancellor of the Exchequer positively asserts that there would have been no war if Lord Derby and himself had not unluckily been forced out of office. These

TURKISH DERVISHES.—FROM AN ORIGINAL DRAWING BY JAMES ROBERTSON, OF CONSTANTINOPLE.—(SEE NEXT PAGE.)

may not be the words, but they express the meaning which Mr. Disraeli wished to convey. What is to console the country when it learns the heavy price it has to pay for a Coalition? Who shall administer to its comfort when it understands how much better off it would have been if it had continued to have faith in Mr. Disraeli—to have accepted his abortive Budget, and to have taken him as its new "heaven-born Minister"?

The Liberal opponents of the Ministry—who will not, however, go to the length of voting against it on any vital question—are resolvable into four classes: those who object to this war and to all war; those who object to a war in favour of the Turks because of their religion, and of their non-progressive civilisation; those who approve of the war only upon condition that it be turned to the advantage of what they call the "oppressed nationalities" of Poland, Hungary, and Italy; and lastly, those whose whole spirit is in the war, and who have no other desire than to see it prosecuted with the utmost amount of zeal, energy, and success. Mr. Bright may be taken as a fair representative of the first class; Mr. Cobden, of the second; Lord Dudley Stuart, of the third; while the last class has such numerous exponents of its views and wishes, that no one person can justly claim the honour of being peculiarly its organ. With Mr. Bright's party the country has no sympathy. It has no hold of Parliament, of the press, or of public opinion. The same may be said of the party of Mr. Cobden. The religion or civilisation of Turkey are not the points to which we have to look; but the aggression and encroachment of Russia. Mr. Cobden would have the world believe that if he had been Minister, we should have had no war. He never was afraid of Russia, he says, and congratulates himself upon the fact that everybody is coming round to his opinion, that there was nothing to be afraid of. But the sentiments of Mr. Cobden and those of the public are not so identical as he supposes. Mr. Cobden was not afraid of the ambition of Russia because he did not believe that the Czar was ambitious. The public did and do believe in that ambition, and if they are not afraid of Russia, it is because they rely on their Might as well as on their Right, and because they know that the happy alliance of Great Britain and France, either with or without other aid, is more than a match for Russia and all the help she can gather from every quarter under heaven. Those who advocate the views of which Lord Dudley Stuart appears to be the parliamentary oracle, appeal to larger sympathies, and form, perhaps, the most numerous body of those who express dissatisfaction with the conduct of the war. But this party is too revolutionary in its objects to elicit the support of practical men. It affronts right feeling as well as sound policy. M. Kossuth may attract and amuse large audiences; and, to a certain extent, inspire them with his eloquence, but, for all essential purposes, he perorates an1' declaims in vain. He has miscalculated his time, as well as the temper of the people. In the present quarrel, the people of England can have nothing to do with Hungary, or any other "oppressed nationality." If Poles, Hungarians, and Italians are to form themselves into independent states, it is their affair, and not ours. If they are worthy to become independent, they will achieve their object by their own exertions. It was not by the aid of other nations that England became a free and prosperous, and a mighty state; and M. Kossuth, and other patriots of a similar calibre, but betray their own weakness and that of their cause, when they go whining for foreign aid to obtain the freedom which, unless it be of domestic and spontaneous growth, is like Jonah's gourd—sown, grown, ripened, and cut down in an hour. The members of this party are loud in their clamour for Lord Palmerston as War Minister, and Mr. Cobden has done good service in showing what a delusion they are practising on themselves and the country; and how unlikely it is that Lord Palmerston would forward their views in the slightest degree, if he were in possession of the office to which they want to thrust him against his own will and that of the other members of the Cabinet. Of the fourth and last section of Opposition little need be said. They have had some show of reason for the belief that the war has been carried on in too dilatory a fashion. But their utter discomfiture on the amendment introduced on Tuesday evening by Lord Dudley Stuart, proves them to be without a Parliamentary standing. The day for recrimination on this subject has gone by. The hour of action has arrived, and cannon-balls have superseded the goose-quills of Vienna. The goose-quill will not be again called into requisition until Russia be effectually humbled, and until Sebastopol or Cronstadt, or both, shall be in the possession of France and England.

DERVISHES OF CONSTANTINOPLE.

AMONG the varied population of Constantinople, not the least picturesque are the Dervishes, whose dancing and howling performances are stock subjects in most books of travels to the capital of the Ottoman Empire. The artistic group engraved upon the preceding page are taken from a drawing by Mr. James Robertson of Constantinople. Their full trowsers and large mantles, and Eastern head-dress, make up a very effective costume, backed by a cemetery crowd d with tombs and gravestones of marble. Theophile Gautier, in his very life-like "Constantinople of To day," recently published, thus characterises these singular people:—

The word "Dervish," signifies "poor" but this does not prevent their communities from possessing great wealth, derived from the legacies and gifts of the faithful. This designation, once true, is still retained; although it has long ceased to be applicable.

The mutits and ulemahs—the regular authorities and priests of Mahometan law and religion look with no favourable eye upon the dervishes; whether from some secret difference of doctrine, or from the influence which the latter have with the multitude, or only from the dislike which the regular clergy always feel towards the itinerant or mendicant orders, I am not sufficiently profound in Mahomedan doctrines to declare.

Contrary to the custom of all the other Mosiemah, who refuse to let Glaours be present at any of their religious ceremonials, and drive them with violence from the mosques, if they intrude during the hours of prayer, the dervishes permit Europeans to penetrate to the very heart of their takkés, on the sole condition of leaving their boots or shoes at the entrance, and entering in bare feet or with slippers. They chant their litanies, and perform their evolutions without seeming in the least disturbed by the presence of Christians; whose attendance as spectators, is said, on the contrary, to be regarded by them as rather flattering than otherwise.

The Tekké of Pera appears to be anything but a pious prison of voluntary recluses:—

On the contrary, cheerful apartments, painted in gay colours, gladdened by sunlight, and having a superb view of the Bosphorus—a magnificent panorama, bathed in air and light. Scutari and Kadi-Keui, lying outspread upon the Asiatic shore; the Olympus of Bithynia, wrapped in snow; the Isles of Princes spots of blue, upon the rippled surface of the sea; Seral-Bournow, with its palaces, its kiosks, and its gardens; Sultan-Achmet, flanked by its six minarets; the forest created by the masts of ships all nations: all combine to form a spectacle, ever changing, ever new, and on which one could gaze for ever, without weariness, or sense of monotony.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The journey of the Emperor and Empress to Biarritz, has taken place with as little parade and ceremony as was possible, and their Majesties have arrived at their destination in good health, notwithstanding the heat and fatigue attending a journey in the present tropical state of the atmosphere.

The Cent Gardes—whose brilliant uniforms of sky-blue, amaranth, and gold, produce a splendid effect—are to commence their service at Biarritz. Orders being transmitted by telegraph to Bayonne, for the immediate formation of a camp at Biarritz, the garrisons of Pau, Navarreux, St. Jean-pied-de-port, and Dax, were obliged immediately to send thither divisions; in addition to these, four brigades of Gendarmerie are established on the spot, and a squadron of the Guides were despatched from Paris, and travelled with such speed as to arrive at the same time as the Emperor.

At Boulogne, M. Lepic, the Officier d'Ordonnance of the Chef de l'Etat, has taken the Hôtel Brighton, and all the adjoining houses, for the accommodation of his Imperial Majesty and suite, the Cent Gardes, Guides, &c.; and orders have been issued to establish stabling for five hundred horses. The Empress is not to accompany the Emperor.

It is said that the camp at St. Omer will be singularly magnificent, and here it is generally reported that Prince Albert will come over to visit it.

Paris seems paralysed and deserted under the influence of the intense heat, which for the last week has visited it. The theatres, and other places of public amusement, which hitherto have been nearly as full as in winter, play to almost empty benches. No one that can stay at home ventures out till near nightfall. The sunny side of the street is untrodden by living foot, and cab and cart-horses take this opportunity of giving in their resignations somewhat before their full period of service.

On the other hand, the country presents a scene of joyful activity, the crops ripening *a vue d'œil*, and presenting the most splendid appearance, both as to quality and quantity, call for an abundance of hands to cut and prepare them for housing. Here and there the heavy rains and hailstorms have laid, and, in a few instances, destroyed, the grain crops; but so rare are these examples, that they weigh as nothing in the general scale. The injury done to the vines, though certainly very considerable, has, it seems, been also exaggerated; as, in some places, they present a most favourable aspect.

It is feared that the sudden arrival of the heat may bring back the cholera, which had almost disappeared in Paris, and diminished in the provinces: but as yet but little grounds for this fear have been apparent in Algeria, it appears that the harvest is so magnificent as to have rendered vain any of the uneasiness that existed here previous to the arrival of the fine weather, reassuring the public mind on the subject of the native harvests. This fact opens also vast resources for the future. A man of weight and experience is now engaged in the preparation of a *brochure* on the subject, of which the title is to be "l'Algérie Nourrira la France."

Whatever be the prospects of France in general, as to eating, those in Paris, in particular, as to drinking, are at this moment in a perilous predicament, in as far as water is concerned. The works of the second lake in the Bois de Boulogne being terminated some fortnight ago, the process of filling it was naturally commenced; in a few days the effect became sensible in the Bath and other establishments where large quantities of water were required, and now, such is the diminution of the supply, that the public is put to the most serious inconvenience, and, unless some remedy be immediately adopted, it will shortly cease almost entirely. Surely such a contingency ought to have been foreseen and prevented.

Among the other articles of summer produce, is a paper, entitled, "L'Eté," which is likely to have a considerable sale, more especially among strangers and foreigners on their arrival in the capital; as, in addition to the usual topics of the day, it particularly treats of all that can add to their amusement during their stay in the capital. This journal, which appears weekly, indicates all the places of public entertainment in Paris and its environs; the popular pieces at the different theatres; the hours and prices of the various railways and other conveyances; the sights best worth seeing, and all such information. In the end of October the paper is to change its title for "l'Hiver," and to afford to winter visitors the same sort of intelligence that it has done to summer ones.

On the plain which extends between the Bois de Boulogne, the Seine, the Abbey of Longchamps, and the village of St. James, is about to be constructed a Hippodrome, on the most extensive and magnificent scale, for races, national fêtes, and equestrian exercises. It is to be surrounded with a wall, laid down in grass, and is to contain stands capable of accommodating forty thousand persons; on the slopes surrounding the course is to be space sufficient for three hundred thousand more. The plans for this construction are completed, and have already received the Emperor's approval.

The Prince Torlonia has presented to the Cabinet of Antiquities of the Bibliothèque Impériale, four magnificent real Etruscan vases; two, in especial, are of the rarest beauty, and most exquisite form.

Here is a little fact which seems to us too significant to be omitted. The Princess Lieven, whose sources of information on the subject of the politics of Europe in general, and of Russia in particular, are much too authentic to be said in doubt, has renewed the lease of her hotel in the Rue St. Florentin, though her landlord, M. Rothschild, has added two thousand francs yearly to the rent.

The principal theatrical success of the day is "Les Cours d'Or," at the Gymnase. It is said that the Opéra Comique and the Théâtre Lyrique are to be united under the same management. A piece commenced by M. Alexandre Dumas *fils*, for the Gymnase, is, we are told, to be given, by special request, to the Français.

THE OVERLAND MAIL.

By the arrival of the Overland Mail we have received private correspondence and files of papers—from Bombay of the 23rd of June; Calcutta, 13th of June; and China (Hong Kong), 6th of June.

From the Cabool correspondent of the *Delhi Gazette*, we learn that intrigues between the chiefs in Central Asia and the Russian Government are still going on. Very little faith can be placed on these reports. But a report which, two months ago, found its way into the bazaars of British India, seems to be confirmed by this Cabool newswriter. It is to the effect that a Russian force of 4000 men had, in a country called Hoorgunj, a dependency of Khiva, met with a Kokanee army of 12,000 men, and the Russians had been completely victorious. So far as the dates of these native letters can be made out, this fight must have taken place some time in March last. The King of Bokhara still continues his correspondence with the Russian and Persian Governments. Nearer our own frontier, the famous Major Jacob, of the Scinde Horse, has been on a political mission to the Khan of Kheiat, a chieftain of great power, and to whom vast tribes of Beloochees and Affghans, surrounding our Scindian frontier, owe allegiance. The actual nature of the mission is not positively known, but it is supposed to be with reference to keeping the tribes near our frontier quiet.

At Peshawur, and in the adjoining countries, everything is perfectly tranquil. Nor is there anything of note to report from the north-west provinces.

The news from China relates chiefly to the civil war, which still rages throughout the empire. The insurgents appear to have got the upper hand in most of the engagements which have taken place.

THE INSURRECTION IN MADRID.

The outbreak in Madrid began on the 17th inst. No sooner was it known that the Ministers had given in their resignation, and that the Queen had confided to General Cordova the task of forming a Ministry, than the people rose in insurrection. They cried with furious enthusiasm, "Plural Liberty! Long live O'Donnell! Long live the Queen! Down with the Ministers!" In a few moments numerous groups were formed, and at seven o'clock an immense crowd filled the streets. At eight o'clock the people invaded the Prefecture, and possessed themselves of a small quantity of arms which were deposited there. At nine o'clock the rioters were in possession of one of the principal Government buildings, but they soon abandoned it. Up to that moment the insurgents were without plan and direction, as if they had been surprised by the news from Valladolid, and had acted spontaneously and without preparation; but they soon began to act with order and regularity. After ten o'clock a meeting took place at the Town-hall, and a governing Junta for the province was formed. General Evaristo San Miguel was nominated President of it. The General at first accepted, but soon resigned functions which were too difficult under such circumstances—his age not leaving him the force necessary to combat the disorders inseparable from such a rising. The retirement of General San Miguel troubled the operations of the Junta; and, after long hesitation, it resolved to send a deputation to the Queen, to express to her the wishes of the people. The Queen received the deputation, but made no concession. General Cordova, who had accepted the Ministry of War, but had not been able to find colleagues, took on himself to make the Queen's determination known. In the meantime, the first effervescence became calmed a little, but the greater part of the people appeared determined to maintain their ground, in order to be able to recommence the next day with new energy. The chiefs of these bands were encouraged by the rumours that had been spread in the evening that Barcelona had risen, and that all Catalonia had followed its example. General Cordova thought it necessary to disperse the groups: he sent troops to the Plaza Major, with orders to fire if necessary. This was done, but the troops did their duty reluctantly, and it was said that some of them were ready to join the insurgents. At six o'clock in the morning General Cordova resigned to the Queen the power of forming a Ministry, which she had confided to him, but he remained Minister of War. Thereupon the Queen formed a Ministry, consisting of three members of the moderate Opposition, the Duke de Rivas, M. Mayans, and M. Rios Rosas; three members of the Progressist party, M. de la Serna, M. Cantelo, and M. Roda; and of General Lersundi, who represented the defeated party. In the evening of the 17th six hotels were invaded, sacked, pillaged, and set on fire by the populace. These hotels were occupied by the Ministers San Luis, Domineeh, and Collantes; by Count de Quisto, Civil-Governor of Madrid; by Count de Vasta Hermosa, a newly-created Lieutenant-General, who distinguished himself in the combat of Vicalvaro with General O'Donnell, and who commands, in conjunction with General Blaser, the column sent against the insurgents; and by M Salamanca, the banker. M. Salamanca has lost, amongst other precious things, a magnificent collection of pictures, which he had formed with the greatest care, and of which he did the honours to artists and visitors.

The Madrid journals of the 20th, give some additional details of the scenes of bloodshed which took place in Madrid on the 18th and 19th. It appears that on the morning of the 18th instant the people prepared on every side for a desperate combat. Barricades were raised, and for eighteen hours the armed populace fought against the troops, who were obliged to call for the assistance of the artillery. On the morning of the 19th every street had its barricade, and the combat continued during the whole day, particularly in the Prado, and in the streets of La Cruz, La Gorguera, Lobo, Bono Carrera, and San Geronimo. About six in the evening a white handkerchief was seen displayed from the top of a musket, and a suspension of hostilities was called for, on the ground that Marshal Espartero had been charged to form a Government in accordance with the wishes of the nation. In a moment every one laid down his arms, and the army fraternised with the people. It was clearly understood by every one that a Government altogether Liberal was to be formed; and the Duke de la Victoria was loudly designated as the "Pacificator of Spain."

The latest despatches from Madrid reported that the city was quiet, but the citizens were still under arms, and continued to build barricades. The troops maintained their positions at the Retiro and around the Palace. The Junta of Safety and Defence had decreed the reorganisation of the National Guard, and the re-establishment of the Constitutional Ayuntamiento of 1843. M. Pozos, Sub-Director of the Secret Police, had been seized and shot by the populace. No news had been received of the movements of O'Donnell. There was a report that he had held an interview with Espartero, and that they would enter Madrid together.

DISTURBANCES IN ITALY.

Several attempts at insurrection have recently been made in various parts of Italy. At Parma, on the 22nd, the soldiers were fired upon from the roofs and windows of the houses. The Austrian troops, however, maintained the upper hand on all points. At Genoa a rising took place, of which no particulars are given, except that it is said to have been a failure. An outbreak was planned at Modena, but the precautions taken will probably have prevented the explosion. At Rome there is said to be a good deal of uneasiness, and it has been thought advisable to strengthen the French garrison. The King of Naples, who participates in the general alarm, has resolved to anticipate any possible emergency by arming the Lazzaroni, a step which has excited great consternation among well-disposed citizens, as the name of the Lazzaroni is associated with pillage and murder in the history of Naples.

UNITED STATES.

The Royal mail steam-ship *Europa*, which left New York on the 12th, arrived at Liverpool on Monday night. The Committee on Foreign Relations has reported back the Fishery and Reciprocity Treaty. Cholera is said to be making sad havoc with the emigrant trains in the south-west. It has also been very fatal in New York. The skirmishes between the Irish and native American parties have not been put down. On the evening of the 8th inst. a disturbance of this kind took place at Lawrence, Massachusetts. Early in the evening a party of Irish raised the American flag on a pole, surmounted by a cross. This was torn down by the Americans, but was again hoisted. A numerous party of Americans then gathered, and a fight took place, in which several guns and pistols were discharged. The Irish were put to flight, and several of their houses gutted. The Mayor ordered the military under arms, when the rioters dispersed.

Recent gold discoveries in California have caused great excitement, and many people in comfortable circumstances in the Eastern States are preparing to go south.

THE BRITISH ARMY ON THE DANUBE.—The following has just been received from an officer belonging to the Light Cavalry Brigade, encamped near Devna:—"I was exceedingly surprised at the coincidence contained in your last letter, evidently written under the impression that we are suffering from scarcity of food and other vexatious privations. Of course I can only speak to a certainty regarding what passes under my own observation; but I should have experienced the evils you speak of; but such misfortunes have not hitherto fallen to our share, since, as far as our regiment is concerned, we are right well off in point of almost. The Vale of Devna is said to be exceedingly rich in country, eggs, milk, &c., as plentifully as we can desire, but the comfort of the men would be considerably improved if the beer, which is supposed to be lying at Varna, was brought up. With the exception of a few cases of diarrhœa, we have not any sickness whatever; and such, I understand, is the case in the other camps. As regards myself, thank God, I have not felt a moment's indisposition since we arrived. You also wrote, the English papers assert that Lord Cardigan was accompanied, on his *reconnoissance*, by a squadron of our corps. It much regret to say, such was not the case. It is not intended we should be employed on outpost duty—at all events, just now; and, consequently, we were left behind, much to our annoyance and disappointment. Lord Cardigan took with him two squadrons of the 8th Hussars and 13th Light Dragoons, for the purpose of tracing the direction taken by the enemy in his retreat from before Silistria. We expect much from the information looked for on his return. At present the plans of our Generals are kept carefully close, on account of numberless Russian spies said to be lurking in the vicinity of the Allied armies. The consequence is that we literally know nothing. Everyone is most anxious to advance, and time hangs heavily on our hands. Beyond the usual routine of duty there is little to divert attention. Were I to write but a trifling portion of the reports hourly circulated, I could fill a volume, but the truth is, that the flying and contradictory rumours have their origin in the camp, and one person knows just as much or, to speak more correctly, just as little—as another. The moment anything authentic is made known, you shall hear from me."

THE WAR.

SIR CHARLES NAPIER'S OPERATIONS.

ounts agree in stating that Bomarsund, in the Aland Isles, is bombarded on the arrival of the French troops; and as the British with the soldiers on board, passed the Great Belt on Saturday and steered up the Baltic without stopping at Nyborg, we may some interesting intelligence before long.

owing regulations have been established for the organisation ed boats of the fleet:—

tilla is to consist of from eighty to ninety boats, to be divided squadrons—each squadron to comprise three divisions. The boats in a squadron will vary from twenty-five to thirty-, which are to be furnished with howitzers. In each division to be from twelve to fifteen boats, in one-half of which howitzers placed. The entire flotilla is to be placed under the command officer, appointed by the Commander-in-chief—each squadron command of the flag-ship of that squadron, and each division orders of the senior commander of the particular division to boats belong. On the whole being ordered to assemble, whether for the purpose of exercise or landing, the boats of each ship ceed in a body in tow of each other. The commanding officer the barges, followed by the pinnaces, cutters, and launches in ; the captains commanding squadrons being in their respective accompanied by a light boat to carry orders. In each boat-up- a howitzer two extra men, in whom confidence can be placed, employed—one to take charge of the powder magazine, the other of the gun. A proportion of marines, under a captain of the be sent away in the boats on every occasion that they are and armed. A reserve squadron will be formed by the boats of e and screw steam-sloops. On the crews being landed, the are to haul off from the shore to their anchors by the stern, so as by for embarking men or covering a retreat.

very important result of the taking possession of Bomarsund, ted that such a display of vigour on the part of the Allied l be the accession of Sweden to the Anglo-French alliance. It stated, upon good authority, that they are only waiting for a llow being struck to send a large body of troops to act in con- the Allies.

THE CZAR'S ANSWER TO AUSTRIA.

bject which at present most interests all persons taking an in- politics, is the position assumed by Austria towards Russia. e to accounts received at Paris, from Vienna, on Wednesday, toman Secretary of Legation, M. Stendl, it would appear that eror Nicholas has given the bearers of the Austrian ultimatum ignation of the Principalities, an answer well in keeping with itation for haughty daring. In receiving them he is stated to d them that if their Emperor wanted we should have it, but her he nor their young master would, in all probability, see the

ill doubtful what the next step of the Austrian Government but military men of rank are of opinion that within a very short ops will enter the north of Wallachia from the Transylvanian It is thought that no great number of troops will enter the dities, as the object of Austria must be to concentrate a e force in the east of Transylvania, in the Bukovina, and in so that the offensive may, in case of need, be assumed with the bility of success. If a campaign should commence unfavour-

Solavonic races on the southern frontier of the Empire might celess; but if it at once becomes evident that the power of s irresistible, neither Servia nor Montenegro will venture to great many Russians are in Vienna at present, and they ably Lieutenant-Colonel Mantenffel in his endeavours to obtain for the Emperor Nicholas. The young men of high rank nuse their evenings at a club known as the Casino, and the Rus- are introduced there are at great pains to convince the credulous s that the sole wish of the Emperor Nicholas is to remain terms with Austria. According to these patriots the most feeling prevails at St. Petersburg towards the Government, and a mixture of sorrow and surprise that his Russian Majesty sees y of his motives questioned by the Emperor Francis Joseph. ssians must recently have received their one from Prince loff, as a short time ago they talked in a very different They treated Austria and the Austrians with the greatest con- ke disrespectfully of the Emperor, and took no trouble at all al their opinion that the Imperial Government did not dare to ill of the Czar. Having found that the Emperor has at his own, they now seek to gain him over by flattery and sen-

PRUSSIA AND THE GERMAN BUND.

Oesterreichische Correspondenz states that on the 24th the Bund acceded to the Austro-Prussian treaty of alliance of the April by sixteen votes for, to one against, the motion. The nt was Mecklenburg. It is also affirmed that on all important Austria and Prussia have at length agreed. News has arrived in that the Prussian Government will employ 8,000,000 of dollars ising the artillery and cavalry

other hand, it is currently reported that the fickle King of is about to pay a visit to the King of Italy for the purpose of measures to prevent Russia from being injured by the war.

BATTLE OF KAMA.—DEFEAT OF THE RUSSIANS.

gagement between the Turkish troops and the enemy, on the (of which we gave an imperfect account last week) is thus d by Omer Pacha, in a despatch received at Constantinople on July:—

ters which I this day receive from Hassan Haki Pacha, Supreme der of the Army at Rustchuk, and from Said Pacha, Governor- of Silistria, announce that an engagement took place on Friday hewal), between our troops and the enemy. At two o'clock in (July [illegible] a strong column of a total [illegible] ard to the island of Kama. Hurried before Rustchuk, at the same time another [illegible] troops proceeded from the island Ostion to Giurgevo. The Russians, on perceiving this, col- a considerable number of troops and artillery from Giurgevo the village of Slobieza, and commenced the engagement. The Ottoman troops, reinforced by a strong detachment, which to the spot, and supported by the fire of the fortress, gave this vigorous reception. The engagement lasted [illegible], and a en the victory was declared on our side, and the Russians took

The Turks, without losing time, immediately commenced forti- the island of Kama; whilst the enemy [illegible] to the island ing the bridges on the river [illegible] Strait of Giurgevo, and esting fire to the ships, and to several military establishments the harbour of that town. [illegible] cost the enemy

The number of their wounded is enormous. As regards [illegible] but 200 killed and wounded, which is very little in comparison losses sustained by the enemy.

that affair the Russian corps at Fratesehti, which has been re- large reinforcements from Moldavia and Bessarabia has endea- to revenge itself upon the Turks for so many defeats, but with or success than before. On the 19th, the Russians advanced Giurgevo, in three columns, with the intention of driving the ns across the Danube, in compliance with the express orders from St. Petersburg. The attack was repulsed with vigour. ians were again thoroughly beaten, and two of their Generals wounded.

rs from Constantinople state that the Austrian Internuncio has ed himself very strongly respecting the "presumption" of Omer in crossing the Danube, after it had been agreed that the occu- should be effected by Austria.

DEFENCE OF ODESSA.

eport that Odessa was to be attacked a second time appears to en without foundation, but it has had the effect of making the s prepare for the enemy. Odessa advices in the *Vienna Lloyd* that, on the 8th of July, a steam-frigate left Sebastopol, with a ble breeze, and reached Odessa without being sighted by the ruisers. This vessel, says the *Lloyd*, makes the sixth ship that tted by a favourable wind to reach Odessa, where a respectable ce is thus gradually collecting. The land troops are encamped Odessa, and it is thought there that the city is sufficiently secure any attack. To make assurance doubly sure great pains have en taken to strengthen the fortifications of the city.

A GENERAL ENGAGEMENT ON THE DANUBE.

ter from Varna of the 17th of July states that the troops are col- provisions, and preparing to march at a moment's notice against esians; and the latter appear to be quite prepared to meet them. graphic despatches received in Vienna from Hermannstadt an- that the Ottoman position at Giurgevo was reconnoitred by the ns on the 22nd inst. Prince Gortschakoff has a force of 110,000 with twenty batteries, at his disposal, to oppose the Ottomans at portant position. His head-quarters are at Slobodzia, where Ge- nerals Liders, Dannenberg, and Osten-Sacken held a council of war at the above date. Two divisions of Russian infantry and one of cavalry were reported to be advancing from Moldavia, over the Sereth, on Jatomnitza. The right wing of the Russian army at Fratesehti had been advanced to Slobodzia and Malu, close to the Danube. The corps of Generals Liders was concentrated at Kalarasch. The Ottoman and Anglo-French troops were continually crossing the Danube near Rustchuk. These movements look as if a general engagement were in contemplation.

NAVAL OPERATIONS ON THE DANUBE.

The fleets were at Baltschik on the 16th inst., and nothing was known at that time as to what course they were likely to take. It was thought, however, that some enterprise was contemplated, as Admiral Hamelin had ordered the construction of thirty vessels, capable of transporting 400 men each voyage. It is said that these barques will be employed in looking after the unfortunate Russian flotilla, which was lately seen at the mouth of the Pruth. It case of necessity, it is deemed probable that the Russians will burn a number of the gun-boats, and send the rest up the Pruth.

The French and English flags now float on both sides of the Danube, at the Sulinsh mouth of the river. Letters from Galatz, of the 12th, state that the Russians were rapidly evacuating the Dobrudja, and that Mehemet Pacha, who has been appointed Commander of that district, has established his head-quarters at Hirsova.

At Schumla and Rustchuk a number of English miners and carpenters are busy at work, constructing barracks to serve as winter quarters for the troops. A great many mechanics have likewise been sent from all parts of the country to Silistria, for the purpose of repairing or rebuilding the houses damaged and destroyed during the late siege.

THE RUSSIAN FLEET IN THE INDIAN SEAS.

The Russian squadron, which has been cruising about the Southern Archipelago for some time, is said to have at last taken up its quarters in the Dutch harbour of Surabaya, at the eastern end of the Island of Java. The Calcutta correspondent of the *Delhi Gazette* says:—

There are six ships altogether—the *Pallas* frigate, carrying the Commodore's pendant, as I told you some months ago, with two sloops of war, a brig, and two tenders. As matters were warming into hostilities at home, these Russian ships went cruising about in search of news, and the last they got was in the Strait of Malacca. From this they saw at once that all hope of escape into a Russian port in the Baltic was at an end, and capture certain in that direction, and accordingly the Commodore, in the midst of thickening dangers, made up his mind to run for the friendly and neutral port of Surabaya, and there await events. You know, of course, that the Royal families of Russia and Holland are closely allied by marriage; consequently the Dutch Government of Batavia will give the Russian ships shelter and protection, which they may possibly enjoy so long as they shall remain at anchor in the harbour of Surabaya. It is not believed that we will dispute this right of a neutral power on the part of the Dutch; but, although we may respect the neutrality of the port, we are at liberty to watch the enemy's ships, blockade *them*, and nab them if they should venture out.

Later accounts state that two of the Russian frigates are reported to be cruising in the track of the Australian trade; and some English ships of war have been sent to look after them. It is said that Russia refused to acknowledge the neutrality of Sweden and Denmark, till those Powers had agreed that certain of their ports should be closed to the ships of war and prizes of the Western Powers; and surely we might with equal justice insist on no harbour being given to the enemy's vessels in the Dutch and Spanish ports of the Indian archipelago.

THE BALTIC COMMISSARIAT.

The hired steamer, *Nicolai I.*, left Dantzic on the 22nd, with 100 bullocks, a great quantity of fresh vegetables, and sundry stores; and it will be satisfactory to all who have relations or friends in the fleet to learn that good arrangements have at last been made to preserve the health of the crews in the Baltic. It is intended that every sailor shall have one pound of fresh meat and half a pound of fresh vegetables five days in the week. These comfortables Government, and on board under the personal superintendence of John Marks, Esq., paymaster of the *Duke of Wellington*; and the cattle are not only much better than those purchased for our allies in the French fleet, but they are, at the same time, very much lower in price—the bullocks sent to the French having cost 140 Prussian dollars each, and those procured for the English 105.

THREATENED PRIVATEERING.—The *Washington Union* publishes a letter received by a member of Congress, in relation to a project being on foot to fit out a Russian privateer, with a view of attacking the guard-house at Chagres, and carrying off the gold for British, sometimes descending the coast also capturing vessels from California or Australia with gold. The parties to the project are two naturalised Irishmen, who have agents in London.

IMPORTANT POLITICAL EVENT.—The King of the Sandwich Islands has issued a proclamation of neutrality as regards the pending European war.

FUNERAL OF CAPTAIN PARKER.—The funeral of Capt. Parker, of the *Firebrand*, who met with his death in storming the stockade near the mouth of the Danube, on the 7th, took place at Constantinople on the 13th inst.

DEATH OF ABBAS PACHA.—Abbas Pacha, Viceroy of Egypt, died very suddenly, at Benha, during the night of the 13th inst., from a fit of apoplexy. Said Pacha, the only surviving son of Mehemet Pacha, has succeeded to the reins of government, and has received the congratulation of all the foreign Consuls upon his accession to the throne.

THE RUSSIAN TRADE ON THE PRUSSIAN FRONTIER.—Accounts from Memel, down to the 17th, state that the traffic with Russian produce by land, and especially by water, continues to increase. Want of warehouses and workmen is alone complained of; but the latter deficiency has been much diminished by the arrival of numerous hands from the interior, attracted by high wages. Articles of luxury are said to be in much less demand than formerly. Champagne dealers complain loudly.

OFFICIAL APPOINTMENTS.—Sir Geo. Grey, K.C.B., Governor of New Zealand, is appointed Governor and Commander-in-Chief over her Majesty's settlements at the Cape of Good Hope. Lieut.-Colonel Freeman Murray is appointed Governor and Commander-in-Chief of the Leeward or Somers Islands. Mr. Wm. Fossett is appointed Chief Clerk, and Mr. Wm. K. Fossett and Mr. George Mathews, Second Class Clerks, in the Director-General's Department of the Navy, Somerset-house. Mr. John Hill Burton, advocate, is appointed Secretary to the Board of Directors of Scotch Prisons. The Hon. Charles Murray Paid Attaché at Stuttgardt, is appointed Paid Attaché at Stockholm. Lord Schomburgh Kerr is appointed the Unpaid Attaché to her Majesty's Legation at Lisbon. Mr. Edmund Grosvenor Bunbury is appointed Unpaid Attaché to her Majesty's Mission at Washington. Sir Baldwin Walker, K.C.B., is appointed Naval Aide-de-Camp to the Queen.

CHRISTIAN YOUNG MENS' INSTITUTION.—On Thursday the foundation-stone of the Bloomsbury branch of the Christian Young Mens' Institution was laid by Lord Robert Grosvenor, assisted by a numerous party of friends, at the corner of Queen-square and Great Ormond-street.

LONDON AND BRIGHTON RAILWAY.—On Thursday the half-yearly meeting of this company was held at the Bridge-house Hotel —S. Laing, Esq., in the chair— and a dividend of £2 0s. for the half-year declared, a motion for stopping systematic Sunday-trading did not meet with a seconder.

LONDON AND SOUTH-WESTERN RAILWAY.—The half-yearly dividend on this line is to be at the rate of 4½ per cent per annum.

SATURDAY HALF-HOLIDAYS.—On Thursday evening a conversazione, over which the Earl of Harrowby presided, was held at the National Club, Whitehall Gardens, when the propriety of giving the working and other classes of society a holiday on the Saturday afternoon was strongly urged, with the view of preventing the opening of the British Museum and similar institutions on Sundays.

SOUTH-SEA COMPANY.—On Thursday a special meeting of this Company was held at the South-Sea House—R. Franks, Esq., in the Chair—when it was resolved to wind up the affairs of the company, in pursuance of the recent Act of Parliament, so soon as the assets can be realised. The stock is estimated of the value of £118 per cent.

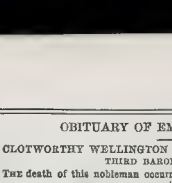
CITY ORTHOPŒDIC HOSPITAL.—A deputation from the committee of this hospital have just presented to Mrs. Thomas Gregory, at Weston-lodge, St. John's-wood, a portrait of the Rev. Thomas Gregory, the chairman of the committee, in testimony of the valuable services rendered by him to the hospital.

RUSSIAN GOLD IN BERLIN.—Although the Russian Government has prohibited the exportation of gold, a great quantity of Russ an gold is said to be in circulation at Berlin. By some this is considered a proof that Russia has been obliged to send gold for the payment of the interest on the debts owing to different parts of Europe. Formerly the operation used to be effected by means of bi ls of exchange, drawn principally in London. Others fancy that a portion of the gold may have been sent to pay certain secret services rendered to the Czar by his friends in Berlin.

OBITUARY OF EMINENT PERSONS.

CLOTWORTHY WELLINGTON WILLIAM ROBERT ROWLEY, THIRD BARON LANGFORD.

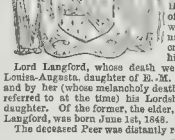
THE death of this nobleman occurred on the 19th inst., after a very short illness, at Castletown, county Kildare, the seat of his brother-in-law, Thomas Conolly, Esq. His Lordship was but twenty nine years of age, having been born 29th, 1825. He was the representative, through his grandmother, Frances Rowley, of the Irish branch of the ancient Cheshire family of Rowley, of Lawton. That lady married the Hon. Clotworthy Taylour, fourth son of Thomas, first Earl of Bective, who assumed in consequence the name and arms of Rowley, and was created Baron Langford, of Somerhill, in 1800.



Lord Langford, whose death we record, married, 28th July, 1846, Louisa-Augusta, daughter of E.-M. Conolly, Esq., M.P., of Castletown, and by her (whose melancholy death by drowning in last November we referred to at the time) his Lordship leaves issue two sons and one daughter. The former, the elder, Hercules Edward, now fourth Lord Langford, was born June 1st, 1848.

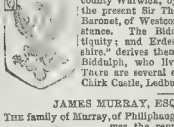
The deceased Peer was distantly related to the Duke of Wellington.

SIR THEOPHILUS BIDDULPH, BART.



THIS respected gentleman died on the 15th inst., at his seat, Birbury Hall, Warwickshire. He was born 24th March, 1785; and married, 13th April, 1825, Jane-Rebecca, daughter of Robert Vyner, Esq., of Easthorpe, county Warwick, by whom he leaves a son and heir, the present Sir Theophilus-William Biddulph, seventh Baronet, of Westcombe; and one daughter, Jane-Constance. The Biddulphs are a family of remote antiquity; and Erdeswick, in his "Survey of Staffordshire," derives them from Ormus le Guidon, Lord of Biddulph, who lived in the time of "Domesday." Yours are several existing branches, seated at Burton, Chirk Castle, Ledbury, &c.

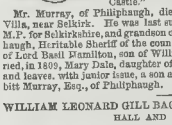
JAMES MURRAY, ESQ., OF PHILIPHAUGH.



THE family of Murray, of Philiphaugh, of which the deceased gentleman was the representative, resided in early times at Falahill. John Murray, of Falahill, the outlaw Murray, who succeeded at the close of the fifteenth century, and who with 500 of his men bade defiance to the King of Scotland, James IV., is immortalised by the beautiful ballad, preserved in the Minstrelsy of the Scottish Border, and known for ages as a popular song in Selkirkshire. "The traditions of Etrick Forest," says Sir Walter Scott, "bears that the outlaw was a man of prodigious strength, possessing a baton or club, which he had *ten* (*i.e.* waste) the country for many miles round; and that he was at length slain by Buccleuch at a little mount covered with fir trees, adjoining to Newark Castle."

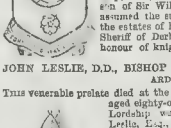
Mr. Murray, of Philiphaugh, died on the 15th inst., at Beachwood Villa, near Selkirk. He was last surviving son of John Murray, Esq., M.P. for Selkirkshire, and grandson of John Murray, Esq., M.P., of Philiphaugh, Heritable Sheriff of the county of Selkirk, by Eleanora, daughter of Lord Basil Hamilton, son of William, Duke of Hamilton. He married, in 1809, Mary Dale, daughter of Henry Hughes, Esq., of Worcester, and leaves, with junior issue, a son and successor, the present John Nesbitt Murray, Esq., of Philiphaugh.

WILLIAM LEONARD GILL BAGSHAWE, ESQ., OF WORMHILL HALL AND THE OAKS.



THIS gentleman lost his life in an affray with poachers. On Wednesday night, the 19th inst., he went out, at the head of a band of keepers, to drive the poachers off. A long and bloody strife ensued. Mr. Bagshawe, who fought hand to hand with three men, was at length struck down by a blow from a gun-stock, of which he died the following day. He had not completed his 26th year, and had only succeeded to the family estates two or three years since. He was eldest son of the late William John Bagshawe, Esq., M.A., of Wormhill and the Oaks, and grandson of Sir William Chambers Darling, M.D., who assumed the surname of Bagshawe on inheriting the estates of his maternal uncle, served as High Sheriff of Derbyshire in 1805, and received the honour of knighthood in that year.

JOHN LESLIE, D.D., BISHOP OF KILMORE, ELPHIN, ANN ARDAGH.



THIS venerable prelate died at the Palace, Kilmore, on the 22nd inst., aged eighty-one, of an attack of erysipelas. His Lordship was second son of Charles Powell Leslie, Esq., of Glaslough, in the county of Monaghan, by Prudence Pentlope, his wife, aunt of Arthur first Duke of Wellington, and youngest daughter of the first Viscount Dungannon. Paternally Dr. Leslie was great grandson of John Leslie, Bishop of Raphoe in 1661.

His Lordship, who received his education at Trinity College, Dublin, was consecrated Bishop of Dromore in 1812, and translated to Elphin in 1819; to Kilmore he succeeded in 1841. He married, 1st August, 1806, Isabella, second daughter of the Hon. and Right Rev. Thomas St. Lawrence, Bishop of Cork and Ross; and by her, who died 30th Nov., 1830, leaves a large family.

SIR HENRY KING.

GENERAL SIR HENRY KING, C.B., K.C.H., Colonel of the 3rd Regiment of Foot, died on the 24th inst., at his residence, in Sussex-street, Hyde-park-gardens. Sir Henry was in his seventy-seventh year, and had been sixty years a soldier, having entered the Army in 1794. He attained the rank of General on the 20th of June last. His career may be thus briefly recorded:—After some military service in the West Indies, where he shared in the seige of Porto Rico and capture of Trinidad, in 1797, Sir Henry King went through the Egyptian Campaign of 1801, in which, while commanding a squadron of the 26th Light Dragoons, he lost his right leg. King accompanied the expedition to Walcheren, and was at the siege of Flushing, in 1809. The following year he proceeded to the Peninsula, having been appointed Commandant of Tarifa. For his services in the defence of that place he obtained the rank of Lieutenant-Colonel. Joining the main body of the army a few days after the battle of Salamanca, King led the 82nd at Vittoria; towards the close of that famous action the command of a brigade devolved on him. For these services Sir Henry King received the Egyptian and Peninsular gold medals.

Sir Henry King was made a C.B., in 1831, and a Knight Bachelor and K.C.H. in 1834.

WILLS AND BEQUESTS.—The will of the Hon. and Very Rev. George Neville-Grenville, M.A., Dean of Windsor, was proved under £70,000.—The Right Hon. Henry Tufnell has bequeathed £100 to the London City Missions; his personal estate was estimated for duty at £20,000.—The late Andrew Caldcleugh, Esq., of Woodford-hall, Essex, and of Chesapside, warehouseman, died intestate; his widow administered to his effects under £160,000.—Mrs. Georgiana Dimock, wife of the Reverend Nathaniel Dimock, of East Malling, has bequeathed £1000 to the Society for the Propazation of the Gospel in Foreign Parts, and £1000 to the Society for Promoting Christian Knowledge.—Mrs. Mary Ann Haire, wife of Thomas Haire, Esq., M.D., of Lewes, Sussex, has left the following bequests:—To the Indigent Blind, London, £600; to the Deaf and Dumb Asylum, £200; Sailors' Female Orphan Home Institution, £200; Royal Asylum for Destitute Females, £200; Society for the Protection of Females, £200; Infant Orphan Asylum, £200; Philanthropic Society, £200; Guardian Society, London, £200; Sussex County Hospital, £200; Society for Aiding Foreigners in Distress, £100; and to the Lewes Mechanics' Institution, £50.

1.—MR. JAMES REA'S HEREFORD. CLASS 2, NO 118. 1ST PRIZE, £25. 2.—MR. SAMUEL FARTHING'S DEVON. CLASS 4, NO. 653. 1ST PRIZE, £10. 3.—MR. GEORGE FLETCHER'S COTSWOLD. NO. 466. 1ST PRIZE, £30. 4.—DUKE OF RICHMOND'S SOUTHDOWN. 2ND PRIZE.
5.—MR W SANDAY'S SHORT HORN. CLASS 1. NO. 2. 1ST PRIZE, £40 6.—MR. GEORGE HEWER'S NO 412 2ND PRIZE. 7.—MR. HENRY LUGAR'S SOUTHDOWN. CLASS 1, NO. 391. 1ST PRIZE, £30. 8.—MR. CHARLES TOWNLEY'S SHORT-HORN. CLASS 4, NO. 74. 1ST PRIZE, £30.

PRIZE CATTLE, FROM THE EXHIBITION OF THE ROYAL AGRICULTURAL SOCIETY, AT LINCOLN.—DRAWN BY HARRISON WEIR.—(SEE PAGE 84.)

OPENING OF THE NORTH DEVON RAILWAY.—ARRIVAL OF THE TRAIN AT BARNSTAPLE.

HIGH-STREET, BARNSTAPLE.

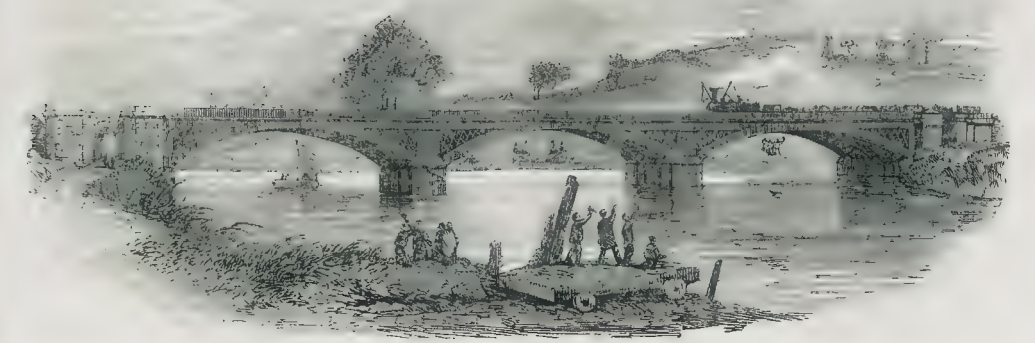
NORTH DEVON RAILWAY.

The opening of a further portion of this Railway will, doubtless, be fully appreciated by tourists in search of the picturesque, during the present season. The line follows the valley of the Taw, and will be of the greatest value to a large agricultural district, both for the conveyance of manures and farm produce; at the same time it will open to the tourist an easy access to the delightful scenery of Linton, Ilfracombe, Instow, Clovelly, and the whole of the north coast.

On Wednesday, the 19th inst., the Directors of this Company, including Mr. W. Tite, F.R.S., Chairman; Mr. John Sharland, Deputy Chairman; the Earl of Portsmouth, Colonel Buck, Mr. Maxwell; Mr. Neale, the Engineer; Messrs. Brassey and Ogilvie, the Contractors; and a large party of their friends, together with some of the Directors of the Bristol and Exeter Railway, proceeded over the line, from Crediton to Barnstaple, as a preliminary trip, previous to the general opening for traffic, which will take place on Monday next, the 31st instant. The day was set aside for general rejoicing throughout the whole district; and at Barnstaple, the capital of North Devon, preparations on a large scale had been made by the Mayor and Corporation in honour of the auspicious event. Upon the arrival of the train at the Barnstaple Station, a congratulatory address was read by Mr. L. Bencraft, the Town clerk, which was ably responded to by Mr. Tite, the Chairman of the Company. The Freemasons of the district, in full costume, were assembled on the platform; and corn, oil, and wine having been poured out as an oblation, the Provincial Grand Chaplain offered up a prayer for the prosperity of the undertaking. A procession, headed by a troop of the North Devon Mounted Rifles, then formed, which included the Mayors and Town-councils of Exeter, Barnstaple, Bideford, Torrington, Southmolton, the Lodge of Odd Fellows and Freemasons, trades unions, railway directors, magistrates and gentry of the county, accompanied by several bands of music, and appropriate flags, banners, and devices. The procession marched through the principal streets of the town, which were spanned by triumphal arches, gaily decorated, and crowded with thousands of spectators, who came from far and near to witness the arrival of the first train. The day was remarkably fine, and everything wore a festive aspect. About 1000 guests sat down to dinner in the new Market-hall, presided over by the Mayor, Mr Budd. Several toasts were drunk, and an admirable band and choir of vocalists kept up the festivity of the meeting. A grand fancy bazaar was held in aid of the Churches of Trinity and St. Mary Magdalen; and a considerable sum was realised. In the evening a ball, attended by the rank, beauty, and fashion of the neighbourhood, wound up the day's proceedings.

Few lines during their progress have met with more serious obstacles

TRIUMPHAL ARCH, BARNSTAPLE-BRIDGE.



THE IRON RAILWAY BRIDGE, OVER THE RIVER TAW, NEAR BARNSTAPLE

than the North Devon. The question of gauge, which agitated all the west of England, and led to lengthened and expensive hostilities between the Great Western and South-Western Companies, which were seeking to become possessed of the district, occasioned a long suspension, and almost a final abandonment of the works; but the Directors persevered, and great credit is due to them for having overcome all difficulties, and given to this large section of country the benefit of railway accommodation.

The line commences by a junction with the Crediton Station of the Exeter and Crediton Railway, and ends at Fremington-pill, about two-and-a-half miles below Barnstaple, on the River Taw, where a wharf for the accommodation of shipping has been constructed. From this point a further extension to the Port of Bideford is in progress, which will complete the chain of railway communication for North Devon. The length of line at present completed is about thirty-five miles. It is single, on the broad gauge, with the electric telegraph throughout, and has been substantially executed by the eminent contractors, Messrs. Brassey and Ogilvie, under the superintendence of Mr. W. R. Neale, the Company's Engineer. The line is also let to the above gentlemen for seven years, at a fixed rental.

The principal work (which we have engraved) is a cast-iron bridge over the Taw, near Barnstaple, shown in the accompanying illustration. It consists of three cast-iron arches, 83 feet 6 inches span each, with a 10 feet rise. These arches rest on iron circulars, sunk into the bed of the river, and filled with solid masonry.

CALENDAR FOR THE WEEK.

SUNDAY, July 30.—7th Sunday after Trinity. Wm. Penn died, 1718.
MONDAY, 31. Ignatius Loyola died, 1556. Gray died, 1772.
TUESDAY, August 1.—Lammas Day. Battle of Minden, 1759.
WEDNESDAY, 2.—Battle of the Pyrenees. Mehemet Ali died, 1849.
THURSDAY, 3.—Attempted Assassination of George III., 1786.
FRIDAY, 4. East India Docks opened, 1806. Battle of Evesham, 1265.
SATURDAY, 5.—Fenelon born, 1651.

TO CORRESPONDENTS.

H. S.—The Sketch of the Review did not reach us in time to be available.
AN OLD GARDENER is thanked.
J. B. F., Newcastle.—See the series of papers on Chess, commenced in our Journal of July 8.
A SUBSCRIBER is thanked for the Sketch of the *Tiger*.
T. S., Dublin, is thanked.
D. G. W. B. His Sketch of Russian Prizes reached us too late.
E. G. H., Heidelberg. Declined.
AN AUSTRALIAN is thanked; but we have not room for the Sydney yachts.
W. B., Belfast.—We have not room.
AN ANNUAL VISITOR, Cromer.—Received.
A SUBSCRIBER.—The two and four-page Engravings in our Journal should be inserted by the bookbinder as folding plates.
R. G., Bow-lane.—Apply to the authorities at the Lunatic Asylum, Colney Hatch.
R. D. J.—"Cliffe's Books of North and South Wales" are excellent Guides.
W. H. B., Peterborough.—Received.
W. W. K, the Baltic, is thanked; but we have not room for the Sketches.
INQUIRER.—"Short Short-hand" may be had, by order, of any bookseller.
A CORRESPONDENT.—Hinkse-hall was the Sessions House of the county of Middlesex, built in 1619, opposite the Windmill Inn, St. John's-street, Clerkenwell, by Sir Baptist Hicks, afterwards Viscount Campden, and taken down after the erection of the New Sessions House on Clerkenwell-green. The distance on the milestones on the Great North-road were formerly measured from Hicks's-hall.
R. V. B. The Royal Regiment of Artillery at present consists of seven troops of Royal Horse Artillery, and fourteen battalions of Royal Foot Artillery. Exclusive of these there is a field-train of Artillery, the Royal Arsenal, Royal Military Academy, Royal Military Repository, and the Riding Troop.
QUAILS.—A Correspondent observes that the writer of the article on "Quails," in the ILLUSTRATED LONDON NEWS for May 27, page 403, adopts the generally received opinion that the "winged creatures," provided miraculously as food for the Israelites in the Wilderness were Quails. Reference to Mr. C. C. Forster's work "The Primeval Language," second edition, 1852, pp. 98 to 110, shows that the "winged creatures" provided as food for the Israelites were not Quails, but a species of the Goose tribe—the *Casarca*, or Ruddy Goose.—(See "Encyclopædia Britannica," art. "Anser.")
F. H.—It is very difficult to define what constitutes a City. Cité, in France, seems to mean any large town; so it probably once did in England, but Bishops and peculiar Corporations being attached to our early large towns, they ever after retained the name of "City," while those, then small, and there subsequently built did not, and preserved the appellation of "town." The Queen's charter is at present the form by which a city is created.
J. F. L., VERITAS.—Apply at the Admiralty.
A SUBSCRIBER.—The present Viscount Palmerston is son of Henry, second Viscount, by Mary, his wife, daughter of Benjamin Mee, Esq. The title is an Irish one, derived from Palmerston, in the county of Dublin.
A READER.—Any one, who has a card of admission to the library of the British Museum, may take any extracts he pleases from the heraldic and geneological manuscripts therein contained. We have no remembrance of the Howard pedigree referred to by our Correspondent.
ROSA.—Otho, King of Greece, is brother of Maximilian, King of Bavaria. He was born June 1st, 1815; accepted the Crown of Greece in 1832, and married, in 1836, Marie Frederica Amelie, daughter of the Grand Duke of Oldenburg.
WILLIAM D., Warminster; ANTI-NICHOLAS.—Declined.

THE VOLUMES OF THE ILLUSTRATED LONDON NEWS.

COMPLETE SETS of the VOLUMES of the ILLUSTRATED LONDON NEWS, from the commencement to the present time, may now be had, bound in paper or cloth. Price of the Complete Set (24 Vols.) in cloth, £22 17s.; in half calf, £16 17s. in paper.

Any of the Volumes, in paper or cloth, can be had separate.

Price of each Volume in cloth:—Vol. I., 21s.; II. to XVII., 18s. each; XVIII., 21s.; XIX., 26s.; XX., 18s.; XXI. to XXIV., 21s. each.

Price of each Volume in Paper, 8s. per Volume less.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JULY 29, 1854.

THE military revolt in Spain has rapidly expanded into a popular revolution. The movement so gallantly commenced by General O'Donnell has been seconded with enthusiasm in every part of the country. The Royal forces under the command of General Blaser have, after an ineffectual attempt at resistance, joined the insurgents, and Blaser himself has been compelled to take flight into Portugal. In Madrid, the troops, after a struggle that lasted three days, against a people entrenched behind impregnable barricades, have fraternised with the insurgents, and the throne of Queen Isabella lies shattered in the dust. The palace of Queen Christina has been sacked, if not demolished; and the same vengeance has been displayed against the houses of Sartorius and other obnoxious Ministers. Queen Christina, unable to effect her escape from Spain, is supposed to be concealed in the capital—according to some accounts, in the palace of her daughter; and, according to others, in the safer purlieus of the French Embassy. So great is the exasperation against her, that a fatal catastrophe that would throw discredit on the Spanish name would be the almost certain result, if she fell into the hands of the people. It is to be hoped that she will escape their fury, and live to repent in exile and disgrace the misfortunes which she brought on the country of her adoption, and upon the daughter to whom she ought to have been an example and a protection.

Queen Isabella, when she found the serious turn that affairs were taking, and that the garrison of Madrid was not to be depended upon, endeavoured to prevent further mischief, and the effusion of blood, by the dismissal of the unworthy Cabinet, that, in conjunction with her mother and her favourites, had brought her to this extremity. But it was too late. The new Ministers whom she appointed, refused the perilous responsibility. Even if they had consented, they would have been rejected by the country, for their names included none that did not inspire mistrust or hatred. As a last resource, her Majesty sent for General Espartero, who in a few days, without her consent, would have appeared in the capital, at the head of a victorious army, as the acknowledged Liberator of the Spanish nation. Never was the humiliation of a Sovereign more sudden and complete. Queen Isabella has paid the penalty, not only of her own misdeeds, but of her unparalleled misfortune in having such a woman as Christina for a mother, and such a man as the late Louis Philippe for a friend. Had her life been as pure, and her intentions as noble, as those of any sovereign in history, it would have been difficult for her to have escaped unscathed from the odium attaching to such relationship, and from the dangers placed around her by such treacherous friendship. But her own conduct greatly aggravated the perils of her position. The Spanish marriages have indeed borne bitter fruit of infamy and chastisement to all concerned in them. They overturned the dynasty of Orleans in France, and they bid fair to overturn the Bourbon dynasty of Spain. The avenging Nemesis has been visible in every page of Spanish and French history since the ill-omened day when these marriages were planned; and will yet be seen in many a fearful shape before the drama is closed.

In the meantime, Espartero is both Liberator and Dictator of Spain; and, ere this sheet reaches the eyes of our readers, will probably have made his triumphal entry into Madrid. In his hands are the destinies of the Government. It was his energy that established the constitutional throne of Queen Isabella. The country has never prospered since the day when, by the ingratitude of the Court, he was forced into retirement, and his honourable place filled up by knaves and adventurers. The utmost reliance is placed upon his wisdom and his patriotism by the great bulk of the people. He is the idol of the Progressista, or Liberal party; and no other is strong or united enough to offer him even a show of resistance. Whether he will use this great opportunity to retain upon the throne the Sovereign whom he placed there, is impossible to predict. It was not only the misgovernment of Queen Isabella that stung the Spanish nation into resistance. Had there been nothing else, it is possible, notwithstanding all the errors of the past, that the re-establishment of the Constitution of 1837, under sufficient guarantees, with the presence of Espartero as the virtual head of the Government, might reconcile the people to the endurance of her rule. But the Queen has outraged the moral sense of the nation. She has inflicted a stain upon the national honour. She has made her Court the scandal of the world. She has done everything that a woman ought not to have done, and has been true to no domestic feeling but that of attachment to the miserable mother who sold her for filthy lucre to Louis Philippe, and who inculcated vice in her daughter both by precept and by example. The influence of Espartero, earned by so many services to his country, is, perhaps, great enough to be successful, if, for the sake of the future tranquillity of Spain, he should deem it the wisest policy to maintain her on the throne. But it will be a difficult task, and it is not yet certain that he desires to accomplish it.

All the factions with which Spain is cursed are on the alert to turn the circumstances to their own advantage. The Legitimists, the Orleanists, and the Republicans are all more or less in full activity of intrigue. The Emperor of the French, who has already ordered an army of observation to the Spanish frontier, cannot be expected to look upon the success of either of these parties with any degree of complacency. But the chances of each are so small that neither France nor Europe need be under much alarm. Spain does not wish for a Republic; and, if there were no possible choice between Queen Isabella on the one hand, and the Count de Montemolin or the Duc de Montpensier on the other, it would assuredly consent to give Isabella another trial, rather than see the crown on the hated head of an Orleans, or on that almost equally hated of a Spanish Bourbon of the male branch. But the choice does not lie exclusively between Isabella and either of these claimants. If the Queen have too grievously insulted the Spanish nation to permit of her continuance in power, or if the legitimacy of her daughter, the Princess of the Asturias, is so much a matter of doubt as to render it probable that, at the Queen's death, another civil war of succession might arise, there is another candidate in the field who, if properly brought forward and supported by General Espartero, would be cordially accepted by the large majority of the Spanish nation, and with the good wishes of all Europe. His name, wherever it has been mentioned, has been received with acclamation; and among the cries heard in the streets, during the progress of the revolution, was one of "Long live Espartero, Regent of the Kingdom until the arrival of the King of Portugal." Supposing it be impossible to retain the throne for Isabella, and to surround her with good instead of evil councillors, the accession of the King of Portugal to the throne of Spain would be a happy result for both countries. For many reasons, it presents a solution of the difficulty far preferable to the retention of the throne by the present dynasty. It would elevate to regal power a young man representing, in the female line the illustrious House of Braganza, second in ancestral splendours to no House in Europe; and in the male line the more modern but scarcely less illustrious House of Saxe Coburg-Gotha; a Prince of excellent attainments and capacity—in the flower of his youth, and at that plastic age when good and able advisers could scarcely fail by ordinary prudence to educate him into the creditable fulfilment of all the duties of a Constitutional Sovereign. The union of the two kingdoms of Spain and Portugal, under one sceptre, would be highly advantageous to both. It would give Spain a rich and fertile territory, a noble line of sea-coast, and the command of one of the finest rivers in the world; while it would give Portugal still more, in opening up to her all the resources and colonies of Spain. The united kingdoms, with a rational, instead of that irrational commercial system, which made Spain poor, and keeps her so, which empties her treasury, and fills the pockets of her countless legions of *contrabandistas*, without the slightest gain to the nation, would not be long in re-assuming the high place that Spain once held in the comity of Europe, when she colonised the New World; when she was the patron of art, science, and literature; and when her ships swarmed in every sea. Even without a union with Portugal, Spain might regain much of the consideration which she has lost; but, united with Portugal, under wise and expansive institutions, all her chances of improvement would be greatly increased. Another, and perhaps not inconsiderable, advantage that might result from this arrangement, were it concluded with the consent of the Liberal party in Spain, would be the influence which it would exert upon the relations now subsisting between Spain and the United States of America. The Southern States of the Union are bent upon the acquisition of Cuba, and will endeavour to profit by the intestine commotions and revolutions of Spain, to send their buccaneers and filibusteros to effect a *coup-de-main*, and make a forcible seizure of the island. They only await the moment when they think that Spain may be too distracted by civil war, or a feeble Government, to offer available resistance. But even in the last agonies of dissolution Spain could never submit to a loss so galling to her pride, so subversive of her interest, and so fatal to her security. In such a cause, weakened as she has been, her national energies might sufficiently revive to brave and overcome all the might of the American Union. The Slave States might, possibly, with all their boasting, find Spain more than their equal in the iniquitous struggle which they are eager to provoke. Were Spain governed by a Prince of the House of Braganza, a new Power would become interested in the conflict, and the Emperor of the Brazils would, in all probability, for dynastic as well as for general reasons of policy, be happy to assist in repelling the aggression of the Americans, and in securing for Spain that splendid island which is justly considered the most valuable jewel in its crown.

These are but a few of the reasons why the union of the two kingdoms might be of the highest advantage, not only to Spain and Portugal, but to the general tranquillity both of the Old World and of the New. Spain is not so isolated from the politics of Europe and America as she has been represented. No State in Europe, however weak, or however small, can be isolated from the States around her. Spain has done much to withdraw herself from the broad highway of the world's progress, but it is impossible for her, even by the worst misgovernment or the most exclusive dealing, to shut herself within herself, like China or Japan. Her geographical position forbids it. Her revolutions reverberate through all civilised countries, and not even the din and uproar of the great war in which the leading Powers of Europe are now involved, are sufficient to divert attention from the significant events which are taking place within her boundaries. We do not believe that Spain has so fallen from her high estate as to be unable to rise again. Dark and gloomy as her fortunes may be, they are by no means so dark or so gloomy as the fortunes of France during the first years of the reign of Louis XVI. When we think what France was then, and what she is now, we can see no reason to despair of Spain. She has already suffered much, and will doubtless suffer more; but the popular indignation, which has made so sharp an end of the miserable intriguers that surrounded the Court of Queen Isabella, is of itself a proof that there are virtue and vitality in her people. Whatever is of advantage to Spain is of advantage to all Europe. The richer and the more prosperous she is, the better it is for all her neighbours. A weak and falling State is not only a peril to herself, but a nuisance to every member of the great commonwealth of nations. All Europe is at this moment paying a penalty for the weakness of Turkey. Sooner or later, it would have had to pay a similar penalty for the weakness of Spain. On expressing a cordial wish that from the throes of this revolution may be born a powerful, a stable, and a wisely-Liberal Government, we speak not only in the interest of Spain, but in that of all civilisation.

THE COURT.

The Queen and the Prince Consort have been enjoying the beautiful weather of the past week at their marine residence in the Isle of Wight, taking frequent trips in the Royal yacht, and occasional land excursions into the interior of the island.

On Saturday, Prince Albert, attended by Lord Alfred Paget and Col. the Hon. C. B. Phipps, embarked in the Royal yacht: *Fairy*, and visited the new works now erecting for the purpose of fortifying the entrance to the Solent by the Needles. Major-General Sir F. Smith had the honour of accompanying the Prince. Her Majesty drove out in an open carriage, attended by the Countess of Desart.

On Sunday, the Queen and Prince, the Prince of Wales, Prince Alfred, the Princess Royal, and Princess Alice, attended Divine Service at Osborne. The service was performed by the Hon. and Rev. Augustus Phipps.

On Monday afternoon the Queen and Prince Albert embarked in the *Fairy*, and cruised in the Solent, returning to Osborne soon after eight o'clock.

On Tuesday afternoon the Queen and Prince, the Princess Royal, Princess Alice, Princesses Helena and Louisa, attended by the Ladies and Gentlemen in Waiting, embarked in the *Fairy*, for a cruise.

Her Royal Highness the Duchess of Kent leaves Frogmore today (Saturday) for the Isle of Wight, where the Duchess has taken a marine villa for the season, not far distant from Osborne.

The Countess de Neuilly has taken a mansion at Torquay for the summer season.

Their Serene Highnesses Prince Antoine and Prince Guillaume Radziwill have arrived at the Clarendon, from Homburg.

The Duke of Devonshire continues to go on favourably, at his marine villa, at Kemp Town, where his Grace, during last week, entertained a family circle, including the Countess Dowager Granville, the Countess of Carlisle, and Lady Dover.

Viscountess Palmerston had an assembly, on Saturday evening, at the family mansion, in Carlton gardens.

Sir James Graham entertained his colleagues in the Cabinet at dinner on Wednesday evening, at his official residence in the Admiralty.

On Wednesday, the Earl of Aberdeen arrived from London, and remains on a visit to her Majesty.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary honoured the performances at the Royal Italian Opera with their presence, on Thursday evening. Their Royal Highnesses occupied her Majesty's box, and were accompanied by Lady Suffield and Baron Knesebeck

LATEST INTELLIGENCE.

RUSSIAN INTENTIONS.

The latest report from St. Petersburg is that the Czar—irritated to the quick, at the impression made throughout Europe by the defeats at, and inglorious retreat from, Silistria and the right bank of the Danube, and still further irritated by the recent defeat of seymonoff's division at Giurgevo—has ordered Prince Gortschakoff to concentrate his masses, and, *coûte que coûte*, to drive the Turks across the Danube. Nor will he be contented with this. Gortschakoff is to recross the Danube, if he can, and then re-invest Silistria, and await battle in the same position which he occupied before, but out of gunshot of the place. Such is the report, and a wild one it is, so far as regards the re-passage of the Danube. The first portion may be less difficult, especially if the Allied Generals remain passive spectators of the operation, or make an attempt to assist the Turks by flank movements.

THE AUSTRIAN ALLIANCE.

Letters from Paris say that in the Ministerial circles it is affirmed, that the Austrian Cabinet has signified to the Cabinets of London and Paris its determination to take the field against the Russians in the Principalities, if, by the 30th instant, the Emperor of Russia shall not have given orders for immediate evacuation. Should this be true, and the Emperor of Russia resolve to attempt a defence, the French, English, and Turks, at and near Varna, who are estimated by the *Patrie* at nearly 100,000 men, will enter the Principality of Wallachia on one side, as the Austrians will do on the other. If Austria should fail to execute her promise, that will not prevent the Allies from acting; for it is certain that, without the aid of Austria, they can bring into action an army not only superior in discipline and courage to that of the Turks, but also more numerous.

The latest intelligence from Vienna is that the Austrian Commander-in-Chief, Baron Reis, intends to take up his head-quarters at Sutschawa on the 20th of August, and in the event of Russia's rejection of the intended Austrian ultimatum, hostilities, at once push on his army (200,000 men) onwards direct upon Jassy; by which operation, it is thought the Russians will be forced out of both the Principalities, but especially out of Wallachia, as by this move they will be wedged in between two hostile armies, which, by combined operations against the invader, cannot fail to throw him back across the Pruth.

THE WAR IN THE BALTIC.

(From a Correspondent.)

By the latest accounts from the Baltic, reaching to the 24th, we have reason to believe that any attack upon Cronstadt is abandoned. The fortifications have been reconnoitered by the Admirals and leading officers of both fleets, and declared to be impregnable to assault from sea. The Russian fleet (fifteen sail of the line, &c.) is moored in the most admirable manner, and is protected by batteries, which would render any attack of doubtful result.

From the same source, we are led to understand that the attempt to storm the Aland Isles will immediately be made by the land and sea forces, amounting to above 30,000 men. The seamen of the fleet have been practising with scaling-ladders, for landing on precipitous shores; and everything forbodes a desperate conflict, as the Russians are said to have large bodies of troops for the defence

We also hear that a division of the heavy ships—no longer wanted in the Baltic—are under orders for the Black Sea. The rest will be employed about the scene of action in the Baltic.

SPAIN.

PARIS, Friday, July 28.—Advices from Madrid, of the 25th, state that the Spanish capital is tranquil. The Queen was *d'accord* with Espartero, who was expected there on the 28th.

BARCELONA, July 28.—Order continues, thanks to the attitude of the garrison and the Captain General. The arrival of Don Manuel Concha had restored confidence. The two Generals act together in the most perfect harmony.

ITALY.

TURIN, July 27.—A permanent Council of War is sitting. Two soldiers have been sentenced and shot at Parma.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS.

TAKEN DURING THE WEEK ENDING THURSDAY, JULY 27.

Month and Day.	Correct'd Reading of Barometer at 9 A.M.	Thermometer: Elevated Reading	Thermometer: Lowered Reading	Mean Temperature of the Day.	Departure from Mean Temperature. Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

„ 27	30·039	72·6	58·9	62·4	+ 0·3	73	N.E.	0·25

Note.—The sign + denotes above the average.

The corrected reading of the barometer has varied but little during the week, the highest reading being 30.18 inches on the 22nd, and the lowest 30.00 inches on the 25th. The mean for the week at the height of eighty-two feet above the level of the sea, was 30.082 inches.

The mean daily temperature of the 24th is the highest mean temperature recorded on that day since the year 1815, when it was 70.2°; and that of the 25th is the highest at present recorded, the register extending back to the year 1814. During the three days of highest temperature were above their averages viz., from the 18th to the 27th, the average daily excess was 4·6°.

The mean temperature of the week was 67.9°, being 6° above the average of the corresponding week during thirty-eight years.

The range of temperature during the week was 25.6°; being the difference between the lowest reading of this thermometer on the 21st, and the highest on the 23rd.

The mean daily range of temperature during the week was 27.9°. The greatest was 32° on the 23rd, and the least 16·5° on the 27th.

Rain fell to the depth of eight-hundredths of an inch during the week.

Lightning was seen during the evening of the 25th.

The weather, on the first five days of the week was very fine, and the sky almost free from cloud; the rest of the week was fine, but the sky was overcast.

JAMES GLAISHER

Lewisham, July 28, 1854.

HEALTH OF LONDON.—During the week ending last Saturday the births of [illegible] children were registered in the metropolitan districts; of these 531 were boys, and 778 were girls—exhibiting the averages of the nine corresponding weeks of the nine preceding years by 106 and 132 respectively. The number of deaths during the week were 1008, being nearly the same as in the preceding week. In the average of the ten corresponding weeks of the ten preceding years the number is raised to [illegible] the actual number, therefore, was 108 less than the average number registered in the ten years. The deaths returned from zymotic diseases were 192, which is 24 below the average. The deaths registered under the head of [illegible] were 211: of these 16 are attributed to small-pox; to measles, 12 (the average is 22); to scarlatina, 86 (its average is 31); to diarrhœa, 58 (its average is 67); to cholera, 26; and to typhus, 43 (being the same as its average). To dropsy, cancer, &c., 41. To tubercular diseases, 199: of these consumption carried off 146, being 11 above the average. To diseases of the brain, nerves, and senses, 111. To diseases of the heart and blood-vessels, 47. To diseases of the [illegible] of the other organs of respiration, 102: of these 44 are due to bronchitis (4 above the average), to pneumonia, 41 (the average being 42). To diseases of the stomach and other organs of digestion, 51 (the average is 66); and to violence, privation, cold, and intemperance, 23 deaths are attributed.

TAILORS' ASYLUM.—On Wednesday the chapel of this institution, at Haverstock-hill, was re-opened by the Bishop of London, the sacred edifice having been greatly improved at the expense of an benevolent individual. A new bay has been added to the nave; the roof has been re-modeled, the chancel, vestry, &c., rebuilt. A memorial window to the founder of the chapel, Mr. Shute, will be put up on the south side immediately.

OVERCROWDING OF STEAM-BOATS.—Many complaints having been made of the overloading of the steam-boats on the river, a committee of the Aldermen met on Wednesday, and, with the sanction of the Board of Trade, appointed two inspectors, who will be actively engaged in watching the different steam-vessels; and in all cases where [illegible] have been discovered [illegible] the Act of Parliament [illegible] the proceedings [illegible] the Attorney-General.

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

THAT good, amiable, and exalted poetess, Caroline Bowles—of late better known as Caroline Southey—has just been removed from among us by death; and our contemporaries have been making sad havoc with her biography. They make her the daughter of Bowles, the Canon of Salisbury Cathedral; of the Rev. William Lisle Bowles, the poet—to whom Coleridge and Southey acknowledged in print so many poetical obligations; but, strange to say, she was in no way whatever related, but by name, with one of the best of the minor poets of England. The father of Southey's widow was an Esquire, and not a Reverend. Miss Caroline Ann Bowles, afterwards Mrs. Southey, was the daughter of Charles Bowles, Esq., of Buckland, near Lymington, in Hampshire; where his daughter died in a very unforeseen widowhood on the 20th of this month.

A sweeter or truer poetess in blank verse than Caroline Bowles never wrote. Her ear was so exquisitely attuned to this really English measure, that her skill in it must have been one of those unheard and unseen attractions which made Southey her admirer, and at last her husband. Miss Bowles had a comfortable independence of her own. She lived on the skirts of the New Forest, and her delight was in woodland contemplations. When or how she became acquainted with Southey no one has told us—not even the poet's son. Southey's pure and holy liking for her was known to many—was known to his own much-loved and excellent wife, and had her approbation. When he married her, in 1839, he had been a widower for about two years. Edith Fricker, the wife of his boyish aspirations, had died mad—poor Southey was to do the same. The illness which impaired, and finally ruined, his noble intellect, was foreseen by Miss Bowles—foreseen before he had offered her his hand in marriage. Why then, it will be asked, did she dedicate her existence, even to a great man, with the shadow of such a certain calamity hanging over him? Why? She accepted his hand, thinking, in her fine womanly nature, that consent would be a means to avert so terrible a blow. She surrendered an annuity to marry a man with grown-up children, and already a grandfather, without any other means of existence than what was derived from the exertions of a brain on the verge of madness. Was not this a noble act of female devotion? Who that loves Robert Southey does not love Caroline Bowles?

But more was foreseen by Caroline Bowles; but that more—she also had hoped to overcome. She knew that Southey's marriage to *any one* would be unwelcome to more than one of his children. She relied on the love of children for their father—she trusted to her own gentle disposition for making friends. But no! Soon her soon foresaw the misery he had brought upon the woman he loved. There was no disparity of age. She was about fifty-three, and he was then sixty-five. Scenes such as we are unwilling to dwell upon took place; scenes such as Southey's clouded brain could not understand, and—much to the credit of both parties—was, we believe, never permitted to see. The real sufferer in this case was poor Caroline Bowles. Young Mr. Southey has been silent, with great good taste, on this sad part of his father's exile tence. But now that the widow is no more, friends may speak out. Here are extracts from two of Mrs. Southey's *unpublished* letters to a much-loved female friend:—

Greta Hall, 23rd Sept., 1840.

I purposed writing to you immediately after my brother-in-law's (Dr. Southey, the poet's brother) visit to us, about three weeks ago; but perpetual hindrances of all sorts have caused me, till now, to defer the execution of that purpose. If I had *had good* to report, I believe my desire to impart it to you would have broken through all hindrances. But I have fallen into that state of total discouragement (the listlessness of mind and spirit) which prostrates all our energies. Dr. Southey could afford us but two days; but in that short space of time he saw enough to confirm all his apprehensions. He frees confident that disorganisation of the structure of the brain is surely, though slowly, progressing—though it may not affect life for many, even very many years. But the constitution is so sound that there can be little strength left to wrestle with any illness that may supervene; and, to *my perception*, there is, in all respects, a gradual progress of change for the worse. Whether from really *much increased* weakness (which, however, the pulse does not indicate), or from whatever other cause, my dear one can now scarcely walk across the room with safety unassisted nor sit down or rise from a chair; and when the few little days we are ever blessed with here enable us to crawl out for a little air and exercise (strictly enjoined by our resident medical adviser), he takes so unsteadily and is so near sinking after a very short walk, that it makes me miserably nervous, insufficient supports as I am. I look to nothing else than his being quite shut up this winter, for he is *cooled*, not warmed, by such slow walking as he is reduced to; and Dr. Southey by no means recommends it. *You may conceive* how it adds to my distress to feel that he is now in a state to require the *best daily medical surveillance*, and that I cannot place any confidence in that which is at one within our reach—most unfortunate circumstances also precluding me from taking counsel with his children, to which it would have been such a comfort to resort in my present perplexities. That I have the *perfect confidence and approbation* of his brother, and Mr. and Mrs. Warter, is a great consolation as far as I am individually concerned. * * * * * *

Of late my dear husband has been less restless in the day-time, sitting quietly on the sofa turning over his leaves for an hour or two at a time, so that I have been able to occupy myself a little, as of old, with my pencil, * * * and now my latest and perhaps *last* attempt satisfies even me, for I *here* somehow mass out an excellent likeness of that dear husband, of whom there has never yet been a resembling portrait. * * * Here is a chapter of egotism, but never was Raphael so contented with the great glorious of his works as I with this, my poor defective drawing. "Yes, this me," was the remark of my dear husband when I showed it to him. * * Affectionately yours, CAR. SOUTHEY.

Greta-hall, 24th Oct., 1840.

* * * * * * *

Nothing gratifying, nothing hopeful, have I now to tell. Tho' there is still great cause for thankfulness in continued exemption from all acute pain and bodily suffering; but I *think* there is increased feebleness; and certainly, from week to week, the mental failure progresses. Spark after spark goes out of the little light now left. Yet a capacity for *enjoyment remains*; and, God be thanked, I can read to him, he still likes new books, taking, to all appearance, as much delight in them as ever. I have no doubt, however, that there is at times a painful consciousness of his condition. When any question has been submitted to me by him (of late a very rare occurrence), he has scarcely chosen to look at them, and would not speak a word; tho', after they were gone, on my reminding him that *such a person* had been here, he would answer, "I knew him very well." I am persuaded he dares not *trust himself* to speak. The week before last I heard him say to himself, as he was standing before a bookcase, "I wish my head was in the right place."

* * * * * * *

Mrs. Southey was not a cheerful poetess; no poetess, we fear, can be cheerful. This remark we first heard made by a witty lady who is still happily alive to say witty things. "I should not care to know," she observed, "the lady who wrote 'The Flowers of the Forest,' or she who exclaims—

Slow spreads the gloom my soul desires.

Mrs. Hunter, who sang the 'Cherokee Indian's Death Song,' could not be a nice person; Mrs. Hemans writes on black-edged paper, and from a mourning warehouse; Miss Landon's best poem is on the first grave in a newly-made churchyard. These are not cheerful subjects. Nay, Miss Bowles, who is so clever, seems to live in churchyards. Why should not woman write about winter fireside, hayfields, the happinesses of domestic life? I do not care for charnel-house poetry."

There is a commotion in Paternoster-row, and among the West end houses. The early closing movement has reached the descendants of Lintot and Tonson, and our literary wants on a Saturday are in future not to be supplied after two o'clock. The smart tall apprentices at Longman's and Whittaker's are to get away into the country, or where they innocently like, every Saturday after two. The West-end publishing houses (Murray, Moxon, Bentley, &c.) fall, it is said, into this early closing change.

The original MS. of "Gray's Elegy in a Country Churchyard" will pass, on Friday, the 4th of August, under the hammer of Messrs. Sotheby and Wilkinson. It is the first complete copy of one of the best-known poems in the world, and abounds in unpublished alterations such as poets would do well to study. Mr. Penn, late of Stoke Pogis, whose property it is, gave £100 for it. It is written on one half of a sheet of yellow foolscap, folded into two. Eton College was a competitor for it when it was sold to Mr. Penn, in 1845; and will, it is said, enter the lists again on this occasion. The Americans, however, are counting their dollars, with a view to its transfer to Boston or New York.

FINE ARTS.

ORNAMENTAL CASTS, BELONGING TO THE DEPARTMENT OF SCIENCE AND ART.

The collections of Ornamental Art in course of formation by the Department of Science and Art are already of very fair extent, and promise eventually to prove of great interest and value to the student of art-history. They are divided into three classes, marking three distinct eras—the Ancient, the Mediæval, and the Modern, or Renaissance. In the first, or Ancient division, are included Egyptian, Greek, and Roman specimens; in the Mediæval—Byzantine, Saracenic, Norman, Gothic, &c.; and in Modern Renaissance—Cinque-cento, Elizabethan, and Louis Quatorze specimens. Those of the first and last classes are the most numerous, the acquisitions in Mediæval art being as yet comparatively few. It is the intention of the Department to publish illustrated catalogues of each of the classes; that, indeed, of the Renaissance being already issued. The illustrations by female students in the wood-engraving class are numerous and very creditably executed; and the historical and descriptive notices by Mr. Wornum, the keeper, are carefully prepared, and sufficiently in detail as helps to study. After a review of the four varieties of the revival, distinct from its perfect form, the Cinque-cento, the writer gives the following brief summary of results:—

A design containing all the elements of this period, is properly called Renaissance. If a design contain only the tracery and foliage of the period, it would be more properly called Tre cento; if it contain, besides these, elaborate natural imitations, festoons, scroll-work, and occasional symmetrical arabesque, it is of the Quatro-cento, the Italian Renaissance of the fifteenth century; and if it display a decided prominence of strap and shield work, it is Elizabethan. In all these styles the evidence of their Byzantine and Saracenic origin is constantly preserved, in the tracery, in the scroll-work, and foliage, in the rendering of classical ornaments; and in the intricate varieties, in the shape of the panels containing religious illustrations, which even to the close of the Quatro-cento, are of pure Byzantine shapes, as they abound in the manuscripts.

In short, the Cinque cento aims at the perfection of grace of outline in the abstract, curved forms in infinite variety of picturesque being the prevailing element. The cartouches and strap-work are rejected in the best examples, being comparatively modern introductions; and vases, musical instruments, and other art-subjects, after ancient models, introduced in their stead. The Elizabethan, Louis Quatorze, and Louis Quinze styles grew out of the Renaissance, and then came the *rococo*—the culminating manifestation of extravagance. All these examples are interesting as matters of study, showing how one style grew out of another, adding its distinguishing features; but, whilst he studies them historically, the art-tyro should be warned by the very fact of their progressional character, from adopting any of them as examples for imitation. What style may ultimately turn up from the revival and admixture of all previous styles, we are utterly at a loss to imagine; but certain it is, at present we are without a style, and that a style we much want.

In France the majority of the best producers appear to have settled down upon the pure Renaissance or Cinque-cento territory; but we do not think it a style which would generally suit the genius of this country; nor, on the other hand, that our own Elizabethan is calculated to fill up the measure of our requirements.

MACDONALD'S STATUE OF ULYSSES, &c.

Mr. Macdonald has completed his statue of Ulysses Recognised by his Dog, a commission of Lord Ellsmere; it has safely arrived in this country from the artist's studio at Rome; and is at present open to the inspection of amateurs, at the rooms of Messrs. H. Graves and Co., in Pall-mall. Having seen it, we can speak highly of its merits; both in conception and execution. It is a work of the highest class. The subject is an eminently dramatic one—the wandering King, on his return home, in the assumed guise of a beggar, discovered by his faithful dog, who licks his master's knee as he looks up affectionately into his face. The form of this Greek hero is full of manly dignity, with his hand resting upon a rugged staff: his attitude is sufficiently indicative of action, but momentarily suspended, and emotion at the touching instance of brute fidelity enacted before him. The figure is slightly draped; a cloth thrown over the left shoulder, and girt round the waist, yet singularly simple in treatment. The marble, out of which this fine statue has been carved, is a remarkably fine specimen, of purest white, without, as far as we could discover, a flaw in any part of it. British art may be proud of such productions.

In the same room with the Homer hero, is exhibited the bust of the late Daniel Webster, the distinguished American Statesman, executed for Lord Ashburton by Mr. J. G. King. It is a vigorous and characteristic realisation of a most remarkable head, severely naturalesque, yet singularly simple in treatment.

[illegible]

TESTIMONIAL TO COLONEL MABERLY.—On Tuesday evening an elegant silver Epergne was presented to Colonel Maberly, the late Secretary to the General Post-office, by a large number of persons who have served under him during his long official career. [We shall engrave the Testimonial next week.]

LAYING OF THE FIRST STONE OF THE CHURCH OF ST. MICHAEL-ON-THE-MOUNT, LINCOLN.—The ceremony was performed by the Right Hon. the Earl of Ancaster, on Thursday week, and was attended by the Mayor and Corporation of Lincoln, the Governors and boys of Christ's Hospital School (a noble foundation in this parish for 150 poor boys), and by numerous visitors. Several of the company afterwards partook of luncheon at the Prescotor's, the patron of the living. A collection was made towards the building fund, £700 being still required to carry on the work to completion. The new church will be built for 500 persons. The architect is Mr. Teulon, of London.

MELBOURNE UNIVERSITY.—Professor M'Coy, of the Queen's College, Belfast, has been unanimously elected by Sir J. T. W. Herschel, Professor Airey (the astronomer Royal), and other members of the Melbourne Professorship Committee, to fill the chair of Natural Sciences in that University. The salary is £1000 a year, with a house, and allowances for travelling expenses. Professor Herne, of Queen's College, Galway, has been appointed to the Greek chair in the Melbourne University, the salary of which is also £1000 a year.

THE HORSEMONGERS TO BOW MEETING.—The first bow meeting for the season was held at Garnons, the seat of Henry Clay, Esq., on Thursday, the 20th inst. The prizes were presented by Mrs. Kevill Davies, the Lady Paramount, to the following successful shots:—First Lady's Prize, for hits, to Miss Clay; Second Lady's Prize, for numbers, Miss Webb, King's Fyon. First Gentleman's Prize, for hits, Mr. Henry Clay; Second Gentleman's Prize, for numbers, Mr. Joseph B. Clay. The prize given by Mr. Clay to the lady who obtained the greatest number of golds, was awarded to Miss Freeman, Games.

RAMAZAN.—A singular custom exists in Turkey, even among the most enlightened of the land. At one period, for eleven months of the year, the Pachs uses the European aid of knives and forks, and separate plates for each guest. During Ramazan, the dinner is served in the old Turkish style, and it is looked upon as meritorious or pleasing to forego for a time to the usages which are abandoned, but which yet have not ceased to be remembered and regretted.

MR. HOWARD PAUL, the American author, was last week married at Frankfort to Miss Feathestone, the popular vocalist.

THE MANCHESTER UNITY FESTIVAL.—The members of the Manchester Unity Order of Odd Fellows of the Brighton District, held their opening dinner on Monday, in their new Hall, in Queen's-road, Brighton; the usual toasts were given and received with much enthusiasm. A cold collation was served by Mr. Taylor, to which 200 members sat down. The chair was supported on the right by Messrs. Scott, Esq., Dr. Hall, Esq., J. H. Cowper, Esq., H. Hards, Esq., Wm. Sligo, Esq., &c. And, on the left, by W. Verrall, Esq., Verrall, Esq., J. C. Cockburn, Esq., J. C. Burrows, Esq., [illegible] Esq., J. Turner, Esq., Mr. Chas. Honeywood, and Mr. Abbott (the P.G.) The room was hung with flags and banners, on which were inscribed the names of the orders. The cloth having been removed, the usual toasts were given and received with much enthusiasm. The chairman, in proposing "Success to the Manchester Unity," read several extracts from the report, in order to show the wonderful progress which it had already made. Mr. Church, in returning thanks, said he was happy to inform those present that the number of members was 1564, that the Benefit and General Fund amounted to £4250, now in hand, and the Widows and Orphan Fund to £3000; making a total of £7250. For a society of working men that was a large amount of money to have collected by their own exertions and industry, without extraneous aid.

"THE ARREST OF LOUIS XVI. AND HIS FAMILY, AT VARENNES, IN JUNE, 1791."—PAINTED BY T. F. MARSHALL.—FROM THE EXHIBITION OF THE ROYAL ACADEMY, 1854.

"THE ARREST OF LOUIS XVI. AND HIS FAMILY, AT VARENNES." PAINTED BY T. F. MARSHALL.

EMBOLDENED by the well-deserved success of Mr. E. M. Ward's very clever picture of "Louis XVI. in Prison," for the possession of which even Royalty itself was a competitor, another clever artist, Mr. T. F. Marshall, has turned to Lamartine's "Girondins," and sought a subject of the same picturesque period, and relating to the same unfortunate King. The point he has chosen is thus related by Lamartine:—

The King having been recognised at St. Menehould, by Drouet, the son of a postmaster, who rode forward to give notice of his approach at Varennes, was conducted to the house of M. Sausse, a grocer of the

"CINDERELLA."—PAINTED BY GEORGE CRUIKSHANK.—FROM THE EXHIBITION OF THE ROYAL ACADEMY, 1854.

town, and who was at the same time Solicitor of Commune. In vain he d nied his rank, and implored the municipal authorities to allow him to depart; when, at length, the Queen Marie Antoinette, turned to the wife of M. Sausse, and showing her children to her, said:—"Voilà ces mère, Madame; vous ès femme! la sort d'une femme et d'une mère est entre vos mains! Songez à ce que je dois éprouver pour mes enfants, pour mon mari! * * * La Reine de France vous devra plus que son royaume, plus que la vie!" "Madame," réponde hochement la femme de l'épicier, * * * "je voudrais vous être utile. Vous pensez au Roi, moi je pense à Monsieur Sausse."

Mr Marshall, it will be seen from our Engraving, is no timid imitator of Mr. Ward: he emulates rather than imitates. We have seldom seen Mr. Marshall to more advantage than in this picture.

"CINDERELLA."

PAINTED BY GEORGE CRUIKSHANK.

GEORGE CRUIKSHANK is certainly one of the most versatile-minded men of his day. He is determined to succeed in whatever he undertakes. He has—or had, shall we say?—a rich fund of humour, coupled with a dexterity of hand, and a facility of invention, that more than places him by the side of his great rival Gillray. No complete collection of his works or any collection at all approaching to complete is known to exist. With a disregard of self so common to genius in such matters, he has nothing like a collection of them himself. This is the more to be regretted, inasmuch as a series of George Cruikshank's publications would be a history of the follies and street enthusiasms of London for the last forty years.

Not content with achieving great excellence as a designer, and an etcher or engraver of his own works, Mr. Cruikshank, in his new lease of life, is determined to excel in painting in oils. He properly considers that a design which is good as an etching or engraving, will look as well upon canvas as upon paper. There is great truth in this position. But he is apt to forget that crude or ill-placed colours too often injure the effect of a design; that there are good pictures which will never engrave—and good engravings that will not engrave to any additional advantage.

The admirers of Mr Cruikshank—and he has many, and none warmer than our selves—have been pleased to find that he has chosen to dwell in fairy land—that he prefers Queen Mab and Cinderella, to Bond-street dandies and the follies of the day. It would be difficult indeed to find a fitter artist to introduce to the Fairy Queen: he really seems to revel in tiny circles and on mushroom tops, with a Puck-like vivacity and good-will. We engrave a recent instance of his skill in embodying nursery stories. His subject is "Cinderella," and the picture we engrave is his solitary contribution to the recently-closed Royal Academy Exhibition.

"EVANGELINE."—PAINTED BY JOHN ABSOLON.—FROM THE EXHIBITION OF THE NEW SOCIETY OF PAINTERS IN WATER-COLOURS, 1854

When Mr. Cruikshank delighted in the vintages of France and Portugal, he had none of these Queen Mab and Cinderella dreams. Water has opened up to him a new vein—the pump has introduced him to Puck.

THE BAY OF URI, LAKE LUCERNE.

BY W. C. SMITH.

FOR the solemn grandeur of its natural features, and the romantic historical interest attaching to it, the narrow Bay of Uri, on Lake Lucerne, is a point of signal attraction with all tourists imbued with a love of the picturesque and the poetical. Here it was that Tell leaped ashore, from the boat of the Austrian tyrant, and proclaimed the independence of the Swiss Cantons, which they have enjoyed ever since; and here stands the little chapel, commemorative of the event, where mass is said annually on the Friday after Ascension. It is from this point that Mr. Smith has taken the view which he has elaborated with great success in the picture exhibited at the Water-Colour Gallery, and which we have great pleasure in engraving. The lofty mountain crags, the deep dark water, and the varied atmospheric effects peculiar to mountain lake scenery, are all realised with admirable success. The production is one, altogether, worthy of the subject, and of Rogers's fine lines:—

That sacred lake withdrawn among the hills,
Its depth of waters flanked, as with a wall,
Built by the giant race before the flood;
Where not a cross or chapel but inspires
Holy delight, lifting our thoughts to God.
From godlike men * * *
That in the desert sowed the seeds of life,
Training a band of small republics there,
Which still exist the envy of the world!
Who would not land in each and tread the ground—
Land where TELL leaped ashore."

"EVANGELINE."

BY JOHN ABSOLON.

MR. ABSOLON'S contributions to the Exhibition of the New Water-Colour Society are numerous and varied, landscape and figure subjects—some purely real, some more or less ideal and suggestive—in the landscape department, for instance, his admirable "Field of the Cloth of Gold." In female studies he displays equal taste and fancy, and one of the most pleasing of this class we have selected for engraving. It aptly illustrates the lines in one of Longfellow's poems:—

As apart by the window she stood, with her hand in her lover's,
Blushing Evangeline heard the words that her father had spoken.

"THE BAY OF URI, LAKE OF LUCERNE."—PAINTED BY W. C. SMITH.—FROM THE EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS, 1854

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS.—SATURDAY.

The Borough Rates Bill was read a third time and passed.

SALE OF BEER, &C.

On the motion for reading this bill a third time,

Mr. H. BERKELEY opposed the measure, because it dealt with the rich and the poor in a different manner, especially the poorer classes who went out for recreation on a Sunday, and did not, according to the decisions of the magistrates, come under the denomination of travellers.

Mr. PATTEN said, to meet this objection, he had extended the hour for closing at night from nine to ten o'clock.

Lord D. STUART, Mr. W. J. FOX, and Mr. Crawfurd opposed the bill; which was supported by Mr. Bankes and Mr. Henley.

The bill was read a third time and passed.

The following bills were also read a third time, and passed:—Reformatory Schools (Scotland) Bill; Ecclesiastical Jurisdiction B.ll; Stock-in-Trade Exemption Bill; Enclosure, &c., of Land Bill; Common, &c., Rights (Ordnance) Bill; Friendly Societies Acts Continuance Bill; Spirits (Ireland) Bill; Burials Beyond the Metropolis Bill.

BRIBERY BILL.

The House then went into Committee on the Bribery, &c., Bill.

Lord J. RUSSELL proposed one additional clause, to the effect that it should be lawful for candidates to defray the actual and reasonable expenses of bringing voters to the poll.

Mr. CRAUFURD moved an amendment, to the effect that it should not be lawful.

After some discussion, the amendment was lost by a majority of 110 to 49.

Mr. HEADLAM moved a proviso limiting these expenses in boroughs to aged and infirm voters, which was also lost by a majority of 85 against 51.

The clause was then carried by a majority of 88 to 47.

On the motion of Mr. WALPOLE, an additional clause was substituted in lieu of clause 28; and the bill was ordered to be reported, as amended.

The Land Revenues of the Crown (Ireland) Bill passed through Committee.

The Land, Assessed, and Income Taxes Bill, and the Duchy of Cornwall Office Bill, also passed through Committee.

The Highways (Public Health Act) Bill, and the Chancery Amendment Bill, were considered as amended.

HOUSE OF LORDS.—MONDAY.

THE WAR—THE QUEEN'S MESSAGE.

The Address to the Crown, in reply to her Majesty's most gracious Message, was moved by the Earl of ABERDEEN, who said that, large as the vote of credit was, he apprehended no reluctance on the part of Parliament to grant it.

The Earl of ELLENBOROUGH, in assenting to the Address, expressed a hope that the money would be economically expended.

The Earl of HARDWICKE thought the House ought to have further information as regarded the conduct and objects of the war.

After some observations to the same effect from Earl Fitzwilliam and the Marquis of Clanricarde, the Earl of CLARENDON said that Austria was too deeply engaged to the Western Powers to draw back without dishonour. As far as our own Government was concerned, it would lose no opportunity of concluding an honourable peace; and, in the name of all his colleagues, he declared that they had no intention whatever of returning to the *status quo ante*, nor would they agree to patch up a peace which would be likely to render a future war inevitable.

The Address was then agreed to.

HOUSE OF COMMONS.—MONDAY.

THE ROYAL MESSAGE—CONDUCT OF THE WAR.

The House having gone into a Committee of Supply, Lord JOHN RUSSELL proceeded, in accordance with her Majesty's Message, to move a vote of credit of £5,000,000 for the expenses of the war. He briefly asked for the vote of credit for the service of the war, without any estimates whatever. He dwelt at some length upon the position and difficulties of Austria, and upon the evasive reply of Russia to the requisitions sent her by that Court, which the Western Powers thought was not such as would afford any grounds for peaceful arrangements. Austria had been too slow in joining France and England; but now he thought that country was bound to take part in driving Russia from the Principalities; he had no doubt but that it would honourably carry out its engagements. He had already refused, on the part of the Government, to be bound to any specific conditions of peace, for these must depend upon the position of the belligerents at the time of the negotiation; but he had no hesitation in saying what would be most essential. They were justified in assuming that Russia would push her advantages to the utmost, even to the subjugation of Turkey; and they should therefore have some securities against any similar aggressions on her part in future.

The integrity of Turkey, and the balance of power in Europe cannot be secured by reverting to the *status quo* with reference to the position of the Ottoman Empire (Cheers). But there is another mode in which the position of Russia is menacing to the integrity and independence of Turkey. In my opinion the establishment of a great fortress, made as impregnable as it is possible for art and science to make it, containing within its port a very large fleet of line of-battle ships, ready at any moment that they could obtain a favourable wind, to come down into the Bosphorus, is a fact so menacing to Turkey that no treaty of peace would be secure which would leave the Emperor of Russia in the same position with reference to the Ottoman Empire in which he has hitherto been placed (Cheers).

He believed the Government of France united with that of England in this sentiment, and they would not cease until they had obtained securities against the continuance of Russia's aggressive policy, nor did he believe that Russia would cease until brought to do so by the events of the war. Were a hollow peace to be patched up, England would lose not only her Allies, but the respect of the whole world, while Russia would be positively advantaged. The noble Lord concluded by moving the vote of credit.

Mr. ALCOCK complained that the war had not been carried on with proper vigour, and insisted upon the necessity of adopting energetic measures in the Crimea and Circassia.

Mr. G. BANKES hoped there was no intention of subsidising Turk y without the assent of Parliament.

Mr. HUME, in supporting the vote, deprecated the idea of subsidies altogether.

Mr. KNIGHT hoped some aid would be given to the Circassians, who would be found capable of giving the most efficient assistance to Turkey.

Mr. BLACKETT, in supporting the vote, expressed great distrust of the Austrian alliance.

Mr. CORDEN said that events had already proved that he was correct in maintaining that there was nothing to be feared from Russian aggression. Russia was very powerful for defence, but she had no power when once beyond her own frontier. The noble Lord, therefore, was indirect in favouring the policy of the Government to occupy the Crimea, for Russia would place herself on the defensive; and should Sebastopol prove to be, as was said, a second Gibraltar, the result might be very disastrous to the arms and honour of this country.

Mr. LAYARD regretted that Lord Palmerston had not been appointed War Minister; for the appointment of the Duke of Newcastle to that position created throughout Europe a doubt as to the sincerity of England in carrying on the war with vigour and effect. The assurances given by the noble Lord the President of the Council would be very satisfactory if they could be certain that his sentiments were shared by all his colleagues.

Lord D. STUART pressed for an assurance from the Government that they should have an autumnal session of Parliament. There was so much suspicion in the public mind as to the conduct of the war, that he thought it advisable, instead of proroguing Parliament, that it should adjourn from time to time, so as to exercise some supervision over the occurrences that might chance to arise.

Mr. DISRAELI had thought that the noble Lord would have felt it his duty to adopt the suggestion which he had on a former evening thrown out, that Parliament should re-assemble about November, or before the close of the year. That discussion had, however, elicited from the noble Lord a declaration of the definite objects of the war, and he must say that it was with some consternation that he heard the declaration of those objects, knowing that, without their consummation there was to be no hope of peace. He understood that peace was not to be expected except upon the condition that Wallachia and Moldavia were not again to return under the protectorate of Russia, and that Sebastopol was to be destroyed, and the Crimea to be occupied.

Lord J. RUSSELL said, he had not said so. What he had said was, that Turkey could not be considered safe while Russia had so large a fleet at Sebastopol.

Mr. DISRAELI appealed to the House if they had not all been, for six hours, in a fools' paradise? (Loud cheers responded to this appeal.) Had they not all been under the impression that Sebastopol was to be destroyed and the Crimea occupied? (Cries of "Hear, hear," from all parts) Had they been correct in their supposition of the noble Lord's meaning, he should certainly have thought that the noble Lord was imprudent in disclosing what should be Cabinet secrets. The discussion of that evening was more than ever important if they had been mistaken as to the noble Lord's meaning. He had a right now to ask the noble Lord what was the policy of the Government since that which they supposed to have been avowed was clearly a delusion. They must now suppose that the policy of the Government, was not to be altered—that it was to be the same that it had been from the beginning—and he feared that it would be the same to the close.

Lord PALMERSTON replied to the observations of Mr. Disraeli, and said it was impossible to lay down what should be the conduct of the Government, for that must be governed by the events of the war. The terms of peace must be regulated by France and England, without being influenced by those who might or might not unite with them in their military exertions.

Lord D. STUART said that they ought to report progress, as they were under a misapprehension as to what had fallen from the Lord President of the Council.

Lord J. RUSSELL, in explanation, said that what he had stated was that they would not agree to terms of peace while Russia held such a position at Sebastopol as must be always menacing to Turkey.

After some discussion, it was arranged that the debate should be renewed next day, on the bringing up of the report.

HOUSE OF LORDS.—TUESDAY.

The Usury Laws Repeal Bill went through Committee; and several other bills were advanced a stage.

COMMUNICATION WITH THE GUARDS OF RAILWAY TRAINS.

Lord STANLEY of Alderley, in answer to Earl Fitzhardinge, who adverted to the attempted assassination of a police-officer in a railway train, stated his belief that an efficient apparatus for communicating between the guard and driver had been devised, and was in operation on one of the lines of railway. The attention of the Government had been directed to the necessity of such a communication, and a bill would be brought in next session to regulate and enforce the improvement.

HOUSE OF COMMONS.—TUESDAY.

THE BRIBERY BILL.

After some debate, Lord John Russell's clause in the Bribery Bill, declaring it to be illegal to give any refreshments to voters on the days of nomination and polling, was adopted by 77 to 35.

An amendment, moved by Sir F. KELLY, intended to legalise the giving of refreshments reasonably incidental to the travelling expenses of the voter, was negatived, on a division, by 113 to 61.

Several new clauses were added, and the third reading was fixed for Friday.

THE VOTE OF CREDIT.—THE WAR.

On the report of the Committee of Supply (£3,000,000) vote, Lord D. STUART moved the addition of the words, "and that an humble address be presented to her Majesty, to return her Majesty the thanks of this House for her most gracious Message, and to assure her Majesty that her Majesty, deeming it expedient to provide for any additional expense which may arise in consequence of the war in which her Majesty is now engaged against the Emperor of Russia, may fully rely on the cheerful zeal and constant affection of her faithful Commons, and to assure her Majesty that they most readily do make provision according to her Majesty's wishes, and humbly to pray that her Majesty will be graciously pleased not to prorogue her Parliament until she shall have been enabled to afford to this House more full information with respect both to her Majesty's relations with foreign Powers, and to her views and prospects in the contest in which her Majesty is engaged." The proceedings of the previous evening rendered such a resolution not only desirable, but necessary. The annals of Parliament failed to produce a parallel to what was then witnessed. The leader of the House of Commons had made a statement as to the objects and purposes of the war, not in the heat of debate, but deliberately, which he afterwards thought proper to retract. Lord D. Stuart referred in the usual parliamentary manner to the passages in Lord J. Russell's speech, and then minutely put in question, and pointed in the details of the conduct of the war which the Government had pursued, and which, he thought, were without foundation. Mr. Herbert took occasion to pay a high compliment to the skill and bravery displayed by Captain Butler in the defence of Silistria, and proceeded to state that he was in error when he had declared that he had no confidence in the Government, and it had also been asserted that the Government was one of sufferance. Be it so; but this he would say, that, so long as they had the support of the House of Commons, they would hold the reins.

Mr. LAYARD, adverting to Lord John Russell's words on the subject of the menacing position of Sebastopol, defied any person to show that the construction which the House put upon the words was not the correct one. Nothing short of the destruction of that great fortress could meet the case as stated in the first instance. As to the Ministry, Mr. Layard had confidence in Lord John Russell, but he had no confidence whatever in Lord Aberdeen.

Colonel DUNNE mentioned certain circumstances which tended to obstruct the advance of the British army. Preparations were not made in time.

Admiral BERKELEY adduced a number of facts to repel charges made in reference to the alleged inactivity of the fleets. It had been alleged that the Government had tied up the hands of Admiral Napier in the Baltic. This was not true. The Admiral had a *carte blanche*, and had been encouraged to proceed rather than to withhold. The circumstance of no great operation having been attempted was owing entirely to the formidable character of the fortifications. Sir Charles Napier and Admiral Chads had both declared that it would be perilous to attempt the bombardment of Cronstadt.

Sir J. SHELLEY remarked that throughout the country there was a feeling of distrust as regarded the Earl of Aberdeen, and he was quite willing to view the amendment as involving want of confidence in him.

Sir J. WALSH criticised freely the conduct of Ministers, but declined to support the amendment.

Mr. M. MILNES appealed to the empty state of the benches to show the little interest the debate was exciting, speaking of Austria and Mr. Milnes declared that from the beginning of the controversy to the present time she had acted in the most selfish manner. With regard to Lord Aberdeen, he had no apprehension whatever of any failure on his part in carrying out the war.

Mr. HILLS challenged the discretion of Admiral Berkeley in reading extracts from the private letters of Admirals Napier and Chads, giving it as their opinion that it would be destruction to the fleets to attack Cronstadt and Sveaborg.

Admiral BERKELEY declared that he had read the extracts to show that there was no ground for the assertion that Admiral Napier's hands were tied; and also to show that, in Lord Charles Napier's opinion, it would be destruction to the fleets to attack Cronstadt or Sveaborg with the objects in view. Since those letters were received, Lord Dundonald had been sent to the Baltic, and the country might rest assured that whatever could be done by that gallant officer would be done to accomplish the objects of the war.

Colonel LINDSAY adverted to the propriety of an autumnal meeting.

Mr. PEZO thought that much unskilled labour from such districts as Cornwall might be profitably employed in making entrenchments, and when they were made, a very few men would be required to man them.

Lord J. RUSSELL did not think it necessary to make any further explanation. He had seen the reports of his speech; they appeared to him to be correct. He was willing to abide by them. He belief was that before the close of the session it was not improbable to state what were the general objects in view. All the information received by Ministers, as to the destruction of Sebastopol, was to the effect that the Crimea was gratuitous. He would not go into the general conduct of the war, but there were one topic which he could not overlook. Had Aberdeen people been consulted before the Baltic fleet was sent out? Had Admiral Dundonald been consulted? Had Admiral Berkeley been consulted? Had Admiral Napier been consulted? Had Admiral Chads been consulted? Had Admiral Seymour been consulted? Had Admiral Dundas been consulted? Had Admiral Lyons been consulted? Had Admiral Plumridge been consulted? Had Admiral Boxer been consulted? Had Admiral Corry been consulted? Had Admiral Stopford been consulted? Had Admiral Freemantle been consulted? Had Admiral Hamilton been consulted? Had Admiral Fanshawe been consulted? Had Admiral Hall been consulted? Had Admiral Bruce been consulted? Had Admiral Pelham been consulted? Had Admiral Yelverton been consulted? Had Admiral Sir Thomas Hastings been consulted? Had Admiral Sir Thomas Pasley been consulted? Had Admiral Sir Thomas Maitland been consulted? Had Admiral Sir Thomas Troubridge been consulted? Had Admiral Sir Thomas Williams been consulted? Had Admiral Sir Thomas Wilkinson been consulted? Had Admiral Sir Thomas Wilson been consulted? Had Admiral Sir Thomas Wolley been consulted? Had Admiral Sir Thomas Young been consulted? Had Admiral Sir Thomas Yorke

nance). Land Revenues of the Crown (Ireland); Highways (Public Health), and Public Libraries Bill.

HOUSE OF COMMONS.—FRIDAY.

The Speaker took the chair at twelve o'clock.

The Militia (No. 2) Bill and the Militia (Scotland) Bill were severally passed through Committee.

BRIBERY BILL.

Lord J. RUSSELL moved the third reading of the Bribery Bill.

Lord HOTHAM stated his objections to the measure, and declared his intention to vote against the third reading.

The Bill was ultimately read a third time.

The House was occupied until an advanced hour of the night with the consideration of several new clauses proposed by private members.

NATIONAL SPORTS.

GOODWOOD RACES.

TUESDAY.—The magnificent meeting at Goodwood was inaugurated to-day under the most favourable auspices. The weather was most propitious; a brilliant unclouded sun diffused its radiance over the surrounding scenery, and the genial atmosphere was redolent of summer's richest fragrance; while the attendance of aristocratic and other visitors certainly showed no diminution from that of former years An attack of the gout, we regret to state, confined the Duke of Richmond to the house during the early part of the afternoon, but just before the race for the Stewards' Cup he arrived on the course in a pony chaise. The events were decided as follows:—

Craven Stakes.—Protest, 1. Adine, 2.
Match: 100, h. ft.—Diomedia, 1. Blanca, 2.
Lavant Stakes.—Lord of the Isles, 1. Paradigm, 2.—
Gratwicke Stakes.—Boiardo, 1. El Dorado, 2.—Betting: Even on Boiardo, 2 to 1 agst El Dorado.

Fifty Pounds, added to a Sweepstakes.—Flageolet, 1. Thessaly, 2.
Sweepstakes of 300 sove. each.—West Australian, 1. Colonel, 2. Hazlenut, 2.—Betting: 6 to 1 on West Australian, who waited until they arrived at the distance, when he took the lead, and won in a canter.

Stewards' Cup, added to a Handicap Sweepstakes.—Pamicestone, 1. Redmyside Hero, 2. Trust, 3.—Thirty-eight started; and the betting was 5 to 1 agst Pamicestone, and 20 to 1 agst the second and third.

Ham Stakes.—Dirk Hatteraick, 1. Habena, 2.
Match, 100, h. ft.—William Rufus, 1. Orpheus, 2.

WEDNESDAY.—The scorching heat of yesterday no longer prevailed; it was succeeded by a cold, low, dust-raising wind—the very wind which generally "blows up rain." Towards noon lowering clouds gathered around, and a rumbling of distant thunder was distinctly heard Just after the race for the "Goodwood Stakes," a smart shower fell, and umbrellas and mackintoshes were in immediate requisition. The attendance of general company throughout the day was unquestionably inferior in numerical strength to that on the previous day. The events were as follow:—

Sweepstakes of 300 sovs. each.—Boiardo, 1. Basibee, 2.
Handicap Plate of £50.—Lizzie, 1. Trust, 2.
First Year of the Second Great North and South of England Biennial Stakes.—Lord of the Isles, by Touchstone, 1. Cloiide, 2.
Match.—Goodwood Stakes.—Bribery, 1. Heapy, 2. Adine, 3. Tros, 4.—Sixteen started; and the betting at starting was 6 to 1 agst Heapy, 6 to 1 agst Tros, 12 to 1 agst Adine, 100 to 8 agst Bribery.
Drawing-room Stakes.—Alcohol walked over.
Sweepstakes of 10 sovs. each.—Thessaly, 1. Nicotine, 2.
Anglesey Plate.—William Rufus, 1. The Kaffir, 2.

THURSDAY.

Sussex Stakes—Namur, walked over.
Sweepstakes, 200 sovs. Dirk Hatteraick, 1. Moonbeam colt, 2.
Sweepstakes, 100 sovs. Tros, 1. A. colounus, 2.
Goodwood Cup.—Virago, 1. Indian Warrior, 2.—Won in a canter.
Fourth Bentinck.—F. by Surplice, 1. Corobus, 2.
Molecomb Stakes.—C. by Cotherstone, 1. William III., 2.
Racing Stakes.—Scythian, 1. Champagne and Pamicestone dead heat.
Sweepstakes. Antoinette, 1. Whistle, 2.

FRIDAY.

Sweepstakes of 100 sovs.—Calberna Hapes, 1. Pharoid, 2.
Nassau Stakes.—Virago 1. Honeysuckle, 2.
Chesterfield Cup.—Catspaw, 1. Knight of St. George, 2.—Twenty-three ran.
Second Year of Third Bentinck Memorial Stakes.—Dervish, 1. Arthur Wellesley, 2.
Third Year of Second Bentinck Memorial Stakes.—Vanderdecken, 1. Filbert, 2.
Sweepstakes of £50.—Andover walked over.
Biennial Stakes.—Rotherby, 1. Fawn, 2.
Nursery Stakes.—Rifleman, 1. Miami filly, 2.—Matilda ran against a post, and J. Steggles is much injured.
Duke of Richmond's Plate.—Determination, 1. Little Charlie, 2.
Queen's Plate.—Epaminondas walked over.

CRICKET.—The match between the Marylebone Cricket-club and the county of Kent took place on Monday and Tuesday last, in which the former were the winners. The Kent's first innings were 104, the second, 150. The Marylebone Cricket-club, 157 and 98—leaving six wickets to go down.

NEXT WEEK'S RACING.—The great event of July—the Goodwood having taken four days of this week, the three next meetings are—the Brighton, on Wednesday and Thursday, followed by the Brighton Cup on Friday; and, in the north, the meeting at Airdrie is held on Thursday and Friday.

MAILS FOR AUSTRALIA.—Arrangements have been made for the conveyance of mails to Australia once in every month, by the establishment (under a contract with the General Screw Steam Shipping Company) of a packet to run once in two months direct from Southampton to Australia, intimately with the existing line of packets from Singapore, in connection with the Indian mail service. The mails for Australia will accordingly be made up in London, during the remainder of the present year, on the following days:—August 4, morning, by direct packet; Sept. 4, morning, via Southampton and Singapore; Sept. 9, evening, via Marseilles and Singapore; Oct. 4, morning, by direct packet; Nov. 4, morning, via Southampton and Singapore; Nov. 9, evening, via Marseilles and Singapore; Dec. 4, morning, by direct packet. The postage upon letters for any of the Australian colonies when conveyed by direct packet, or via Southampton and Singapore, will be 1s. the half ounce; and when addressed to be sent via Marseilles, 1s 10d., if under a quarter of an ounce, 2s 8d., if weighing a quarter of an ounce and not exceeding half an ounce, and so on, according to the scale in operation for charging letters addressed to India. Newspapers posted in accordance with the regulations will be transmitted by packet direct, or by packet via Southampton and Singapore, free of charge, but will be liable to a pre-payment of such when sent via Marseilles The postage upon both letters and newspapers must be paid in advance. Letters, &c., for Western Australia are forwarded by private ships, unless especially directed to be sent via Singapore or by some other route.

THE CONSERVATIVE LAND SOCIETY.—A public meeting of the inhabitants of Lincoln was held at the Corn-exchange, on the 21st inst., the last day of the Agricultural Show; the Right Hon. R. A. Christopher, M.P., in the chair, supported by some of the chief magistrates and gentry of the town and county. A deputation attended for the society, to explain its plans and object. The right hon. chairman addressed the meeting on the commercial advantages of the investment, as well as the important political privileges enjoyed by freehold franchise. Col. KNOX stated that, from the formation of the society, on the 6th September, 1852, to the present period, upwards of 10,015 shares, of £50 per share, had been taken, representing a nominal capital of more than half a million pounds sterling, on which about £180,000 had been actually paid up, and the withdrawals had amounted to only about £2000. The shares on the order of rights preceded 3500, and the rights exhausted the estate, 220. Thirteen estates had been allotted, and three estates were in preparation to be distributed amongst the members. A resolution was then passed by the meeting, declaring the society to be highly worthy of support.

DESERTERS FROM THE MILITIA.—In consequence of the order for embodying several regiments of Militia for permanent service, the desertion of fellows who prefer an inactive life, and who only enlisted for the sake of the bounty money, has become so numerous, that, in addition to the usual insertion of their names in the police gazette *Hue-and-Cry*, the authorities have considered it necessary to forward their names and descriptions to the parochial officers of the parishes in which they reside, for the purpose of their detainment: and also to those of any parishes in which it was known they had subsequently resided, with a view to their speedy apprehension; and lists of the defaulters are now posted up at the church doors of the district in which they last resided.

CHOLERA IN SOUTHERN EUROPE.—The cholera has appeared at Genoa, the Pireus, Gallipoli, and the Dardanelles. General Ney is one of its victims. The Ottoman Government has established a quarantine of five days at Constantinople for vessels arriving from Marseilles, on account of the epidemic. The French at the Pireus have obtained the use of the Royal Cadet School, a large and convenient building, for an hospital. The Board of Health at Genoa has just subjected arrivals from Malta to observation, in consequence of cases of cholera having made their appearance there.

CHESS.

TO CORRESPONDENTS.

G. W., of Sunbury.—1. The solution of Enigma No. 874 is too long for publication in our limited space, but if you will furnish an address it shall be forwarded. 2. Your solution of Enigma, though easy, is very promising. Let him send another taste of his quality.
E. H., of Norwich.—See notice to "G. W., of Sunbury." In all such cases an address should be sent to us.
R. H. W., of Oxford; A. E., of Lambeth; the Rev. R. S. R. W., of York; Chirurg Rusis, Newcastle; Many thanks. The Problems received shall be inspected on in our next Number.
ANON. E compare Problem 342 with the Solution once more, and you will find them agree perfectly. The Problem is a masterly piece of strategy.
F. C., of Dover.—A very brilliant and interesting little game.
JUPITER TONANS.—The proposal may do by electric telegraph is between the Paris *Cercle des Echecs* and the Palais Royal, and the St. George's Chess-club, 50, St. James's-street, London.
SOLUTIONS OF PROBLEM No. 843, by Dunsvon, Philip, Magnus, Clidson, O.F.Q., Scalton Magee, R.D.V., D.D., are correct.
SOLUTIONS OF PROBLEM No. 844, by Quixote, P.P., Chemicus, E.H., J.P.W., Norwich; P P., Isabella; Orthlus, Septimus, Alpha, P.T.W., Pitch, Punch, Cear, are correct. All others are wrong.

SOLUTION OF PROBLEM No. 844.

WHITE.	BLACK.	WHITE.	BLACK.
1. Kt to Q 5th (dis ch)	K to Q 4th or (a)	2. R to Q 6th	Kt to Q B 6th

(Black may play differently, but the result is the same).

3. Kt to Q B 7th (dis. ch)	Kt to Q 4th	4. Kt to Q Kt 5th.—Mate	

WHITE.	BLACK.	WHITE.	BLACK.

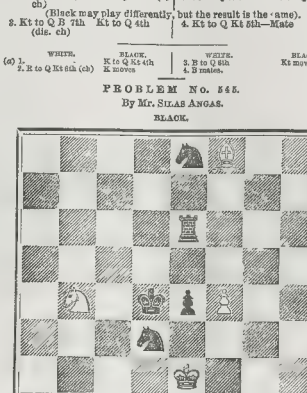
2. R to Q Kt 6th (ch)	K moves	3. B mates.	

PROBLEM No. 845.

By Mr. SILAS ANGAS.

BLACK.



WHITE.

White to play, and mate in four moves.

CHESS IN INDIA.

In the following, Mr. COCHRANE plays against the BRAHMIN MOHESCHUNDER.

(Petroff's Defence.)

WHITE (Mr. C.)	BLACK (Mohes.)	WHITE (Mr. C.)	BLACK (Mohes.)
1. P to K 4th	P to K 4th	19. Kt to K 2nd	Kt to Q Kt 3rd
2. Kt to K B 3rd	Kt to K B 3rd	20. Q R to Q sq	Q R to Q sq
3. Kt takes P	P to Q 3rd	21. Kt to K K 3rd	Kt to Q B 4th
4. Kt takes K B P(a)	K takes Kt	22. P to K B 4th	Kt takes Q Kt P
5. B to Q B 4th (ch)	P to Q 4th	23. P to K 5th (ch)	K to Kt 2nd
6. B to Q Kt 3rd (b)	K B to Q 3rd	24. R to Q Kt sq	B takes K P
7. B takes P (ch)	Kt takes B	25. P takes B	Kt to Q B 6th
8. Q to K 8th (ch)	P to K Kt 3rd	26. P to K 6th	Q R takes Q P
9. Q takes Kt (ch)	K to Kt 2nd	27. R to K B 7th (ch)	K to Kt sq
10. Q to her 4th (ch) (c)	Q to K B 3rd	28. B to K R 8th	Kt to Q 7th
11. Q takes Q (ch)	K takes Q	29. R to Q sq (f)	Kt to K B 6th (ch)
12. P to Q 4th (d)	R to K sq	30. P takes Kt	R takes R (ch)
13. P to K B 3rd	P to Q B 4th	31. K to B 2nd	Q R to Q 3rd
14. P to Q 5th (e)	P to K 3rd	32. R to Kt 7th (ch)	K to R sq
15. Castles	R to Q K 3rd	33. Kt to K 4th	Q Kt takes P
16. R to K B 2nd	Kt to Q 2nd	34. R takes Q R P (g)	K R to K 2nd
17. B to Q 2nd	P to Q Kt 4th	35. R to K 8th (ch)	K R to K sq
18. Kt to Q B 3rd	P to Q Kt 5th	36. R to K 7th	K R to K 2nd

And, as both parties persisted in repeating these moves, the battle was drawn.

[(a) This is a favourite sacrifice of Mr. Cochrane; but, notwithstanding his strong recommendation of it, both by precept and practice, we doubt if it will ever be popular.
(b) The attack obtained is neither vigorous nor lasting enough to compensate for the loss of a Knight.
(c) Better than taking the Pawn at once.
(d) What other player would have had the daring to court an exchange of Queens under such circumstances?
(e) P to Q 3rd would, perhaps, have been better, since he could then advance his K B Pawn, quanto on, immediately.
(f) For his own revolver we have been of no avail
(g) Was this intentional, or a slip? R to K sq looks a strong and perfectly safe move.
(g) Mr. Cochrane remarks in a note that he might have won the exchange here by playing Kt to K 4th(ch); but that, even then, he could hardly have done more than draw the game.

Slight Skirmish between the same Players.

(Philidor's Defence.)

WHITE (Mr. C.)	BLACK (Moh.)	WHITE (Mr. C.)	BLACK (Moh.)
1. P to K 4th	P to K 4th	6. K B to Q B 4th	K Kt to K B 3rd
2. Kt to K B 3rd	P to Q 3rd	7. Q to Q Kt 3rd	Q to Q 2nd
3. P to Q 4th	Q B to K Kt 5th	8. Q takes Q Kt P	Q to Q B 3rd (a)
4. P takes P	B takes Kt	9. B to Q Kt 5th.	
5. Q takes B	P takes P	And Black resigns.	

(a) In fairness to the Brahmin, we must state that this little affair was one of the first games he played in the European manner. He is, probably, a knight stronger now than he then was.

CHESS ENIGMAS.

No. 879.—By H. O., of Queenstown Cork.

White: K at Q R 2nd, R at Q R 6th, Kt at K 8th, B at K R 3rd, P s at K B 2nd, K Kt 5th, and Q Kt 6th.
Black: K at K B 5th; P s at K Kt 3rd, K B 6th, K R 5th, and Q Kt 2nd.
White playing first, mates in four moves.

ARRIVAL OF ANOTHER HIPPOPOTAMUS.—A female hippopotamus was landed at Southampton on Saturday last, in the bath with its Arab keeper by the side of it, and thus it proceeded to London on a railway-truck, to which the hippopotamus den was well fastened. The difficult task of landing and conducting it was effected without accident. The huge creature weighs above a ton, and is only a sucking calf. It has but four teeth. After the journey its mouth is opened by the keeper's hand, which is thrust in, covered with milk and corn-meal, and licked or lapped by the animal's monstrous lips and tongue. The male hippopotamus in the Zoological Gardens has a large number of teeth, and can now eat corn. Soon after the den, the hippopotamus was fed on board the *Hipon*, on Friday evening, the keeper resumed on his seat by the side of the pet for the night, and the den was lit up by a candle. To gratify some visitors, the Arab rose, and slowly moving about the den muttered a doleful and monotonous chant, as it called the huge beast; the latter seemed immediately excited, and the great bulk vibrated to and fro, as it keenly listened to the measure of the keeper's song. Like other amphibious animals such as the seal, for instance the hippopotamus is not insensible to musical sounds, for on any one of the *Hipon*'s band playing his instrument over the den, the hippopotamus would raise its head in the attitude of listening. The Arab keeper of the hippopotamus, who came to England in the *Hipon*, is a snake-charmer, and he used to frighten the monkeys on board the *Hipon* into convulsions when he exhibited his snakes by the side of them. The Arab nearly lost his life in the *Hipon*, owing to the hippopotamus jamming him against the side of the den, and some of the crew were obliged to goad the youthful leviathan in order to release the keeper.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories*: The Rev. J. B. Cobham, to Dingley, Northamptonshire; the Rev. G. R. Green, to Farnham Royal, Buckinghamshire; the Rev. R. C. Hawtrey, to Maple Durham, near Reading; the Rev. G. Lucas, to St. Lawrence, with St. John, Southampton, the Rev. C. Luxmore, to Everdon, near Daventry, Northamptonshire; the Rev. H. B. Miles, to Abbelhampton, with Burleston, near Dorchester; the Rev. C. B. Penrice, to Branch Ash, Norfolk. *Vicarages*: The Rev. C. T. Wattley, to Bedlington, near Morpeth; and the Rev. J. R. Wood, to Compton Chamberlayne, near Salisbury. *Incumbencies*: The Rev. J. Evans, to St. Mary, Grassendale, Lancashire; the Rev. D. L. Morgan, to Cwmyoy and Llanthony, Monmouthshire; the Rev. G. A. Seymour, to the new Church of the Holy Trinity, Winchester.

CONSECRATION OF THE BISHOP OF SODOR AND MAN.—Wednesday morning the Archbishop of York, assisted by prelates of the northern province, consecrated the Hon. and Rev. Dr. Horatio Powys to the Bishopric of Sodor and Man, in the room of Lord Auckland.

INTERESTING FESTIVAL.—Last week a jubilee was held at Kelvedon, Essex, in celebration of the fiftieth year of the respected Vicar's incumbency of that parish.

NEW COLONIAL BISHOPRIC.—Her Majesty the Queen has been graciously pleased to sanction the immediate erection of Mauritius and its dependencies into a bishopric. The island of Mauritius is too far removed from the Cape on one side, and from Ceylon on the other, to be advantageously placed under the epi copal superintendence of either the Bishop of Capetown or the Bishop of Colombo. Mauritius, therefore, with, probably, the Seychelles, will form a separate diocese. The Society for the Propagation of the Gospel has appropriated the sum of £2000 out of its jubilee fund towards the endowment; and the Society for Promoting Christian Knowledge has granted a grant of £2000. The Rev. Vincent Ryan, Principal of the Metropolitan Institution at Highbury, is to be appointed the first Bishop.

ST. ANDREW'S CHURCH, PIMLICO.—The new church at the western end of Victoria street, Westminster, which was commenced in the early part of the present year, is rapidly advancing, and will be soon ready for consecration.

EXTRAMURAL CEMETERY FOR ST. PANCRAS AND ISLINGTON.

ON Tuesday the Lord Bishop of London consecrated the new Cemetery, which has been formed in compliance with the Act 15 and 16 Vic., for the parishes of St. Pancras and St. Mary's, Islington, at Finchley. The grounds consist of eighty eight acres, tastefully laid out. The burial board of St. Pancras were the original purchasers of the estate, at the cost of £40,000, which, until 1815, formed part of Finchley Common; of which thirty acres have since been purchased by the burial board of St. Mary, Islington, at a cost of £300 per acre. A portion of land abutting upon the Finchley road has been separated from the Cemetery, in consequence of the land at these points being in closer proximity to inhabited houses than is allowed by the Act of Parliament. In the division of the ground for the purposes of interment, St. Pancras possesses fifty acres, and St. Mary, Islington, thirty acres; in the former about thirty acres, and in the latter twenty acres, were set apart for the purpose of consecration, the remainder being appropriated for the burial of the Nonconformist population. The only division distinguishing the boundary of the ground belonging to the two parishes is by iron posts and chains; giving the impression that the whole of the ground is one large cemetery. At the approach from the Finchley and Barnet road is a Gothic lodge, containing residence for a gate-keeper, offices, and waiting-rooms, with a large room, and doors leading to a raised terrace, with public promenade beyond; and the original designs by the architect (not at present being proceeded with) include an opposite residence for the registrar or officiating clergyman. On entering the cemetery the first object presented is the raised terrace, which, in addition to being of considerable architectural pretension, is well adapted for the erection of tablets and monuments upon its face; or even at some future period, the arches upon which it rests may be formed into capacious catacombs.

The Episcopal chapel stands upon a considerable elevation: it is of Kentish rag and Bath stone; and is of the Gothic and Early Decorated character, cruciform, and finished with a tower and spire, about 100 feet in height: the spire is boldly sculptured, by Farmer, of Lambeth; it contains a three-toned bell. The interior of the chapel is provided with sittings for about 120 persons. At the western end is an open carved screen, separating the interior of the church from the entrance. The windows throughout are filled with stained glass, of a peculiar depth of colouring. That at the western end of the building is occupied in the centre compartment with figures typical of the Resurrection, with the Ascension; above, and in each of the side lights, is the Tree of Life, and a diagonal banding, inscribed with portions of the burial service. The eastern window contains the dove, and a geometrical pattern neatly displayed, and in either transept window is delineated the seals of the burial boards of the respective parishes of St. Pancras and Islington, with monograms, and other emblematical devices. The stained glass has been entirely executed by Messrs. Wardour-street. The roof of the church is of a light character, open and stained oak; as is also all the other wood work of the building. The entrance to the church is from the west door; immediately opposite which is the exit, of much smaller dimensions, and intended only for the passage of the corpse on a tramway to its last resting-place. From the church, looking into the lower ground, are seen three entrance-lodges to the Islington ground: they are of the same character as those of St. Pancras, and will, when finished, have a pleasing effect in the landscape.

The Dissenters' chapel is situated upon the brow of a fine hill, about one-third of a mile from the entrance; the valley below being spanned by a very neat and substantial viaduct, with Gothic arches and buttresses supporting the carriage-way. The building is six-sided, with flying buttresses and ornamented pierced parapet, and has an elegant stone lantern, similar to some mortuary chapels in Belgium and the south of France.

It is the intention of Messrs. Masters and Son, who have had the superintendence of the laying out the grounds, to plant an avenue of cedars from the side building. The architects of the whole are Messrs. Barnett and Birch, of Gray's-inn; the contractor, Mr. Dent. Much credit is due to all engaged in the works, they having been brought to their present state since last November. The gates are by Kennard, of Upper Thames-street.

After the consecration ceremony had been performed in the Episcopal chapel, a procession of the clergy and authorities of both parishes made the circuit of the ground, and then partook of an elegant dejeuner, provided in a tent, by Messrs. Shipley, of the Union Tavern. The Rev. Canon Dale presided. Grace having been said by the Lord Bishop, the Rev Chairman proposed "The Health of the Queen, and the rest of the Royal Family." The toast having been duly honoured, the Rev. Chairman proposed "The Health of their worthy Diocesan," whom he hailed for the stimulus which he had given to church-building in the diocese; and his Lordship having replied, several other toasts followed, including "The Health of the Rev. Mr. Dale." Proposed by the Bishop; and, after some observations from the Rev. J. Hollis, a Dissenting minister, who expressed his entire satisfaction with the consecration service and the whole proceedings of the day, the company separated.

HOLY TRINITY NATIONAL SCHOOLS, WEYMOUTH.

THE foundation-stone of these buildings was laid by Miss Adison, on Trinity Monday, 1853; and on the anniversary of that day they were dedicated to God, by a service held in the adjoining church of the Holy Trinity. The Rev. John Hill, Rector of Wyke Regis, preached a very appropriate sermon, from Ephesians, chap. vi., verse 4. At the close of the service the congregation retired to the School-rooms, when the Rev. John Hill offered up prayer; and the Rev. Dr. Cottle gave a statement of the receipts and disbursements, as well as the circumstances connected with the erection of the buildings.

Sir John Hesketh Le Bridge, Bart., the Rev. J. B. Austin, the Rev. Thomas Stanley, and the Rev. Dr. Cottle, then ably advanced the cause of the religious education of the poor, and a liberal collection was made in aid of the building fund. The cost of the schools is £1200.

The style of architecture is that of the Middle Pointed or Decorated period. The plan has received the approval of the Committee of Council on Education, and is considered to be very convenient in its arrangement. The size of the school-rooms (which communicate) is 49 feet long by 18 feet broad; they are separated only by folding doors, so that they will form one room if required. The class-rooms, which open into both rooms, is 18 feet by 12 feet wide. The entrances to these are on opposite sides of the building. A door for the master's residence also on it, and has good accommodations, below and above.

The way from both streets is entered by a play or exercise ground for the building, which, when completed, will be a handsome, but produced a good effect, and is a pleasure to see it from all parts of

Weymouth and the vicinity. The architect is Mr. Talbot Bury, of London; the builder is Mr. P. Dodson of Weymouth.

The site, which commands the beautiful Bay of Weymouth, was presented by the Rector of Wyke-Regis, and on it was formerly a chapel, dedicated to St. Nicholas. This building was destroyed during the Great Rebellion, and its materials used for the erection of a battery. Several sculptured stones and cannon-balls were found in excavating the foundations for the school-rooms. These schools owe their erection to the vigorous and untiring exertions of the Rev Dr. Cottle, Incumbent of Holy Trinity, Weymouth; to whom the Church of England is deeply indebted for several similar undertakings, and especially for his unwearied labours in the restoration of the magnificent Church of St. Mary Magdalen, Taunton. (See ILLUSTRATED LONDON NEWS, No. 194.)

These Schools were opened a few days since, when the children and teachers were inducted into the buildings by the Rev. Dr. Cottle, assisted by the Building Committee.

NEW CHURCH OF ST. JOHN THE EVANGELIST, AT LOWESTOFT

THE inhabitants of the populous new town and favourite watering-place of Lowestoft had, for a considerable time, experienced the want of church accommodation; and while new residences and buildings connected with commerce and the trade of the port arose on every side, the first structure raised for ecclesiastical purposes proved altogether insufficient. But, the good work, once commenced, has been completed with extraordinary celerity. The first stone of a new church was laid in July last year; and on the 16th instant the beautiful edifice was consecrated by the Bishop of Winchester, who attended in consequence of the continued illness of the Bishop of Norwich. The service was attended by a large number of the clergy of the neighbourhood, and the gentry, visitors, and lay inhabitants of Lowestoft. After the sermon, preached by the Bishop of Winchester, a collection was made; and at the déjeûner which followed Mr Peto presented £30 to be applied towards the furnishing of the Church.

The Church is in the Geometrical Decorated, or Second Pointed style; and consists of a nave, north and south transepts, south aisles, chancel, and a tower and spire situated at the south east corner. There are three entrances, one at each of the transepts, and one under a porch at the south-west end of the nave. The Church is lighted by 17 windows, glazed with cathedral glass, of a greenish tint. The east window of the aisles is of stained glass, presented by Messrs Hartley, of Sunderland. There are in the Church and tower 30 windows, all of different designs. The tower has on two sides clock faces under projecting canopy roofs of stone, supported on elaborately moulded corbels; there are also angle-buttresses; and a lofty broached spire is in progress.

The exterior materials consist of Kentish rag-facing, with Caen stone dressings, and the contrast has a charming effect. The roofs are slated with green-grey Welsh rags, finished with a bold ornamental earthenware ridge cresting; and the gable of nave, chancel, and south transepts are finished with stone crosses.

Interiorly, the chancel arch is elaborately moulded, part of the mouldings being continued down the jamb. All the roofs are open timbered, that over the nave being formed of arched ribs with cross braces.

The pulpit is of stone, and attached to the north-east corner of the nave, and entered from the vestry by a stone staircase, with a stone canopy gathered over the angle, and having an embattled cornice enriched with ball-flowers and paterræ; and the arch of the doorway underneath the canopy has the hoodmould terminated by carved heads. The pulpit itself is hexagonal on plan, having a highly-moulded base, with clustered columns in the middle of each face of the hexagon, with deeply-cut and moulded foliated ogee arches springing over and meeting at the angles. The whole is finished with a crenellated and enriched cornice.

The font, placed under the west window, has the stem composed of two squares piercing each other, and forming thus the eight angles of the base and bowl.

Perhaps the most remarkable feature, although the least noticed, is the hagioscope, which is pierced through the pier of the north transept and chancel arches, and enables most of the congregation behind to see both the pulpit and reading desk. It is ornamental in character and useful in purpose. Hagioscopes were originally used for the purpose of enabling the attendant in the nave to see the elevation of the Host at the altar by the priest, and then to ring the sance-bell; and were never used for any other purpose. The present is believed to be the only modern example of its adaptation to a useful object.

The chancel is paved with Peake's terro-metallic tiles (blue and red) in ornamental patterns. The Church will contain 750 sittings, of which number it is proposed to make 300 free.

The total interior length of the nave and chancel is 110 feet 6 inches, and the height of the tower and spire will be 135 feet.

The builders of this fine Church are Messrs. Lucas, and the architect is Mr J L. Clemence, of Lowestoft. The amount raised is £5500; but we understand that £2000 more is required to complete the edifice as designed.

NEW CHURCH OF ST. JOHN THE EVANGELIST, AT LOWESTOFT.

CONSECRATION OF THE ST. PANCRAS AND ISLINGTON EXTRAMURAL CEMETERY, FINCHLEY-ROAD, ON TUESDAY.—PROCESSION TO THE EPISCOPAL CHAPEL.—(SEE PRECEDING PAGE.)

NEW NATIONAL SCHOOLS, AT WEYMOUTH.

MEMORIAL TO LIEUTENANT BELLOT.

THE melancholy fate of this gallant French officer is recorded upon this tablet, of simple design (R. Physick, sculptor), sent out in her Majesty's steam-vessel *Phœnix*, Captain Inglefield, to be erected at Beechey Island, Barrow Strait, near the three graves of seamen belonging to Sir John Franklin's Expedition. The afflicting circumstances of the closing scene of Lieut. Bellot's career were narrated by the Right Hon Sir James Graham, First Lord of the Admiralty, at the meeting held soon after the return of the Expedition, for the purpose of erecting a national testimonial to Lieut. Bellot.

At this meeting, also, Mr Barrow, in moving the third resolution, bore testimony to the amiable character of Lieut Bellot. Mr. Barrow saw a great deal of him, and was one of the first persons that Lieut Bellot knew when he first came over to this country, to embark in Lady Franklin's expedition on board the *Prince Albert*. He could never forget the enthusiasm with which Lieutenant Bellot joined that little vessel at Aberdeen. On his return home, he heard of the exploits he had performed, and how nobly he had supported Mr. Kennedy throughout that voyage, which was so remarkable on account of the journey that was performed in mid-winter. He believed it was the first time that travelling was undertaken in the Arctic Regions in the midst of winter, and Mr. Kennedy and Lieut. Bellot had been out for three or four months. Lieutenant Bellot was particularly attached to all Englishmen. An expression of his was, that it was said he was "a little Britisher," and he had always spoken in terms of friendship and regard of our countrymen.

Memorials to voyagers, erected upon the sites of their exploration, upon far distant shores, are impressive records of admiration and affection. Such is the column erected to the memory of La Perouse, near the entrance to Botany Bay, the last place whence intelligence was

received from the unfortunate navigator; and here rests one of the naturalists attached to Perouse's expedition. Not far distant, at Cape Solander, the spot whereon Captain Cook first landed, a brass tablet commemorates that great event in the history of civilisation.

THE GOODWOOD RACE PLATE.

THE three prizes contested for in the past week at Goodwood have been designed from classic story and Eastern travel, and are fine specimens of metal work. The first Cup is from the establishment of Messrs. Hunt and Roskell; it has been designed and modelled by Mr. H. H. Armstead, who has selected the mythological story of Phaëton and his father Apollo. The Horses of the Sun, harnessed to the Chariot of Day, are preparing to perform their journey through the heavens. Apollo, who, in evil hour, has promised to grant any request to Phaëton, is struck with dismay when the youth claims for one day to drive the

GOODWOOD RACE PRIZE.—BUCEPHALUS TAMED BY ALEXANDER THE GREAT.

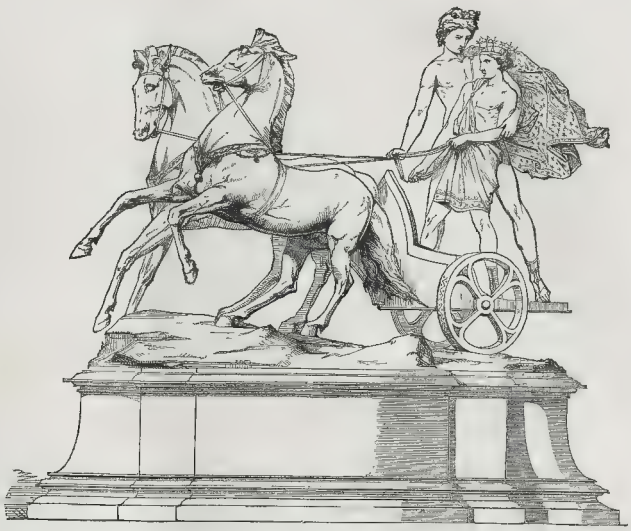
celestial chariot. After in vain attempting to dissuade his son to withdraw his request, he finds himself compelled to comply with it, and tenders the advice, which Addison has so elegantly translated from the Latin of Ovid, the point taken by the artist being described in these lines:—

Thus did the God th' unwary youth advise,
But he still longs to travel through the skies,
When the fond father (for in vain he pleads),
At length to the Thessalian chariot leads.
The youth with secret joy the work surveys,
When now the morn disclosed her purple rays;
The stars had fled—for Lucifer had chased
The stars away, and fled himself at last.
Soon as the father saw the rosy morn,
And the moon rising with a hunter horn,
He bid the nimble Hours without delay,
Bring forth the steeds: the nimble Hours obey;
From their full racks the generous steeds retire,
Dropping ambrosial foams and snorting fire.

GOODWOOD RACE PRIZE.—ARAB GROUP IN THE DESERT.

The artist has gone rather beyond the past, and has placed Apollo in the chariot with his son, instructing him how to hold the reins to guide the horses previously to the commencement of his adventure.

This subject, in the hands of an ordinary artist, becomes a mere scene of violence; nothing short of the frenzy of the unbridled horses, the disordered trappings, the broken car, will satisfy the usual notions of "spirit." Widely different is the rendering in the example before us: here we find that true spirit-suggestiveness, by which the interest is excited and kept alive by the simplest means. The paternal caution and



GOODWOOD RACE PRIZE.—PHAETON AND APOLLO.

anxiety with which the reins are reluctantly delivered to the ardent boy, and the ill-brooked restraint of the fiery coursers, alluded to in the following lines, are the great points of the composition:—

Take this, at least'—this last advice, my son;
Keep a stiff rein, and move but gently on;
The coursers of themselves will run too fast;
Your art must be to moderate their haste.

The refined ideal of antique art has been most judiciously respected throughout the work, and the horses remind one of the Elgin marbles, partaking of the terrestrial steed, yet fully embodying the celestial attributes. The group is very delicately finished, and thoroughly sustains the well-earned reputation of the artist and the manufacturers.

The second prize is, in fact, an actual Cup. It has been manufactured at the establishment of Mr. Hancock, New Bond street, after a design of M. Lami, the celebrated French artist of great fame, both here and on the Continent. The Cup, which rises from a dish calculated to hold flowers, &c., is three feet high, and is in the Cinque-Cento style, elaborately executed in bright and frosted silver. Around the centre of the Cup is a series of groups, very fine in design, representing the horse Bucephalus tamed by Alexander the Great. The whole is vigorous and bold in outline. The handle is partly formed by the figure

PARIS FASHIONS FOR AUGUST.—(SEE NEXT PAGE.)

of a female, a marine deity; and on the summit is a statuette swan, with outspread wings. The whole is creditable to the artist and the manufacturers. We may take the opportunity of mentioning that a very beautiful group—an equestrian statuette, manufactured at this establishment—was recently run for at Stamford; it was designed by the Baron Marochetti, after his great equestrian statue of Richard Cœur de Lion.

The third Cup has been executed by Messrs. Garrard, of the Haymarket, and represents an Arab horseman receiving a pitcher of water in the desert from a woman stationed by the side of a well. The artist has introduced a child, a she-goat, and a kid, with good accessories, and the whole group—an equestrian statuette, manufactured at this establishment—was recently run for at Stamford; it was designed by the Baron Marochetti, after his great equestrian statue of Richard Cœur de Lion.

PARIS FASHIONS FOR AUGUST.

OUR Fashions must this month be sought on the lovely beach of Biarritz, whither the *séjour* of the Empress attracts tourists to or from the Pyrenees. Instead of the Biscayan population, of which almost all the bathers at Biarritz were formerly composed, you now see the freshest toilettes of Paris. The prevailing shade there will be green, which is decidedly that adopted by the fashion. The bonnets trimmed with this colour (a mixture of *paille lustrée*: bands of this straw are made to alternate with those of taffetas, *vert pomceau*, or of *vert d'Italy*, at every border of which is placed a narrow piece of black blonde. Similar blonde is met for trimming the strings and the ribbon knot on the *bavolet*; the under part is much ornamented, and trimmed with black velvet, blonde, and rose-coloured flowers, which harmonise well together.

Corsages de Robes are made of muslin, of barège, and of other light stuffs, *à point* and *à la vierge*, without flaps. The skirts are trimmed with three or five flounces, with pinked edges, the heads are trimmed with puffs of the same stuff, through which is passed a light-coloured ribbon, which is repeated in the sash, or the ribbons themselves are puffed. This latter trimming is advancing in favour. Sometimes the skirt is made *à tablier*; and the embroidery which forms the apron, is besprinkled with little flowers, which are continued upon the body of the dress. To accompany these white dresses, nothing is so fine as a sprinkled shawl of black Chantilly lace, the rich tracery of which stands out upon the white ground of the dress. The *fichus à la paysanne* are again slightly in vogue: they are either in muslin or in tulle, trimmed generally with two rows of lace; never more, as they would make it too weighty. By young persons, this kind of neckkerchief is much worn. Flounces are, however, too heavy for them; and they substitute simple tucks to ornament the skirts of their dresses—except for balls, which require richer robes. Black lace corsages are also much worn over the dress, which, in this case, is always open; while the lace one is close, and has long sleeves. Thus you can wear during the day dresses as light as in the evening, without appearing to be dressed for a ball. Travelling dresses are worn of *Cachemerienne*, of a green or grey shade, without trimming either on the body or the skirt. A little mantelet pelisse, in which the wearer can entirely wrap herself, is also worn.

Parasols should match with the dresses. The most elegant are covered with black lace upon a light and plain ground.

THE ILLUSTRATIONS.

Girl. Little bonnet of white taffetas, white muslin frock with two skirts—one worked—as well as a *berthe a la broderie Anglaise*.

Boy: Unblenched cap, with a plume twisted with the same colour; blouse of plain popeline, with little silk *brandenbourgs* laid on flat, and terminated by buttons. Sometimes these ornaments are worn of a darker colour; but those of well-matched colour are most *distingué*.

Bonnet of paille lustrée à bande, alternated with ribbons; bunch of flowers on each side; the rim trimmed with white lace, and the same flowers on the inside of the bonnet. Lie-down collar of Malines lace; frock of plain grenadine, with body collar *à la sultane*. Lace mantelet, with flounces mounted upon a lace-covered ribbon. The upper part of the mantelet is also ornamented with a flounce turned over, mounted in the same way, but upon narrower lace.

Bonnet of paille d'Italie, or paille de riz of mallow colour, trimmed like wise upon the edges, with flowers like those of the interior, mingled with white blonde. Frock of taffetas, mantelet of white taffetas, with fringe plaited at the end, trimmed with little knots of similar taffetas, and the bottom composed of small *rouches à jour* trimmed with tulle, and worked on the edge.

THE LATE MR. WILLIAM HAY.—There are many who will hear with sincere sorrow of the death of this amiable man and most accomplished scholar. The last few years of his life were passed in retirement beneath a heavy cloud of illness; but, till then, there was not a more alert and vigorous spirit among his fellow-men. His reputation as a thorough Grecian with wit as well as learning is appreciated by the whole circle of that language, from whose anthology all tongues have willingly culled both power and grace—has been inseparably linked with the famous discourses of Christopher North.—*Edinburgh Courant*.

MAILS FOR INDIA, VIA MARSEILLES.—GENERAL POST-OFFICE, JULY, 1854.—The Overland Mail for India, China, &c., vià Marseilles, will in future be made up and dispatched from London on the second days of the month and 23rd of each month, instead of on the evenings of the 8th and 24th, as heretofore; except when the 9th or 23th of the month falls on a Sunday, on which occasion the mail will be dispatched from London on the evening of the following day.

NEUTRALITY OF BRAZIL.—The Brazilian Government has declared to the Cabinets of France and England that no privateer under a belligerent flag shall be fitted out, or victualled, or shall carry into the ports of Brazil, and that Brazilian subjects will be required to abstain from taking part in fitting out any privateer, or in any other act opposed to the obligations of a strict neutrality.

FRANKLIN'S CREW.—The representatives and relatives of these unfortunate navigators and explorists, are now daily applying for administration to their effects. The following are amongst the names that have been administered to:—Of the *Erebus*, William Bell (Quartermaster), Samuel Bryant (Sergeant of Marines), J. W. Brown (Caulker), Samuel Brown (Boatswain's Mate), Charles Combs, Richard Aylmore, John Alexander Cowie, Francis Fosset, George Thomas Hodgson, George John Gann, Thomas Armitage, and Samuel Crisp—all of the *Terror*. The effects sworn to varied in amount from £320 to £300 each.

It is said that the Liverpool Dock Committee is about to purchase from the Earl of Derby a piece of land on the north shore for £100,000.

FATAL RAILWAY ACCIDENT.—An accident occurred to the 7.30 a.m. up express from Birmingham, on Wednesday morning, by which one person was killed, and several dangerously injured. The down line of rails, north of Coventry, is now in process of being relaid, and during this operation the traffic passes over a single line of rails, in every case preceded by a pilot engine. By some inexcusable neglect on the part of the "turn-out" were closed wrongly, and when the 7.30 a.m. express from Birmingham arrived at the spot, it continued its course until it came into collision with a train of empty ballast waggons. The speed of the express had been considerably reduced, but the sight of the empty ballast waggons seems to have alarmed the driver of the pilot engine and the stoker, both of whom jumped off before the collision occurred. The driver was killed instantaneously, and the stoker had a leg cut off, besides sustaining other injuries. Inspector M'Kay of the Coventry district railway police, who was on one of the engines, has also received injuries, sustained a fatal injury. The passengers, with very few exceptions, were, happily, not much hurt. The traffic was resumed in the evening.

AN INTERNATIONAL DEMONSTRATION AT DEAL.—On Saturday last the town of Deal presented a scene of gaiety and festivity on the occasion of the departure of the transport screw-steamer, *Prince*, with the 3rd regiment of French Infantry, for the Baltic. The Prince and suite arrived in the Downs in consequence of having received some injury. The yard was crowded with thousands of spectators, who thronged there to witness the happy meeting of England and France. The band performed several celebrated airs; after which Mr Reaks, the ex-Mayor, came forward and made an appropriate address to the alliance of France and England, concluding with three cheers, in which the spectators joined for the Emperor Napoleon, &c. After the last piece, composed in honour of the union of the two countries, had been sung and played with enthusiasm, "God Save the Queen" was repeated, and followed by loud shouts of "Vive Victoria." The band then adjourned to a spacious building in the naval yard, and partook of an English entertainment. After this repast they paraded the town arm-in-arm with our English soldiers. At eight p.m., they commenced embarking for the screw steamer *Prince*, amid loud cheering and waving of hats and handkerchiefs from the crowd assembled along the beach to witness their departure the band playing "God Save the Queen." [In our next publication we shall give an illustration of the enthusiastic scene.]

MUSIC.

MR. SIMS REEVES appeared at the ROYAL OPERA, DRURY LANE, on Monday evening, in the character of *Masaniello*, the opera being performed in English. It was his first appearance in this part, and was, on the whole, successful. He acted with intelligence and feeling; but his aspect and bearing fell far short of the conception which everybody forms of the bold and heroic leader of one of the most memorable insurrections in the annals of Europe. In the softer traits added by the dramatist to the picture of the Neapolitan fisherman—especially his constant affection and tenderness for his miserable sister—Mr. Reeves was very happy: several of his scenes with her were truly pathetic. His style of singing corresponded with that of his acting. In the softer passages it was often beautiful and expressive, but it was deficient in masculine vigour. Were Mr. Reeves to utter his notes with more firmness and decision—were he to avoid the temptation of drawing them out beyond their proper length, in order to display the beauty of his voice—and were he to make greater use of his chest-tone, and eschew the falsetto to which he is so much addicted—all which habits concur in producing a weak and languishing effect—he would be equal to any tenor singer that England has ever possessed. In other respects, the opera was well performed. Mr. Weiss, in the character of *Pietro*, acted and sang admirably; and Madame Rudersdorff did great justice to the very difficult music in the part of *Elvira*. The splendid choruses were well sung, and the *mise en scène* of the opera was carefully and effective. The opera announced for the following evening was "The Huguenots;" but in the course of the day bills were posted at the doors, intimating that, "in consequence of the intense heat of the weather," there was to be no performance till further notice. This sudden closing of the theatre has caused considerable surprise, no other place of public amusement having shut its doors for such a reason.

THOSE active *entrepreneurs*, Messrs. Cramer, Beale, and Co. have organised two strong vocal parties for the provinces during the autumn. The first party is for that purpose giving the Italian operas and concerts in August and September, is to consist of Mdlle. Cruvelli, Mdlle. Marai, Madame Cotti, and Signors Tamberlik, Lucchesi, Tagliafico, Smini, and Polonini, with M. Benedict as Conductor. The other, for the purpose of giving oratorios and concerts in October and November, is composed wholly of English singers.—Mdme. Clara Novello, Mrs. Lockey, Mrs. Endersohn; and Messrs. Lockey, Hobbs, Phillips, and Sims Reeves, with Mr. J. L. Hatton as conductor, and Mr. Land as conductor. It is easy to perceive that these parties, consisting of such eminent artists, will be able to bring forward entertainments of very high excellence.

A GREAT MUSICAL FESTIVAL has been held at Rotterdam, got up by the Society for the Advancement of Music in the Netherlands. It took place on Thursday, Friday, and Saturday, the 13th, 14th, and 15th of this month. It was held in the large and magnificent Concert-hall, which is 300 feet long, 90 broad, and high in proportion. There was a chorus 700 strong, and an orchestra of 300 performers. The principal singers were Herr Belle, Nry, Madame De Hoven, our countrywoman Miss Dolby, and Messrs. Roger, Pischek, and/or Formès. The most remarkable performances were Handel's "Israel in Egypt," and Haydn's "Seasons." The former would not have been tolerated by an English audience; it was full of blunders, and betrayed, on the part of the conductor, as well as performers, a total ignorance of Handel's style. Haydn's oratorio, of course, was better, and more successfully performed. The public were in a state of enthusiasm; and the town, which was full of visitors (including some from England, and, among others, Mr. Sternidale Bennett), was a scene of great festivity.

THE THEATRES.

HAYMARKET.—A new drama, by Mr. Stirling Coyne, was successfully produced on Monday. It is in three acts, and is partly indebted for its materials to an old French piece, entitled "A Jeune Femme," but in its English garb it bears the name of "The Old Château, or, the Night of Peril." The title has reference to the action of the third part of the play, where all the parties, moved by their different interests, are brought to an old château; particularly the *Marquis de Leyrac* (Mr. Howe) and the *Marchioness* (Miss Reynolds)—the former to overhear the conversation between his wife and a returned lover, and to be convinced, but too late, of her innocence in having caused the assignation, which, indeed has been the contrivance of a foolish friend, *Madame Samson* (Mrs. Fitzwilliam), and of an adventurer concerned, *M. Lalouette* (Mr. H. Marston), who, from various motives, has busied himself in exciting the jealousy of the Marquis. The part is completely a drawing-room copy of *Iago*, and could not have been better rendered than by Mr Marston, whose performance, in its original has long been a stage property, and is now the best extant on the boards. Mrs. Fitzwilliam and Miss Reynolds were also happily provided with parts; the latter a sentimental lady who, in the course of the piece, is triumphantly rewarded for her disinterestedness. *Madame Samson* is a person characterised by levity and a shallowness of feeling, that contrast with the deep emotion of her footman. She, with her husband, a quadrain groat and another (the Natural Great of Paris), very amusingly interpreted by Mr. Buckstone—gives rise to the comic action, and agreeably relieves the more serious interest. Mr. Coyne merits commendation for the skilful construction, which develops the story and characters with a smoothness and harmony as to the general effect which is rarely attained. Notwithstanding the imitative form of some of the situations, the dramatic art was perceptible in the maintenance of the feeling of expectation; and Mr. Howe, by the display of natural and vigorous emotion, won much deserved applause. The piece has been most carefully placed upon the stage; and the arrangement of the last scene, with the moving storm-cloud, and atmospheric effects in the background, was admirable. Altogether we are disposed to regard this drama as the best of the season.

LYCEUM.—On Wednesday evening, Mr. C. Mathews took his benefit under peculiar circumstances—the occasion being marked by the contribution of pieces by the managers of the "previous" theatres, the Strand, the Royal Lyceum, the Haymarket, Drury-lane, and the Olympic theatres. The entertainments were further assisted by several members of the different companies, some of the managers themselves participating in the performances. Mr. Mathews's share in it, "Patter *v.* Clatter" was put forward, and his vivacity was perhaps never exceeded. He had reason to be proud of his reception and the extraordinary and sympathetic patronage he had enjoyed on the occasion.

SOHO.—On Friday week were performed the "Iron Chest" and the "Heir at Law;" Mr. Meritield appearing as *Sir Edward Mortimer*, and Mrs. Henderson as *Lady Helen*. A Miss Bulmer made her début as *Caroline Dormer*. She displayed great self-possession, and some acquaintance with theatrical details. The theatre was tolerably full, and the friendly audience appeared well pleased with the promising amateurs.

ROYAL ACADEMY OF ARTS.—On Wednesday, the President and Council gave their annual soirée to the exhibitors, and a distinguished circle of visitors, in their rooms in Trafalgar-square.

MIRAGE ON THE SOUTHERN COAST.—(From a Correspondent).—On Sunday last, on returning from church at about 4.30 p.m., I found a most beautiful perspective shadowily over the sea at the phenomenon of mirage, from Cowes Point to Eaglehurst, at an elevation of about five degrees, representing the shipping of all kinds in the air in an inverted position, as well as trees, &c., and beautifully exhibiting the perspective difference between near objects and distant. The atmosphere was very free from clouds, the refractive power powerful, and the thermometer in the shade at 86°. Another Correspondent, writing from Babbicombe, states, that, shortly before one o'clock on the above day, the Bill of Portland, distant about fifty-two miles, was seen in strong light and shadow, as if only a few miles distant.

A VETERAN.—For the last few days there has been an inmate of the Oxford Workhouse, named John Greombridge, of the great age of 103 (having been born in the year 1751), and who for many years served as a sailor. He was in several engagements: among others, at Walcheren, Copenhagen, the Nile, and at Trafalgar, where he was on board the *Victory*). For these latter battles he received a medal. The old man was on his way from Exeter to London, for the purpose of becoming an in-pensioner of Greenwich Hospital, and having a relation at Oxford, he made that city in his journey for the purpose of visiting him, but being long vacation, his relation was not in residence of the fellows of New College, had left Oxford. The poor old man was taken ill in the street and was conveyed to the workhouse, where every care and attention were paid him, and he has since sufficiently recovered to proceed on his journey; the master of the house having kindly set on foot a subscription for that purpose.

THE CENSUS.—AGES AND OCCUPATIONS.

AT length the final Report of the Census Commissioners is published, giving an account of the ages, civil condition, occupations, and birth-places of the people. It has reached us too late to enable us to present a complete analysis of its contents till next week; in the meantime we may state some of the chief results.

Of the 14,422,861 people living, in 1821, in Great Britain, 6 981,068 were under 20 years of age, and 7,441,793 were 20 years and upwards. Of the 21,185,010 living in 1851, those under 20 were 9,558,114; those of 20 and upwards, 11,626,896. The number of the population of 20 years of age and upwards exceeds the number under that age by 2,068,782. The population under 20 increased, between 1821 and 1851, 2,577,046; above 20, 4,185,103. In the thirty years there has been an increase in the number of males, of 20 years and upwards, of 2,033,777; of males, between 20 and 40—the soldier's age—1,226,832 (a vast army). The population under 20 years of age has increased 37 per cent; between 20 and 40, 60 per cent; between 40 and 60, 55 per cent; between 60 and 80, 45 per cent; above 80 years of age, 34 per cent. Thus the greatest percentage increase was of the most vigorous portion of the population, whence it is justly concluded that the strength of the nation, as well as its wealth, has increased faster than its numbers.

The people, in their several occupations, are classified in a totally different manner from the classification of any previous Census. They are first divided into those who work and those who have no definite occupation—the latter class being very few. The former are arranged in fourteen distinct classes, and many sub-classes. Class 1. Her Majesty, the Royal Family, the Lords and Commons, civil servants and officers of Government and of local Governments. Class 2. All the men in the Army and Navy, or connected with them. Class 3. The learned professions. Class 4. Poets, historians, painters, sculptors musicians, architects, natural philosophers, professors, and teachers of literature and science. Class 5. Wives, mothers, mistresses of families, &c. Class 6. The persons principally engaged in lodging, entertaining, attending, or providing articles, so as to be brought much into personal contact with those whom they serve. Class 7. The commercial, or persons holding property and always seeking to sell or let; or always seeking to buy or borrow. Class 8, carriers of goods and persons. Class 9. Persons connected with the land—occupiers and owners, farmers and agricultural labourers, land-surveyors, gardeners, &c. Class 10. Persons specially employed about animals—horse-dealers, horse-breakers, jockeys, &c. Class 11 Artizans, mechanics, handicraftsmen—divided into numerous sub-classes. Class 12. Those who work and deal in matters derived from the animal kingdom, and or employed in preparing and distributing animal food. Class 13. Those who deal in matters derived from the vegetable kingdom, and supply a large portion of our food, stimulants, and raiment. Class 14. Mineral and metal workers.—The classifications and sub-classifications are entirely new, and arranged in the order of greatest number of persons. Agricultural labour stands first, and comprises 1,460,896; domestic servants stand next, 1,038,701; the ribbon manufacture stands last, and comprises 10,074 persons.

Next week we shall give further details.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The amount of business doing in the Consol-market, this week, for Money, has been comparatively small; but the transactions for the Account have certainly increased. The extremely favourable accounts from all parts of the United Kingdom, as well as from the Continent, on the subject of the crops, the steady influx of bullion from Australia, and the declaration on the part of the Chancellor of the Exchequer that a fresh loan is not in contemplation, have certainly had the effect of raising prices, in most instances, have been well supported: whilst the fluctuations have been less frequent and important than for some weeks past. So far, therefore, the events of the week in the Stock-Exchange have been satisfactory; but we perceive a most decided dissatisfaction on the part of bankers and bill-brokers to make advances except upon first-class security.

On Monday, the Consol-market was steady. The Three per Cents were done at from 92½ to 92⅝, closing at the former figure. The Three per Cent Reduced were 92½; the New Three per Cents, 92¼; Bank Stock, 213; and the New Two-and-a-Half per Cents, 79 to 80¼. Bank Stock, 213; South Sea Stock, 112½. Exchequer-bills, par to 2s. prem. At 10 o'clock on Tuesday morning the Consols remained in the quotations of Monday. The Three per Cents Reduced were marked 92⅝; the Three per Cent Consols, for account, 92⅝ to ⅞; and the New Three-and-a-Quarters, for account, 92⅛ to ⅜. Long Annuities realised 4⅞. India Stock were 214 to 216. Exchequer-bills, 2s. prem. to par. At 10 o'clock on Wednesday the Three per Cents Reduced were marked 92⅜, and the Three per Cent Consols, 92⅝; and the New Three-and-a-Quarter per cents, 92⅛ to ⅜. Long Annuities were 4 9-16 ex dividend. India Stock, 214 to 216. Exchequer-bonds, 1858, 99½. Exchequer-bills, 2s. to par. South-Sea Stock, 112 to 113. The market on Thursday was inactive. The Three per Cents were 92⅜ to ½; the Three per Cents Reduced, 92⅜; and the New Three-and-a-Quarter per Cents, 92⅛ to ⅜. Exchequer-bills were par to 2s. prem.

The transactions in the Foreign-house have been devoid of interest. In the quotations no material change has taken place. Brazilian Five per Cents have marked 100¾; Granada Deferred 4½; Mexican Three per Cents, 24¾; Sardinian Five per Cents, 86¾; Spanish Three per Cents, 21 ex div.; Ditto, New, 21; Ditto, New Deferred, 13⅜ ex div.; Venezuela One per Cent, 11; Dutch Two-and-a-Half per Cents, 59⅜ ex div., Dutch Four per Cents, 91⅛; Russian Four-and-a-Half per Cents, 83; Ditto Five per Cents, 97½; and Dutch Five per Cents, 102.

There has been a fair business doing in Joint-Stock Bank Shares, and the following quotations have been realised:—Australasia 84½; Commercial of London, 24½; London and County, 35½; Oriental, 49; Union of Australia, 72; Union of London, 27. Miscellaneous Shares have been dealt in to a moderate extent:—Australian Agricultural, 3½; Australian Royal Mail, 8⅜; Canada Six per Cent Bonds, 106½; Crystal Palace, 4⅝; Peel River Land and Mineral, 6⅝; Peninsular and Oriental Steam Navigation Company, 144½; Royal Mail Steam, 69½; Oriental Steam Navigation Company, 7⅝; South Australian Land, 35; Van Diemen's Land, 11; Canal Securities have been very dull:—Ashton and Oldham Junction marked 1; Caledonian, 21½; Derby, 80; Grand Surrey, 1; Grand Union, 12½; Leeds Junction, 27; Neath, 150; Oxford, 115; Rochdale, 15; Stafford and Wolverhampton, 7; Stourbridge, 28½; Worcester and Birmingham, 39. Water-work Shares have been:—Chelsea, 71½; Equitable, 1; Grand Junction, 100, New, 19½; Lambeth, 97; Southwark and Vauxhall, 89½; Ditto, New, 89; West Middlesex, 101, ex div.; Ditto, New, 19⅝. Gas-light and Coke Companies' Shares have been heavy:—Bristol, 28; Equitable, 1; Grand Junction, 11½; Imperial, 88½; Phœnix, 27; Ratcliff, 70; Ditto, New, 6⅜. Railway Shares:—Manchester, Sheffield, and Lincolnshire, 53 shares, 49½; North British, 15⅝; South-Eastern, 23⅜; South Yorkshire, 81; York, Newcastle, and Berwick, 24⅜.

Foreign Railway Shares have been active:—Antwerp, 18; Great Central of France, 9⅜; Hamilton and Toronto, 10½; Namur and Liege, 7⅜; Paris, Caen, and Cherbourg, 10, West Flanders, 9½. Western of France, 15.

All Mining Shares have been heavy, and the quotations have ruled almost nominal.

Friday Evening.

We have had a steady market for Consols to-day. The Three per Cents have marked 92½ ⅝ ½ ⅝; the Three per Cents Reduced, 92½ ⅝ ⅜; and the New Three-and-a-Quarter per Cents, 92⅛ ⅜. Exchequer-bills, par to 2s. prem. In the value of Foreign Bonds and Railway Shares very little change has taken place.

THE MARKETS.

CORN EXCHANGE (Friday).—There has been an increased arrival of home-grown wheat since our market constries, the supply during the week being upwards of [illegible] and the demand [illegible] to-day's prices. Foreign wheat [illegible] to-day's currency. Barley [illegible] quarters, and [illegible] quarters. Beans, peas, and flour remain [illegible].

GOD'S IMAGE in EBONY. A Series of Biographical Sketches, &c., Demonstrative of the Moral and Intellectual Capabilities of the Negro Race. Price 1s. 6d., in wrapper; 2s., cloth
"This is certainly an interesting little volume. It is edited by a Mr. M. G. Adams accompanied by a brief Sketch of the Anti-Slavery Movement in America, by the Rev. Newman Hall, and Essay—under a Chapter of Additional Evidences,' communicated by Wilson Armistead, Esq., edited to all appearance, but well compiled work upon a very striking status of Toussaint L'Ouverture the revolutionary black Emperor of St. Domingo. Dedicated appropriately to Mrs. Stowe the book then, is a collection of extraordinary Negro Biographies; in which their large capability, with other graphics; in which their large capability for human qualities, as so oppressed, valuable evidences of their aggregate humanities, as so oppressed, despised, and outcast race, are exemplified without the slightest parade or ostentation. As a testimony to their worth and virtues it is a most efficient book, and we wish it every success."—Weekly Dispatch
London: PARTRIDGE and CAKEY, 34, Paternoster-row; and 70, Ridgway-road.

ESTABLISHED IN 1841.—
By Appointment.
The London
GENERAL MOURNING WAREHOUSE,
Nos. 247, 249, and 251 Regent-street.
The Proprietors of this Establishment desire most respectfully to submit that, from their having been so many years engaged in the exclusive
SALE OF MOURNING ATTIRE,
and from the immense business transacted in their warehouses, and from the numerous commands they receive to attend in various parts of the country,
they are enabled to sell their goods on most advantageous terms.
Messrs. JAY have ever deemed it necessary to quote prices, from a conviction that it only tends to mislead the purchaser: but they beg to offer the strongest assurance that whatever may be purchased at their Establishment will possess the value that is paid for it; and that, in addition to their
COURT,
FAMILY and
COMPLIMENTARY MOURNING,
they have every variety of quality and price, and suited to any grade or condition of the community.
Widows' and Family Mourning
Of every description, may be had
Mildmay, &c., &c.
The London General Mourning Warehouse,

Alpaca Coats	9s.	The new circular Lettre	14s.
		Coat, with Belt	12s 6d

A Fox: Pound Suit Samuel Brothers strongly recommend, made from the best cloth, manufactured by an eminent West of England house the wear of which they warrant. Patterns, &c., sent post free. —29, Ludgate-hill.

REMOVAL of W. G. TAYLOR'S (late Hallday) JUVENILE and OUTFITTING WAREHOUSE to 38, BARKER-STREET, Russell-square, Bloomsbury. W. G. TAYLOR has the honour to announce that this BUSINESS is REMOVED to the Spacious and more convenient Premises above mentioned, where he trusts to be favoured with a continuation of the distinguished support the house has always enjoyed.

WANTED, left-off CLOTHES, HEGGERTY and CO., 64, Cornhill.—Mr and Mrs JOHN ISAACS, of 319, Strand (opposite Somerset-house), give 150 per cent above all other dealers for every kind of Lady's, Gentleman's, or Children's Clothes, &c., &c. Letters immediately attended to; or parcels being sent, the utmost value remitted.—Established 46 Years.

BURTON and HARE'S Improved INFANT PROPELLERS, supported on Steel Springs. These much admired Juvenile Carriages are furnished with all the recent Improvements. Country orders promptly executed.—Depôt, No. 469, New Oxford-street, London.

DUTY OFF TEA.—All our Prices again REDUCED, as per recent Parliament Alteration. Good Tea, 3s. 4d. per lb. Sugar, 4d. per lb. Coffee, 1s. per lb. Tea Merchants, 8, King William-street, City, London. A general Price Current sent, post-free on application.

THE EMPRESS of CHINA'S TEA.—Universally admired for its purity, strength, rich full, and delicious flavour, and moderate price. HOOPER and CO., 14, Little Tower-street. London. Sold retail in air-tight tins of all sizes, by their Agents, throughout the country.

GLENFIELD PATENT STARCH (used in her Majesty's Laundry), and WOTHERSPOON'S Machine made CONFECTIONERY, MARMALADE, JAMS, JELLIES, &c. (which gained the Prize Medal of 1851), may be had of all Grocers. Wholesale of Wotherspoon, Mackay, and Co., 96, Queen-street, Cheapside, London, and Robert Wotherspoon and Co., Glasgow

THE HOUSEWIFE'S FRIEND.—CREWS' RINSING LIQUID, used in all laundries, effectually restores and fixes colours which are now destroyed in washing. Twenty drops of the Liquid are sufficient for one gallon of rinsing-water. Sold in bottles, 2s. 6d. and 5s. each, by all chemists and oilmen in the United Kingdom. Manufactory, Commercial Wharf, Mile-end, London.

FUTVOYE'S £4 4s. GOLD WATCHES, four holes jewelled, horizontal escapement, warranted. Silver Watches, £2 10s. Solid Gold Chains, of their own manufacture, 40 as per ounce; and the fashion only charged. Every description of Jewellery taken in exchange, or purchased for cash.—124, Regent-street, corner of Beak-street.

PARKINSON and FRODSHAM, Chronometer Makers to the Queen, beg to call the attention of the Nobility and Gentry to their Stock of WATCHES, CHRONOMETERS, and CLOCKS, in which much greater variety may be seen at their present Manufactory, Victoria Clock-gallery, Cornhill, opposite the Royal Exchange. Established upwards of 66 years

JONES'S £4 4s. SILVER LEVER WATCHES, and 4l 10s. GOLD LEVERS, at the Manufactory, 32, Strand, opposite Somerset House, warrants for 5 years. Above 1000 more than half a minute per week. On receipt of a Post-office Order, payable to JOHN JONES, for 4 5s., one will be sent free. Jones's Sketch of Watchwork, free, for 2d

AMERICAN CLOCK WAREHOUSE, embracing every variety of these superior Time-pieces, imported on our own account, at the sole Establishment in this country, and Manufactory for our sole use of the celebrated Factory, all brass works and warranted to keep correct time. They are so d one in 24 hours than the usual price Day Clocks from 10s. to 10l. Regulators, 2l. to 10l. Also, a large variety of Ormolu Clocks, suitable for LEAVAUX and CO. (formerly ROGERS and Co.), 446, New Oxford-street.

C. F. HANCOCK, JEWELLER and SILVERSMITH, begs respectfully to inform the Nobility and Gentry that he has REMOVED his late Premises, 89, BUCKTON-STREET (which have been extensively enlarged to meet the demands of his increasing business), which are entirely New and Splendid Stock of Jewellery, Silver and Plated Articles and he takes this opportunity of returning his most grateful thanks for their kind patronage, and earnestly solicits a continuance of the same.—39, Bruton-street, Bond-street. N.B.—A large Stock of Second-hand Plate

SILVER TEA and COFFEE EQUIPAGES
A. B. SAVORY and SONS, 14, Cornhill, London, have always on Sale a splendid assortment of the above articles. They are of novel finished pattern, and are manufactured by the Silkwelgh have and elegant design, and of the highest finish. The following have been generally admired:—

The Prince of Wales' Pattern, Shaped and Chased		The Louis Quatorze Pattern, Richly Engraved	
Strong Silver Tea pot . £12 10 0		Strong Silver Tea pot . £15 10 0	
Ditto Sugar-basin, gilt 4 4 0		Ditto Sugar-basin, gilt 5 5 0	
Ditto Cream-ewer, gilt 4 18 0		Ditto Cream-ewer, gilt 5 15 0	
Ditto Coffee-pot . . 5 5 0		Ditto Coffee-pot . . 6 6 0	
£39 15 0		£47 10 0	

The Guide to the extensive stock in the Show-rooms contains the weights and prices of a variety of Silver Plate of London manufacture, with copious information respecting Sheffield and Birmingham Plate, Electro-silvering, Gilding, &c., and may be had gratis, or will be forwarded, post free, on application.—A. B. SAVORY and SONS, Manufacturing Silversmiths, 14, Cornhill, London, opposite the Bank.

HAWLEYS, WATCH and CLOCK MANUFACTORY, 172, Oxford-street; and 284 High Holborn, London. Established 1795, in Coventry-street, and the Strand.
GOLD WATCHES
Hawleys' Duplex Movement, Jewelled in 5 holes, compensation balance, highly finished, 30 guineas.
Hawleys' Lever, with dead-fully-engraved or engine-turned hunting case, 10 guineas.
Hawleys Geneva Levers capped and jewelled in 4 holes, with engraved or engine turned cases, gold or enamelled dials, 10, 12, 14, and 16 guineas.
Hawleys' Geneva Levers jewelled in 6 holes, cases and dials richly engraved and chased, carefully finished, 6, 8, 10, and 12 guineas.
Hawleys' Geneva Horizontals, jewelled in 4 holes, going fusee, cases and dials elaborately chased and engraved, £3 10s. Similar movements in larger cases, 4, 5, and 6 guineas
SILVER WATCHES.
Hawley's Levers capped and jewelled in 6 holes, compensation balance, going fusee, silver or enamelled dials, make seconds, 10 guineas.
Hawleys Levers, jewelled in 4 holes, gold balance, engine-turned cases, 5, 6, 7, and 8 guineas. If in hunting cases, 1s. extra
Hawleys Geneva Levers, jewelled in 10 holes, chased or enamelled dials, 8, 9, 10, 11, and 12 guineas. If in gold cases, 4 Guineas.
Hawleys Horizontal, jewelled in 4, 6, and 8 holes, richly chased or engraved dials and cases, strongly and carefully finished, with all the recent improvements, £3 5s., £3 15s., £4 5s., £4 15s., and £5 15s.
Second-hand Gold and Silver Watches (generally in stock) by the First-class Makers, considerably below Half Price.
Ladies' and Gentlemen's Fine Gold Neck and Guard Chains in great variety. An extensive assortment of Gold Bracelets, Brooches, Ear-rings, Chronometers, Clocks, and Watches Cleaned, rated, and adjusted, by scientific workmen

SARL'S ARGENTINE SILVER PLATE.—It and its Electro-plate continues to stand unrivalled amongst all the substitutes for Silver. Its intrinsic excellence, durability, and beauty of appearance, defies all competition. Its unprecedented success during these years since this manufacture was its result is fully appreciated by the public and, notwithstanding the enormous demand exceeds all former precedents; thus giving a convincing proof of its having answered the end proposed, which was to produce an article combining the durability and appearance of solid silver at one-a-th its cost. The magnificent Show-Rooms, 4, Moorgate-street, contain many of the novelties in dinner, tea, and breakfast services, and never possessed so many attractions as at present, which are offered for sale at the Manufactory. A new and elegant pattern Fiddle and Pattern Fiddle, Thread, and Shell, is just published, and now ready for immediate. It may be obtained gratis by applying at the manufactories. Sarl and Sons, 4, Moorgate-st., and 15, Cornhill. Caution.—It is recommended that no article is genuine, except purchased at Sarl and Sons No other parties are authorised to sell it.

S. MORDAN and CO.'S MANUFACTORY, 23, City-road, London.
CAUTION.—PATENT EVER-POINTED PENCILS.—S. MORDAN and CO are daily receiving complaints of the various imitations of their 'ever-pointed' pencils, which in no way have the merit of a new thing years. S. M and Co caution all purchasers to be the S. Mordan's Patent, as the genuine have never failed to give satisfaction pencils are constantly present on this pencil, as they yield a smooth point to the substance used, but will be found of no value in use
CEDAR PENCILS made from the Cumberland Lead, purified by the proprietor of the Company having disposed of the whole of their stock of crude black lead to the patentee, S. Mordan and Co are enabled to offer their Cedar Pencils, made from the only pure lead extant, with confidence that their superiority will be readily appreciated by the public. A Specimen of this pencil may be had gratis on these Pencils by painters, engravers, architects, engineers, and draughtsmen of the greatest eminence, who will several professors, and whose testimonials have been published in detail. The following names are kindly permitted:—

Cosmo Barry, Esq., R.A.	Copy by Fielding, Esq., P.W.C.S.
C. L. Eastlake, Esq., R.A.	W. Wyon, Esq., R.A.
E. H. Baily, Esq., R.A.	David Roberts, Esq. R.A.
Clarkson Stanfield, Esq., R.A.	Thomas Creswick, Esq., R.A.
W. Mulready, Esq., R.A.	H. C. Wilson, Esq., Director, Government School of Design.
S. Prout, Esq., V.A.	
John Phillip, Esq., R.A.	

Each Pencil is stamped "Warranted Pure Cumberland Lead S. MORDAN and Co., London"
S. MORDAN and Co.'S PATENT COMBINATION LITHOGRAPHIC and COPYING PRESS.
By the aid of the most simple mechanics, arrangements, the Patentees have succeeded in producing a most effective and useful Lithographic and Copying Machine, equally well adapted for the Counting-house, Office, or Library. With this Press any person may easily become proficient in the art of Printing.
A specimen of its Printing can be produced at a less cost than the cheapest Lithographic Press in the market, and, in addition to its capability of doing the work of a Lithographic Press, it is an excellent and perfect Copying Press. Price 3l. 3s., complete, with every requisite as exhibited and obtained by the purchaser gratis.
To be obtained from the leading Stationers in the Kingdom.

HER MAJESTY'S ROYAL LETTERS PATENT.—The most powerful and absolutely invincible of the most powerful and brilliant TELESCOPES, CAMP, PERSPECTIVE, RACE-GLASSES, and OPERA-GLASSES, ever offered to the public, are now viewed through those of great importance to the Army, Navy, and others. Messrs S. and B SOLOMONS, Optical Artists, 39, Albemarle-street, Piccadilly. Observe—opposite the York Hotel These Telescopes possess such extraordinary powers that someone, with an extra power, can read a Newspaper distinctly in Messrs. Staten's Room, and the Double Stars; with the same Telescope can be seen a Regiment of Soldiers on the Land Camera, and at objects from 16 to 30 miles. They supersede every other kind for the wide-angle, powerful, and clear light, and all sizes, with increasing power accordingly. The Royal Exhibition, 1851, valuable, newly-invented Telescopes, Microscopes, and Spectacles, also the Gem of the Exhibition, very small, powerful, and clear, which a person can be seen and known a mile and a half distant by which a person can be seen and known a mile and a half distant. They answer every purpose on the course, as the opera-glasses, and cannot be detected, as they only seen at 12 to 14 miles. They are scientific and astonishing, case shining, yachting—to sportsmen, gentlemen, tourists, &c., and for the country, race-courses, camp, any pecuniary pleasure, wh wonderful powers; an object can be seen at from 12 to 16 miles, a beautiful scene, a cheerful countenance. Its wonderful they are placed before extreme y imperfect vision every object becomes clear and distinct, and see at large, and all sizes, with increasing power accordingly. The Royal Exhibition, 1851, valuable, newly-invented Telescopes, Microscopes, and Spectacles, also the Gem of the Exhibition

INAUGURATION OF THE CASCADES, IN THE BOIS DE BOULOGNE, PARIS, BY THE EMPEROR AND EMPRESS OF THE FRENCH.

EMBARKATION OF ARTILLERY HORSES AT CALAIS.

The shipping of the horses belonging to the French artillery on board the *Lamoricière*, French corvette, which took place on Wednesday week, was the most troublesome part of the work at Calais. Great care was taken by the men in putting the horses on board; but, with all their precautions, they had nearly lost one of the finest of them. Whilst in the slings, the horse became frightened, and the struggles having caused the slings to slip forward, the animal became suspended by the head. It seemed a case of hanging or drowning; the horse appeared to prefer the latter. After two or three desperate plunges, it fell into the sea. All hands were instantly at work to save it, and in a few minutes the animal was secured, and placed safely on board. The Illustration furnished by our Artist represents the orderly manner in which the horses were disposed of when they had been got on board.

THE ORNAMENTAL WATERS IN THE BOIS DE BOULOGNE.

The Ornamental Waters in the Bois de Boulogne will, when they are completed, prove one of the greatest attractions of Paris. In that beautiful city they will be among the things the most beautiful. Amidst all the cares of external and internal politics, and while engaged in re-organising France on the Napoleonic model, the Emperor has found time also to plan and execute the extraordinary improvements which have totally changed the aspect of this suburban wood, and have rendered it one of the fashionable promenades of Paris. To attract the Parisians away from Paris was pronounced to be something little short of a miracle; but it is a miracle which the Emperor has succeeded in effecting, with the aid of English landscape-gardening.

The professional wits of Paris have long made merry over the preparations for the Ornamental Waters. All the associations of the Bois de Boulogne, heretofore the rendezvous of lovers, duellists, or cut-throats, were invoked against the spirit of change which had so ruthlessly disturbed the genius of the place. The Emperor, according to his custom, paid but little attention to all these objections. He had given himself an object, and that object he has pursued. At present enough has been done to give a very fair idea of the ultimate effect of the *ensemble*; in fact, as with so many other things that have been commenced and organised by this persevering man, time alone is wanting in order to render the work perfect. We have but to remember what the ornamental portion of St. James's park was fifteen or twenty years ago, in order to form an idea of what the Bois de Boulogne will be in some ten or fifteen years time.

Our readers may remember that, about three months ago, the Emperor and Empress were present at the inauguration, as they call it in Paris

SHIPPING ARTILLERY HORSES, AT CALAIS, FOR THE FRENCH EXPEDITIONARY FORCE TO THE BALTIC.

of the completion of a portion of the ornamental waters. There are two very large winding lakes, separated from each other by an intervening portion of land, laid out and planted in park like style. There is no direct resemblance between the whole ornamental portion of the Bois de Boulogne and anything of the kind in our parks; but the lakes themselves are somewhat like the ornamental water in St. James's park, except that the banks slope downwards somewhat more towards the water. The Parisians call these waters rivers, but we should rather call them lakes, as they resemble in their serpentine form, though not, of course, in size, the smaller lakes of Cumberland or Killarney.

The ceremony to which we have referred as having occurred some three months ago consisted in the letting in of the waters to one of these lakes. At its head, and at the point the most distant from Paris, on the way to the Auteuil station of the railway, had been constructed artificial rocks, to form a cascade or waterfall. Over and through these rocks the waters made their way that were to fill the lake. These waters are supplied by the great pump of Chaillot, and they are conducted by subterranean pipes a distance of forty centimetres from that place to the top of the waterfall. They pass by the Château de la Muette, and traverse a portion of the Bois de Boulogne itself, before arriving at the point where they are to see the day. The inauguration consisted in the opening by the Emperor of the mouth of the conduit, and the loosening of the waters into the empty lake At the time it was impossible to form any idea of the effect; but, when the lake was completely full, it presented a really beautiful picture, which bore no sign of having been produced by artificial means.

There still remained the other lake, of which the inauguration took place on the 5th July. As in the case of the other, at the head of the artificial water, rocks had been so disposed as to form two magnificent cascades, at a distance of about five minutes walk from the end of the other artificial water. The effect of these last waterfalls is more grand than that of the others; and, when they are in continual play they will add very much to the beauty of the whole scene. Great care was bestowed on the formation of an artificial bed to these lakes, so as to prevent the absorption of the water. The material employed appeared to have been well chosen. It consisted of a species of lava, the production of a factory at Clichy, and was considered superior for the purpose to any kind of asphalte. All the preparations having been completed, the Emperor and the Empress proceeded to the spot on the afternoon of the 5th July; and at five o'clock his Majesty went through the ceremony of loosening the waters, which at once fell in great volume over the rocks, forming a very magnificent and beautiful cascade. The Prefect of the Seine assisted at the ceremony, as did also the Prefect of Police, and some of the officers of the Imperial household. There were also great numbers of spectators, by whom their Majesties were warmly applauded, and who appeared to take an active interest in the proceedings Of course, this inauguration was only an experiment, and there were not then the means completely to fill the second lake with water; but, judging from the effect of the other, the *coup d'œil* will be magnificent. On Monday week some further arrangements having been completed, the Prefect of the Seine attended to make one more trial of he cascades. The waters were again let off, and the result seemed at first extremely satisfactory. For a few days crowds flocked to see the waterfalls, and they were told that, in a week or ten days, the river would be full. It now turns out, however, that the Clichy lava is not so impervious as was supposed. The water leaked away as fast as it came in, and now it has been resolved to make a concrete bottom, which will be a long, and an expensive work. What should have been done at first was, to puddle the bottom and the sides. Good clay was to be had within a short distance, and two or three hundred English *navvies* would have done the whole work in a month.

THE ROYAL AGRICULTURAL SOCIETY AT LINCOLN.

(From our Special Correspondent.)

THE LIVE-STOCK PRIZES.

(See Illustration at page 89.)

IN a review of a show of live stock, it is supposed as it usually is of animals of certain established breeds, varying little from year to year, except in degrees of condition, only perceptible to the practised hands rather than eyes—we are in the same difficulty, if we attempt criticism, as those who have to notice from year to year the narrow stock of subjects on which painters and sculptors exercise their cold skill—where Eves and Musidoras, scenes from the "Vicar of Wakefield" and "Gil Blas," appear and re appear, until we long to introduce our artists to a new library.

In Short-horns there are a certain set of exhibitors sure to show and sure to carry off some prize. In Herefords, a somewhat smaller but two names are always prominent; in Devons, three or four. The Leicester ram of this year will do to represent any ram of the last ten years. In South Downs, the prizes go to A and B, or C and D, or C and D, and A and B. In the less-esteemed breeds the progress of improvement is more decided and visible

"What then"—asks the beef and mutton eating townsman, who only knows the ox in the shape of steaks, sirloins, and rounds, and sheep in legs, saddles, and chops—"what is the use of these annual exhibitions, in which prize animals appear prepared with as much care as, and scarcely less expense than that, the racehorses which run for thousands at Epsom or Doncaster? Are these sleek, silent heifers good for the dairy? Do they give an ample quantity of milk? Are they safe to produce an animal calf?" Would you recommend me," he continues, "when I retire from my counting-house anxieties to the leisure of a model farm at Roehampton, to stock my pastures with the pure-blooded, high pedigreed, blue-faced Leicester? Will the ewes give me double milk in spring, and the wethers form creditable saddles whereon to entertain the ex-Lord Mayor and present Aldermen?"

"By no means, my friend. That beautiful mild-faced roan heifer has already once slipped her calf, and it is very doubtful whether she will ever be able to claim the prize now awarded to her by the production of that living lowing evidence, without which the reward of a prize is but a barren honour. Those pen of pure bloodster ewes are almost all too genteel to rear their lambs. Like other fashionable ladies, they require the assistance of a wet nurse of coarser pedigree. The same observation will apply to pigs, which cease to be prolific, and good dams, in proportion as they attain the prime qualities of pure-bred animals—early maturity, and preponderance of prime joints over offal."

We owe the superiority of the farm live stock of this country to the passion with which our stock-breeders, as well as agricultural Peers and landed Squires pursue the ideal of pure blood, and the skill they regard it be for profit. The pure Short-horn does not, as an ox, make the best beef, or, with exceptions, as a cow, the best help to the dairy. But to grow beef with a profit, the Short-horn is the safest cross; and in all English dairies a large cross of Short-horn is found indispensable to produce an animal which will give plenty of milk while in milk, and fatten rapidly for the butcher when dry. And so, to improve almost any breed of sheep intended for the butcher, the Leicester is the safest and surest cross. The most fashionable and crowded sheep of the day, the Cotswold, which is now considered to be established as a distinct breed, owes some of its best qualities to the Leicester cross

The whole art of breeding cattle has come back less than one hundred years. Robert Bakewell, of Dishley, took in hand the improvement of both the ox and the sheep. In the ox tribe he selected the Long-horn, and for a short period, by his pains and judgment in selecting and putting together the best male and female animals, he succeeded in effecting great improvement in the race—reduced the coarser and enlarged the finer parts. During his life-time he obtained enormous prices for his herds; and the reputation was maintained for some years after his death in 1795; but in the long run the Long-horn has been superseded in all but a few localities by other superior breeds. At Lincoln, Mr. Burbidge, of Wroxhall, near Warwick, who has had the breed in his family from the time of Bakewell, carried off two prizes for the best bull, and Captain Legg, of Thorpe, near Tamworth, for the best cow and heifer. They are often as profitable a breed as any, if bought at a fair price, to feed off a piece of rich pasture, and they look very picturesque in a park.

Bakewell was more fortunate with his New Leicesters. By means only known to himself he established them as a distinct breed, which have superseded in name even the original Leicesters At Lincoln, 103 entries sent from Yorkshire, Lincolnshire, Nottinghamshire, Leicestershire, Warwickshire, Cheshire, Devonshire, and several counties of Scotland, showed how widely spread and firmly established is a breed which is scarcely ever kept as pure stock, except with the view of selling or letting the male animals at a large price. Bakewell, who first began the system of letting rams by letting one for sixteen shillings, afterwards obtained annual rents for single animals of from £100 to £1000.

To Bakewell succeeded the Brothers Collings, the founders of the Short-horn, who found grazing in a lane in Durham, the property of some cottage "Hubback," that famous bull to whom all Short-horn breeders try to trace back their stock, just as the best racing blood of the kingdom is pursued up to Eclipse and the Darley Arabian.

In all counties almost in all countries, the merits of the Short-horn are acknowledged. Enormous sums have recently been given by American for the best short-horn blood. It is very rare that such rejoicings may be had with the greatest security in order to obtain early maturity, weight, and dairy qualities. In all suitable districts, and with suitable care, the Short-horn ox best repays the care of those who horse their cattle and feed on artificial food. The Yorkshire cow, which supplies the London dairies with enormous quantities of milk, and fattens rapidly to a great weight when no longer fit for the dairy, has a large dash of Short-horn blood. It is the cross by which common breeds are best improved. Every Smithfield Show, and, still more, every Smithfield market, has a large number of beasts of the finest quality bred by the cross of the Short-horn with Scotch cattle or other breasts of less illustrious pedigrees. Thus, although the North Devon is found most profitable on his native hills, as the West Highlander on his—where both thrive when a Short-horn would starve, and both produce a very superior quality of beef—the cultivation of the Short-horn is the great security for the growth of the roast beef of Old England.

The fashion—at one time it was nothing less—of Short horn breeding produced a wholesome rivalry in the proprietors of Herefords and Devons. Within the last twenty-five years the North Devon has been immensely improved by the exertions of Mr. Quartley, Mr. Turner, and the late Earl of Leicester, who to a certain extent naturalised the breed in Norfolk, where, although they degenerate in size, they are very fine in form and quality

In counties where the competition of cattle shows does not exist, the governments are obliged to keep male animals for the use of farmers. Without such assistance, cattle bred merely for the dairy or the market from the male animals that happen to be nearest, would steadily deteriorate. Now this is the direction in which our local and Royal Agricultural meetings are so useful.

They give the breeders of superior pure breeds of any kinds an opportunity of making known by the best possible kind of advertisement where the general public may resort with confidence to obtain the best blood and the best form, whether it be in Short-horns, Herefords, Devons, or even fancy Long-horns; in Leicesters, in South Downs, or recently in Cotswolds. We have no doubt that the next five years will see an immense improvement in the Lincoln sheep in consequence of the Cotswold competition at Lincoln.

A considerable number of breeders are noblemen and gentlemen—like the Duke of Richmond, Lord Leicester, and Lord Berwick—to whom profit is not all-important; but even to them the reputation of a prize makes no inconsiderable difference in the year's balance-sheet

Men who understand the subject well doubt whether, on an average, the breeders of pure stock make money. The expenses are great, and the losses at times enormous; and when great sales at thousands of pounds are reported, we hear nothing of previous expenses. But, in any event, the nation gains by having that done by private enterprise which no Government could do for us. The result has been to diminish, by from one-half to three-fifths, the period at which all kinds of stock can be sent to market, and by that much increasing the food of the nation. The improvement in pigs, by applying the principles of breeding first practised on sheep and cattle, is obvious to those who look back only twenty years; and the same may be said of the Cotswolds, the Shropshire Downs, the Hampshire Downs, and other less fashionable breeds of sheep

Leaving to agricultural papers a detailed criticism, the following summary will give some idea of the Horned Stock exhibited at the Lincoln Show:—

"In Short-horns there were 111 entries, divided into five classes, viz., Bulls calved previous to July, 1852, and not exceeding four years old; Bulls since the same date, and more than one year old; Bull calves above six and under twelve months; Cows in milk or in calf; Heifers not exceeding three years old, in same condition; and yearling Heifers" Of these Lincolnshire sent 30; Notts, 11; York, 11; Stafford, 8; Leicestershire, 7; Haddington (in Scotland), 6; Wiltshire, 7; Suffolk, 1; Cheshire, 1; Herts, 2; Oxford, 2; Norfolk, 2; Warwick, 1; Shropshire, 2; Leicester, 2; Rutland, 1; Middlesex, 1; and Wicklow (in Ireland), 1: while the Prizes went—to Nottingham, 1; to York, 2; to Lincolnshire, 1; to Lancashire, 5 (and those all to Mr. Cowsley); to Herts, 1; to Haddington, 1; to Wilts, 1.

The sire of the bull which carried the first prize in Class II., Mr. W. Olding's (of Market Rasen) "Comet," was an animal of no pedigree, purchased for eight pounds, and what is called in the county a mash bull Yet this bull went in and beat twenty-three entries of the best blood and first breeders in the kingdom, including the Marquis of Exeter, the Earl of Zetland, Mr. Charles Towsley (who took a second prize), Lord Berners, Lord Walsingham, Mr William Tour, and others. This seems curious at first sight; but, as it is the custom of Short-horn breeders to send their inferior or coarser stock, among which are found the shape this despised mash bull came of as good a pedigree as any in the list.

Mr. Townley's extraordinary success must be attributed to the superior quality of his herd, and his perfect knowledge of the art of feeding for an exhibition. Lincolnshire carry, and will long carry off one prize, because farmers keep more pure stock there than in most counties, and a desire to support the Show made them send, just as farmers train and enter hunters at local races, against the thoroughbreds of professional trainers.

The Herefords—a breed which has partaken of the general improvement of stock, and is one of the very best beasts for feeding on good pasture—were in number only nineteen, and all from Herefordshire and Shropshire

The Devons gave forty entries from Devonshire, Somersetshire, and Norfolk. The prizes were carried off by the names we always see in these contests—Mr. Farthing, of Stowey Court, near Bridgwater; Mr. G. Turner, of Barton, near Exeter; Mr. Quartley, of South Molton

The Devon has, perhaps, more than any other breed been improved by competition with the Short-horn breeders at the Smithfield Fat Cattle Shows. The first Devon Herd book was published by an enterprising breeder and agriculturist, Mr. E. Davy, in 1851. It is to be hoped that this beautiful and docile grazing beast will eventually supersede the miserable runts which now feed on the Welsh hills—being quite as hardy, and more profitable.

In Sheep, the principal prizes in Short-wools and Southdowns were carried off by Mr. Lugar, of Suffolk, and Mr. Salusbury, of West Lavington, Wilts—thus beating the Sussex men, the Duke of Richmond carrying off a second prize. In Long-wools, the Cotswolds attracted great attention, the improvement effected within the last few years having placed them in the first rank as profitable sheep. The improved Lincolns looked very poor beside them. But it must be remembered that while the Cotswolds have been strong enough to make the Council of the Royal Agricultural Society do them justice in classes and amount of prizes, and have had the advantage of great markets in a cluster of large towns close at hand, the improvement of the Lincoln sheep has been left to the working tenant farmer, without the help of "fashion," which has done so much for other pure breeds

The group drawn by Mr. Harrison Weir, at page 89, illustrates some of the finest animals.

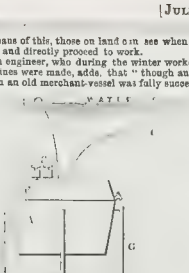
THE MEDITERRANEAN SUBMARINE TELEGRAPH.

—Intelligence was received on Monday morning that the first portion of the great Mediterranean Submarine Telegraph from Spezzia, in Piedmont, to Cape Corso, in Corsica—a distance of about a hundred miles—has been successfully laid down, as well as the communication across the Strait of Bonifaccio, a distance of about ten miles, from Corsica to the island of Sardinia It is also understood that the contractors, Messrs. Tapper and Carr, are nearly ready with the remaining 150 miles of cable to connect Cape Spartivento, the southern point of Sardinia, with the African coast, where it will join the Algerian lines.

INFERNAL ENGINES IN THE BALTIC.

WE quote the following description of the Jacobi Infernal Engine in the Baltic from the *Folkets Rost* (Swedish journal) of July 8:—"A and B consist of two close-fitting copper receptacles, which form together a large hollow vessel or mine. At C are two pipes, through which the charge is introduced, and they close then hermetically sealed. D is a leather pipe, wherein is secured a copper wire, covered with gutta percha, which has one end in communication with the charge in the mine, and the other with the electrical apparatus on shore. At G are four iron bars, firmly bolted to the mine, and secured below to an iron ring (K), from which a rope droops, and goes round a pulley (L), attached to an iron weight (D), in the form of a pyramid upside down, whose apex touches the ground. Lastly, E is a small white wooden ball, which is secured to the mine, and floats on the surface of the water. By means of this, those on land can see when the enemy's ship is over a mine, and directly proceed to work.

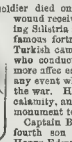
The Swedish engineer, who during the winter worked in the factory where these mines were made, adds, that "though an experiment with one of them on an old merchant-vessel was fully successful in smashing



THE JACOBI INFERNAL ENGINE, IN THE BALTIC.

the vessel, the firing of the mine is to the highest degree unsafe; and the ships menaced can easily cut off all communication between the shore and the mines; as the situation of the latter can be easily discovered by means of the floating ball.

THE LATE CAPTAIN BUTLER.



THIS gallant soldier died on the 20th ult., aged twenty-seven, of a wound received while bravely and successfully defending Silistria against the Russians. The defence of that famous fortress has been the great operation of the Turkish campaign, and it was mainly young Butler who conducted it. Omer Pacha, it is said, has been more affected by the death of Captain Butler than by any event which has occurred during the progress of the war. He purposes to mark his sense of the public calamity, and of his private grief, by the erection of a monument to the youthful hero.

Captain Butler was by birth and family Irish; the fourth son of Lieutenant-General the Honourable Henry Edward Butler, uncle and heir presumptive of the present Earl of Carrick. He received his early education in Paris: subsequently he proceeded to Sandhurst, but there stayed but six months. He next studied at Freiburg, under a tutor from England. At the age of sixteen he was appointed to the 90th Light Infantry, with which he served against the Kaffirs in 1846 and 1847. In the latter year he obtained a Lieutenancy in the Ceylon Rifles, and remained in that colony six years. There he rendered himself useful in quelling the rebellion. In August, 1853, he obtained a Captaincy. Early in the present year he returned to Europe, owing to a reduction in the establishment of the Rifles, and joined his father in Rome. The active warfare on the banks of the Danube had attractions for his martial spirit that he could not resist, and he volunteered to share the dangers of the protracted siege of Silistria. The result has been one of the most gallant achievements of modern times, accompanied, unhappily, by the sacrifice of a life of brilliant promise. The Home Government marked their sense of Butler's exploit by conferring on him a Majority in the Coldstream Guards; but the promotion came too late. The announcement has given pleasure to no one more than to his father.

His gallant companion in arms, Lieutenant, now Major, Nasmyth, in a letter detailing the siege of Silistria, bears the following testimony to Captain Butler's bravery:—

June 12th: Cannon and hot fire division got in this morning, and on the 13th he and his English officers, accompanied Butler and myself to Yelanli. While here poor Butler was mortally wounded in the forehead, while taking a reconnaissance of the enemy's position for a sortie, which we had arranged for that evening At the time he received the wound none of us thought it was anything more than a mere flesh wound, particularly as the ball had passed so great part of his temple before striking him. He lived eight days after this, and I may say his death was universally regretted. He was a fine chivalrous fellow, and the garrison paid every respect they could to his remains. A company of infantry was told off as the firing party, and an officer from each battalion attended his funeral.

The following is from another account of the siege:—

20th-21st.—This evening, at six o'clock, Captain Butler died. No bad effects were anticipated from his wound till the 18th, when he became very feverish, and he sank rapidly during the following three days from fever and weakness. He was a gallant soldier and a perfect gentleman. There can be no doubt that he and Lieutenant Nasmyth have been the mainstay of the place, as, had it not been for their energetic remonstrances on the 25th of May, the outwork of Arab Tabia would have been abandoned. Poor Butler is the first English officer who has fallen in this war. The garrison universally regretted him, and the authorities showed every desire to render proper respect to his remains

The portrait of Captain Butler, engraved upon page 96, is from a miniature taken a few years since, and the only portrait of this young and gallant officer.

The following letters and extracts of despatches have been forwarded by Horse Guards to Lieutenant-General Butler, as the most appropriate condolence upon the death of his lamented son. They will be read with much interest:—

Horse Guards, July 17, 1854.

SIR,—I have heard with the deepest regret of the loss which you and the army have sustained by the death of your distinguished son, Captain J. A. Butler, of wounds and fatigue at the siege of Silistria.

During the whole of that siege your son displayed very rare qualities, combining with the skill and intelligence of an accomplished officer the intrepidity of the most daring soldier—so one concurring in the confidence of the garrison (over which he had only the authority of a very young volunteer) by the example of his personal valour; at another, prolonging the defence of the place by the consummate firmness of his counsel: and on all occasions infusing into those around him that spirit of heroic resistance which led to its triumphant defence.

I deeply deplore your affliction in losing such a son, but your sorrow is felt by the country, the Army, and the Sovereign.

The Queen had recognised his merit by placing him in the Guards and conferring upon him army rank, trusting that he might pursue a career of which all were so proud, at that time, not being aware of the danger-ous state of his health.

The blow is unexpected and most severe, but I trust you will bear up against it by the fact, that your son's services have been most valuable to his country, in promoting the success of a just war; and I hope I shall not give you pain by alluding to another son—Captain H. T. Butler, of the 55th Regiment—selected for employment on the Quar ermaster-General's staff, when the army first embarked for Turkey, solely on account of the ability he had shown in his studies at the Royal Military College.

I trust that the well-earned fame of one son and the rising merit of the other will, under Providence, be a source of consolation to you at this moment of extreme affliction.

Pray accept, my dear General, the condolence of your very faithful servant,

HARDINGE

Lieutenant-General the Hon. H. E. Butler.

Horse Guards, July 21, 1854.

SIR,—Since I had the honour to address you on the 17th instant, to offer you my sincere condolence on the affliction which had fallen upon you in the loss of your gallant son at the close of the siege of Silistria, I have received a letter from the Duke of Newcastle, transmitting a despatch from Lord Raglan, with an enclosure from his Highness Omer Pacha, adverting in terms of high eulogium to the brilliant services and lamented death of Captain Butler; and her Grace expressing an opinion that your family may derive some consolation from being put in possession of ex-

tracts from those letters, I have the honour to transmit the accompanying extracts, which I am willing to hope may afford some gratification to yourself and family in the midst of your bereavement.—I have the honour to be, sir, your most obedient humble servant, HARDINGE.

Lieut.-General the Hon. H. E. Butler, &c.

EXTRACT OF A DESPATCH FROM GENERAL LORD RAGLAN, G.C.B., TO HIS GRACE THE DUKE OF NEWCASTLE, DATED VARNA, JULY 6, 1854.

He brought, also, the painful intelligence of the death of Captain Butler, who had been supposed to have received only a slight wound, which, however, proved so serious that he sank under his sufferings one or two days before the siege was raised by the Russians.

This officer had so greatly distinguished himself, and had in all he had done shown so much prudence, courage, and ability, that his death cannot be too deeply lamented.

I beg to enclose the copy of a further despatch from Omer Pacha, of the last mat. in which your Grace will see with satisfaction that the services of the late Captain Butler, as well as those of Lieutenant Nasmyth and Lieutenant Ballard, of the East India Company's army—the last of whom, though late in Silistria, exerted himself most ably and gallantly in aid of the defence are fully recognised and appreciated by his Highness.

EXTRACT FROM A LETTER FROM OMER PACHA TO GENERAL LORD RAGLAN, DATED SCHUMLA, JULY 1, 1854

Parmi les braves qui ont pris part à la défense glorieuse de Silistrie se trouvaient deux officiers Anglais, dont je ne dois pas oublier les noms. Le jeune Capitaine Butler, arrivé pendant l'hiver avec M. Nasmyth au Quartier-General de Chumla, était à Silistria au moment où les Russes commencèrent l'attaque contre la place. Tous les deux pouvaient se retirer, mais la voix de l'honneur parlant haut chez eux, ils préférèrent de rester, dans l'idée d'être utile dans la lutte qui se préparait. Leur exemple, leur conseil, ont puissamment contribué à la conservation des forts attaqués ;.....malheureusement, M. Butler, blessé d'une balle au front, a trouvé là une mort glorieuse ; mais sa mémoire ne périra pas dans l'armée Ottomane.

THE SIEGE OF SILISTRIA.

(From our Special Correspondent.)

SCHUMLA, July 4, 1854

On the 25th of June the holy fast of Rhamssan had just expired. The night had been dark and cloudy, and concealed behind it the pale young crescent of the moon. But three persons of respectable lives and of veracity had come up from the country, and vouched that between the clouds they had seen the new-born planet; and the Feast of Bairam commenced with all the usual ceremony on the assurance given that the ordinary courses of the time had not been changed. The night air had resounded, therefore, with the shouts and the rejoicings of the faithful, and the sharp explosion of pistols, muskets, cannon, and crackers. For three days previous to this happy moment, the whole of Schumla was employed in making petards to explode for the occasion—the grocer had left his wares; the saddler and shoemaker, their awl and leather; the arabadji, his horses and ricketty vehicle; and the population seemed determined honestly and triumphantly to celebrate the termination of the fast—during which, to the best of my belief, not more than one in ten had really fasted. But whilst the crowd were thus intent on festive preparations, cares of heavy import weighed upon the minds of all connected with military command. The Russians had besieged Silistria for more than forty days; and it was feared Silistria must fall. The enemy was numerous, and the garrison hard pressed; and in the midst of the rejoicings of the people, it was determined to make an effort to succour the besieged citadel. Several orders had been given—the Turkish forces were to march, the Allies were to move, and all was silently prepared; when a messenger arrived, and brought the news that the Russians had retired, that their army had withdrawn, abandoned its positions and crossed the Danube, and that Silistria was once more free. Increased rejoicings marked the Bairam; and crackers, pistols, guns, and cannon resounded for the double triumph of religion and deliverance from the enemy.

Early on the morning of the 26th I started for Silistria, determined to pay a visit to the scene from which the principal actors had departed. I did so, in company with two gentlemen as eager as myself and as anxious to ascertain how so powerful an enemy had relinquished a well-declared purpose without a visible cause. The road to Silistria bore the most animated appearance. The troops of the garrison of Schumla had broken ground before us and were marching forward elate in spirits and elastic in step. At first we saw battalions of Egyptians, and of Turks, crowding along the heights, and dipping into the vales which succeed each other rapidly outside the town. The absence of trees and shrubs rendered their movements the more visible. In sharp contrast with their fresh and strong appearance was that of stragglers coming from the scene of action jaded, hungry, and worn, and toiling slowly on to reach a place where food might be less scarce and sleep more plentiful than at Silistria. The sun shone brightly, too, on endless lines of waggons, drawn by buffaloes and oxen, whilst the air was filled with the creaking of their ungreased wheels. Passing the village of Kayaladdere, where traces were still visible of the passage and stay of troops, we began to enter a more wooded and picturesque country, and we entered the large camp of Giurgerli. At the time of the Russian passage into Bulgaria, and during the siege of Silistria, it was considered necessary to advance a considerable body of troops in front of Schumla, and Giurgerli had been chosen as a safe and easily-defended position. Redoubts were thrown up along the sides of an amphitheatre of hills, at the base of which there was water sufficient for the supply of the troops—water being throughout the country south and east of Silistria the great desideratum—and there lay a considerable body of troops encamped in the most picturesque of hilly landscapes. Although I have heard some severe critiques passed upon the choice of this ground, I could not but consider that in a pictorial, if not in a military sense, no prettier spot could have been discovered.

Through Giurgerli, which was situated at the very bottom of the amphitheatre, we galloped at considerable speed. There were three fountains near the road—here and there some puddles into which the drivers pushed their buffaloes, and moistened their backs with mud; but the village itself had no inhabitants—the houses were empty; and soldiers here and there were loading themselves with branches from large cherry orchards, and sucking the fruit as they proceeded. After a steep ascent, along which the deeply-laden provision carts of the Turks were crawling with painful efforts, the road became less open, the forest closed in upon the track, and the moving forms of soldiers added new and unaccustomed tones to the deep green of the gnarled oaks along the way. Sometimes open glades succeeded to the thick wood, and these were sown with wheat and barley, which seemed to grow luxuriantly. As we entered Karabashlie, we came upon the rear of a column of artillery, cavalry and infantry, marching at a rapid and orderly pace. The column was accompanied by numerous water-carts, towards which the soldiers were rushing, at times, in numbers, crowding and hustling each other, to wet their lips—parched by marching in a heat of ninety degrees. Karabashlie, as well as Chuplolar, was empty of inhabitants; and, if here and there a strange female form was to be seen hiding from view, it was that of some old or infirm person, too weak to fly from the supposed advance of the enemy. The difficulty of marching an army in such a country may be conceived, when it is borne in mind that, in addition to the flight of the inhabitants, there was no meal, no corn, no barley, and no meat—and no food, in fact, either for man or horse to be found. The troops had, therefore, to carry everything they required with them, and that everything consisted of dry biscuit and meal, with which they made a sort of pancake, by no means unpalateable. In five hours the village of Ramana Chikler was in sight, and there we determined to camp for the night. It was a village of prepossessing appearance; its houses, scattered over green grassy slopes, covered with old oak-trees, stunted by the axe of the woodman, and guarded, in consequence, into the strangest attitudes. But where there were inhabitants they were still too much under the influence of fear to open their doors to us; and, where there were none, every available space had been taken up by a multitude of soldiers. Provisions we had with us, coverings also; it only remained to discover in what part of the village we should sleep. We found a shady spot near a mosque, where gigantic walnut trees were disputing the ground with the stones which indicate a Turkish grave. Wine, also, we had brought, but water had been unpardonably neglected. We were, therefore, forced to use the puddle from a pond, where, it is true, the soldiers were all replenishing their beakers, but where buffaloes had disported, and given a strange and brackish taste to the liquid. In Australia, after a march of fifty miles, one might be glad to drink such water out of one of those rare holes which poor Leichhardt described;

THE STAMBOUL GATE, SILISTRIA.

THE MARKET-PLACE, SILISTRIA.

but here in Europe to find a village without a well, and to trust with true Musulman fatalism to Heaven for a supply, was a thing for which I was not prepared, and there was, consequently, more wine than water drunk on the occasion. The next thing after eating was to sleep, and I prepared my couch upon the ground—a piece of oilskin under, and a blanket over, me. One of my companions, a gentleman from Nantes, had a longing for sleep anywhere than on the ground, it was, therefore, with an inexpressible evidence of glee upon his face that he triumphantly brought forth from under the porch of the mosque a wooden table about six feet long, having sides six inches high, and which he affirmed would be his bed for the night. He had not been the first to make the discovery, and I reserved to myself the pleasure of baulking him of enjoyment after he had lain down. This I did shortly after, by informing him that his bed was the parish coffin; at which he rose in horror, and dreamt of corpses during the night.

Breaking ground early from Ramana-Chikler, we had a hot ride with jaded horses to Calipetri, a Bulgarian village, in which the Bashi-bozouks had taken their usual liberties. The church was burnt, and nothing but the walls were standing, and many of the houses had been reduced to ashes, whilst the gardens were ransacked for onions and beans. From Calipetri to Silistria is a march of eighteen miles, along a plain, or plateau, waving, as far as the eye could reach, with corn and barley. The noise of quails and grasshoppers was incessant; and here and there were to be seen the traces of cavalry encampments in the standing crops. These, it appeared, were the resting-places of Cossacks, who, for upwards of forty days, had scoured the country, and frequently showed themselves on the heights above Kalipetri, whilst the inhabitants of the village, armed by the Russians, were roaming through the neighbouring forest and killing men and horses. The extremity of the plain before us was marked by a low, square edifice, out of which a flag-staff, with the Crescent and Star, was flying, and indicated the vicinity of Silistria. This was the Medjidié Tabia, a large fort, which covers the town on that side, and was of such strength as to deter the Russians from making an attack there. The ground in front of it, however, had been the scene of many encounters between the Turkish Irregulars and the Cossacks. About 600 of the former were taken prisoners on these occasions; but General Lüders, after disarming and depriving them of their horses, informed them that they were free, and as he had heard that General Youssouf was about to raise a force of them, he begged them to present themselves to that commander, with his (General Lüders's) compliments. These men are now in Schumla.

On the right, as the Medjidié Tabia increased in size as we came near, the Danube burst into view, and the flats between the Danube and the latter and the ground up to Kalarasch, seemed to be covered with the tents of the Russian army, which had merely up to that time retreated across the Danube. To the left, and as it were at the base of the Medjidié, lay the town of Silistria, apparently in excellent preservation, with all its minarets entire, and shining in the sun. It was evening as we came in, our tired horses having taken twelve hours to go this second day the same distance as the first. It is true that they had eaten nothing in the interval, and laboured, therefore, under considerable disadvantages.

Silistria, although a fortress of the fourth order, and merely surrounded by an enceinte and ditch of very small size, is formidable to an enemy from the circle of forts by which it is surrounded, the heights being each covered by an outwork of earth, which must be taken before an attack can be made on the body of the place. The Danube, however, is not broad there, and from the batteries on the Wallachian side the Russians kept up an incessant bombardment with eight mortars, throwing 24-inch shells, and with howitzers. A battery of one gun marks the entrance to the town through the Stamboul gate, but the bridge was enfiladed from the batteries at the other side of the river, which rendered the entrance dangerous at all times. As we entered the gate we marked the spot where Mussa Pacha, issuing from a small bomb-proof, was killed by the explosion of a shell. Here it was that a party of Bashi-bozouks was surprised by a similar projectile at the moment of Captain Simmonds's visit to Arab Tabia. Here it was, also, that we met Omer Pacha just arriving from Schumla, whose coming was the signal for a salute of three guns from each of the batteries of the town and fort. His Highness had just visited the Russian lines, and was kind enough to give orders that no change should be made in the works at Arab Tabia, until I had taken sketches of the position. The street through which our cavalcade passed, on their way to a lodging, provided for us by Ibrahim Pacha, was broken every few yards by large holes, five feet deep and three wide, in which were the remnants of Russian shells. The roofs of the houses were all more or less pierced by the passage of these terrible bells, and the party-walls were full of holes. The minarets, in many instances, were pierced into steeples *à giorno*; but though many were much damaged none had fallen. Nor had the houses crumbled to the ground under the fire, but stood bravely up under their wounds. It seemed, in truth, as if the edifices of Silistria had partaken of the spirit of its defenders, and had determined, like them, not to fall at any price. It is almost needless to say that in Silistria no inhabitants had remained—they had all taken refuge in caves scooped out of the earth at the side of the hills, where they lay safely ensconced, suffering no doubt from want of motion, and sometimes from want of food, but safe. The soldiers alone remained in this place sleeping at their posts by the walls, where they could man them at a moment's notice. In the arsenal was the tent where Lieutenant Nasmyth and Captain Butler lived. It was not destined that both those gallant defenders of Silistria, whose services were so highly appreciated by the Turks, should outlive the siege. Captain Butler sunk eight days after his wound in the Ilianli Tabia; although the spot where the fatal ball had struck him in the forehead was to all appearance healed. Due honour was done to his remains: a Captain from every company in the garrison accompanied him to a grave in the Armenian cemetery, and the military salute was given over him. Omer Pacha has ordered a suitable monument to be erected to his memory, which will live amongst the Turks as of a brave officer whose gallantry and undaunted courage were proved on more than one occasion. Lieut. Nasmyth, more fortunate, is now in Schumla, and has had bestowed upon him the Cross of the Medjidié and that of the Legion of Honour. A letter of Lord Raglan has officially expressed to him the thanks of the English army for his gallantry. Nor must I forget to notice Lieut. Ballard of the Bengal Engineers, who, though not so long in Silistria as his comrade, rendered good and efficient service against the enemy during the last fortnight of the siege. Let us hope that he also will not be without his reward.

The whole of the 27th was spent by our party in visits to the Arab and Ilianli Tabias; and the sight was one which excited to the utmost extent our wonder and admiration. The road from the town to Arab Tabia is along the brow of the hill, on the summit of which the redoubt is placed. A number of holes, dug out of the side of the hill, and capable of holding several hundred men, was the first sign on approaching it. There was encamped, or rather lay hid, the reserve which defended the redoubt. The Russians had hit upon a place not far distant, where they thought that reserve might be. Upon this spot they had thrown thousands of shell. The places where they exploded harmlessly were marked by little sticks planted there by the Turks. They were willow wands, which, if they were to grow, would make a small forest. To the right of this favourite spot, no less than 2000 unexploded shells were picked up during the siege. This may give a faint idea of the warmth, more than tropical, there during several weeks. At the crest of the hill we entered Arab Tabia, of which one corner still remains entire. The rest of the work had been reduced to a shapeless mass of mounds and valleys. Three gigantic holes, burrowing into the body of the redoubt showed the place where the Russian mines exploded. The parapet had been re-formed along their jagged edges the instant after the explosion. Carefully lying down, the soldiers commenced throwing up earth from the inside. The motion of throwing sometimes exposed the top of a fez, at which the Russian riflemen took deadly aim. Many were thus killed by bullets through the brain. But the extraordinary fact of these affairs was that the enemy trusted entirely to musketry on these occasions, and never used their guns with sufficient effect to prevent the parapet from rearing itself before them in the heat of the fire. But there came a moment when, even with these conditions, the place became too hot to remain in. Under the parapets which concealed them from the Russians—in gabions, prostrate, and covered with earth—the Turks lay concealed; but there was a certainty at last that the whole redoubt was mined. Already a portion of the work looking towards the Danube had been abandoned; a new work was made behind the old, and there the Turks retired. This again, it seemed, was threatened, and a third was built, better and more durable than either. It may be easily con-

ARAB TABIA, SILISTRIA.

ceived, that in such a spirit the ground would be disputed inch by inch. The Russians found, when they had reduced one work to dust, that they must pulverise another; and this must have been most disheartening. As for embrasures in the first and second works, no trace of them remained. There was a row of two hundred graves about, where the dead had been buried on the spot. The moment of a soldier's fall was that of his interment. There was no time for funeral honours, and none were given. On the brow of the ditch, about ten yards from the jagged and demolished parapet, we entered the Russian covered-way. Following it through its numerous windings, miles of ground were passed over; the nearest batteries were at 50 yards, the furthest at 300. The line stretched from Arab Tabia, down a vale, towards the Danube, where some hideous remains were visible; then up the opposite side and, dipped into another valley, where were traces of a large encampment. Forts defending this encampment were placed at every quarter of a mile, many of them capable of holding six, seven, and eight guns. They all were faced in the same direction, fronting towards the Turks, which showed that the object was to attack the town, and secure retreat against a strong body coming to succour. The largest works of this kind, were as distant as seven miles; one large fort at the extremity of the line, facing all sides.

Three valleys, sloping to the Danube, were thus defended. Opposite the first the Russians had their first bridge, passing over the islands to the opposite side. The second bridge was five miles further down the river; and across these the enemy retired under cover of a tremendous bombardment, which only terminated at three o'clock on the morning of the 22nd ult., at which time it was ascertained that the approaches to Arab Tabia were abandoned. Under the redoubt was discovered a mine, with three branches stretching right into the centre of the place. Illanli Tabia was approached by two covered-ways of considerable length and sinuosity; but the attack was carried on with much less vigour against this fort than that against Arab Tabia. Its profile was much more favourable to the defenders, and it has suffered considerably less. It was here that Captain Butler received his death-wound.

The places where the Russians camped were marked by the spaces of their square tents, and the presence of numerous bones of beef and mutton, a proof, whatever may be said, that food was plentiful. All over these encampments, and in the redoubts and covered-way, there was, however, a fearful stench, which may account for much sickness in the Russian army, which is stated to have had nearly 30,000 men in hospital.

THE LATE CAPTAIN BUTLER, THE DEFENDER OF SILISTRIA.
(SEE PAGE 94.)

Returning to Silistria by the river side, I was able to examine the immense number of batteries which lined the island immediately facing the bank. I re-entered the town, struck with wonder at the immensity of the Russian works, and thinking with what ridicule it must cover the army of the Czar, that they worked so hard to obtain so little. The official numbers of the Turkish loss in Silistria is given at 1200 regulars, of which half were killed, and the rest wounded; of the irregulars, about 1000 were lost. The Russians are supposed to have had no less than 7000 killed and wounded during the forty-five days which the siege lasted. Two of their Generals were in the number.

Omer Pacha returned from Silistria on the 1st inst; he left for Varna on the 3rd, for a conference with Lord Raglan and General St. Arnaud

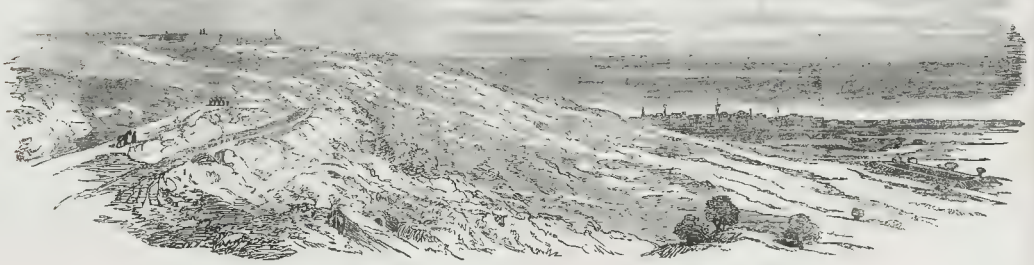
THE ILLUSTRATIONS.

Interior of Arab Tabia, as it remains since the 25th of June, when the siege of Silistria was abandoned by the Russians. The View is taken from what was once the parapet facing the enemy's batteries. On the left, in the distance, is the Medjidie Tabia—the Danube in front, and the plains of Wallachia in the distance. The holes in the sides of the earth-work are made to contain as much of a man's body as he can stuff in to avoid the bursting shells. The lodgments on the right are under the parapet, and are for the same purpose of protection. The men also slept in gabions, covered partially with earth. The embrasures in the fort are those of a new work, built behind the old, into which the Turks were about to retire before the Russians' retreat. Only a part of the Turkish force remains in this fort, the main body of defenders being outside, encamped on the side of the hill behind, ensconced in holes in the earth.

View of Arab Tabia and Illanli, from the Russian batteries on the left of the Turkish positions. Arab Tabia is on the left of the drawing, Illanli on the right, and Silistria in the distance. The covered-way of the Russians leads up from the left of the drawing, and turns from the vale up the sides, so as to be as much as possible out of the way of shells. The covered-way has little holes in the sides, where the Russians ensconced themselves. The two tunnel-like apertures are for cooking.

View in the Town of Silistria. The Market-place—a bell-tower on the left, a fountain in the centre. The roofs are the usual funnel tile, much damaged by shells—holes in them here and there. In the foreground, under the umbrella, is a vendor of liquors. The sun is setting directly in the background.

View of Stamboul Gate, with the bomb-proof chamber, in which lived Musas Pacha. He was standing at the door of this bomb-proof when a shell burst at the spot from which the Sketch is taken, and a fragment carried off his hip. The parapet in front of which the tent is placed, were lined with men for musketry practice. Outside the gate, an outwork, *en barbette*, with one gun, defended by gabions, put up for the occasion.



ARAB TABIA AND ILLANLI TABIA, SILISTRIA.

PROCESSION OF THE SULTAN AT THE FESTIVAL OF THE BAIRAM, CONSTANTINOPLE.

THE FEAST OF THE BAIRAM.

In Turkey, the long month's fast of Ramazan (the Mahomedan Lent), is succeeded by the Bairam, which presents three days of unmixed festivity. Every Turk who can afford it appears in a new dress; visits are exchanged, and parties are made up for excursions to favourite spots in the vicinity. The pious Turk (says our Correspondent) is relieved from the oppressive abstinence of thirty long summer days; and even the more Europeanised and enlightened Mussulman, who smokes and drinks in private, is glad that his favourite enjoyments can now be indulged in openly, and without fear of the censure of the world. The rich and powerful may defy the orthodox rigidity of the multitude; but any man, who has his living to make, is forced to consult the popular prejudices, and if he takes a cup of coffee or a cigarette in an Englishman's room, he will put them down and look another way when a servant enters, who might be inclined to tell the scandal to his associates. Our Artistic Correspondent at Constantinople enables us to illustrate the procession of the Sultan to the Mosque of Achmet, on the Place d'Hippodrome, accompanied by the cavalcade which usually attends him. On the first day, the unreasonable hour prevented the great body of European visitors from being present; for these strangers are far from showing any readiness to adopt Oriental habits of early rising, and even under the rays of a June sun seldom leave their beds before half-past eight. Before five o'clock the procession left the

RUSSIAN PRISONERS ON BOARD "THE FURY," AT CONSTANTINOPLE.—(SEE NEXT PAGE.)

summer palace, and passed through the thronged lanes, where the Sovereign listened to the sunrise prayer after the custom sanctioned by centuries of usage.

Our Correspondent's Sketch taken from an eminence, includes a view of the entire Place, which was, upon another day, crowded with spectators, mostly women. There are arabas and other Turkish vehicles. The Sultan is preceded and followed by the Imperial Guards; and there are several high dignitaries on foot near his Highness's horse. At every row or file of Imperial Guards is an officer of the army in short jacket, epaulettes, braided breast, and small cap, or fez. The streets are lined with troops in usual dress; the one here shown is the regiment of Artillery—the standard-bearer inclines his colours. Masses of spectators are seen everywhere—standing on every sort of available planks, seats, windows, or roofs.

What changes, says a contemporary, may take place before the salutes are fired for another Ramazan are still concealed by the darkness of the future. But though the political state of the country may be destined to undergo many revolutions, yet the attachment of the Turk for his religion gives no sign of growing cold; nor can an observer on the spot yield to the idea that there is any immediate hope of a deliverance from these prejudices which prevent the Mussulman from running an equal race with the Christian in civilisation and enterprise.

RUSSIAN PRISONERS AT CONSTANTINOPLE.

(From our Special Correspondent.)

CONSTANTINOPLE, July 9th, 1854.

THE principal event that has occurred here since my last has been the embarkation of Russian prisoners on board the *Fury* steam-frigate. They were 150 in number, and appeared, on the whole, to be a fine set of men. They seemed highly delighted at their deliverance, and testified great admiration of the fine vessel in which they were quartered. One thing in particular which excited my sympathy was the politeness with which the crew waited upon them. It was an interesting sight to observe the contrast between the clean, orderly, and, if I may so speak, jolly, appearance of the sailors, and the seedy, unshaved, aspect of the prisoners. To see these generous fellows running to and fro to oblige the enemies of their country, was most affecting, certainly, never traveller in boat or hotel received more attention and more delicate attention, too, from paid waiters. The Russian prisoners seemed quite bewildered at the kindness shown to them.

As to the officers, who were five in number, they did not appear to be a bit superior to the men, either in dress, manners, or general appearance, and were decidedly inferior to them in a physical point of view. They mess with the officers of the frigate; and the Colonel, a stout, vulgar man, dines with the Commodore. It has been represented in England and elsewhere that Russian officers are a well-educated class of men, with all the different "tongues of Europe on the tips of their fingers;" however this may be, not one of these five could speak a syllable of any language but his own.

We have nothing from the seat of war. Transports laden with troops, infantry and cavalry, have sailed here on their way to Varna. It is supposed that the 1st and 4th Hussars will not be mounted without some difficulty. The horses of the 6th Dragoons have not yet arrived at Gallipoli.

The corps of Engineers formed in France for this expedition has arrived here, and sets out to-day for Varna. The construction of telegraphic lines, of which 60 have been planned, will probably be the first real benefit that will accrue to Turkey from her alliance with England and France. The Adrianople line, which is to be the first, is to be begun almost immediately. Another expedition, consisting of a battalion of French Miners, proceeded last week to the mines of Heraclée (Heraclitus?) which has been unproductive for the last five years, on account of the bad management of its Turkish overseers. It is reported that a railroad between Constantinople and Adrianople is to be laid down immediately, under the superintendence of English engineers. It is to be hoped that this is really the case; for, if something of the sort be not effected before winter, it will probably fare badly with our troops.

The accompanying Sketch (from another Correspondent at Constantinople) represents the Barracks at Cassim Pacha, behind the arsenal, on the Golden Horn, in which the Russian prisoners are kept. The

BARRACKS OF CASSIM PACHA, IN CONSTANTINOPLE.

Anglo-Russian prisoners, 220 in number, have been embarked on board the *Fury*, for Odessa, where they are to be exchanged for the crew of the *Tiger*. About twenty-four prisoners remain, belonging to the Turks, who have not yet effected any exchange. The prisoners have all been well treated; though the close quarters to which they are naturally confined, and the great heat, are complained of. They are supplied with provisions by a Protestant Armenian, thus ensuring full weight and good quality; though it may be doubtful, whether the Turks, through whose hands every thing passes, do not help themselves to a part. It must, however, be acknowledged, that there is more honesty and honour among the Turks than among most other classes of natives (Protestants excepted) in the East. They have more humanity, too. A Turk will not steal the hay from a hungry animal, while a Greek has not the slightest hesitation to do it. This honesty and honour is, however, found chiefly among the middle classes.

One of the missionaries resident here, went to see the Russian prisoners, and offered them New Testaments; which they, however, respectfully declined, out of fear lest they should get into some trouble in Russia with them.

NAVAL AND MILITARY INTELLIGENCE.

THE FRENCH TROOPS FOR THE BALTIC.—The following is the number of men of the French army on board the war-vessels and transports which have sailed for the Baltic:—*Hannibal*, 801 men; *Royal William*, 1263; *St. Vincent*, 1271; *Alpiers*, 998; *Sphinx*, 123; *Stromboli*, 90; *Ternapent*, 367; *Belgravia* (transport), 629; *Clifton* (transport), 244; *Columbia* (transport), 377; *Julia* (transport), 321; *Prince* (transport), with 21 horses, 1142; *Herefordshire* (transport), 829; *Edwin Fox* (transport), 477. Total, 9064. The number of officers accompanying them is 242. The French men-of-war embarked at Calais comprise engines and an immense amount of ordnance stores, besides 550 Engineers and Artillery, and 78 Artillery horses. The grand total, therefore, of the embarkation complete is, 9866 officers and men, and 99 horses.

STEAM GUN-BOATS FOR THE BALTIC.—On Saturday, the *Mine* screw gun-boat, intended for the naval operations in the Gulf of Finland, was launched from Messrs Green's yard, at Blackwall. The *Mine* has 160 feet length of deck, with great beam, to enable her to carry a heavy battery, including a long pivot gun for shot and shell. It is stated that the whole fleet of gun-boats, together with a number of small steamers recently launched at Pembroke, Plymouth, Portsmouth, and other naval depôts, will be ready to start for the Baltic about the second week in August.

EMBARKATION OF THE SCOTS GREYS.—The main body of the Scots Greys (2nd Dragoons), which has, for the past week or two, been stationed at Manchester, awaiting the arrival at Liverpool of the steamer *Himalaya*, to convey them to the seat of war, entered the latter town on Tuesday morning in two detachments, comprising in all upwards of two hundred horses and a similar number of men. These, with the numbers embarked at Kingstown, will make about 390 horses and 350 men. When the *Himalaya* slipped her moorings and steamed majestically towards the middle of the river, the band of the regiment struck up the National Anthem. Hats, caps, and handkerchiefs were waved by the dense crowd on shore, and hearty cheers were given again and again, and were responded to by the soldiers on board. The *Himalaya* remained at anchor in the river until Wednesday morning, when she took her departure for Varna.

ARTILLERY FOR THE BALTIC.—The *Medway* steam-vessel is loading with siege guns at the Royal Arsenal, for service in the Baltic. Major C. C. Young's field battery of the Royal Artillery is placed under orders to proceed to the Baltic with the siege guns, and will be the first detachment of Royal Artillery for that destination.

ARTILLERY FOR THE EAST.—The *Jason*, screw steam-ship, is at Blackwall, fitting for the conveyance of horses of the field batteries, together with the officers, non-commissioned officers and men, of the batteries under orders for the East. Captain J. N. A. Freese's (No. 7) company, 12th battalion, has been placed under orders to hold themselves in readiness for immediate embarkation for service in the East; and the greatest exertions are now being made to have the whole of the six field-batteries now under orders embarked without delay. No. 3 company is to be attached to the siege guns; and Nos. 1 5, 6, and 7 will have 9-pounder field-batteries for service in Turkey.

NEW MEN OF-WAR AT PEMBROKE.—The following new vessels have been ordered to be built at Pembroke. They will soon be laid down:—*Revenge*, 91 guns, screw steam-ship, 600-horse power; *Alert*, 16 guns, screw steam-sloop, 100-horse power; *Pelican*, 16 guns, screw steam-sloop, 100-horse power; *Cordelia*, 8 guns, screw steam-sloop, 60-horse power. Four line-of-battle ships, four first class heavy frigates, and four sloops, are now building, or ordered to be built, at this establishment. Of these, two line-of battle ships, one frigate, and the four sloops, are to be fitted with the screw-propeller.

THE MILITIA.—We can state on authority that the Irish Government is now occupied in deciding on the most efficient method of raising a body of militia in that part of the United Kingdom, for permanent duty. Lord Palmerston is at the present time debating measures for embodying a similar description of force in Scotland. The Lieutenant-Colonelcy of the Westminster Militia is vacant by the resignation of Lieutenant-Colonel Cannon, who is now employed on active service in the East.

THE 21st Royal North British Fusiliers have received orders to proceed to the seat of war forthwith. This regiment will embark on board the magnificent steam-ship the *Golden Fleece*.

COLONEL E. W. Forestier Walker, of the Scots Fusilier Guards, son of General Walker, of the Royal Artillery, has been directed to take his passage in the *Golden Fleece*, to assume the command of the battalion of his regiment serving in Turkey, vacant by the recent promotion of Colonel Moncrieffe.

THE MOUSTACHE IN THE ARMY.—It has at last been decided that the moustache shall be worn throughout the Army, by men of all ranks who desire to adopt it. The following is the Horse Guards circular on the subject:—"Horse Guards, 21st July, 1854. Circular Memorandum.—A large part of the Army being employed in Turkey, where it has been found beneficial to keep the upper lip unshaven, and allow the moustache to grow, the General Commanding-in-Chief is pleased to authorise that practice in the Army generally, subject to the following regulations which are to be strictly observed on home and colonial service: A clear space of two inches must be left between the corner of the mouth, and the whisker—when whiskers are grown. The chin, the under lip, and at least two inches of the upper part of the throat must be clean shaven, so that no hair can be seen above the stock in that place. The wearing of the moustache is to be optional with all ranks. The troops serving in the East will be allowed such further latitude in respect to shaving their beards and whiskers, as the General Officer commanding that Army may deem it expedient to sanction during the continuance of that service. By command, GEORGE CATHCART, A.G."

NEW AMBULANCE CORPS.—Notice has been given to the metropolitan police that fifty men are required for special service at the seat of war. These men must have been in the cavalry, as they will be mounted, the duties being to look after stragglers from the various regiments. The pay is fixed at two guineas per week. Should the system succeed, it is understood to be the intention of the Commander-in-Chief to increase the force materially. Twelve men, who have volunteered to join the Commissariat staff at a rate of pay of 5s. 6d. per day with rations, will embark immediately to join that service.

MRS. MOORE, the widow of Colonel Moore, of the Inniskillings, who perished in the burning of the *Europa* transport, with several of his men, through a resolute perseverance in what he deemed his duty as a commanding officer, has, at the especial desire of the Queen, been appointed apartments in Hampton court Palace, and has also the highest pension awarded, 300*l.* per annum.

EXTENSION OF THE EARLY CLOSING MOVEMENT.—A fresh success has just been won by the Early Closing Association, in the case of the wholesale booksellers in the "Row," who, with very few exceptions, closed on Saturday last at five, instead of half-past seven o'clock, which, up to that day, had been the usual hour. It appears that several of the firms have expressed themselves as highly favourable to suspending business on Saturday at two o'clock, so soon as such arrangement can be made at all general.

EPITOME OF NEWS—FOREIGN AND DOMESTIC

The price of wheat has already fallen from two to five francs per hectolitre in several parts of France. At Blois the price of rye has fallen nearly one half.

The trial of Mr. Carden for the attempted abduction of Miss Arbuthnot, at the Tipperary Assizes, was to take place yesterday. The Attorney General was to prosecute in person. Mr. Carden is said to have retained three eminent counsel for the defence.

The Munich Industrial Exhibition was opened on the 14th inst. with much pomp, by the King. The number of exhibitors amounts to 6586. Of these, eight are Bavarians, 1477 Austrians, and 767 Prussians; Wurtemberg gives 443, and Saxony 440.

The British Ambassador at Berne, the Hon. C. Murray, gave a dinner on the 15th inst., followed by an evening entertainment, to the Russian deputation now at Berne for the settlement of the remaining differences with Austria.

So light have been the calendars in all parts of Ireland, and so limited the criminal business to be disposed of, that the present summer assizes are not likely to occupy one-half the time usual in former years.

The marriage of Ali Ghalib Pacha (Redschid Pacha's son) to the Sultan's daughter is broken off, or at least put off for a year.

The number of steam-boat disasters in the United States, during the first half of 1854, has been considerably over one hundred, involving a loss of very little short of 2,000,000 dollars of property, and resulting in the destruction of more than 300 lives.

Glasgow is at present infested by a gang of housebreakers, supposed to be returned convicts. They commenced operations at the beginning of the fair, and have become so daring as to pursue their avocations during the day-time.

A man in Mexico has received a patent for the manufacture of soap from the vegetable called "The Soap Plant." The plant is indigenous to the soil of California.

The sum of £4700 has been subscribed in Manchester towards the expenses of the forthcoming Paris Exhibition.

The Danish Government has issued a decree, ordering that ships shall, for the future, on the bound-days when taken with Icelandic produce, and when they discharge their cargoes in a Danish harbour.

In two quarters of Paris, where a few cases of cholera were declared last week, there is now not one, in spite of the great rise of temperature. In 1840, when the heat came on, the cases were quintupled in less than three days.

A boiler explosion took place on board a steam-boat on the River Ribble, on Sunday night last, by which five persons lost their lives. Several others were so severely injured that they are not expected to survive.

The Government of Saxony has notified that, from the 1st of January next, executions shall no longer take place in public; but, as in Prussia and Wurtemberg, in the interior of the gaol, and in presence of a priest, two surgeons and twelve witnesses.

The Board of Health at Genoa has just subjected arrivals from Malta to observation, in consequence of cases of cholera having made their appearance there.

The Canadian immigration into Quebec, this year, to the 30th June, amounted to 29,076 souls, being an excess of 7,047 passengers over the same period last year.

M. Barth, printer, of Breslau, celebrated, a few days ago, the 250th anniversary of the first book printed in his establishment. This book is a German legend of some rank, and appeared in 1504. M. Barth's printing office is the oldest in Europe, and has been for 350 years uninterruptedly in the hands of his ancestors and himself.

The reports from the Scotch moors regarding the young grouse are very discouraging. In some districts it is said there will be a total failure of young birds.

Workmen are employed in forming a harbour of refuge at Naples, which merchant vessels will be able to enter, when prevented by bad weather from getting into the Bay.

The greatest activity prevails at present in the shipwrights' yards, at Nantes, where there are on the stocks twenty-three vessels, which will be ready for launching before the end of the year.

The Historic Society of Lancashire and Cheshire has arranged to exhibit the whole of the Faussett Collection of Anglo-Saxon and British Antiquities during the meeting of the British Association in Liverpool.

M. Raoul-Rochette, member of the Académie des Inscriptions, a Perpetual Secretary of the Académie des Beaux Arts, has provided in a set the delivery of any oration at his funeral, by specific prohibition in his will.

The inhabitants of Mexico have suffered so much from the despotic exactions of the Government of Santa Anna, that many of them are voluntarily expatriating themselves, and seeking peace and protection within the United States.

The Austrian War Department is said to have entered into a contract for a term of two years with the aëronaut, Eugene Godard, for the supply of balloons at the chief stations of the army on the south-eastern frontier. He is also to instruct the officers in the management of balloons, and to render personal services for the purposes of military observation.

From the inquiry now making into the turnpike system of Dublin, it appears that house property in the northern suburbs is depreciated to the amount of forty or fifty per cent, as compared with that in the south of Dublin, which is exempt from tolls.

Cholera has made great havoc in Barbadoes. The number of deaths up to June 26 was 2414. Nine-tenths of the deaths were among the black population.

The Grand Duke of Tuscany has accepted the resignation of Prince Joseph Poniatowsky, as Minister at the Courts of Paris, London, and Brussels.

Loughcooter Castle, the property of Lord Gort, which was purchased in the Encumbered Estates Court some time back by the superiores of a religious community in Ireland, is to be again disposed of next month.

Mr. Barnum has withdrawn from the management of the New York Crystal Palace, which has again proved a failure. At the close of the Exhibition, the Palace as all other property of the Association are to be disposed of. A project exists for removing the Palace to Washington, to be used as a National Observatory.

Mr. Van der Hoop, the wealthy Dutch capitalist, having left by will his valuable picture-gallery to the municipality of Amsterdam, on condition that it should pay the duty (exceeding £6000) on the legacy, a public subscription was opened, and that sum has been raised.

Mr. Francis Thomas Yates Molyneux, undergraduate of St. John's College, Cambridge, was drowned last week while bathing in the river Severn.

Accounts from New Foundland state that active exertions were being made to dispatch armed vessels to protect the fishermen from the encroachments of their rivals.

Last Saturday night Mr. J. R. Hind discovered an object which looks like a star of the tenth magnitude, or rather brighter, between two stars of the fifth magnitude—29 and 32 of Flamsteed in Capricornus, which proves to be no other new member of the group of minor planets, the Ariadnides, besides the 47 of perpetual insanity.

In consideration of the payment of two per cent, the company insure for every house, the insurance expiring only when the house is burnt down.

The *Parlamento* of Turin says that a new pamphlet of Mazzini's is at present secretly in circulation at Genoa, treating particularly of the kingdom of Sardinia.

The Peninsular and Oriental Company's steamers will no longer call at Batavia on their way to Australia.

The constables of the City police are ordered to destroy all unmuzzled dogs found in the streets during the summer months, first giving notice of this order to the owners of dogs who reside in the City.

By a Royal decree dated the 16th, the session of the Senate and Chamber of Deputies of Piedmont has been prorogued to the 27th of November.

The Lord Provost of Edinburgh has addressed a letter to the newspapers, in which he states that since the act for closing the public-houses on a Sunday there has been so great a decrease in the number of committals for crime, that he thinks it probable the £12,000 recently demanded by the prison board for the enlargement of the prison will not be required.

A treaty of commerce and navigation has been completed between Austria and Belgium, bearing date Brussels, the 2nd May, and ratified there on the 8th June, 1854.

The arrivals of specie last week amounted altogether to £800,000, the whole of which, with the exception of £160,000, was in gold.

The East India Railway Company has entered into contracts for the completion of their line to Cawnpore, and intends to make the remaining portion to Delhi with the present staff.

In Hobart Town there has been a "maiden session" of the Supreme Court, the first ever held in the colony.

Owing to the great exportation of English goods and manufactures to Australia, almost everything imported is now selling at the dearest quote as cheap as in England.

Some coins of the reigns of Trajan and Antoninus have recently been disinterred in the streets of Lancaster.

16, OXFORD-STREET.

THE FRENCH MUSLIN COMPANY have the splendid stock now exhibited in their Premises, and can thus offer the most extensive assortment of Muslins ever submitted to the notice of the Nobility and Gentry, at prices which, in the present state of the market, must be considered unprecedentedly low.

And at the Crystal Palace.

THE CRYSTAL PALACE.

THE FRENCH MUSLIN COMPANY are now exhibiting a most extensive assortment of NEW MUSLINS and BAREGES, in the Nave of the Palace. Experienced Assistants are present to dispose of the specimens, and take orders

16, Oxford-street.

M'CRONE.

Bibbed moustached. Any gentleman can have the Corazza or any other form of Shirt, by sending these numbers taken tight—1. Round the Neck; 2. Round the Chest; 3. Round the Waist; 4. Round the Wrist; 5. The Height of the Wearer.

Excellent Cotton Shirts, with [illegible] Collars, and Wrists of fine Linen, 40s. to 42s. each.

Useful [illegible] Shirts of various [illegible] sizes, 10s. to 12s. each

Additions for [illegible] or Embroidery from 2s. to 10s. each

77, Regent-street, 6, James's, London

OUTFITS to all parts of the Globe, at the smallest remunerative profit. The plain price is marked on every article, and no deviation made. One establishment is devoted to the CLOTHING of UNDER SIZED BOYS, in all its branches, and another (the all remote house) to SHIRTS and UNDERCLOTHING for every Size. Gentlemen's Cabin Trunks, Portmanteaus, Bags, Rugs, Bedding, &c. One system, a adopted throughout—plain figures and no deviation.—T. MILLS and Co., Aldgate. N.B. Scarcity opposite Jewry-street.

WATERPROOF GARMENTS, at very Reduced Prices.—As these Waterfast Garments are coming into general use and the high price hitherto charged has been an obstacle, S. W. SILVER and CO. have become Manufacturers on a large scale (using their own materials), and are now able to supply the Public at a very moderate charge, thoroughly waterproof travelling, overcloats, and summer wet weather coats, the Shooting and Fishing Cape and Leggings Screw Ferrule, a great protection to travelling by sea and land; Bivouacking Blankets, for soldiers or settlers, to resist grounding, an open-air cure and shelter, and all are impenetrable to rain in any climate. Purchasers of country may rely on every article being of the best Manufactory, North Woolwich, where her Majesty's Hussars, Waterproof Clothing Manufactory, 2 and 3, MITRE, Bell-yard, Temple-bar, and Bell room Ware Premises, 3, Oxford-street, London.

BEDDING.—ECONOMY. DURABILITY, and COMFORT.—The GERMAN SPRING and PATENT MATTRESSES make the most elastic and softest bed. A price list of every description of Bedding, Blankets, and Quilts, sent free. Bedsteads, Furniture, and Bedding. Lists and Estimates sent free. [illegible] Bed and Mattress Warehouse, 2 and 3, MITRE, Bell-yard, Temple-bar, and Bell room Ware Premises, 3, Oxford-street, London.

OSLER'S CRYSTAL GLASS CHANDELIERS for GAS and CANDLES.—A great variety of the newest and most elegant designs, suitable for every description of the above Lustres. The moderate price of every article may be learned at OSLER'S Manufactory, Broadway, Birmingham, and 45, CLASS of the newest and most beautiful designs for Table Glass, Dessert Services, Ornamental Glass, Decanters, Lustres, Chandeliers, &c., at 45, Broadway, Birmingham.

GAS-FITTING.—GARDNERS' Two-Volume Guinea Estimates, for ten-roomed houses, includes chandeliers for the most elegant designs, for dining and drawing-rooms hall lanthorns, library, kitchen, and bed-rooms—compromise in all, fifty guineas. Good work by apprentices, by her Majesty's, 453 Strand, and 54, Charing-cross Manufactory, James-street Estabished 16 years.

GAS CHANDELIERS, HALL LANTERNS, &c. To Gas-fitters, Ironmongers, &c.—The most complete assortment in the trade of ormolu and bronze for fittings, suitable for Drawing and Dining-rooms, Libraries, Halls, &c. Every article marked in plain figures, at the lowest possible price, by the Inventor and Patent Gas Meter [illegible] Improved Vaporizers, &c. [illegible] Lamps, and Heaters. Large Patent Book of Engravings, with Prices sent free on application. Show Rooms, 61, Fleet-street, [illegible] Coffee Urns

COOKING by GAS.—The most extensive, well-constructed and efficient GAS COOKING APPARATUS now [illegible] at DEANE, DRAY, and ANSTEAD'S, 41, Pall-mall East. Prospectus sent on application.

CRYSTAL PALACE.—The best Present to take home is a Chinese Package of the very finest kind of TEA, very strong; 3s. 3d. per lb. Also finest Wax Lights, Arrowroot, &c., in 11lb. packages. Imported and Sold only by the PALACE TEA COMPANY, No. 24, South-bank Gallery, Crystal Palace.

THE CRYSTAL PALACE FLOWER-[illegible] [illegible] Bouquets and other [illegible] an extraordinary little glasses introduced at the Exhibition of 1851, though scarcely larger than your thumb, yet possess an ornamental power and cleanliness as to show objects distinctly at the distance of a mile. Not only will they be found invaluable for [illegible] to be appointed agents—Sams, 1, St. James's-street, Mitchell, 33, 34 Bond-street, Westerton, 4, Hyde-park-corner, Keith, Prowse, and Co., 48, Cheapside, Lotts, 8, Royal Exchange, and at the Book-stalls [illegible] Crystal Palace. Price 1s. 6d. each; by post, 1s. 8d. Orders [illegible] of stamps or Money order, payable to William Callaghan, Cranbrook, Great Russell street, Bloomsbury.

AIR CANES, for Shooting Rabbits, Rooks, Sea-Fowl, &c., in Cases complete with the many fish, with harpoons, &c.—Price of these portable and silently destructive weapons, from 10s. 6d. Intending purchasers [illegible] GUN Maker, New Oxford-street, London.

RIDING WHIPS, CANES, and STICKS, in the largest and best stock in London. Ladies' whips, solid gold mounted, 1s. 6d., dragon canes, with ivory heads and enamel stripes, 2s. 6d.—JOHN CREEK, Manufacturer, 126c, Oxford-street. Sword canes.

CROGGON'S PATENT ASPHALTE [illegible] [illegible] [illegible]

NEW BOOKS, &c.

NEW BOOKS, PUBLISHED at MILFORD HOUSE, MILFORD-LANE, STRAND.

The NATIONAL ILLUSTRATED LIBRARY.

The HISTORY of RUSSIA, from the Foundation of the Monarchy by Rurik to the Coronation of the Hungarian War. To which are added Historical Notices on Sweden, Lapland, Tibet, the Nobility, the Church, Trade in Caucasus and the Transcaucasian Provinces of Russia. THE ILLUSTRATED LONDON NEWS

No. 696.—VOL. XXV.] SATURDAY, AUGUST 5, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE SPANISH REVOLUTION.

THE Spanish Revolution has entered upon the second stage of its history. The people of Madrid seem to have agreed to a cessation of hostilities as soon as it was made known that the Queen had sent for General Espartero. At the date of the last accounts, the Queen still remained intrenched in her Palace, but had shown herself to the people from a balcony, with her husband at her side, and had been received without enthusiasm, and without disfavour. The barricades were still standing in the principal streets, and the populace, as well as the National Guard remained under arms. Four days previously to the entry of General Espartero, on the 29th ult., he dispatched a messenger from Saragossa to represent to her Majesty the sole conditions on which he would accept the responsibility of endeavouring to carry the nation in safety through the crisis to which the Queen's mis-government had brought it. Whatever the conditions were, her Majesty accepted them with the least possible hesitation. They are believed to have consisted of two only—the immediate convocation of a Constituent Cortes, to be elected by universal suffrage; and the expulsion of the Queen-Mother from Spain. Supposing these to have been the terms, they were simple and intelligible. Though apparently hard upon the Queen, they were less onerous than her consciousness of wrong-doing and her sense of utter helplessness might have led her to anticipate.

One of the streets of Madrid which bore the name of Queen Christina, received from the Junta, which assumed the reins of Government before Espartero's arrival, the name of O'Donnell, and another of the principal streets received the new designation of the Calle del Duque di Victoria. Prior to Espartero's entry into the capital, O'Donnell, the real author of the revolution, and his companions Dulce and Serrano, were restored to their military rank—a fact from which it may be inferred that Espartero and O'Donnell are to be allies, and not antagonists, in the future conduct of affairs. Thus far it would appear as if the revolution had simplified itself. It should be stated, however, that General Blaser, who was reported to have fled into Portugal, is still in command of a numerous force in support of the Royal authority, and may possibly give further trouble; and that a considerable portion of the army at Madrid does not look with as much favour as the people upon Espartero's return to power.

But Espartero is, for the moment, the undoubted master of the situation. The question arises, whether his energy will prove equal to his honesty, and whether he will be able to repay the confidence which the Spanish nation has placed in him? Of his real intentions nothing is positively known from his acts; neither can anything decisive be gathered from the terms which he imposed upon the Queen. To purge the Court of the foul presence of Christina, and the peculators, panders, paramours, and other evil councillors who followed in her wake, and grew rich upon the plunder of the people, is obviously his first duty. There can be little doubt that he will perform it, and that he is willing to bear all the responsibility, as well as receive all the glory, of the purification. But it is not likely that he will be contented with the mere expulsion of the offenders. Their ignominious punishment is required for the sake of the public morality which they have outraged. Spain owes the world the example, and it is to be presumed that Espartero will have the courage not to flinch from it.

But the far greater question of the dynasty and the occupancy of the throne remains behind. Whatever Espartero's own opinions on the matter may be, it would seem that he is not willing to decide it by the sword of his army, or by his own authoritative and Imperial *sic volo*. He has in effect left it in all its grandeur for the consideration of the Constituent Cortes. A question so important, could scarcely have been satisfactorily decided by any agency less august. But in the very greatness of the question, and in that of the body which is called upon to solve it, lie many perils. Not among the least of them is the probability that an assembly elected by universal suffrage, to form a Constitution, and to approve of the Chief Magistrate—King, Queen, or President—who shall be its responsible head, may fail in bringing the Revolution to a close. History shows us that such assemblies may end one Revolution only to inaugurate another and a greater. The French National Assembly of 1789, unsettled all things and settled nothing: it destroyed one bad system only to let in Chaos. And we have no

THE INSURRECTION IN MADRID.—CONFLICT IN THE PLAZA MAYOR.—(SEE NEXT PAGE.)

reason to believe that a Spanish Cortes would be more prudent, when we consider the state of public feeling, how often and how cruelly the Spanish people have been deceived; and what a swarm of factions exist to prevent tranquillity by their preposterous pretensions, and their incessant intrigues.

Espartero will, therefore, not only be a wise and courageous, but he will be a fortunate man, if he succeed in the difficult task which circumstances have thrust upon him. He has received a splendid title from the people, of whom he is, at present, the idol; but it has been given to very few to be really the "Liberators" of their country. The world has seen no man of the kind since the days of Washington; and there was a long blank before Washington's time, during which no similar hero wrote an immortal name on the page of History. Nevertheless, Espartero has a great opportunity, and the events of the next few months will enable the world to judge whether he can make use of it. His difficulties are great; but difficulties prove the capacity of men of genius. To uphold the throne of Isabella, will be an effort which will surround him with one set of perils; to overthrow it, will be an alternative that will present him with difficulties of another, and, possibly, more formidable kind. To overthrow the dynasty might only add another faction to the legion that already distract Spain; for the dethronement of a Sovereign, and of a family, does not, unfortunately, put an end to the troubles which its representatives may occasion, until the very last of those representatives ceases to exist. As the course attended with the least amount of complication, Espartero will, in all probability, do his utmost to maintain the Queen upon the throne. The danger to the dynasty does not lie in his intentions, nor, it may be presumed, in those of O'Donnell or the other Generals who have taken arms to rescue the country from the domination of an odious faction, but in the spirit which animates the Juntas and the people, and which may find its way into the Constituent Cortes. The best policy for Queen Isabella to pursue, is that which she appears to have adopted, of contrition for the past, and of reformation for the future. Sincerity may do much for her, but perfidy, though it might enable her for a short time to attain the ascendency, would but sink her at last into a deeper and more hopeless pit of humiliation and disgrace than that into which she has already fallen. Her address to her people, issued three days before Espartero's arrival in the capital, is conceived in the right spirit. It is a frank and full avowal of what her Majesty justly calls "a series of deplorable mistakes," and a declaration no less frank and open, that she has placed herself under the tutelage of the Duke de la Victoria. Her Majesty avows her "complete adherence" to his ideas, and states at the same time, that she is "disposed to make every kind of sacrifice for the general good of the country; that she desires it shall manifest its will by the organ of its legitimate representatives, and that from this moment she accepts and offers every guarantee that may firmly fix its rights and those of her throne." If the people believe in the sincerity of these declarations, the task of Espartero and the Constituent Cortes will be facilitated, and the throne of Isabella may be secured; yet it must not be forgotten that the whole conduct of the Queen, from girlhood to the present day, has been of a character to destroy, and not to create confidence; and that, the abject humility of her confession of wrong-doing, may show that it was prompted by fear rather than by justice.

One thing we take to be clear, which is, that whatever turn events may take, the Duchess of Montpensier will not replace her sister. That the Duke of Montpensier should profit by the filthy intrigues of his father, and that a Frenchman should sit on the Throne of Spain, would be a consummation as odious to the Spanish as it would be distasteful to the French, and as much opposed to sound policy as it would be repugnant to the public sense of justice and morality. Better Isabella, with all her faults, than Donna Luisa, with a husband, whose accession to power, would be the triumph of Louis Philippe's nefarious policy, and the utter degradation of Spain.

THE INSURRECTION IN MADRID.

Upon the preceding page, we have engraved one of the early scenes of the Insurrection—the conflict in the Plaza Mayor, on the afternoon of the 18th ult., when a little column, composed of two or three companies of infantry, two guns, and a picquet of cavalry of the Civic Guard, proceeded to the Plaza Mayor, and drove the insurgents out of a house, of which they had taken possession. The artillery, however, was employed, it appears, chiefly in the Calle Atocha, and did much damage to the buildings. Few of the insurgents were killed, but a good many wounded, and the troops also suffered considerably. The number of wounded in the military hospital, up to the 24th ult., was 800; the number killed was not known, but it was said to be not less than 400.

A Prussian General at Woolwich.—General Prince Radziwill, of the Prussian service, accompanied by his son, arrived at Woolwich on Tuesday, at eleven o'clock, a.m., and proceeded to the common, where a troop of Royal Horse Artillery was drawn up in line, and, under the command of Lieutenant-Colonel Bloomfield, went through the evolutions of a field-day. General Radziwill then proceeded to the camp on Woolwich-common, and examined the arrangements made for the accommodation of the troops. The Prince afterwards inspected the field batteries, under the command of Colonel Anderson, and appeared much pleased with the fine appearance of the men, and the remarkably fine horses of grey and chesnut colours ready for embarkation for the seat of war in the East. The field batteries turned out in complete marching order, with ammunition-waggons, forges, and rocket-waggons, with every necessary for war service. Each 9-pounder gun was drawn by eight horses, and the same number to the 24-pounder howitzers. The ammunition-waggons were drawn each by six horses. The batteries went through their evolutions of a field day, and afterwards marched past in single gun detachment. General Radziwill's visit was of a private nature, as there were no other officers present on the occasion than those immediately connected with the troop and batteries. The Prince and his son proceeded from the common to the Rotunda, in the Repository Grounds, to inspect the arms and models in it.

Dervishes.—A Correspondent explains to us that there are three sorts of dervishes in Turkey—the howling, dancing, and begging dervishes; of which the first two are natives of Constantinople; and the last, emigrants from the centre of Asia. The howling and dancing dervishes are a polite, tolerably well-informed class of men; while the begging dervishes are described as being a most beastly and degraded set, hating work, and despising improvement. They go about the country armed like brigands, and are the terror of all honest folk. It is to this latter class of dervishes that our Illustration of last week referred.

Bellot Testimonial.—The Committee announce that, of the £2000 subscribed, £500 will be applied to the erection of a granite obelisk on the wharf of the Royal Hospital, at Greenwich. The remainder of the money will be equally divided among the five sisters of the gallant French officer. The position of the obelisk will be immediately to the east of the Greenwich steam-boat pier. Mr. P. Hardwick, R.A., the architect, has kindly undertaken to superintend the erection of the monument, the granite of which is in the course of preparation by Messrs. Macdonald, of Aberdeen.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

Rustchuk, July 10, 1854.

The long-expected passage of the Danube by the Turks took place on the morning of the 7th inst., opposite this town, and was made good after a struggle of thirteen hours, during which a fearful loss of human life was incurred on both sides. The Turks being the attacking party, suffered severely on the occasion; and it is a matter of surprise, considering the nature of the ground on which the action was fought, that they were ever permitted to make good their landing and bivouac unopposed on the field of battle.

Rustchuk is built on the bank of the Danube, and overlooks the stream. The precipitous nature of the ground, and its height above the river, render it more difficult of access from the water side than either Widdin or Nicopolis. The Danube runs past the town at the rate of about four miles an hour; it is, consequently broad, and the distance from bank to bank is not less than 800 yards. On the opposite side is an island, of which the bank, at the highest point, is not less than eight feet, whilst, at the lowest, it does not exceed three feet. The ground is flat, and covered with underwood and reeds or long grass, in which the movements of men may be kept secret if necessary. The copse, in most places, extends to the water's edge, and in some places reaches the height of at least eight feet. The position of the Russians was defended almost naturally by these means, and by numerous small lakes which intersect the island in various directions; and they were further protected by several batteries and breastworks, which defended the entrance to the paths leading inland. The distance across the island in its broadest part is about a mile; and the stream which divides it from the main is barely twenty yards in breadth. Across this stream the Russians had thrown two bridges—one at the lower extremity of the island, connecting it with the town of Giurgevo; the other nearer the centre, joining it with the land below the heights of Slobodzie. On these heights, which command the approaches from the island, they had erected several batteries.

At the moment when the Turks determined to effect a landing, there were from 500 to 1000 men on the island, and guns in a few of the batteries facing the town. Hassan Pacha, who commanded the division, then encamped outside Rustchuk, had heard, however, that the Russians had retired to the mainland, and it was hinted even that Giurgevo itself had been evacuated. This, as the event subsequently proved, was false intelligence; indeed it had been considered so all along by Captain Bent and Burke, R.E.—who, being here on special service, did not fail to protest beforehand against a hazardous enterprise, commenced at an unfavourable moment, without previous concert, and with means incommensurate with safety and success. Behram Pacha supported Hassan Pacha, in his intention of crossing, and the troops were told off, notwithstanding express orders from the Commander-in-Chief, not to hazard offensive operations, until he should himself come up. Many other officers, besides those already mentioned, concurred in considering the attempt most hazardous. Lieut. Meynell, of the 75th, considered it as a forlorn hope; but still the whole of the European officers present in Rustchuk determined upon joining in the attempt, however dangerous it might be, and proceeded. These were, besides the gentlemen already alluded to, Colonel Balfour Ogilvie, and Lieutenant-Colonel Hinde, of the 86th Bengal Infantry, staff of Major General Cannon (Behram Pacha), Captain Arnold, 3rd Madras Light Infantry; and Lieutenant Ballard, Bombay Engineers.

At ten o'clock on the morning of the 7th inst., and after a burning sun, operation commence'. Under cover of a tremendous cannonade from all the batteries facing towards the river, the first division of boats about twelve or fourteen in number, left the Rustchuk shore, in batches, of four or five. The first of these, commanded by Bekir Pacha, Lieutenant-General, landed without resistance opposite the centre batteries of Rustchuk, in the space between two Russian batteries, from which the Russians had already fled. Captain Bent, R.E., who was in the second boat, was the first English officer who jumped on shore. The force in the first four boats consisted of about 160 men. Four more followed, with the same number, and six more completed a detachment of about 500 men, which formed without opposition on the bank. The Russians having abandoned the batteries on the spot, the Turks were thrown out into skirmishing line by General Cannon and Captain Bent, and advanced before any signs of the enemy were visible. They took an oblique direction towards Slobodzie, and met with but slight resistance from dropping rifle-shots. They thus reached the bank of a long lake, which it was found necessary to turn, and this obstacle being fortunately headed, the Turks succeeded in feeling their way to a considerable distance across the island.

In the meanwhile, other divisions of boats had crossed the Danube, a mile and a half higher up the stream, and met with far less success. Colonel Ogilvie and a detachment of 400 Infantry and 100 Riflemen were landed from a steamer, and two gun-boats; Lieut.-Col. Hinde, Captain Arnold, and Lieut. Meynell, were with them. The landing was also effected without opposition. Whilst Colonel Ogilvie, with the main body, formed and marched down the river in the direction of the first landing. Captain Arnold was detached with sixty Riflemen to feel the way among the willows on the left, and with the recommendation to keep his communication well open with the Danube. This he did most gallantly in the face of a constantly increasing fire from the Russian skirmishers, the main body advancing slowly along the bank. The enemy's shots had concerted himself with assailing the Turks by musketry, but as the main detachment and skirmishers advanced, they came within range of a two-gun battery from the heights near Slobodzie, which threw shells and grape into them, doing much mischief. This did not for a moment check the advance, and the skirmishers under Capt Arnold's command took possession of a battery three hundred yards inland, from which the enemy had just withdrawn two guns, whilst the main detachment on the bank attacked and carried almost without resistance, a redoubt and breastwork, from which the Russians ran, leaving their meal on the ground before them. The Turks took possession of the battery, the porridge and black bread of the enemy, and prepared to feed their ground. An hour was made to do much, the enemy's fire increasing in warmth every minute, and their Riflemen advancing with more confidence and in greater number. The steamer and gun-boats in the meantime had taken another trip, and a second detachment of Turkish soldiers marched up to join the first. Lieutenant Meynell was left with fifty men to defend the waterside battery, with directions to wait for Captain Arnold and the second detachment, then coming up within two hundred yards. Colonel Ogilvie started afresh, following the bank, and fighting his way towards the first landed party, under General Cannon and Captain Bent. He did so under very heavy fire from the Russian riflemen. At this moment, the Russians had received a reinforcement of three battalions, which, advancing rapidly against Arnold in skirmishing order, closed in upon the battery, and charging with the bayonet drove the Turks out of the work. The struggle was terrible, but short; and Captain Arnold, after suffering severe loss, retired to the waterside battery, where he joined Lieutenant Meynell, and the last landed detachment of Turks, amounting in all to 380 men. The Russians placed two guns in the battery which they had just taken, and cut off the communication between Arnold and Meynell, and the detachment under Col. Ogilvie. They pushed their men in between; and whilst the latter, hard pressed, made the best of his way to join Bekir Pacha's detachment, the men under Meynell and Arnold were taken in flank, and had no alternative but to hold their ground in the battery at the waterside, or retreat in the direction of their first landing. They determined to hold out in the work as long as they could; and for a considerable time they repelled the fierce assaults of the enemy, who were pressing on them in front and in flank. Firing from cover, the Turks were as steady and as brave as possible; but the odds were against them. Meynell and Arnold, conspicuous by their uniforms, were shot; and the remainder of the defenders, with a short supply of ammunition, retreated up the river, making a stand now and then, and losing men at every stand. The unfortunate remains of this forlorn body arrived at a spot just above their old landing-place, where an equally fearful struggle was going on as that in which they had suffered themselves so much. A third detachment of troops had landed there, under the command of Captain Burke, R.E. The spot was a fearful one on which to meet an enemy; and the landing, on the present occasion, had not been, as on previous ones, unopposed. Captain Burke had scarcely jumped to the ground, than he sought to ascend the bank, which was eight feet high in that place. But the Russians were on the upper ground, shooting down with certain aim upon the men below. Followed by Anderson, a sergeant, and a private of Sappers, Captain Burke endeavoured in vain to climb the beach. He then dug a cover for himself under it, and there he stood at bay, with his sword and revolver. He was found next day, pierced with four musket-balls, one of which, entering at the back of the skull and issuing from the chin, must have put an end to his existence; and a dead Russian lay near him, killed from a shot of his revolver. The rings on his fingers were taken away after his death, by plunderers, who severed his fingers for the purpose. The private of Sappers had already fallen near him, stunned by a blow from the butt-end of a musket across the face; a second blow along the shoulder-blade flung him into the water, where he remained for four hours insensible, and kept from drowning by a thick woollen shirt he wore. The sergeant escaped, after a fruitless attempt to carry away upon his back the dead body of his master. Whilst this tragedy was being enacted, the steamer had been sent over with more men to the assistance of Burke's party; but a ball from a Russian battery disabled her before she reached the shore. As the relics of Meynell's and Arnold's detachment joined, the Russians were forced back by the fire of two guns which the Turks had sent out from Rustchuk, on the opposite bank, and which played on this spot; but, before they had done so, a party of cavalry had already closed in, and carried off several prisoners. It was then about half-past one p.m., and the fortunes of the day had been, till then, very much against the Turks; the detachment under Bekir Pacha had been checked in its victory by reinforcements of Russians, who pressed hard upon them, and by half-past twelve o'clock the whole of that portion of the landed troops had been forced back, and were fighting on the banks, or had taken refuge beneath it. Two Russian guns were playing on this position. Capt. Burke had endeavoured to form a retrenchment out of the Russian redoubts, and a certain number of men held their ground there. General Cannon then, seeing the affair most desperate, took to a boat, and crossed to the other side for aid; and, at half past two o'clock, fresh troops from Rustchuk began to embark, and took ground at the lower landing-place. Lieut. Ballard succeeded in raising a small retrenchment, and for hours the enemy were kept in check upon that point. At last—at about half-past six—the Turks found themselves in sufficient numbers to advance some skirmishers on their right, and a severe conflict was carried on from the opposite banks of a creek until sunset, when the Russian made a great parade of withdrawing in force—carried off their guns, and blew their pickets from the heights, and their cavalry was observed to march off over the hills above Giurgevo. By that time there were about 5000 Turks on the island, and these, having raised a considerable breastwork, entrenched themselves, and bivouacked during the night on the field of battle. It remains as yet a mystery why the Russians permitted the remnant of the Turks, who held their ground at the lowest landing-place up to two o'clock in the afternoon, to remain on the island. Had they advanced in force, as they might have done, the Turks had certainly lost the day. Nor is it a less remarkable fact that Hassan Pacha, who had at least 30,000 men in Rustchuk, should have had the unpardonable folly to neglect advancing more than 2000 men across up to two o'clock in the afternoon. The result was, that out of the total number who crossed up to that time, 1500 Turks were killed and wounded, while on the part of the Russians the loss can hardly have exceeded 200 killed and 600 or 700 wounded. The proportion of loss in killed and wounded of the Turks may be judged from the fact that of the 500 men who formed Colonel Ogilvie's party of 600 men, 300 were killed. Some telling shots from the Turkish guns in Rustchuk were rendered during the day. A shot time after the repulse of Captain Arnold from the inland battery, a shell told upon one of the guns the Russians had placed there, and the powder-waggon was blown up at the same time that the gun was dismounted.

At dawn on the 8th the village of Slobodzie was found to have been evacuated, and Hassan Pacha asserted that Giurgevo had been evacuated also. Already, on the previous evening, he had been with difficulty restrained from advancing directly on the town when the Russians were retiring, and it was only after a written protest from Captain Bent that he desisted from the attempt. The same upon the land was a fearful one. The bodies of the Russians who had fallen had been stripped in the night by the Turks, and lay about in all directions; the paths after the burial of the Ottoman soldiers. Arnold and Meynell were discovered in the ditch of the battery, which they had so gallantly defended, and were buried there. A body of Captain Burke was found later in the day, and taken over to Rustchuk, where he was interred with military honours. The wounded of the Turks were lying at this time in the streets of Rustchuk, and tended to and dying in numbers. The Russian loss on the island was on the places where they fell.

Yesterday the enemy, having evacuated Giurgevo, were discovered to have encamped on a hill at a distance of two miles. They are still there. Hassan Pacha and his staff advanced to the ruins of the town, and sitting on the ground received a deputation about 35 people, who were all that the Russians had not taken away with them. The position of Slobodzie is now being entrenched, the Danube bridge fortified, and the village will be occupied at once, the town being considered by the English officers too insecure in the face of the large force—it is supposed 8000 men—who occupy the heights at no great distance. The Russians in this affair were commanded by Soimanoff and Villebois, so at least state the inhabitants of Giurgevo. One of these officers is, it is also said, severely wounded.

Omer Pacha will be here to-morrow.

Rustchuk, July 15, 1854.

The Russian officers are in a great rage at their failure, this day week, to repulse the passage of the Turks into the island of Rhamadan. They blame their Generals, whom they accuse of incapacity, and apparently they do so with reason. It seems that Sumooroff, the General of Division in command, expected the passage of the river, but was not prepared for it at that place. On the 8th the Turks passed a few battalions of Egyptians into the island of Moksa, three miles below Rustchuk, and the Russians were confirmed in the idea that Hassan Pacha would attempt the passage at that point. They had made preparations in consequence, and were somewhat surprised when they discovered the Turks upon the island of Rhamadan. There were two regiments of infantry in Giurgevo at the time; that of Tomsk, and that of Kolivan, and a regiment of Hussars of the Grand Duke Alexander. These the Russians marched into the island as rapidly as they could; but they were unable to check the advance of the Turks. However, at eleven o'clock, General

Baumgarten arrived from Kalougareu, seven leagues distant, with the Regiment of Tobolsk and the Bug Regiment of Lancers: and the Russians, being thus reinforced, succeeded in driving back the Turks. General Saunicoeff had under him, during the day, Villebois, General of Brigade, and Krouleef, General of Artillery. The latter was badly wounded at noon, and carried off to Fratesehti. General Paskowski and Colonel Bontemps were at the head of the cavalry. The Regiment of Ekatherinenburg, which marched from Kalougaren on the morning of the 7th, arrived too late to take part in the action. You may perceive, from the names of the Russian regiments, that we are here opposite to our old friends of Kalafat. The army before us is, therefore, the rear-guard of the Russians, who can have but little force left in Bucharest at this moment.

The Turks having fortified themselves in the strong position of Slobodzie on the 10th, permission was given to a few officers to venture into Giurgevo. It was generally supposed that the place was abandoned by all but a few people, and the streets were certainly deserted in appearance by all. The Pacha, who was sitting under a small sunk up on a pole near the passage to the Giurgevo gate, had only granted leave after repeated prayers, and he had ordered us to be accompanied by a company of Chasseurs to protect us in case of need; but as we entered the town this seemed to be a useless precaution. Nothing can be more degressing to the spirits than to enter a deserted town. We wandered into the place and found everything empty. One of us popped into a guard-house, and returned with his red continuations black with fleas. Those insects which swarm in Wallachia, as they do in Russia, probably because they are an article of Russian importation, had felt themselves of late deprived of their usual sustenance, and were anxious to fraternise with us on our arrival. Shaking them off as well as possible, the gentleman to whom they had attached themselves rejoined us, and we advanced into the deserted streets. We were soon in the square, where stands a bell-tower. We rushed up to the top of it, and there was no sign of a sail beyond, the distant tents of the Russians, which share upon the heights of Kilia. As we descended, we found about twenty people assembled to receive us: they were all that the town contained. They pointed out a small street, into which we entered, and where we found a *restaurant*. The owner was a Greek, and was, of course, a prime in his professions of friendship. He presented a bill for us, it ought not the best champagne, claret, and cheese, and other good things, and we feasted à *qui mieux mieux*. Even one of the Turkish Majors was persuaded to drink the *French water*, and declared that he had never tasted such an excellent beverage. Our return was probably effected by the breakfast, for the spirits of the whole party were considerably elevated; and the old Turkish Major especially was in a frolicsome mood, unusual to one of his staid and dignified nation.

Giurgevo struck me as a pretty place. It has a better appearance, far from Rustchuk, which has a fine, open, and lively air, of which I have sent you a sketch; the streets converge. The houses are well constructed, and large, divided by a citadel, the Russians having destroyed the walls in 1828.

Yesterday Omer Pacha received the Sultan's firman in due form. A company of English Sappers and Miners are here to build a bridge.

RETREAT OF THE RUSSIANS.

The reports relating to the alleged defeat of the Russians at Giurgevo on the 23rd ult., are still of so conflicting a nature as to render it very doubtful whether any battle was fought there on that day. The *Wiener Zeitung* states, on the strength of despatches from Bucharest, that the report is without foundation; while the *Transylvanian Messenger*, on the other hand, makes mention of a battle having been fought on the 23rd, and a despatch from Hermannstadt confirms it. The probability is that some affair took place, and that the Russians were defeated. The mere fact of despatches from Bucharest being silent on the subject is no proof to the contrary, as the Russians must have become tired of relating their reverses. Whatever the fact may have been as to the defeat of the Russians, there seems to be no doubt now as to their retreat from Wallachia.

The semi-official Austrian *Correspondenz* publishes a despatch, stating that on the 27th July the Russian vanguard quitted Fratesehti, and on the 28th the main body of the Russian army quitted Kalugareni. In the evening the troops were to bivouac between the Argish and the Sultan. The Bucharest hospitals were to be evacuated by the evening of the 29th, and the complete evacuation of Bucharest was to be effected on the 31st July. Oltenitza was evacuated by the Russians during the night of the 27th, after *the du pont* and the bridge of boats had been destroyed. During this retreat, which was being accomplished by forced marches, the thermometer was 104 in the shade. The troops were marching towards the Sereth by way of Sendava, and thence to Popesti and Obilesehti with all their artillery, hospitals, and waggon trains. The Turks occupied Fratesehti on the day that the Russians left it; and on the 27th the Turks occupied the island opposite Kalarasch.

A telegraphic despatch from Vienna, on Wednesday evening, says:—

At Bucharest, on the 27th of July, the Turks were expected in two or three days, and would have a splendid reception.

The province is to have an army of occupation of Turks and Austrians. The immediate evacuation of Moldavia is not expected.

The 93rd regt. under Prince Francis Liechtenstein is ordered to advance from Pesth to Galicia. The Austrian army in Galicia is moving towards its frontiers. Archduke Albrecht has removed his head-quarters to Kronstadt, in the south-east corner of Transylvania.

The evacuation of the Principalities by the Russians is said to be for strategic reasons, as no official communication of the fact has been made by the Czar to the Austrian Government.

IMPORTANT DEMONSTRATION AT ST. PETERSBURG.

Public intelligence is said to have been received at Vienna, that a correspondence has been made at St. Petersburg, as to the Baltic, every article, by a considerable number of the most illustrious of merchants of the capital. A memorial was presented, in which it was stated that it was impossible to appreciate the effect of any blockade, and that already capitalists, to whom it was addressed, had refused to make any advances for the purpose of fitting out privateers. The memorial, it is said, was signed by the whole of Europe. The Czar was so alarmed that he directly commanded his ministers to do their utmost by every possible means to conciliate the interests of the merchants. The memorial, it is said, was presented to the Emperor immediately after leaving church, and before he had changed his dress.

The French and English consuls have also taken steps to prevent the destruction of the forests of Finland, and consequently the ruin of many proprietors, by the cutting down of trees for masts. The Austrian consul, it is said, has also remonstrated against the destruction of the forests, but has received a very haughty reply from the Russian authorities.

The French and English consuls have also taken steps to prevent the destruction of the forests of Finland, and consequently the ruin of many proprietors, by the cutting down of trees for masts. The Austrian consul, it is said, has also remonstrated against the destruction of the forests, but has received a very haughty reply from the Russian authorities.

BOMARSUND, ALAND ISLANDS.

THE BOMBARDMENT OF BOMARSUND.

TELEGRAPHIC despatches from Stockholm and Copenhagen announce that Bomarsund has been taken, "with great loss on both sides;" but it is impossible to say how far such reports are true. If the attack was not made till the troops arrived, the bombardment could not have taken place till about the end of the month; in which case we must regard the despatches from Copenhagen as prophetic only. The transports with the first portion of the expeditionary corps were at Copenhagen on the 26th, and were to remain there two or three days; so that they could not have joined the fleet before the 30th or 31st.

Our latest advices from the Baltic fleet come down to the 25th, at which time the block ships were in front of Bomarsund, ready for action. On the 22nd ult. the *Edinburgh*, flag of Admiral Chads, with the *Hogue*, *Blenheim*, *Amphion*, *Leopard*, and *Valorous*, proceeded up the newly-discovered passage to Bomarsund, piloted by the surveying steamers *Lightning* and *Arden*. These ships took up a position in front of the forts, just out of range. The batteries and forts opened a fire of shot and shell on their approach, from a mud battery recently formed, which all fell far short of their mark. Admiral Chads' ship being the principal target; but as the ships had no intention, as this early moment, to return it, the fire was discontinued after half an hour's waste of powder and shot on the part of the enemy. Admiral Chads coolly dropped his anchor when out of the range of their guns, but just in the position that his 10-inch guns will do execution.

The chief battery is erected on the shore, in the shape of a curve, in order to sweep the whole bay. It is built of granite in two tiers, with 54 embrasures in each, thus being enabled to mount 108 guns, but at present they have only 92 mounted. It has a bomb-proof roofing, and, to add to their security, a layer of four feet of sand rests upon this. On the rising ground immediately behind this are two round-towers, and another at the extreme east, in each of which are 16 guns. A mud battery, rapidly thrown up, still further to the east, completes their defence. Russian soldiers were seen lounging about on the shore, and officers were going to and fro on horseback without the slightest appearance of concern at the proximity of the English and French men of war, eight of which were moored within two miles and a half of them. Many were the speculations of our men regarding the vulnerability of the fortifications, but it was at once determined that the operation of shelling them would be futile, the general opinion being that a land attack by the troops now on their passage, with the broadsides of the men of war at 1000 yards, would soon complete their destruction.

It is said that the place is now held by 2000 to 3000 men, of whom 500 are Finlanders; the inhabitants on these islands (Swedes and Finns) are said to be about 12,000 in number. They are very friendly disposed toward us, and they have in return been assured of our protection. Admiral Plumridge, with the *Leopard*, *Odin*, and *Hecla*, was engaged in cutting off the communication between Aland and the coast of Finland, whilst some French frigates were employed in the same way in the Gulf of Bothnia, and in consequence every means to prevent any intercourse with the Russian authorities and the troops at Bomarsund have been adopted.

We have been favoured by a Correspondent in the Fleet with the accompanying Sketch and details

H.M.S. ——, Bomarsund, Aland Islands, July 24, 1854.

We came up here on the 22nd, after a very difficult navigation through the intricate passages among these islands, on one of which we got aground, but soon got clear again, by running all the guns forward. We were 21 quarters the whole of the way, and had several of the man-of-war pinnaces hoisted with grape and canister, in anticipation of being popped at by the Russian riflemen, or by the masked batteries. Nothing of the kind occurred, however, and we anchored in this Sound the same evening, within two miles of the batteries. With us arrived the *Hogue* (Captain Peyton), the *Amphion*, and a small steamer; and there have been two more ships and a steamer, as well as two English steamers.

On the 23rd we again moved all the vessels opposed upon us, but the shot, which were directed fell short. The Admiral, however, thought it advisable to weigh and to anchor further off.

The second day's firing was very imperfect idea of the strength of the place, which is considered of much importance to Helsingfors. There are here two round towers, each mounting 16 guns, and forts of 16 or 20 guns each; also a small battery of long guns, which can command 120 yards inside. The enemy keep on firing, have no length arrived, and we are now both ready to go in and engage, and cover their landing. The water is shallow, that every round shot our bottom is grating on the rocks as it fell.

All the boats' launches and pinnaces are coming up to-morrow, and then we are ready to land the place.

DISCIPLINE OF THE BALTIC FLEET.—In relation to the efficiency and high state of discipline of the fleet, there are not two opinions. The officers all concur in saying that, with the exception of a few veteran coastguardsmen, they are well manned, and "ready, aye ready," for any service that Sir Charles may ask of them. The men are kept regularly at exercise, and while at one moment you observe all hands aloft in the evolutions of furling and reefing sails, lowering topmasts, topgallantmasts, yards, &c., in an instant the signal is run up by the *Duke of Wellington*, "Man and arm boats," and twenty minutes have barely elapsed when 180 boats, fully armed and equipped with every requisite for attack, are pulling away towards an island, with Admiral Chads at the head, blazing forth in sham attacks upon forts and batteries that have been rapidly raised by the engineers attached to the fleet. All the manœuvring takes place within sight of the Russians, and the telegraph on the heights is continually observed making signals to Helsingfors.—*Letter from Baromund.*

MORE FRENCH TROOPS FOR THE BALTIC.—The *Constitutionnel* announces the proximate departure and embarkation of a second division of the extraordinary corps of the Baltic. That division is to consist of the following regiments:—1st brigade—5th battalion of Chasseurs de Vincennes, 15th and 23rd regiments of the line. 2nd brigade—41st and 57th regiments of the line.

SKATING BATTALIONS.—Letters from St. Petersburg state that they are organising at Cronstadt two battalions of skating infantry, an arm of the service already known in preceding years. These skaters are intended to operate on the ice on the islands occupied by the Anglo-French fleet. Battalions of skaters will be also formed in the other gulfs.

RECRUITING FOR THE TSAR.—A letter from Kalischa, of the 24th ult., states that in the night of the 19th every vacancy made for the army in the ordinary way, that is to say, all the villages were entered in the course of the night and the men designated as capable of bearing arms were taken for their trade.

LEGISLATION IN LITERATURE.—A St. Petersburg correspondent of the *Gazette de Cologne* relates that a foreigner has been taught the dose of the Russian capital, has got into trouble by inopportunely reading Hood's poem the Song of the Shirt, which has been taken for a seditious composition. He is certain now and, his position is by no means quite secure. It would appear to be, nor as we do not like to suppose by any one who had not closely examined it. He would not have undertaken the present war had he believed that he should really have to wage it. He thought to carry all with him at the first onset; but has found himself mistaken. Such is the first unexpected event that perplexes him and causes him much vexation."

NEWS FROM THE SEAT OF WAR.—The Schumla correspondent of the *Oest. Lembelle Post* writes, that as the Turkish post is not to be relied on, the correspondents of the English and German papers have agreed in turn to ride over to Varna, a distance of eighteen hours, in order to send off their despatch the letters by the *Lloyd* steamer, which leaves every Friday

BOAT ATTACK AT THE SULINEH MOUTH OF THE DANUBE.

THE FUNERAL OF CAPTAIN PARKER.

So many misrepresentations have appeared relating to the affair at the mouth of the Sulineh, where Captain Hyde Parker fell, that it is necessary to preface our notice of the funeral with a short account of the transaction.

The Russian batteries at the entrance of the Sulineh river had already been destroyed, under the skilful directions of Captain Parker, and thus this chief opposition to the navigation of the river was removed. The garrison of Sulineh had also been surprised on the night of the 27th of June, when the enemy retreated after severe loss. Their commanding officer was taken prisoner, and sent on by Captain Parker to the Admiral, and by him forwarded to Lord Raglan, who obtained from him important information. From this time the enemy ceased to offer any opposition to the landing of our boats, whether for the purpose of destroying the Russian batteries or for forage. In the meanwhile Captain Parker, in her Majesty's steam-frigate *Firebrand*, with the squadron under his command, had strictly blockaded the river, thus exciting the anger of the Greek population, whose peculations and exactions from the shipping were thus put an end to. There is some reason to think he met his death-wound from one of them, although he had been always most scrupulous in making all under his orders pay them to the uttermost farthing for anything they might obtain from them. Captain Parker determined to examine, and attack if necessary, the gabion battery attached to the quarantine ground, and for that purpose the boats of the *Firebrand* and *Vesuvius*, fully manned and armed, entered the river on the 8th July. Nothing was observed until Captain Parker's galley arrived opposite the gabion battery, when a single rifle-shot was fired, which passed through the boat, and was followed by a volley, piercing the boat, grazing the Captain's elbow, and severely wounding one man, by passing through his legs. Captain Parker then turned the boat round, and, as she retreated, fired his rifle with the greatest coolness at the enemy, who were now pouring in a galling and heavy fire on all our boats. The pinnace, being in advance, was particularly exposed; she grounded about forty-five yards from the battery. On seeing this, Captain Parker leaped from his galley, crying, "We must storm: follow me, my men;" and gallantly rushed forward, followed by all who had yet arrived (sixty yards from the battery). Parallel with the river, and about eighteen yards distant from it, runs a line of canes, twelve to fifteen feet high, growing in the marsh. He advanced along this, had fired his rifle once, and struck down a Cossack, and was reloading, when a volley of balls fell around, one of which pierced his heart. He fell into the arms of his coxswain, and in a moment this noble and gallant sailor had ceased to live. Mr. Everard, naval cadet, was close beside his noble Captain when he fell. The galley immediately returned with the Captain's body, attended by his old friend and surgeon.

Commander Powell then assumed the command. A heavy fire of shell and Congreve rockets was opened on the battery, under cover of which the marines and seamen soon took possession of the place, the Russians having retreated into a marsh, where they could not be followed. Commander Powell immediately sent on the *Firebrand* to the Admiral, with the body of her noble Captain, who dispatched it to Constantinople, in order that it might be buried in a spot where, hereafter, his friends may drop a tear on his tomb, and where future sailors may learn to follow his example.

The following account of one of the attacks made by the *Firebrand* and *Vesuvius* on the banks of the Danube, when blockading it, has been forwarded by a Correspondent in the Fleet:—

It having been determined by Capt. Parker, of H.M.S. *Firebrand*, to destroy the guard-houses and signal-stations on the banks of the river Danube, and which communicated with all the Russian forts, on the morning of the 22nd of June, the boats of the *Firebrand*, *Vesuvius*, and a Turkish steam gun-boat (manned and armed), under the command of First-Lieutenant Jones, of the *Firebrand*, left their respective ships, and proceeded for that purpose towards a guard-house and signal-station about twenty miles north of Sulineh. On their approaching the shore the signal of alarm was made, which is done by setting fire to straw and other inflammable substances entwined round the signal-staff, thereby causing a thick cloud of smoke to ascend, which is seen at the distance of several miles, and repeated by the other signal stations until it reaches the spot where assistance is expected from.

Close to the beach and behind the banks were drawn up bodies of Cossack cavalry, while many were scattered about in all directions, firing from wherever they could get shelter from the fire of the boats; but the shells from the ships' and boats' guns compelled them to break in confusion.

On the boats reaching the shore, the seamen and marines formed on the beach, and advanced in skirmishing order towards the guard-houses; which the Cossacks seeing, they took advantage of their horses, and fled in all directions.

The guard-houses were immediately set fire to, the signal-staff destroyed, and the men returned to their ships in admirable order. Four more of these stations were destroyed the same day, in a similar manner, and one on the 21st.

The accompanying Illustration depicts the honours paid to Captain Parker's remains by the English, French, and Turkish military and civil authorities. The following is the order in which the funeral procession moved from the arsenal at Tophana on the 12th July:—

Troops.
Detachment of Horse.
Artillery and Fusiliers,
Highlanders, Lancers, and Foot.
Firebrand Marines.
Band.

Rev. Percy Rogers, Chaplain.
Three pall-bearers.
Viscount Chabanne, of the *Charlemagne* (French).
Marquis de Gera, Captain of *Bargudze* (Sardinian).
Senior Turkish Officer.

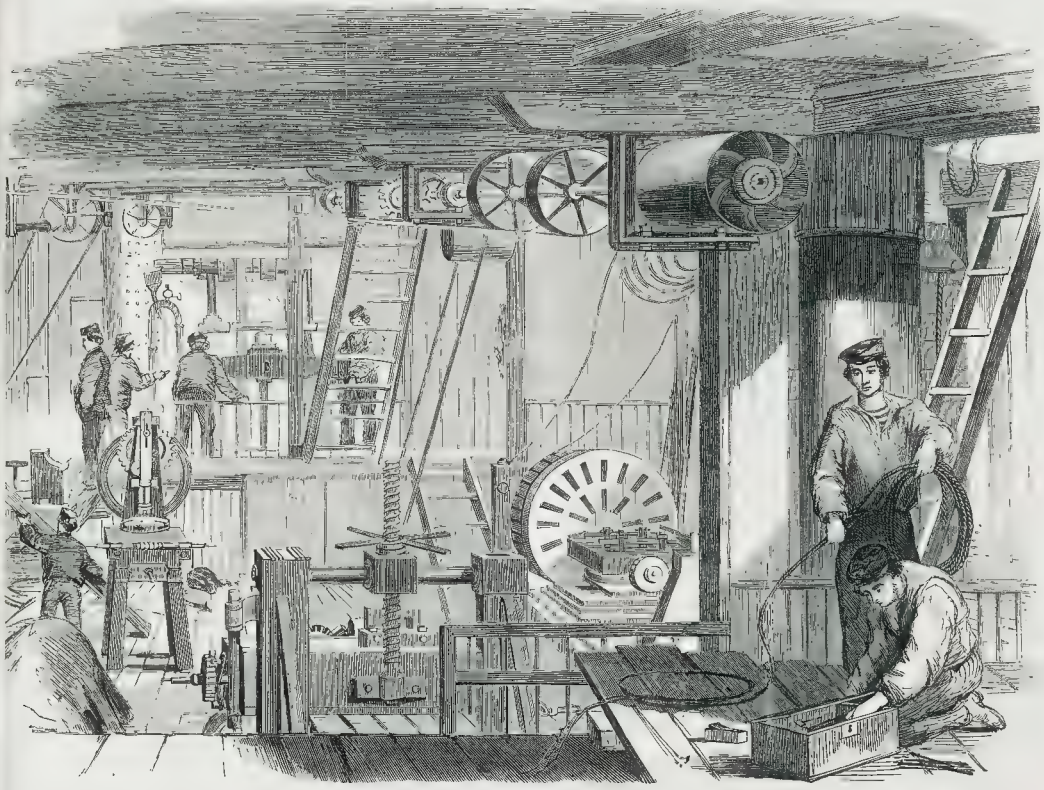
THE BODY,
On a gun carriage,
drawn by
eight horses.

Dr. O'Hagan, Surgeon.
Three pall-bearers.
Commander Johnson of her Majesty's ship *Magnera*.
Captain Stewart, R.A., Transport Service.
Commodore Boyes.

Chief Mourners.
Lieut. Gore Jones, R.N.S. *Firebrand*
Lord Stratford de Redcliffe, with staff of British Embassy,
joined on the road.
Consul-General
Seamen of *Firebrand*, including one of the children preserved at Kustendje.
French officers.
French Seamen (150).
Turkish Officers.
Turkish Seamen.
Halil Pasha (head of the Turkish Admiralty).
Foreign Ambassadors.
Admiral Boxer
Officers of every description.
British Merchants.
Residents.
Merchant Captains.
Merchant Seamen.
&c., &c.

The *Firebrand* fired twenty minute-guns on the body leaving Tophana. After the conclusion of the burial service an eloquent address was pronounced by the Rev. Percy Rogers, Chaplain of the *Firebrand*.

HONOURS PAID TO THE REMAINS OF CAPTAIN HYDE PARKER, BY THE ENGLISH, FRENCH, AND TURKISH TROOPS.—FROM A SKETCH BY LIEUTENANT BREDIN.



"THE VOLCANO" STEAM-SLOOP FITTED AS A FLOATING FACTORY FOR THE BALTIC.—(SEE NEXT PAGE.)

FRATERNISATION OF THE FRENCH AND ENGLISH AT DEAL.

On Friday evening, the 21st ult., one of the transport steamers, the *Prince*, with French troops on board, having been obliged to lie at anchor off Deal for some time, in consequence of injury to the capstan, a most amusing and novel trait was furnished for the gratification of visitors from the shore, of which the most attractive feature was a dance upon deck, to the spirit-stirring strains of the French band. The dancers consisted of merry groups of French and English ladies and gentlemen, some of the former fashionably attired in Bloomer costume, presenting a very picturesque appearance. The utmost good-humour and decorum prevailed, and much praise was given to the master of the ceremonies for the admirable manner in which he discharged the duties of his office.

On Saturday a deputation of gentlemen from Deal waited on the

BAND OF THE 3RD FRENCH REGIMENT PLAYING IN H.M. NAVAL YARD, AT DEAL

Colonel of the 3rd Regiment of the French line, on board the *Prince*, to solicit the services of the band on shore. The request was promptly granted; and, on Saturday afternoon, the spacious area of the Dockyard at Deal was filled by a dense crowd of spectators, while a large number of ladies occupied seats in front of the building. The French band consisted of nearly sixty musicians, all well trained; and the style in which they played the various pieces chosen for the occasion was the subject of general admiration. The following is the programme of pieces performed in honour of the ladies of Deal, at the Royal Naval Yard, July 22nd:—"Le Legion d'Honneur"—Marche triomphale; "God Save the Queen"—Chant National; "Les Folies de Marseilles"—Polka; "La Reine Hortense"—Chant National; "Devant l'Ennemi"—Chant Militaire; "Le Chalet"—Air; "Rule Britannia"—Chant National; "Le Zouave"—Quadrille; "Fidelité à l'Empereur"—Chant Militaire; "La Bernoise"—Grand Valse; "Les Bords de la Moselle"—Polka; "L'Occasion"—Chant de Guerre.

A cold collation was served up in the Boat house, to which due honour was done by the French band; and a number of small parties were also entertained in the large building known as the Dockyard Avenue, at which the soldiers of England and France fraternized in the most cordial manner.

THE "VOLCANO" STEAM FLOATING FACTORY.

AMONG the novel requirements for our steam naval warfare in the Baltic is the provision of a Floating Factory, for the repair of such injury as our vessels may receive in engagements, or from other casualties. For this purpose the *Volcano* steam-sloop has been fitted as a floating factory, by Mr. Nasmyth, who contrasted to provide the whole of the tools and fittings, and an independent steam-engine and boiler capable of exerting a power of twelve horses. The whole having been completed at Woolwich, the *Volcano* had her compasses adjusted at Greenhithe, and was brought up again to Woolwich on Sunday, July 30, and received on board a considerable number of letters and newspapers for the officers and crews of the Baltic fleet. She also received about £10,000 in specie—£7500 in gold, and the remainder in silver—for the use of the fleet; and, having her steam up, she left on Sunday afternoon for the Baltic.

Among the articles supplied to the *Volcano*, there are a wrought-iron founder's cupola, to melt 36 cwts. of metal, with tad es, 7 cwt. each to carry 14 cwts.; 2 cwts. ingots of metal, four portable stationary bellows, suitable to weld 6-inch shafts, two to weld 8-inch shafts, and adapted for all general smiths' work purposes, four best anvils, and an assortment of smiths' tools, consisting of 10 edge-hammers, 4 right-edge hand hammers, and back-hammers, 24 sets of chisels, 13 punches, all of the best steel, 12 steeled sets, all fitted with the best ash shafts, four sets of fire irons and 24 pairs of tongs, assorted sizes; four 2-feet bevils, and 50 feet of blast distributing pipes, and connection-tubes to blow the cupola, and three smiths' fires; one pair of bellows for the bellows-hearth to stand on deck, and two grindstone-hearths and troughs. One direct-acting 7 cwt. steam-hammer, self-acting, variable stroke, with anvil and face and base-plate, for standard and wrought-iron steam-pipe. Two portable punching and shearing machines, to do work 1 by half inch over. One powerful self-acting planing machine, to plane 6 cwt. up to 8 feet long, 2 feet 6 inches wide, and 2 feet deep. One circular and shaping machine, for straight or curvilinear work. One machine for screwing bolts and tapping nuts up to 1½ inch diameter, with eight steel taps and dies. One powerful back-geared drilling-machine, to bolt to sides or beams of the ships, capable to bore holes up to eight inches diameter and eighteen inches deep, and all smaller holes. Three independent drilling-machines. One principal turning-lathe, 21-inch headstocks, with self acting compound slide-rest, capable of turning by self-acting cylinder surface and conical work; bed, fifteen feet long, to slide back to any required distance, on a foundation-bed twenty feet long, so as to admit a cylinder-cover or piston seven feet diameter, and take in a shaft sixteen feet long between the centres with compound slide-rest performing double-ended slide lathe for bolts. One slotting and paring 5½-inch in stroke, with the necessary shafting and pulleys to convey the power of the engine to the machinery.

CALENDAR FOR THE WEEK.

SUNDAY, August 6.—5th Sunday after Trinity. Prince Alfred born, 1844.
MONDAY, 7. John Bacon, sculptor, died, 1799.
TUESDAY, 8. George Canning died, 1827.
WEDNESDAY, 9. Dryden born, 1631.
THURSDAY, 10.—Louis Philippe made King of the French, 1830
FRIDAY, 11.—Dog-days end. Half-Quarter Day.
SATURDAY, 12.—Lord Castlereagh died, 1822

HIGH WATER AT LONDON-BRIDGE,

Offices, 33, Norfolk-street, Strand. The chair will be taken at Eight o'clock precisely.

THE VOLUMES OF THE ILLUSTRATED LONDON NEWS.

COMPLETE SETS of the VOLUMES of the ILLUSTRATED LONDON NEWS, from the commencement to the present time, may now be had, bound in paper or cloth. Price of the Complete Set (42 Vols.), in cloth, £22 17s.; £16 17s. in paper.

Any of the Volumes, in paper or cloth, can be had separate.

Price of each Volume in cloth:—Vol. I., 21s.; II. to XVII., 18s. each; XVIII., 21s.; XIX., 25s.; XX., 18s.; XXI. to XXIV., 21s. each.

Price of each Volume in paper, 3s. per volume less.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 5, 1854.

THOSE who imagine that war can only be carried on by hard fighting will probably be disappointed by the character of the recent intelligence from the East and North of Europe. In the Baltic a great blow has not been struck, but is imminent, and a few days will, in all probability, bring us authentic intelligence of an attack upon, and the capture of, Bomarsund. Whether that place is, as a military or naval position, worth the powder and shot it will cost the Allies, is a question on which opinions will differ. From the seat of war on the Danube, we learn the steady advance of the Turkish, and the rapid retreat of the Russian, armies. The left wing of the Russians, under General Lüders, still rests on the Danube, with its head-quarters at Kalarash; but the main body, under Prince Gortschakoff, has abandoned Fratesthi, where it once seemed highly probable that a general engagement would have taken place. The intelligence of its retreat from Wallachia has reached London and Paris from so many sources, and has been repeated with such an iteration of detail that it must be looked upon as authentic. Jassy, the capital of Moldavia, and which lies about midway between the Sereth and the Pruth, and in very close contiguity to the Russian territory, will be the new head-quarters of the invading army. In a few days Wallachia bids fair to be entirely freed from their devastating presence. This retrograde movement, which was falsely reported to have been accomplished a month ago, has been rendered necessary at this time by the same reasons which were then alleged for it. The bravery of the Turks, and the approach of the British and French armies to their assistance, have partially contributed to the result; but the principal motive that has influenced the Russian Commander-in-Chief, both on his own responsibility and in pursuance of superior orders from St. Petersburg, has, no doubt, been the hostile position assumed by Austria. That great Power moves with a ponderosity which has long provoked the impatience of English and French critics; but, though its movements are slow, they are effective, and it should be remembered that, from the very commencement of the war and the negotiations which preceded it, they have been uniformly in the same direction. Austria may have been deficient in zeal, in precision, and in celerity, but she has exhibited no lack of judgment, or of honesty; and when she has gone through all the cumbrous and exhaustive formalities which her torpid diplomacy exacts, her sword will no doubt prove as efficacious as her pen has proved nugatory. She has not yet finally broken with Russia; some further formalities, tedious as their predecessors, being imperative upon her, before the actual declaration of hostilities; but it appears that the terms of a treaty of alliance, offensive and defensive, have already been drawn up and received the concurrence of Great Britain, France, Turkey, and Austria. We have no knowledge of the exact day upon which that treaty will come into operation, but the Emperor of Russia, anticipating that it will be speedy, has wisely prepared for it by evacuating Wallachia. To this extent, Austria has already proved herself an effective ally.

And what of Prussia? It appears that pusillanimity or treachery, or both combined, continue to overpower the suggestions of a wiser, safer, and more honourable policy; and that the King is either afraid of offending his formidable brother-in-law by openly taking the field against him, or expects to gain more from Russian friendship than he can lose from the hostility of all Europe. However this may be, it is high time that Prussia should cease to be a gainer by the invidious neutrality which it suits the personal character of her Sovereign to maintain. If revolutions are not to be made by the sprinkling of rose-water, neither are wars to be carried on with the kindly courtesies and amenities of peace. It avails little to destroy all the direct commerce of Russia in the Baltic, if we allow it to be indirectly carried on through the neutral ports of Prussia. Our policy has the effect of offering a bounty upon neutrality, and of enabling our open as well as our concealed enemies to set us at defiance. The longer the war continues, the more the merchants of Prussia will profit by it; and while Memel grows rich, Riga and Revel can scarcely be said to suffer. This state of things has already lasted too long, and it is to be hoped that the Anglo-French fleets in the Baltic have already received orders to put an end to it by the strict blockade of the whole Prussian coast. As all appeals to the justice of Frederick William appear to be in vain, and as his neutrality is a direct advantage to the commerce of that Power whom it is our business to weaken, to injure, and to cripple, by every available means, whether military or commercial, it is expedient that we should make an immediate appeal to his fears and his self-interest. He ought no longer to be allowed to make a trading advantage of his cowardice or duplicity. To treat him as if he were against us, is, apparently, the only means left to induce him to be with us. It is true that the Allies are quite strong enough without him, and that he is destroying the influence of Prussia in Europe, and raising up enemies against himself amongst his own subjects, by the course he is pursuing. These results may prove sufficient punishment; but the question for the Allies to consider relates to Russia as well as to Prussia. It is necessary that the Russian trade in the Baltic should be totally prohibited. As long as that trade lasts we prosecute the war at a disadvantage. That disadvantage we cannot, and ought not to, afford. To put an end to it will not only impoverish our foe, but will prevent a false friend from reaping benefits at our expense which a real friend would never desire. Prussia must be made to feel, as well as other Powers, that the war is a monstrous evil; and that she cannot be allowed to derive commercial benefits from a state of things, which inflicts commercial as well as every other kind of evil upon those who have taken up arms for the independence of Europe.

THE CENSUS as now completed is the most minute and detailed picture of the life of a great people that ever was drawn. In another portion of our Paper will be found the full detail of the various occupations of all classes. In addition to this interesting document—which, notwithstanding its length, we have transferred to our columns—the ponderous volumes presented to Parliament are full of most various and minute information. The whole of the people have been numbered in their abodes. How many follow particular modes of worship; how many go neither to church nor chapel; how many go to school; and how many have no means of education, have already been told. We now learn how many are born, how many die under five years of age; how many live to be 20, 30, 40, 50, or 100 years; how many men are fit to be soldiers, and how many women capable of being mothers; how many of both sexes are strong enough to labour for their own subsistence; and how many, by reason of infancy or old age, or by diseases, must be supported by others; how many are deaf and dumb; how many are blind; how many are insane, and how many are in hospitals. We also learn how long is the mean life of man and of woman, what has been, what now is, and what may be, the average duration of existence; how many out of all who are born marry, and how many are bachelors or spinsters; how many are widows or widowers; how many widows and how many widowers marry again; at what age marriage is contracted, and how long it lasts; how many marriages are fruitful and how many barren; how many young women have old husbands, and how many young men old wives;—in short, we are now told not only the different ages of the people, but informed of the "civil condition" of all the families of Britain. By what means they are sustained, and how many are masters, and how many servants, how many are farmers, and how many are weavers and house-carpenters, how many supply material, and how many intellectual food, is also described. Where they were born, and at what age, and whether they migrated,—is all told, and told by the people themselves. The authorities only asked for the information, and arranged it when procured. "It was cheerfully furnished." The working classes took trouble to get their schedules filled up. Only "one occupier, a magistrate," refused to answer; and, on being privately written to, he prudently relented. Some gentlemen or ladies accompanied the information they gave, by specimens of their poetical talents; and a clergyman sent his schedule to the central office, lest his wife's age should become a topic of gossip in the beer-shops of the village. Considering the vast number of co-operators—the head of every family, the chiefs and subordinates of every public establishment, and the army of enumerators and compilers, employed—no great national work was ever more successfully executed.

We mentioned, last week, the increase, since 1821, of the number of men of the soldier's age—from 20 to 40. the total increase in 1851 was no less than 3,193,496, and the total of the women, of the same vigorous and fruitful age, was 3,362,458. These numbers represent the main strength, and, in every way, the chief productive power of the nation. It will be right to bear in mind, in dealing with the whole population, that the persons of the age 20–40 are nearly twice as numerous as persons of the age 40–60, and that the males of the former age exceed all their seniors in number, as 31 to 23. In dividing the population popularly, Great Britain contained, in 1851, 578,743 babes and sucklings (under one year), 2,166,456 infants (1–5 years), 2,456,066 children (5–10), 1,141,933 boys, and 1,114,882 girls (10–15); 1,051,630 youths, and 1,048,404 girls (15–20); 1,830,588 young men, and 1,939,906 young women (20–30); 2,376,904 men of middle age, and 2,482,382 women (30–50). The age of 21, the age of majority by law, corresponds to no natural or popular division in the life of the human being; and, therefore, we must state, as distinct from all other figures, that the number of minors was 9,986,133; of majors, 11,199,877. Notwithstanding the great increase which these returns show of men and women in the full vigour of life, the population of Great Britain contains more youth in it, or is the youngest population of any known, except the inhabitants of the United States. The volumes are full of details equally as interesting and suggestive as those we have thus slightly sketched; and we shall take an early opportunity of returning to the subject.

WE direct the attention of our readers, and of all who are interested in the important question of Prison Discipline, to a letter which appears in another column which has been addressed to us from Munich, by Mr. Combe. The philanthropic labours of that

gentleman—and the eminent services which he has rendered, not only to the cause on which he at present addresses the public, through our columns, but to that of the education and general moral advancement of the great bulk of the people, and especially of the destitute and neglected classes—render of peculiar value any results of similar labours elsewhere, which have fallen under his observation, and met with his approval.

The shocking disclosures of the atrocities which have recently been committed in the Birmingham Borough Gaol, and for which Lieutenant Austin, the Governor, and Mr. Blount, the Surgeon of the establishment, are to be forthwith brought to trial, show how much need unfortunately exists in this country for an attentive consideration of the whole subject of prison discipline as practised amongst us. The punishments inflicted upon the prisoners in that gaol, if not with the concurrence and connivance of the visiting magistrates, must have been known by some of the members of that body to have been both cruel and illegal, but it was not until vague whispers of still darker and deeper atrocities than were actually perpetrated, got abroad among the people, that the eyes of those functionaries were opened to the real state of the case.- We will not attempt to prejudge the case of Messrs. Austin and Blount, which will so speedily be brought before a jury of their countrymen. We only mention it at present to show the difference of the results obtained by their system, and that of the excellent and humane person whose plan of operation is detailed by Mr. Combe. The Birmingham plan—which is not without its imitators in other gaols, implies for slight offences committed in the prison, "privation of bed, privation of light, prohibition of attendance at Divine Service, the punishment jacket, the handcuffing of women, and the drenching of prisoners, both male and female, with cold water." The Munich system, as described by Mr. Combe, is a system diametrically the reverse of this. It treats a criminal as if he were still a man and a Christian, notwithstanding his offences against society; and not as if he were a mere brute beast, insensible to all other appeals but those of physical pain and degradation. We remember having seen, on a visit to one of the Birmingham gaols about four years ago, an instrument of terror, called "a gag"—a kind of iron helmet that surrounded the head and face, and forced into the mouth a heavy plate of iron, almost as large as the tongue, and effectually prevented the unhappy wretch, on whom it was applied, from emitting articulate sounds, or any other except those of low moaning. This instrument was principally used upon women. Perhaps, on the approaching trial of Lieut. Austin and Mr Blount, the counsel for the prosecution may feel it incumbent upon them to ask some of the Birmingham magistrates, who may be examined as witnesses, whether they sanction the employment of such an instrument of torture?

THE COURT.

The Queen and the Prince Consort, with the youthful members of the Royal Family, have taken daily walking and driving exercise in the vicinity of Osborne, during the past week; occasionally extending their drive to Newport.

The Duchess of Sutherland and the Earl of Aberdeen have been among the Royal guests.

On Thursday her Royal Highness the Duchess of Kent arrived at Osborne on a visit to Her Majesty and the Prince Consort.

The Hon. Mary Bulteel has succeeded the Hon. Lucy Kerr as Maid of Honour in Waiting, and Captain Du Plat has relieved Colonel Seymour as Equerry to the Prince.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary are about to leave Cambridge Cottage, for Cowes, Isle of Wight, where their Royal Highnesses intend to sojourn three weeks.

Her Royal Highness the Duchess of Kent has postponed her intended visit to her Majesty, in consequence of the indisposition of Lady Augusta Bruce, who is in waiting on her Royal Highness, and has a slight attack of scarlatina at Frogmore House.

His Excellency the Portuguese Minister and the Countess de Lavradio have left town for Tunbridge Wells. His Excellency, who was suffering in his health, has, we are happy to say, already derived some benefit from the change of air.

His Excellency Vely Pacha, Ottoman Ambassador in Paris, arrived in London, on Saturday last, on a short visit.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. T. Fuller of Chalvington, near Hurstgreen, Sussex; Rev. W. A. Hill to Alvechurch, near Bromsgrove; Rev. W. Quekett, to Warrington, Lancaster; Rev J. H. Wheeler, to Coppenhall, Cheshire. *Vicarages:* The Rev. T. F. Dyke, to Willesborough, near Ashford; Rev John Morgan to Tapyity Ivan, near Oswestry; Rev. C. Tuffnell, to Stourpaine, Dorsetshire. *Incumbencies:* The Rev. R. Read ey to Huddlesborough, Yorkshire; Rev. J. Peat to Weald Chapel, Sevenoaks.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem: The Rev. J. Marshall, late curate of Tywell, Northampton, on his leaving the curacy; the Rev. W. H. Fewtrell, B. F. Yeatman, of Stoke House, Dorset, from the farmers, tradesmen, and other neighbours; the Rev. E. Hoare, from the congregation of Christ Church, Ramsgate; and the Rev. Mourant Brook, from the congregation of the Abbey Church, Bath.

A LARGE number of ship furnaces, for making short red-hot were shipped on Friday at the London Docks for the use of the Baltic fleet.

THE Irish Militia, it is at present understood, will not be enrolled until after the coming harvest is over, and will not be embodied until the spring of next year.

IT is said that the army in Turkey is to be immediately augmented by the 10th Hussars, 52nd, and 93rd Regiments. The 14th Light Dragoons have received a hint that their services may be required in Varna.

THE following are the Turkish titles given by the Sultan to General Beatson and his staff:—His Excellency Shemsi Pacha, Lieutenant-General Beatson; Daoud Bey, colonel Green, chief of the staff; Naymi Bey, Colonel Steinbach; Kedjalo Ley, Colonel Creagh; Yussuf Bey, Major Charles Lane Fox; Mansur Bey, Major Lock. Dr. Sandwith, staff-surgeon and principal interpreter, and the Hon. F. Walpole have not yet received titles.

THE CZAR'S MEN OF STRAW.—At Sebastopol Bay, the distinguished officer in the Turkish service, Omar Pacha, had a number of men at some distance from the shore, the object of the experiment being to test the effects of cannon-balls and shells upon troops. As the ships reached the bay, they opened fire, and the men were seen more subject to panic than they might possibly be can it themselves. The Colonel, however, was not to be deterred, and continued at warning. Suddenly a puff of wind came, and the sailors commenced a series of gyratory movements which had never been described in any drill-book with which Skender Beg was acquainted. Nothing daunted by this extraordinary performance, he dashed up sword in hand, and discovered about twenty Russian great-coats and caps, cleverly stuff d with straw, and placed on sticks so as to revolve with the wind. No quarter was shown, one prisoner only being brought into camp by a dragoon, who moved even the laughter of the sedate Turks. The Colonel himself is uncertain whether he is haunted by magicians, like Don Quixote, or led into mistakes on him by the Russians. The Turks sometimes amuse themselves with similar devices, and at Silistria many a hundred Minie balls were fired without any heads in them, which appeared over the Turkish parapets.

FOREIGN AND COLONIAL NEWS.

FRANCE

(*From our own Correspondent.*)

PARIS, Thursday.

Amid the langour of the dead season Paris begins to look forward with no small degree of interest, to the coming Fête of the 15th instant. In various quarters of the town, the preparations for the decorations and fireworks have commenced some time, and are advancing with all due rapidity. The whole details of the programme of the entertainment have not as yet made their appearance, but *en attendant*, here are the principal ones:—At the Champ-de Mars is to be represented the siege of Silistria—the whole progress of which has been carefully studied by the persons occupied in directing the works, so that nothing shall be wanting to complete the correctness of the representation: at the conclusion four balloons will ascend, bearing the names of England, France, Turkey, and Austria. In front of the Hôtel of the Corps-Législatif, is to be discharged a magnificent display of fireworks. At the Barrière du Trône a similar discharge will take place. All the theatres will give representations gratis; at the Cirque and the Arenas, military games and entertainments will be performed. The works which are in progress on the Seine will prevent the games on the water, which, in former years, have formed a portion of the amusements. The evening will conclude with illuminations, on the most extensive and splendid scale, in the Champs Elysées, the Place de la Concorde, and in some of the neighbouring quarters. Without wishing in any way to underrate the talents of the present administrators of the Fête, we may remark that it will require no ordinary degree of taste, skill, and experience to organise its details, more especially those that relate to the illuminations, with the effect of last year. On no occasion, in Paris or elsewhere, have we seen any of the latter to equal for beauty, originality, extent, and success of execution, those in question, which were entirely arranged and disposed on the plan, and under the personal surveillance, of M. Visconti, whose decease has left such a blank in the branch of art in which he so distinguished himself. In the midst of the general rejoicings the poor are not to be forgotten, a sum of 80,000 francs being distributed among the *mairies* of the twelve arrondissements of Paris for their benefit. A credit of 320 000 f. has been opened to defray the expenses of the Fête.

It is said that but a very small number of civil decorations will be accorded on the occasion of the Fête of the 15th; most of those distributed being intended for military men. The grand Banquet Napoléonien which has been instituted for the same occasion, is this year to be much more numerously attended than on former ones, and is to be held at Vaugirard, instead of at its usual locality—the Barrière de l'Etoile.

It is the intention of their Imperial Majesties to return to Paris on or about the 10th. Their séjour at Biarritz has proved of the utmost service to the health of the Empress, who, without being seriously ill, had for some time been delicate, and whose impressionable temperament had been considerably affected by the sanitary state of Paris and its environs, more especially as related to the ravages of the cholera.

We lament to say that, since the reports contained in our last letter, this terrible scourge has again made its appearance in the capital, and for some days raged with redoubled violence. The storm which took place produced, however, a diminution of its violence; but, being extremely limited in action, the neighbourhood continues, in some places, to suffer frightfully. In some of the villages, such has been its force, that work is abandoned. The peasants are panic struck; and the number of cases—in the generality fatal—forms a fearful proportion to that of the inhabitants. It is a singular fact, and one which seems not yet to be accounted for, that Versailles has, at all times, been almost wholly free from the visitation, even when its neighbourhood was most visited. At present, it is the refuge of the greater number of Parisians, and of the inhabitants of the *banlieue*, or suburbs, whose means or occupations render a farther removal difficult; and we believe that hardly a case of *native* cholera has made its appearance, though a few have occurred among persons who, flying from infected spots, have brought with them the germs of the malady.

Paris was last week visited with a storm of thunder and lightning, accompanied by rain, such as has hardly been known since the commencement of the century. Many of the streets were, within a few minutes, converted into rivers, which flowed into the cellars and ground floors of the houses; roofs were forced, and trees split by the weight of the torrent; quantities of objects of no mean size were carried away; children narrowly escaped a similar fate; and in one house, two, which had been left alone in a room on the ground floor, while their mother was out at work, were drowned before she could get into the house to save them. At the station of Courcelles, the drain of the old road of Monceaux, burst from the flow of water, and undermined the Auteuil railway, for an extent of 300 mètres, so to stop the circulation during the whole of the succeeding day and night.

Science has lost another of its most valued representatives in the person of M. Lallemand, professor of medicine and surgery. M. Lallemand—whose works, besides being some of the most scientific treasures of the day, possess a rare degree of literary merit and charm of style—had for many months, being labouring under a malady which, from an early period, threatened a fatal result. A warm climate being indicated as a means of averting the menaced danger, M. Lallemand removed to Marseilles, where, after a period of acute suffering, he expired on the 23rd ult., at the age of sixty-five, in the full vigour of his intellectual faculties, which, up to the last, were employed in the service of the science of which he was one of the most brilliant illustrations.

Of the theatres little is to be said, and it is probable that no new pieces of importance will make their appearance before the autumn. In October a magnificent ballet is to be brought out for Mdme. Rosati; and an opera, which, it is predicted, will be the triumph of the winter, by MM. Verdi and Scribe, is to to be put in repetition in September.

PROJECTED REPUBLICAN MOVEMENTS IN ITALY.

The outbreak in Parma on the 22nd ult., appears to have been part of a projected insurrectionary movement, under the direction of Mazzini, who fancies that the present is a favourable moment to promote the cause of Republican Italy. A letter from Paris states that, from recent discoveries made by the French police, there can be no doubt of an extensive plot by the Republicans, acting on instructions from political refugees in London, to attempt Republican and anarchical agitation in Italy and Spain. It has been ascertained that more than a hundred chiefs of secret societies in France have left for Italy and Spain. A worse moment for the honour of the Republicans could not be chosen. They would raise a revolution in Italy, who might be arrested for turning to refractory account the light and Force in the war with Russia, particularly as no reliance can be placed by Austria on Prussia for support in maintaining order in her provinces; and they would create a state of things in Spain which might possibly compel the French Government to intervene, and indirectly contribute to the re-establishment of the absolute *régime*.

UNITED STATES.

The steam-ship *America*, which sailed from Boston on the 19th ult., arrived at Liverpool on Monday afternoon; and the *Baltic*, which left New York on the 22nd, arrived at Liverpool on Wednesday morning. The political news is not of much interest. The only event of importance is the ratification by the senate of the treaty negotiated by Commodore Perry with the Government of Japan. Congress has voted a Congressional medal to Captain Ingraham, for his conduct in Koszta's affair. A vote of thanks was proposed and carried.

The cholera in New York is increasing. On one week's report there have been 147 victims, being an average of 21 per day, and an increase of 40 on the previous week.

Late accounts from Texas and New Mexico state that the Indians still continue their hostility to the Whites. A general war appears inevitable.

It is stated by the *New York Tribune* that a treaty for the annexation of the Sandwich Islands to the United States is under consideration at Washington. The only question is, whether the Islands will come in as a territory or as a state.

The *New York Daily Times* reports that a fishery squabble between the United States and Russia is portentously gathering on the North-Western Coast.

LATEST INTELLIGENCE.

WALLACHIA.

PARIS, Friday Morning.—A despatch from Bucharest of the 29th ult. states that the evacuation of that place was completed. Proclamations had been issued declaring all soldiers who remained behind deserters, and to be so considered.

The Russian troops are being concentrated on the Sereth.

A despatch from Vienna of Thursday, says that Omar Pacha was expected at Bucharest, to pursue the Russians.

French Funds, Aug. 3.—Three per Cents., 70.95; Four-and-a-Half, 90.55; Bank Shares, 2900.

Austria, Aug. 1.—Metalliques, 83½; Ex. on London, 12.12.

SPAIN.

General O'Donnell and General Roe de Olano arrived at Madrid on the evening of the 30th. They were both in full uniform, and were cheered by the crowds in the streets through which they passed to the residence of the Duke de la Victoria. The latter warmly received General O'Donnell, and brought him to the balcony, where Espartero, showing O'Donnell to the assembled people, said, "Patriots! we have fought together as Liberals; let us embrace as such," and embraced his brother general, amidst tremendous cheers from the crowd. The Duke went to the Palace at ten p.m., and took the oath before the Queen as President or the Council of Ministers. It is thought that he will hold that dignity without a portfolio, and that a Ministry of a comprehensive character will be formed by him in concert with O'Donnell.

Madrid was tranquil, but the barricades remained, and the people spoke of maintaining them until Espartero had formed his Ministry.

General Dulce was returning to Madrid with the troops which had followed O'Donnell. Generals Blaser and Vista Hermosa were said to have taken refuge at Gibraltar.

The Queen [Christina] was still at Madrid; but it was believed that on the 31st she would set out for Portugal.

THE SPANISH INSURRECTION.

General Espartero and the insurgent Generals have come to an understanding on one important point: Queen Christina is to be allowed to leave the kingdom without violence; but, if she should hesitate, she is to be forced to leave it. There was a violent scene at the Palace, in consequence of Queen Isabella accepting Espartero's condition. Queen Christina was strongly opposed to it, and became greatly exasperated—even going so far, it is said, as to box her daughter's ears. The King Consort was in a great passion at seeing this, and was for having Queen Christina delivered over to the people.

In conformity with the declarations of her Majesty, the guard at the Palace has now been confided to four companies of the first battalion of the National Guard together with four companies of regular troops.

On the 26th ult. the Queen, King-Consort, and infant Princess came to the principal balcony of the Palace to see the guard changed, and were received with vivas and clapping of hands. On the same day detachments of the garrison and of the Civil Guard fraternised with the National Guard, at the Puerta del Sol.

According to private letters from Madrid, the general opinion as to the course to be taken by General Espartero is, the convocation of the Constituent Cortes, and, until the meeting of the new deputies, the re-establishment of the Constitution of 1837. Large bodies of troops were marching towards the capital. General Blaser had resigned the command of the troops under his orders. He remained at Bayien.

The *Gazette* of the 26th ult. contains the following important address from the Queen to her subjects:—

Spaniards—A series of deplorable mistakes may have detached me from you, introducing absurd distrust between the people and the Throne. My heart has been calumniated by whomsoever has attributed to it sentiments contrary to the welfare and liberty of those who are my children; but since the truth has at last reached the ears of your Queen, I hope that love and confidence will revive and be strengthened in your hearts.

The sacrifices of the Spanish nation to sustain its liberties, and my rights, make it my duty never to forget the principles I have represented—the only principles I ever can represent—the principles of liberty, without which there are no nations worthy of the name.

A new era, based on the union of the people with the Monarch, will dispel, even to the last shadow, the sad events which I, first of all, desire to obliterate from your annals.

I deplore, from my innermost soul, the misfortunes that have occurred; and, with an unwearying sanctitude, I will strive to make them forgotten.

I entrust myself confidently and unreservedly to the national loyalty. The sentiments of brave men are always sublime.

My nothing in future trouble the harmony I desire to maintain with my people. I am disposed to make every kind of sacrifice for the general good of the country. I desire that it will manifest its will by the organ of its legitimate representatives, and from this moment I accept and offer every guarantee that may firmly fix its rights and those of my throne.

The honour of that throne is your honour, Spaniards! My dignity as Queen, as woman, and as mother, is identical with the dignity of the nation that once made my name the symbol of its liberties. I fear not, therefore, to entrust myself to you; I fear not to place my person and that of my daughter into your hands; I fear not to place my fate under the shield of your loyalty; because I firmly believe that I make you arbiters of your own honour and of the safety of the country.

The appointment of the Duke de la Victoria as President of the Council of Ministers, and my complete adherence to his ideas, having for their object the general happiness, will be the best pledge of the fulfilment of your noble aspirations.

Spaniards! you may make the happiness and the glory of your Queen by accepting those which she desires for you, and prepares for you in the innermost recesses of her maternal heart. The pure and perfect loyalty of him who is to direct my councils, the ardent patriotism he has so many occasions has manifested, will put his sentiments in accordance with mine.

Given at the Palace on the 26th July, 1854. YO LA REINA.

Letters from Madrid of the 28th announce that Marshal Espartero made his entry into that capital on that day, amid the acclamations of the populace. He proceeded to the Buena Vista Palace, which is to be his residence.

THE CREW OF THE "TIGER."—The crew and officers of the *Tiger* are soon to be sent home, but are to be distributed through the fleet in the Black Sea. Mr. N. G. Simmonds, passed clerk, has been appointed to the *Britannia*; Mr. Domville, surgeon, it is expected, will join the *Conqueror*; and the others fill up any existing vacancies, or act as supernumeraries in other ships. When the *Fury* reached the fleet with the exchanged prisoners on board, the crew of each ship manned the yards, and gave them three hearty cheers.

SEARCHING FOR INFERNAL MACHINES OFF CRONSTADT.

We have been favoured with this interesting subject by Mr. Brine, who went out in the *Driver*, to take sketches of Cronstadt and other places of interest.

We subjoin an extract from a Correspondent in the fleet:—"The fleet went up to Cronstadt, from Seskar, on the 26th June: it consisted of twelve English line-of-battle ships, screw, and the two screw frigates, *Impérieuse* and *Arrogant*, with five other steamers; and of the French, five sailing and one screw line-of-battle ships, and four steamers; there were also the two yachts, *London* and *Fantome*: in all, thirty-six vessels. All went up by steam; the French sailing-vessels being towed by three English and two French steamers; the yachts, *Gondola* for *Princess Royal*, and *Esmeralda* by *St. Jean d'Acre*. The fleet anchored about eight miles W.N.W. of the Tolbakin Light, off Cronstadt.

The afternoon of the 29th being fine and calm, *Driver* and *Bulldog* steamers went in to look for infernal machines, and came up to Cronstadt. On board the *Driver* was a large party of officers, amongst whom were Lord Clarence Paget, Admiral Seymour, Captain Erskine, Admiral Chads, the Russian Admiral, Captain Poland, Captain &c.

The *Impérieuse* having broken down, and the *Arrogant* having grounded, they proceeded in the boats of the latter [illegible] which many apparently [illegible] Driver, however, was [illegible] Bulldog [illegible] Cronstadt [illegible] Admiral [illegible] Russian [illegible] Admiral [illegible] Admiral [illegible] Admiral

STEAM-SHIPS OF THE ALLIED FLEET SEARCHING FOR INFERNAL MACHINES OFF CRONSTADT.—FROM A SKETCH BY W. G. BRIERLY.—(SEE PRECEDING PAGE.)

HIS HIGHNESS

SAID PACHA,

THE

NEW VICEROY OF EGYPT.

His Highness is the eldest living son of the renowned Mohammed Ali, and, consequently, uncle of the late Viceroy, Abbas Pacha, whose sudden decease we recorded in our last week's number. His Highness Abbas Pacha, who was grandson of Mohammed Ali, succeeded, by virtue of the provision that regulates the succession to the Pachalic of Egypt, by which the eldest male, for the time being, of Mohammed Ali's family, is entitled to the Viceroyalty. His Highness Abbas Pacha has left a son; but his Highness Said Pacha, being born in 1822, and, consequently, in his thirty-second year, is the eldest living male. The accession of his Highness, by recent letters from Egypt, has been hailed with enthusiasm, both by natives and Europeans, for the fanatical hatred of Abbas Pacha to the latter, and his oppression to the former, had completely alienated the respect of both from his person, and he died almost without a regret. His Highness Said Pacha, the present Viceroy, succeeds to his exalted and important duties with every anticipation and hope from his subjects, and Europeans, and we are gratified in confidently feeling that his Highness's qualifications for his new duties will enable him fully to realise these anticipations, and place Egypt on a new and solid basis of prosperity. His Highness inherits not only the talents and intelligence of his remarkable father, the late Mohammed Ali, but also his partiality towards European improvements. His Highness visited this country and France about two years ago, and it will be remembered was graciously received by her Majesty the Queen.

His Highness returned to Egypt much pleased with his visit to Europe; and while in this country he carefully inspected our dockyards and other important public and private works with an intelligent and inquiring interest. For several years his Highness has followed the naval profession, to which he was much attached; and for some time enjoyed the high position of Admiral in the Egyptian fleet. His Highness is well versed in astronomy and naval science generally, and takes a great interest in all the mechanical inventions which distinguish the present age, and this country in particular. We may, therefore, now fully anticipate a policy pursued in Egypt which will develop the resources of that fertile and important country. We are assured that his Highness feels that it is alike his highest duty and his best policy to raise the condition of his people, and to establish perfect security for life and property. This, on reflection and experience, has amply taught him that the real mine of wealth of Rulers is that reliance on their justice which animates every man to exertion by the consciousness that he will enjoy the due fruits of his labour. The European merchants in Egypt will no longer be subject to the caprice of a monopolising and narrow-minded Viceroy; and the world will have the satisfaction of feeling that not only will the railroad from Alexandria to Cairo be fully carried out, but likewise the line projected so long ago as 1834, by our countryman Galloway Bey from Cairo to Suez across the Desert (which is even more necessary than the other for the transit through Egypt) will be successfully completed. The Sultan will also find a useful ally in so enterprising and intelligent a Governor as his Highness Said Pacha. We feel confident that Egypt, under the administration of his Highness Said Pacha, will attain that prosperity which its natural position and resources so clearly indicate for it, and which historic records show that it has more than once so largely and prominently enjoyed.

We find the following in the *Constitutionnel*:—

As Said Pacha comes to power in the prime of life, it may be hoped that he may govern Egypt for many years. He is a Prince endowed with fine and noble qualities, and is highly esteemed by the enlightened part of the nation, who have always founded very sanguine hopes on him. His instruction is very remarkable: he not only has a well-grounded knowledge of the ordinary sciences, but he has studied with particular attention history and navigation. He speaks with elegance and purity several living languages of the East and West, and particularly French, with the literature of which country he is perfectly conversant. Being of an enlightened and liberal mind, he takes pleasure in encouraging a taste for intellectual knowledge in others. He has for this reason constantly supported, at his expense, in the different schools of Europe, numerous pupils belonging to the most distinguished families of the country. A Prince of this generous and elevated character, who likes and appreciates France, the civilisation and arts of which he has himself studied, and who has always given the Sultan proofs of the most unchangeable devotedness, will know how to maintain Egypt in the excellent path on which she has entered, and will worthily continue the glorious work of his illustrious father.

HIS HIGHNESS SAID PACHA, THE NEW VICEROY OF EGYPT.—FROM AN ORIGINAL SKETCH

THE ROSETTA MOUTH OF THE NILE.

The Correspondent from whose sketch-book we have engraved this animated scene, appends these descriptive notes:—

As we approached the bar of sand, which constantly shifts its position, and prevents vessels of any considerable tonnage entering the Nile, porpoises and numbers of sea-birds sported round the vessel; and we encountered a little fleet of *djermes*, the coasting boats of Egypt, whose pretty lateen sails are very picturesque objects.

The land on either side of the mouth, or *boghaz*, as the Turks call it, of the Nile is low, and covered with canes. Numbers of men were engaged collecting the cargo of a vessel which had gone ashore when attempting to pass the bar,—over which a considerable swell was rolling as we passed—the said swell bringing back to memory certain sensations experienced when we first went to sea, which, however, soon subsided on our reaching the smooth waters of the Nile. To the east, a low shore is indented with lagunes, which furnish salt to the Egyptians. Two forts command the Mouth of the Nile. When constructed by Mohammed Ali, they stood upon the sea-shore; now the yearly deposit of sand has so accumulated, that the forts are above half a mile from the shore. Proceeding up the river, our young lady friends were

VESSELS PASSING THE BAR AT THE ROSETTA MOUTH OF THE NILE.

anxiously inquiring where it was that Pharaoh's daughter found the infant Moses; and whether we could show them any of the Papyrus, the great-grandfather of Paper, and from which the latter derives its name. We need hardly observe that the last is an difficult a task as the former.

Some distance up the left bank of the river stands Fort St Julian; near this was found the celebrated trilingual "Rosetta Stone," in the British Museum.

ARRIVAL OF EL HHAMI PACHA AT SOUTHAMPTON.

On Saturday night, El Hhami Pacha, the only son of Abbas S. Pacha, the late Viceroy of Egypt, arrived at Southampton in the famous steam-yacht the *Feth Djehad*, on a visit to England. While his father lived, El Hhami Pacha was the next most distinguished person in the kingdom; and as Abbas Pacha was just previous to his death, in the prime of life, there was every probability of his son filling that position for a long series of years. He was made Minister of War in Egypt, and was married to the Sultan of Turkey's daughter, a child of six years of age; and, according to the custom of the East, and the rank of such a powerful vassal as his father was of the Sultan's, El Hhami Pacha visited his intended father-in-law in great state, with a gift of £100,000 sterling in English sovereigns—doubtless a most timely present. After his betrothal he obtained permission from the Viceroy and Sultan to make the grand tour of Europe, and he commenced that tour under the brightest auspices, and in a style of as great magnificence, perhaps, as we ever witnessed. El Hhami Pacha left Alexandria on the 15th ult. after taking leave of his father, who was then in good health, and purposed touching at Malta and Gibraltar, and landing in England at Southampton. He then intended visiting some of the chief cities, and during which time his yacht was to be docked in England, as there was no dock in the Mediterranean large enough for her gigantic dimensions, and then she was to proceed homeward, and be prepared to receive Prince El Hhami Pacha at Genoa.

The news of the death of the late Viceroy of Egypt, reached England last week, by way of Malta and Marseilles, partly by means of the electric telegraph. It reached Malta after the departure of the *Feth Djehad*, and, of course, the Prince could not hear of, to him, the disastrous intelligence until his arrival at Southampton. The yacht was telegraphed to Southampton as passing Hurst Castle, opposite the Isle of Wight, at eight o'clock on Saturday night, and was anchored at the West India Docks by nine o'clock on Sunday. It was the exhilarating on board at their idolised Prince reaching the land he had so long desired to see, and where Royal honours were believed to await him, that guns were fired and rockets ascended from the yacht in token of his having anchored in English waters.

Soon after the yacht's arrival on Saturday night, a small steamer left Southampton-pier for the yacht, having on board Mr. Larkings, the Egyptian Political Agent, and several other gentlemen. As they approached the yacht, her gigantic proportions were apparently increased through the darkness of the night. A flood of light was seen in the spacious saloon, dusky figures were pacing to and fro, and dark mute figures stood on the steps of the gangway, one over the other, looking intense and brilliant lanterns in their hands. Mr. Larkings and his party stepped on board, and the former immediately went below. During this time officers and distinguished persons were walking the deck, enjoying themselves with that gravity and quietude peculiar to the temperament of the East and to the immediate presence of Royalty. In less than five minutes, all persons who were crowded round the State cabin on the main deck started back as if by enchantment, the Prince, completely sobbed, was carried into it by his attendants, and slaves stood around outside, to prevent any one approaching it. El Hhami Pacha had heard of his father's death, and had learnt the precariousness of earthly greatness. He had sunk to a private station under an Eastern despotism. Orders were issued for immediate preparations to be made to return to Alexandria. The Prince had lost a Royal parent; all his suite had lost their rank, situations, and a princely benefactor. The consternation on board can scarcely be imagined.

Under the usual order of succession, El Hhami Pacha would have been the new Viceroy; but it appears that when the settlement took place between the Sultan and the Egyptian Viceroy, in which the European Powers participated, it was also stipulated that the Viceroyalty should be inherited by the eldest living descendant of Mehemet Ali, in order to avoid the troubles of the Government of a minor. Said Pacha, the present Viceroy and Ibrahim Pacha's sons are all older than El Hhami Pacha, the youth above mentioned, and, of course, entitled to the throne before him.

MUSIC.

THE FRENCH Operatic Company at the ST. JAMES'S Theatre brought their performances on Wednesday evening to a close as Mdme. Marie Cabel appeared once more in "La Fille du Régiment," and enchanted the audience as much as ever by the graceful gaiety of her acting and by the finish and brilliancy of her singing. After the operas sung the song (or popular French air exactly) "Partant pour la Syrie," and a verse of "God Save the Queen," pronouncing the words very prettily. The theatre was very full, and the fair prima donna made her parting curtsey amid showers of bouquets and thunders of applause. Our remarks in another column upon this theatre in connection with Madame Cabel make it unnecessary to add anything to this notice of it.

THE THEATRES.

THE termination of the supplemental theatrical season now rapidly approaches, and the Princess's and Adelphi theatres were respectively announced their last seven and five nights previous to their closing. Other theatres, such as Sadler's Wells, the Marylebone, and the St. James's, are, on the other hand reported, to be now making important preparations for an effective re-opening at the latter end of this month or September. That at James's in particular, will be under a new management, for the production of English plays and players. Mr. Seymour is named as the conductor of the experiment, and is said to have commissioned Messrs. T. Taylor and C. Reade to write a new and original five act play; and to have already engaged Miss Glyn, Mr. Wilkins, and Mr. Mead, as members of the intended company. A new tragedy, with extensive spectacular scenery and novel costume, will be the inaugurating novelty at the Marylebone, in which Mrs. Wallack will support the heroine—a character the elements of which are eminently classical. The story is British.

PANORAMIC VIEWS OF CONSTANTINOPLE.—A series of photographic views of Constantinople, taken from the Seraskier's Tower, by Mr James Robertson, of that city, has been submitted for our inspection, preparatory to publication Mr. Robertson's name is becoming celebrated in connection with photographic art. He is also favourably known to our readers by the many valuable drawings which he has from time to time contributed to this Journal. The series includes the following twelve subjects:—The Mosque of Salimanich, with the Old Bridge and Admiralty; Pera and Galata; the Bosphorus; the Seraglio Point; the Mosques of St. Sophia, Nouvi, Osmanie, and Sultan Achmet; the Princes' Islands, and the Bazaars; the Mosque of Sultan Bajazet; the Gate of the Seraskeriat: the St. Stephano Point and the Seven Towers; Mosque of the Laish and district of Fatamatis; Mosque of the Shah Zadeh, the Aqueducts of Valens, and the Mosque of Sultan Mehemet II.; and the Hospital of the Seraskeriat and Golden Horn. These views have been executed with great care, and are, thanks to the good climate and clear atmosphere in which they have been taken, exceedingly beautiful specimens of photography.

SCHOOL OF PRACTICAL ART FOR WOLVERHAMPTON.—On Tuesday the inauguration of a school of practical art for Wolverhampton and the populous district of South Staffordshire was commemorated at Wolverhampton, where a handsome Grecian structure has been erected for the purposes of the institution, at a cost of £5000, raised by voluntary subscription. The Right Hon. the Earl Granville presided at the assembly, in the principal hall of the school, and subsequently at a luncheon at the Corn-exchange. His Lordship was supported by Lord Hatherton, the Earl of Dartmouth, Lord Lyttelton, the Hon. R. H. Littleton, M.P.; the Hon. Arthur Wortesley, Mr. Thornely, M.P.; and amongst the company were the Dimmocks, Blackwells, Thompsons, and other magnates of the trade of the district. In the course of the proceedings Lord Granville received an address from the artizans of Wolverhampton, "as a mark of their admiration of his Lordship's character, and for his steady devotion to the principles of science and art." Of the new school—the first of its class erected in England—a View is engraved in the ILLUSTRATED LONDON NEWS No. 602.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

Earl GRANVILLE, in answer to Lord Montcagle, stated that the Public Revenue and Consolidated Fund Charges Bill, being a money bill, would be re introduced *de novo* in the House of Commons in the shape in which it had left the Select Committee of their Lordships' House.

The motion for going into Committee on the Real Estate Charges Bill was opposed by Lord ST. LEONARDS, who urged that the measure tended to disturb the great law of Primogeniture. He moved that the bill be committed that day three months

Lord Fortescue and the Lord Chancellor defended the bill.

On a division, the motion for committing the bill was carried by a majority of 26 to 23, and the bill went through Committee.

Earl GRANVILLE moved the committal of the Drainage of Lands Bill.

Lord PORTMAN objected to the bill, as giving extraordinary powers over property, with exceptions equally extraordinary. He moved that the bill be committed that day three months

On a division, the amendment was carried by 23 to 18—so the bill was lost.

HOUSE OF COMMONS.—MONDAY.

PUBLIC HEALTH ACT AMENDMENT BILL.

Lord PALMERSTON, in moving the second reading of the Public Health Act Amendment Bill, made an explanatory statement, and expressed a hope that the House would continue, for a limited time, the Board of Health in an amended shape. The proposal was to place the Board under the control of the Secretary of State for the Home Department. As to the members of the Board, they had all pinned their appointments in their hands, should not be deemed expedient that any of them should retire in consequence of the prevailing prejudice. He hoped the House would well weigh the circumstances, and not allow individuals to be sacrificed to unfounded prejudice.

Mr. SEYMOUR moved, as an amendment, that the bill be read a second time that day three months. In doing this, he begged it to be distinctly understood that he was not actuated by any spirit of hostility to the Government. However desirable it might be to have a Board of Health, his belief was that it was not desirable to renew the act as it now stood. The present Board had not acted with that prudence and forbearance which it ought to have done. He did not think that the proposed changes were sufficient to secure the right discharge of the duties involved.

Sir B. HALL seconded the amendment.

Mr. M. MILNES supported the motion, and deprecated the attacks which had been made upon gentlemen as honest and as skilful as any to be found in the kingdom.

Mr. HENLEY's belief was, that the Board was not only condemned by the country, but by the Executive Government.

Lord J. RUSSELL defended the Board; but admitted that a year ago he had told Mr. Chadwick that he had paid too little attention to the popular feeling in favour of self-government.

Mr. HEYWOOD stated that Mr. Chadwick's medical advisers had recommended him to retire from the arduous duties of his office.

Mr. HUME stated that his vote would depend upon the answer given to the question of whether Mr. Chadwick was to continue or not to.

Lord PALMERSTON corroborated Mr. Heywood's statement as to the advice which had been given to Mr. Chadwick on the subject of his retirement.

Sir T. ACLAND advised the House not to press matters too severely against individuals.

The House divided—For the amendment, 74; against it, 65—majority against Ministers, 9.

IRISH MANUFACTURES.

On the question that the House go into Committee of Supply,

Mr. LUCAS drew attention to "the propriety of instituting an inquiry into the best means of promoting Irish manufactures, industry by training or apprenticeship schools, and other similar establishments." Nothing had been done this session to settle the more pressing grievances under which Ireland still suffered. The land question was, according to the declaration of the Lord President of the Council, in a hopeless state as regarded the settlement of an early settlement. It was a fatal misapprehension to suppose that Ireland was in a prosperous condition. The idea of prosperity was incompatible with established facts. The annual births were barely sufficient to balance the annual deaths. The population was not increasing as regarded births, and the drain of the adult population was still going on by emigration. The Emigration Commissioners had spoken of the movement as not likely to cease unless measures were taken to encourage persons to remain at home. Emigration was promoted by funds sent by persons who had left Ireland, and who were naturally anxious that their friends should share in their prosperity. Since 1846 the funds so sent home had increased from half a million annually to a million and a half of money. The only things which threatened to depopulate Ireland was to be found in the Legislature affording facilities for the introduction into Ireland of new manufactures by some sort of direct agency, after the model of Belgium. Mr. Lucas asked no contribution from the Consolidated Fund, he merely asked permission for the towns and districts of Ireland to follow, at their own rate, the course taken so successfully in Belgium—namely, to establish new manufactures, and to introduce improved processes as regarded manufactures already in existence

Lord J. RUSSELL, without passing any decided opinion upon the course taken by Belgium, could see no good reason why the principles which had hitherto guided the manufacturing enterprise of this country should be departed from.

After remarks from Mr. J. Macgregor, Mr. J. Ball, Mr. Maguire, and other members, the House went into Committee, and made considerable progress in the disposal of the Civil Estimates.

WESTMINSTER ABBEY.—PUBLIC MONUMENTS.

On the vote for the restoration of some of the monuments in Westminster Abbey, a discussion occurred as to the propriety of arrangements being made for abolishing the fee of sixpence now charged for the inspection of the monuments in the chapels.

Mr. W. MOLESWORTH stated that the charge went to defray the expense of the persons who exhibited the monuments, and who took care that they were not injured by the visitors. Experience had shown that the monuments could not be safely left without protection. As the House seemed to be willing to defray the salaries of persons accordingly paying the visitors, he would enter into correspondence with the Dean and Chapter, and endeavour to bring about a satisfactory arrangement.

The vote of £1000 to defray the expense of repairing the monument of Charles II., at Charing-cross, met with some opposition. The vote was defended by Mr. DISRAELI, on the score of excellence as a work of art, and historical associations connected with the fortunes of the monument during the Civil Wars.

HOUSE OF LORDS.—TUESDAY.

In reply to a question from the Earl of Hardwicke, the Earl of CLARENDON stated that a cruiser from the Gibraltar station had been dispatched to keep watch over the proceedings of the Riff pirates.

The Medical Graduates (University of London) Bill went through Committee with amendments, after some discussion and a division.

The Burials beyond the Metropolis Bill, the Parochial Schoolmasters (Scotland) Bill, the Youthful Offenders Bill, and the Land, Assessed, and Income Taxes Bill, were severally read a third time and passed.

HOUSE OF COMMONS.—TUESDAY.

NATIONAL GALLERY.

In reply to Mr. D. Seymour, the CHANCELLOR of the EXCHEQUER announced that a vote of money would be asked in order to defray the expenses of erecting a new gallery for the reception of the national collection of pictures. The plans for the new edifice were, however, not sufficiently matured to enable him to give any details of its construction, but the right hon. gentleman intimated that the Royal Academy were not for the present to be disturbed in their occupancy of the building in Trafalgar-square.

THE RUSSO-DUTCH LOAN.

Lord D. STUART called the attention of the House to the "termination of all obligation on the part of this country, in consequence of the conduct of Russia, to continue to make any payments on account of the Russo-Dutch loan. The engagements into which this country had entered in 1815 for the payment of the loan in question, were practically bound up in a treaty concluded in 1831, with various other conditions which Russia had undertaken to fulfil. As these conditions, and especially one whereby the free navigation of the Sulinah mouth of the Danube was to be kept free from all natural or diplomatic obstacles, had been flagrantly violated by the Russian Government, England was, he contended, exonerated on her side from the obligation of performing her part of the convention. The observance of treaties should not be one-sided, and any infraction of their articles on one part justified reprisals on the other. Even if peace had continued, this country would have been freed from all further obligation, according to the rules of international law. War having broken out, there was a fresh argument in favour of his resolution, under the hypothesis that all treaties lapsed upon the occurrence of hostilities.

Sir W. MOLESWORTH saw no difference between the conclusion arrived at by the motion now offered to the House and the doctrine of repudiation. During war he urged the country was exonerated by honour to pay its debts than even in time of peace, and all foreign publicists agreed in deciding that nations were bound to deal with their public creditors, without inquiring into the merits of those creditors, or the accidents of war or peace between their respective sovereigns. This doctrine was sanctioned by all modern practice; it was the sign and token of our improved civilisation; and any attempt to revert to the system of reprisals was a retrograde step towards the custom of a bygone barbarism. After laying down these general principles, Sir W. Molesworth adverted to the special circumstances under the engagements for paying the Dutch loan to Russia had been entered into by this country. These he alleged involved the payment by England of a large sum by way of purchase money for the colonies of the Cape, Demerara, Essequibo, and Berbice: and the continuance of our liability depended not upon war or peace but simply upon the abstinence, on the part of Russia of any interference with the territorial arrangements of Belgium and Holland. Russia not having infringed this condition, the obligation of England still remained; and international law, Acts of Parliament, and public honour all be bound her to its fulfilment.

Mr. D. SEYMOUR supported the resolutions contending that the loan was secured to Russia by a solemn covenant, which Russia herself had broken.

The ATTORNEY-GENERAL, in opposing the motion, argued that the character of the transaction was not the payment of a debt, but the honorable completion of a bargain.

Lord D. STUART replied; and, after a few words from Mr. Cayley and Sir D Norreys, the House divided—For the motion, 8; against it, 57: majority, 49

THE ARMY IN THE EAST.

Mr. WILLIAMS moved for returns of the number of cavalry officers and men employed in the East. The object of his motion, he stated, was to satisfy the public apprehension that an undue proportion of superior officers and staff were concentred among the British cavalry force now in the East in Turkey.

The SECRETARY at WAR admitted that an apparent disproportion now existed in the ratio of officers and men in the cavalry service as compared with the infantry The reason was that the regiments had been allowed during peace to dwindle into mere skeletons for the sake of economy, and the ranks were not yet filled up. With respect to the papers asked for, he pointed out some practical inconveniences which might arise from producing them.

The motion, after some further discussion, was negatived by consent.

PUBLIC HEALTH BILL.

Sir W. MOLESWORTH moved for leave to bring in a bill to make better provision for the administration of the laws relating to the public health. The opinion of the Legislature having been pronounced against the continuance of the Board of Health as at present constituted, as also against the subordination of the department to which the care of the public health was intrusted to the Home Secretary, the Government, he said, had determined to remodel the Board of Health, and assimilate it to the pattern of the Poor Law Board. The new bill would accordingly provide for the appointment of a new functionary, with the title of President, with a seat in the House of Commons, who was to be assisted by two secretaries, and undertake the whole responsibility of administering the laws relating to the public health. A clause would also be included in the bill granting an annual allowance of £1000, by way of compensation, to Mr. Chadwick.

After some remarks from Sir G. Pechell, Lord Seymour, Mr. Henley, Lord Ebrington, and other members, leave was given, and the bill brought in and read a first time.

The Crime and Outrage (Ireland) Bill passed through Committee.

The adjourned debate on the Militia (No. 2) Bill was resumed, and several additional clauses added.

HOUSE OF COMMONS.—WEDNESDAY.

RUSSIAN GOVERNMENT SECURITIES BILL.

The Russian Government Securities Bill was considered in Committee.

Lord D. STUART adopted the absence of the Solicitor-General.

Lord PALMERSTON then moved the amended clause, which ran as follows

If, during the continuance of hostilities between her Majesty and the Emperor of Russia, any British subject shall, in any country, wilfully or knowingly take, acquire, become possessed of, or interested in any stocks, funds, scrip, bonds, debentures, or securities for money, which, since the 28th day of March, 1854, have or which, during the continuance of such hostilities as aforesaid, shall be created, issued, entered into, or secured by or in the name of the Government of Russia, or any person or persons on its behalf, every person so taking, acquiring, becoming possessed of, or interested in any such stocks, funds, scrip, bonds, debentures, or securities, for money, as aforesaid, shall be guilty of a misdemeanor; and, upon being convicted thereof, shall be imprisoned for a term of not less than three calendar months. Provided always, that the provisions of this Act shall not extend to, or include, the case of a British subject claiming an interest in the estate or effects of any deceased person, or the case of a British subject who shall be entitled to, or shall obtain, any stock, funds, scrip, bonds, debentures, or securities for money, by virtue of any marriage, or by virtue of any gift, devise, bequest, or descent, or by virtue of any contract entered into before the commencement of such hostilities as aforesaid, or by virtue of any decree, order, or judgment of any court of equity or law, made before the commencement of such hostilities as aforesaid, or by virtue of any transfer of any such stocks, funds, scrip, bonds, debentures, or securities for money, made before the commencement of such hostilities as aforesaid, or by virtue of any dealing or transaction bona fide entered into before the commencement of such hostilities as aforesaid, or by virtue of any grant, assignment, or transfer of any such stocks, funds, scrip, bonds, debentures, or securities for money, made by the Emperor of Russia, or any person or persons on his behalf, to any person or persons, in consideration of any debt or debts due from the Emperor of Russia, or any person or persons on his behalf, to such person or persons, or in consideration of any money or money's worth bona fide paid or given by such person or persons to the Emperor of Russia, or any person or persons on his behalf, before the commencement of such hostilities as aforesaid, or by virtue of any bona fide dealing or transaction entered into by such person or persons with

the bill, which he believed was ridiculed and laughed at by every hon. member of that House in private, and remarked on the personalities of Lord J. Russell and Lord Palmerston against the Emperor of Russia.

Lord J. RUSSELL repudiated the idea of indulging in any personalities against the Emperor of Russia, as intimated by the hon. member for Huntingdon.

Lord PALMERSTON said, in the present stage of the session it would be impossible to adopt the suggestion of Mr. Walpole, and the question therefore was, whether they would pass this bill or none. As to the charges against him of indulging in personalities, it was only a repetition of the jargon which prevailed through the absolute Courts of Europe when they found the policy of this country opposed to them, and by such taunts he would never allow himself to be influenced. He was not surprised by such remarks being made by Mr. Bright; but he was rather surprised that Mr. Baring, the agent of the Russian Government, should have adopted that line of accusation.

Mr T. BARING disclaimed being the agent of the Russian Government. The house with which he was in connection had, in time of peace, been the agents of the Russian Government; but subsequently the agency was conducted by the Bank of England. He had, therefore, no interest in the course he took on the bill. He never intended to impute the personalities of the two noble Lords to private spite or malice.

On a motion to report progress, the Committee divided, and the numbers were—For reporting progress, 30; against it, 68: majority, 38.

The clause was then read a second time.

Lord D. STUART moved the following proviso at the close of the clause:—"That nothing herein contained shall have the effect of reducing to a misdemeanour any such offence which, if this act had not been passed, would amount to the crime of high treason, or be deemed in any manner to alter or affect the law relating to high treason; but no person indicted for a misdemeanour under this act shall be entitled to an acquittal on the ground that the acts proved against him amount in law to the crime of high treason."

After considerable discussion, the clause was agreed to.

Lord D. STUART then asked if the Government was prepared to take the bill into its own hands?

Lord PALMERSTON agreed to do so.

The House then resumed, the report was brought up, and the bill was ordered to be printed.

HOUSE OF LORDS.—THURSDAY.

THE BRIBERY BILL.

The Duke of NEWCASTLE moved the suspension of the standing order, which declared that no public bills, unless of an urgent character, shall be read a second time by that House after the 25th of July, be suspended, with a view to the consideration of the Bribery Bill.

Lord REDESDALE opposed the motion, not in reference to the bill, but he thought that the House ought to stand by its resolution.

The Earl of AMHERSTY thought that the standing order should be construed in a liberal spirit, otherwise it would amount to a most arbitrary obstruction to important measures of legislation.

The Earl of DERBY, without reference to the merits of the bill, contended that there were no sufficient reasons given why they should depart from a resolution adopted by the sense of their Lordships generally, and after due deliberation. The Bribery Bill could not be considered a measure of urgency.

The Marquis of LANSDOWNE said that the resolution would have never been agreed to, if it were understood that it would operate against a measure of this important character.

After some further discussion, the House divided, when the motion was carried by a majority of 41 to 32.

The Bill was then read a second time.

The Earl of DERBY gave notice that he would offer no further opposition to the measure.

The Stamp Duties Bill was read a second time.

The Inclosure, &c., of Land Bill was read a third time and passed.

The Standard of Gold and Silver Wares Bill was also read a third time and passed.

HOUSE OF COMMONS.—THURSDAY.

The House met at twelve o'clock.

The Episcopal and Capitular Estates Management Bill passed through Committee.

Mr WILSON (in answer to Sir J. Shelley) said that the Treasury was considering what change could be made in the law respecting the sale of cow-beasts and chicory, so as to remedy the evils complained of by the Duke.

The remaining Estimates were agreed to.

The following bills were read a third time and passed—viz., Militia (No. 2), Militia (Ireland), Militia Ballots Suspension, Crime and Outrage (Ireland), and Judgment Execution Bills.

STAMPED LETTER-PAPER.

In reply to Mr. T. Duncombe, Mr. WILSON said that the Government had under their consideration the propriety of supplying the public with letter-paper ready stamped for transmission by post.

TAXES ON KNOWLEDGE.

The CHANCELLOR of the EXCHEQUER (in reply to Sir J. Shelley) stated that the question of the Newspaper Stamp had been under the consideration of the law officers of the Crown; but, owing to the extraordinary pressure of business this session, he was afraid that no legislative enactment worthy the importance of the subject could at present be adopted. The whole matter, however, would, doubtless, receive a full consideration from the Government during the recess.

THE APPOINTMENT OF MR. LAWLEY.

Sir G. GREY (in reference to a motion given by Sir J. Pakington upon the subject of the appointment of Mr. Lawley to the Governorship of South Australia) said that that appointment had been cancelled by the Government, in consequence of information having reached them that Mr. Lawley was a speculator in the Funds, while he was acting as private secretary to the Chancellor of the Exchequer. He (Sir G. Grey), however, believed that Mr. Lawley, so far from being a gainer, was a loser by those speculations.

Sir J. PAKINGTON said, after the statement of the right hon. Baronet, he did not think it necessary to pursue the matter further, and would withdraw his notice.

After some conversation the subject dropped.

MAYNOOTH.

The House having gone into Committee upon the Public Revenue and Consolidated Fund Charges Bill,

Mr SPOONER moved that "The President, Vice-President, and students of Maynooth College, and the expenses of the establishment granted by the 8th and 9th Victoria, c. 25," be added to subsection B: in other words, that the votes for those purposes be subjected to the annual revision of Parliament.

The CHANCELLOR of the EXCHEQUER called upon the House to reject the proposition summarily; for, valuable as the bill was the Government would not feel itself justified in proceed with it if such an amendment of the hon. member were adopted

Mr. DISRAELI expressed his hope that the people of this country were deeply indebted to the political claims assumed by the Roman Catholic Church with respect to the Established Church.

Lord J. RUSSELL regarded the motion as calculated to add to any agitation.

Mr NEWDEGATE supported the amendment.

The Committee then divided, when there appeared—For Mr. Spooner's amendment, 43; against it, 103: majority in favour of the Government, 60.

The bill then passed through Committee.

Several bills on the paper were forwarded a stage.

CONSECRATION OF COLEBROOKDALE CHURCH.—Last week this new church was consecrated by the Lord Bishop of Hereford. It has been erected and endowed by the munificence of Abraham Darby, Esq. The style is Decorated English, and the material the fine limestone of the district. The base is giving by the late Alfred Darby, Esq., on the occasion of the foundation stone being laid. The church has some windows of stained glass, finely executed; and a noble organ, the gift of a lady. The belfry tower has a clock, with an illuminated dial; the cost was £800 nearly, £200 of which was subscribed by the workmen of Coalbrookdale. The Rev. John Hayes is the Incumbent.

DEATH OF GENERAL NEY.—A very afflicting events has just occurred to an illustrious French family. The Duke d'Elchingen, second son of Marshal Ney, has died at Gallipoli. The Duke had felt for some days slight indisposition, when, on the morning of the 16th ult., he received the death of his mother. That melancholy intelligence seemed to affect him deeply; very soon after hearing it alarming symptoms appeared, and at four in the afternoon he had ceased to exist. The Duke was present at the expedition to Antwerp, and at several expeditions to Africa, and was always remarkable for his bravery and intelligence.

OBITUARY OF EMINENT PERSONS

JOHN HAY FORBES, LORD MEDWYN.

of Alyre and Gordenstown.

This eminent Scotch lawyer, formerly a Lord of Justiciary under the courtesy title of Lord Medwyn, died last week. He was born in 1776, the second son of the accomplished Sir William Forbes, sixth Bart., of Pitsligo, by Elizabeth, his wife, daughter of Sir James Hay, Bart., of Haystoun His call to the Scottish Bar dates as far back as 1799, and his appointment to the office of Sheriff Depute of the county of Perth, in 1807. In 1825, he became a Judge of the Court of Session; and in 1830, was constituted a Lord of Justiciary. That office he resigned in 1849; and finally to rest from the judicial bench in 1852. He married, in 1805, Louisa, third daughter of the late Sir Alexander Penrose Cumming Gordon, Bart.,

THOMAS MEYNELL, ESQ., OF KILVINGTON HALL AND THE FERRAGE, COUNTY YORK.

This venerable country gentleman the representative of a very ancient Catholic family—died on the 19th ult., in his eighties year.

Mr. Meynell was a Magistrate and Deputy-Lieutenant for the North Riding of Yorkshire, and was also in the commission of the peace for the county of Durham. In 1803 he raised a corps of volunteers, consisting of three companies of infantry, which he commanded with the rank of Major. In 1825, being then chairman of the proprietors, he laid the first rail of the Stockton and Darlington Railway—the first public road of that description constructed in this kingdom. Mr. Meynell married, 23rd August, 1804, Theresa-Mary, eldest daughter of John Wright, Esq., of Kelvedon, in Essex, and leaves, with other issue, a son and successor, Thomas Meynell, Esq., now of Kilvington and the Ferrage, J.P., who is married to Jane, eldest daughter of W. Mauleverer, Esq., of Arncliff Hall.

THE VERY REV. RICHARD MURRAY, D.D., DEAN OF ARDAGH.

This learned and accomplished divine—the well-known author of "Ireland and her Church"—died a few days since, in the south of England, whither he had gone in the vain hope that change of air and climate would benefit his sinking health. Formerly assistant of the late Mr. Mathias in the Bethesda Chapel, Dublin, he was promoted to the living of Askeaton, county Limerick, and was subsequently selected by the Duke of Wellington to fill the Deanery of Ardagh. That important position, and also that of Vicar-General of the diocese, he held for more than a quarter of a century. His death is deeply lamented.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, TAKEN DURING THE WEEK ENDING THURSDAY, AUGUST 3.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer		Mean Temperature of the Day.	Departure of the mean temperature of the day from the Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
		Highest Reading.	Lowest Reading.					
	Inches.	°	°	°	°			Inches.
July 28	30.165	72·6	52·5	61·6	— 0·7	69	N.E.	·01
„ 29	30.137	77·8	45·4	62·2	0·0	68	S.E.	·00
„ 30	29.928	81·6	56·6	68·2	+ 6·0	73	W. & S.W.	·00
„ 31	29.736	76·1	58·0	65·3	+ 3·1	85	S.W. & W.	·53

„ 2	29.627	70·5	49·2	59·4	— 2·8	76	W.	·40
„ 3	29.774	59·0	54·5	56·7	— 5·5	100	CALM.	1.00

Note.—The sign — denotes below the average, and the sign + above the average. The numbers in the seventh column are calculated on a scale on which that one saturation of the air is represented by 100.

The corrected reading of the barometer decreased from 30·17 inches at the beginning of the week, to 29·63 inches by Monday, and increased to 29·82 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29·852 inches.

The mean temperature of the week was 61·0, being the same as the average of the corresponding week during 15 years.

The range of temperature during the week was 33·2°, being the difference between the lowest reading of the thermometer on July 29th, and the highest on the 28th.

The mean daily range of temperature during the week was °.

The greatest was 34·4° on July 29th, and the least 4·8° on August 3rd.

Rain fell during the week to the depth of 1·61 inches (two inches and one-tenth).

Thunder was heard on July 30th and last and during the night common to the 2nd and 3rd August.

The weather during the first four days of the week was fine, and the sky tolerably free from cloud, during the rest of the week the weather was cloudy and unsettled.

For the month of July the mean reading of the barometer, at the level of the sea, was 29·8[illegible] inches. The highest reading of the barometer during the month was 30·[illegible] on the 2nd, and the lowest on the 29th, being the range of the barometer during the month 0·[illegible] inches. The number of days on which rain fell was 11·[illegible]. The mean of the daily readings of temperature during the month was 61·[illegible], being 2·[illegible] above the average of the corresponding month during 15 years. The mean temperature of evaporation for the month was 55·9°. The mean temperature of the dew-point was 53·[illegible]. The mean degree of humidity was 74 (complete saturation being represented by 100). The fall of rain during the month was 2·1 inches.

Lewisham, August 4, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday, there died of 788 boys and of 770 girls were registered within the metropolitan districts. There must also be an excess of 100 over the average of the last corresponding weeks of the nine preceding years. The number of deaths registered during the same time was 1210, being 210 above the number in the preceding week, and 40 in excess of the average of the ten corresponding weeks of the nine preceding years corrected for increase of population. The zymotic class of diseases, which numbered 393 deaths in the previous week, rose this week to 422. This increase is mainly owing to diarrhœa, which has made considerable progress since the 26 deaths which occurred last week. It was fatal this week in 133 cases—viz., to 42 children under fifteen years of age, to 78 persons between fifteen and sixty years, and to 13 persons sixty years old and upwards. Diarrhœa has increased from 58 to 84 in the last two weeks.

THUNDERSTORM.—On Thursday morning, at two o'clock, a thunderstorm, accompanied with heavy rain and hail, passed over the metropolis. The rain fell so heavily, that in some places it covered the pavements, owing to the sewers being surcharged.

THE PROROGATION OF PARLIAMENT is announced as likely to take place about the middle of this month—most probably on the 15th, the annual Ministerial whitebait dinner, which precedes the termination of the session, having given on Saturday the 12th, at Greenwich.

A NEW CHARITY.—A public meeting was held in the Egyptian-hall of the Mansion-house, on Tuesday, for the establishment of an asylum for the permanent cure of those who, by disease, deformity, or accident, are hopelessly disqualified for the duties of life. Subscriptions were announced to the amount of £200.

THE HOUSES OF PARLIAMENT.—It is proposed to place the management of the ventilation of both houses and all the Committee-rooms and other Chambers (except the library of the House of Lords), to which the librarian will attend, under the superintendence of Mr. Goldsworthy Gurney. The alteration lately made by him in the ventilation of the House of Commons appear to have given general satisfaction. The cost of lighting the two Houses is as follows:—House of Peers, in all its lobbies, 18s. 11½d. per hour; House of Commons, with its lobbies, 36s. 11d. per hour.

FISHMONGERS' COMPANY.—The annual dinner of this company—which is celebrated on the 1st of August, the anniversary of the accession of the Brunswick dynasty to the throne of Great Britain and Ireland—took place on Tuesday, at the Fishmongers'-hall, London-bridge. Mr. Toogood officiated for the Prime Warden, who was prevented by illness from presiding. Amongst the company present were—Earl Fortescue, Viscount Ebrington, Lord Charles Russell, Lord Ernest Bruce, the American Minister, Sir Charles Wood, M.P., Vice-Chancellor Sir W. Page Wood, &c. Lord Palmerston and the Chancellor of the Exchequer were unfortunately prevented from attending. After the usual loyal toasts, which were received with the greatest enthusiasm, the Chairman proposed the "Health of her Majesty's Ministers," to which Sir C. Wood returned thanks. The company separated at a late hour.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

We have received from the Rev. Sir Harry Burrard, the following very interesting letter, relative to our account of his accomplished cousin, the late Mrs. Southey:—

Walhampton, Lymington July 31, 1854.

As a near relative of my ever-to-be-lamented friend, Caroline Ann Southey, I have read with delight your observations upon the purity of her life, &c., &c.

With William Lisle Bowles, I had been intimate for sixty-five years, when we were associates at Trinity College, Oxford. My cousin, Caroline Southey, was the daughter of Captain Bowles, a much-esteemed officer in the service of the East India Company. He married my first cousin, Miss Burrard, sister to the late Lieutenant-General Sir Harry Burrard, Bart.

I recollect the ceremony of marrying Caroline Bowles to my friend Robert Southey—one of the most able, unostentatious, and heavenly-inspired men I ever met with in the course of a long life.

They were on a visit to myself a month after their marriage. He was then *very absent* in his mind, straying constantly into a wrong bedchamber, but we never contemplated the sad result with so much pleasure as that the Almighty to afflict him, which rendered my cousin's life for (I think) four years a most unhappy one, augmented by sad family scenes.

But she did *her duty by her husband*; and on the 20th inst. (when I was in her house) it pleased God to receive her pure spirit in a profound sleep, without pain, without a sigh, or a momentary struggle.

And thus gently, this gentle-thoughted woman and most excellent poetess, whose name will live in our literature, was removed from among us. Where was she buried? at Crosthwaite, with her husband, or at Boldre, made memorable by her own chapters of churchyard poetry in prose?

Government (so the Chancellor of the Exchequer informs us) has no intention of turning out the Royal Academy from its one-half of the present National Gallery; and yet Government, while admitting the great unfitness of the present building for the pictures we possess, is, as yet, undetermined what shall be done with respect to the Kensington site, or the new building which it sees in the dim distance of an uncertain future. We confess we had expected a different kind of answer from Mr. Gladstone, not with respect to the Royal Academy, but with regard to a fitting gallery for our pictures. Mr. Disraeli, when he held the purse-strings of the nation, evinced a sincere sympathy with what we cannot help calling the demands of the nation, for a new National Gallery; but then Mr. Disraeli is up in the history of King Charles I., and his own father's commentaries on that King's reign. He knows, too (no one better), how much the fine arts tend to civilisation, though at times cultivated by very rough professors.

This week has been plentiful of complaints against certain noisy and unknowing members of Parliament, who love to resist any vote proposed in the House of Commons for the preservation of our national monuments. As for war-grants and peace-grants, we have had a sad realisation of a well-known line—

Fears of the brave and follies of the wise.

We have seen an Admiral fearful of our successes at sea; and we have a peaceful member of the name of Wise refusing a grant for the restoration of the statue of King Charles I., at Charing-cross, for this very artistic reason, that Charles I. was a bad king. Now, we will not wander into a defence of the man Charles Stuart with such a member as Mr. Wise; but we must own to some surprise at finding any gentleman so unacquainted with what is beautiful in art as to resist a grant of a thousand pounds for the restoration of the finest proportioned pedestal in the world. But Mr. Wise was by himself, as he was beside himself, and the money has been voted.

The Dean and Chapter of Westminster, of 1824, would not admit Lord Byron's body within the walls of Westminster Abbey, though Sir John Cam Hobhouse was ready with the costly fees required by Dean Ireland and his Chapter for sepulture even in Poet's Corner; and the Dean and Chapter of Westminster of 1854 will not suffer a statue of Tim Campbell to be erected in the Abbey, because, having his body (heavy fee prepaid), the subscription has been insufficient to do more than pay for a able artist for marble, and a mason's work. The grave of the author of "Ye Mariners of England" and of "The Battle of the Baltic" cannot be marked for want of two hundred guineas, demanded by Dean and Chapter. It is time that the public should take certain public places into its own care. Let us parishes Hampstead-heath for ourselves and for unborn generations; and, as this Dean and his Predecessors die out, let us take Westminster Abbey into our own hands. To say we are adding to the popularity of the Dean and Chapter show, by the grant of a large grant for the restoration of the first monument, surely we should couple our public grant with some popular condition. Let Sir William Molesworth look to this.

We were taken the other day to the dead-room of the Royal Academy in Somerset-house—a museum designed by that lover of King George III., and decorator of tombs, Sir William Chambers, for Joshua Reynolds, Chantrey, and others. What a change! They are now the rooms of the very able Registrar-General of Births, Marriages, and Deaths. The Registrar himself sits in the stripped library of the Royal Academy, with its vacant centre ceiling piece (formerly filled by the Theory of Painting, painted for the spot by Sir Joshua Reynolds), and with some few memorials about it, chiefly by Cipriani, showing what it once must have been like. The Great Room, in which the leading glories of the Academical School of Painting have been hung—a room most admirably lighted—is now portioned into re-mi, and commanded by a gallery of clerks recording births, marriages, and deaths—births in red-covered books; marriages in green; and deaths in black. When we contemplate the present use of this building, we cannot help thinking that the bust of Michael Angelo, over the door, is a mistake; and that Michael should be supplanted by a bust of Malthus or Miss Martineau—or with both, in profile, of both—

Dilling,
Like Philip and Mary, on a shilling.

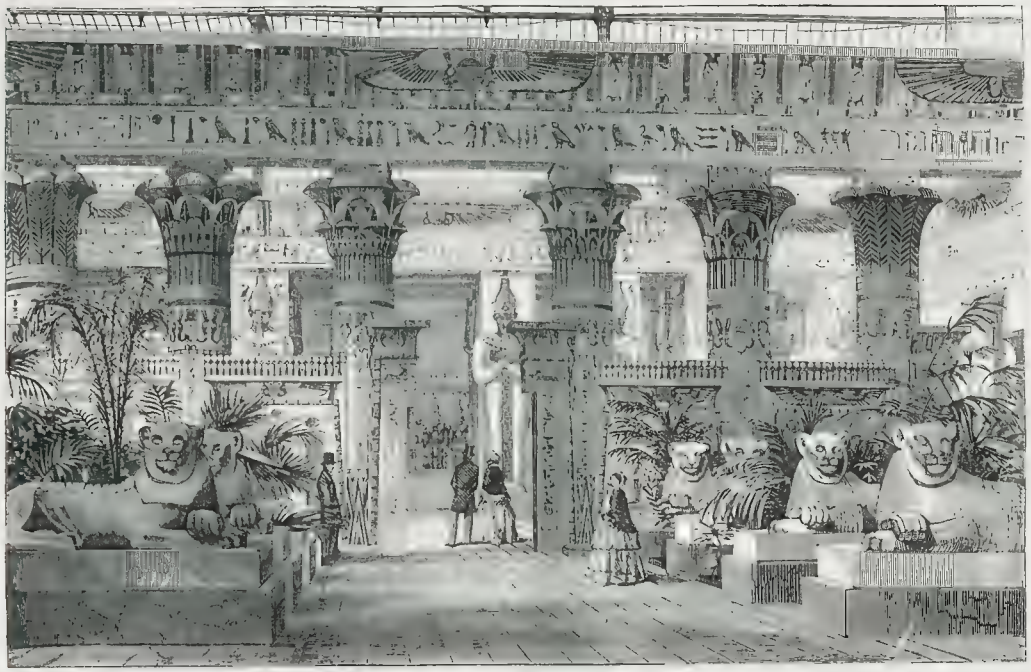
Perhaps Mejor Graham will not think our suggestion altogether out of place.

The great West-end publishers have adopted the early-closing movement on Saturdays. At three on that day, in the summer months, the West-end houses will be closed. Murray's *four* o'clock visitors, commemorated by Lord Byron, must meet, on Saturdays, at *two*—thanks to this very proper movement.

The Princess' Theatre is to be sold by public auction—nay, do not start at our Table Talk, Mr. Kean has nothing to do with the sale. We are not to lose "Margarita," and the "Courier of Lyons." Mr. Harley is still to delight us with his fun; and the "Storm in a Teacup" will still prove attractive on the same boards. The theatre, however, is for sale: it is advertised among the auction advertisements of the week, with this curious piece of intelligence annexed—that the theatre is let to Mr. Maddox, on lease, at £2800 per annum, and underlet to Mr. Kean at a greater rental.

Let (we are told, the disciples of Walton and Cotton be on the look-out next week for Mr. Pickering's *final* sale of rare old books. Such examples we observe of father Isaak and dear son Charles—the collection of a life of great opportunities and lavish expense. The sale is at Sotheby's.

The custom any pensions may run of £1200 a year, to be given by her Majesty's Ministers, in pensions, to persons distinguished in literature, science, and the fine arts, or to the widows and children of such persons, commences this month. It would be a proper and graceful act were Lord Aberdeen to raise the pension of the Ettrick Shepherd's widow from £50 to £100. It is due to the poet—it is due to the widow—it is due to Scotland.



THE CRYSTAL PALACE.—ENTRANCE TO THE EGYPTIAN COURT FROM THE NAVE, BY THE AVENUE OF LIONS.

THE CRYSTAL PALACE.—THE EGYPTIAN COURT.

We resume our Illustrations of the Courts of the Crystal Palace with two Views of those appropriated to the Architecture and Sculpture of Ancient Egypt, thus described in Mr. S. Phillips's admirably-written "Guide-book":—

We approach the Egyptian Court rom the Nave by an avenue of lions, cast from a pair brought from Egypt by Lord Prudhoe (the present Duke of Northumberland), and we have before us the outer walls and columns of a temple, not taken from any one particular structure, but composed from various sources, to illustrate Egyptian columns and capitals during the Ptolemaic period, somewhere about 300 years B.C. On the walls are coloured sunk-reliefs showing a King making offerings or receiving gifts from the gods. The capitals or heads of the columns are palm and lotus leaved; some showing the papyrus in its various stages of development, from the simple bud to the full-blown flower. On the frieze above the columns is a hieroglyphic inscription, stating that "in the seventeenth year of the reign of Victoria, the ruler of the waves, this Palace was erected and furnished with a thousand statues, a thousand plants, &c., like as a book, for the use of men of all countries." This inscription is repeated, with some slight additions, on the frieze of the interior of the Court. On the cornice of both the inside and outside of the Court, are the names of her Majesty and Prince Albert, engraved in hieroglyphic characters, and also winged globes, the symbolic protecting deity of doorways. Entering by the central doorway, on the lintels and sides of which are inserted the different titles of King Ptolemy in hieroglyphics, we find ourselves in the exterior court of a temple in which the multitude assembled; the decorations of the walls are similar to those we saw outside; and it must be borne in mind that the colouring is taken from actual remains in Egypt. On the wall to the left is a large picture copied from the great Temple of Rameses III., or Rameses Mai Amun, at Medinet Haboo, near Thebes, showing the counting of the hands of the slain before the King, who is in his chariot; on the right-hand side of the Court is a representation of a battle-scene, with the Egyptians storming a fortress. Turning to the left, after examining the eight gigantic figures of Rameses the Great, forming the façade of another temple, we enter the colonnade of an early period, its date being about 1900 B.C. The columns represent eight stems and buds of the papyrus bound together, and are cast from a black granite column bearing the name of Amunoph, now in the British Museum.

Passing on we find ourselves in a dark tomb copied from one at Beni Hassan. It is the earliest piece of architecture in the Crystal Palace, its date being about 1640, B.C. The original tomb is cut in a solid chain of rocks that forms a boundary on the east of the Nile, separating the sandy desert from the fertile valley of the river. Although architectural remains exist in Egypt of a much earlier date than this tomb, it still possesses great value to us, for it may be considered as exhibiting the first *order* of Egyptian columns, which was employed in constructing buildings at as remote a period as two thousand years before Christ; this fluted column in another respect claims our attention, for there can be but little doubt that it supplied the Greeks with the model of their early Doric.

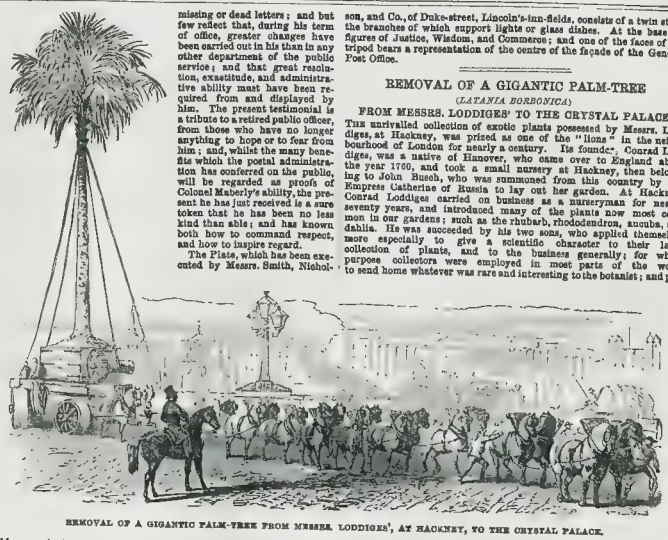
TESTIMONIAL TO COLONEL MABERLY.

On Tuesday week, an elegant piece of table plate was presented to Colonel Maberly, the late Secretary to the General Post-office, by a large number of those who, having served under him during his long official career, and who have had frequent occasion to admire the firmness with which he has maintained the discipline necessary to the well-doing of so large an establishment, and the kindness which prevented that discipline from becoming irksome to his brother officers. This may be a proper occasion to remark that the Post-office has hitherto received a very scanty measure of justice at the hands of the public.

TESTIMONIAL PRESENTED TO COLONEL MABERLY.

With all its sins of mission and commission, the public is intimately acquainted; but of the amount of work accurately, speedily, and cheaply performed; of the great and beneficial changes silently and expeditiously carried out, those, perhaps, think least who benefit most thereby. The name of Colonel Maberly is known to many only in connection with missing or dead letters; and but few reflect that, during his term of office, greater changes have been carried out in his than in any other department of the public service; and that great resolution, exactitude, and administrative ability must have been required from and displayed by him. The present testimonial is a tribute to a retired public officer, from those who have no longer anything to hope or to fear from him; and, whilst the many benefits which the postal administration has conferred on the public, will be regarded as proofs of Colonel Maberly's ability, the present he has just received is a sure token that he has been no less kind than able; and has known both how to command respect, and how to inspire regard.

The Plate, which has been executed by Messrs. Smith, Nicholson, and Co., of Duke-street, Lincoln's-inn-fields, consists of a twin stem, the branches of which support lights or glass dishes. At the base are figures of Justice, Wisdom, and Commerce; and one of the faces of the tripod bears a representation of the centre of the façade of the General Post Office.



REMOVAL OF A GIGANTIC PALM-TREE FROM MESSRS. LODDIGES', AT HACKNEY, TO THE CRYSTAL PALACE.

REMOVAL OF A GIGANTIC PALM-TREE

(LATANIA BORBONICA)

FROM MESSRS. LODDIGES' TO THE CRYSTAL PALACE.

The unrivalled collection of exotic plants possessed by Messrs. Loddiges, at Hackney, was prized as one of the "lions" in the neighbourhood of London for nearly a century. Its founder, Conrad Loddiges, was a native of Hanover, who came over to England about the year 1760, and took a small nursery at Hackney, then belonging to John Busch, who was summoned from this country by the Empress Catherine of Russia to lay out her garden. At Hackney, Conrad Loddiges carried on business as a nurseryman for nearly seventy years, and introduced many of the plants now most common in our gardens; such as the rhubarb, rhododendron, acuuba, and dahlia. He was succeeded by his two sons, who applied themselves more especially to give a scientific character to their large collection of plants, and to the business generally; for which purpose collectors were employed in most parts of the world to send home whatever was rare and interesting to the botanist; and probably, no private establishment ever approached the multitudes of rare species, belonging to every cultivable division of the vegetable kingdom. About two years since, the whole of this unique collection was purchased by Sir Joseph Paxton for the Crystal Palace Company. The removal of the vegetable Titans has been an interesting labour, of which the Illustration represents a specimen, in the transit of a gigantic *Latania Borbonica*, or Fan Palm of the Mauritius. This individual tree was once in the collection of the Empress Josephine, at Fontainbleau. It was purchased and brought to England by Thomas Evans, Esq., of Stepney, at whose decease, in 1814, the tree was bought by the Messrs. Loddiges (the plant then being about five feet in height), and it remained in their palm-house until its removal on the 27th ult. The tree is now about fifty feet high, and weighs upwards of a ton; it is planted in a box, eight feet square, of solid earth. This ponderous mass, weighing fifteen tons, was removed to Sydenham as follows. It was first strongly encased in timber with iron bracings, and shored up on either side. A carriage of sufficient strength, and weighing seven tons, was then placed underneath, and thus the luxuriant load was drawn through the streets by thirty-two of Messrs. Younghusband's finest horses.

The progress of this stupendous plant through the metropolis, and the effect of the broad foliage—sometimes sweeping the three-story windows of the houses—will not be easily forgotten. The tree arrived safely at the Crystal Palace during the evening, to be placed among the other tropical plants.

"THE OLD CHATEAU."

We present our readers with an Illustration of the last scene of Mr. S. Coyne's new play at the Haymarket. For this striking *dénouement*, the previous portions of the drama seem to have been constructed—all conduct naturally to this catastrophe. An innocent wife, suspected by her husband, having thoroughly justified herself, at an interview brought about without her knowledge at "the Old Château," with a lover; nothing remains but that the *Othello* of the scene should countermand the orders that he has given to an accomplice to shoot the offending young man. He, however, falls a victim to his own contrivance. As throughout the piece, the conduct of the unfortunate husband has been, except in this one particular, irreproachable, his premature death under such circumstances is calculated to excite the utmost compassion, while the utmost indignation is felt for the *Iago* tempter. These are the only

MISS REYNOLDS. MR. HOWE. MR. H. FARREN.

SCENE FROM THE NEW DRAMA OF "THE OLD CHATEAU," AT THE HAYMARKET THEATRE.

feelings produced on the spectator by the situation. It doubtless required great delicacy on the part of the dramatist to avoid inducing an unworthy sentiment; but, so chaste are the colours in which the heroine is portrayed, so pure is the state of her mind represented throughout as thoroughly unconnected is she with all the circumstances by which the fatal result is necessitated, that it is impossible to suspect her of any sinister motive. Such a theme we must, however, admit, has serious difficulties; and prudence requires that these should in general be carefully avoided. Mr. Coyne, in encountering them, has proceeded with the utmost caution. The accessories of the scene, as we stated last week, with the ominous atmospheric effects beyond the lattice, and the general character of the old gloomy apartment at dead of night, are in admirable keeping with the pathetic tragedy therein enacted, and do great credit, indeed, to the painter. Aided by such artistic effects, the curtain falls on the action, while the mind of the spectator is in a purely aesthetic state, both as to the incident and its representation, and not at all in a condition to indulge in any curiosity, lying beyond the local situation and the immediate event. However, to those who judge of poetry on conventional grounds, the subject, if not the treatment, requires some apology.

THE GENERAL COURTS-MARTIAL AT WINDSOR.

(From a Military Correspondent.)

THE proceedings of the general Courts Martial, lately held at Windsor, shed an air of more than usual gloom over the festivities of the Garter. It is revolting to those unacquainted with the service. Unthinkable as was the conduct occasioning the investigation, the public at large should be disabused of the supposition that similar fracas are of frequent occurrence among officers who have the honour to hold her Majesty's commission. Truth is diametrically opposed to so erroneous an idea. Yet the avidity with which the details have been received and commented on, suggest the inference that the case in point is to be entertained as a system not unusually pursued in barrack life. Nothing can be adored palliative of drunkenness, from the shameful excesses of a gentleman—a term, however desecrated in the present era, conveying a sense jealously guarded by every old soldier, and inculcated on all so designated by the Queen on their first entering the service. Those ingredients to cast unmerited odium on the members of a distinguished branch of the State by reason of the inexcusable behaviour of a few, might call to recollection acts of oppression committed by other young men, not under military control which, though equally free from premeditated malice, produced results more indelible. The case has fallen to the lot of the parties where offence is now canvassed. If non-observance of strict rectitude was on every occasion pounced at in proposals, few could evade censure. The exacerbation arising from publicity would, in that case, be visited on the delinquent, having him only to the infliction of disgrace. The reputation of others unconnected with the charge would remain unassailable. But in a body constituted as is the Army, where the *esprit* of the profession is based on disconnecting acts prejudicial to its reputation, it is needless of even one is felt as casting a stigma on the whole. To that sensitive appreciation of its dignity may be traced the estimation in which a British officer is held. How doubly cautious, then, should be the actions of every man during his military career, not alone for the sake of his individual reputation, but also to avert the onus which in some degree must indistinctly attach to his brethren in arms, by his deviating from the bearing of a gentleman. The cause of the recent Courts Martial is attributable to that most pernicious of evils—philoprogenitiveness, according to Locke, "leaves no safe-conduct behind, and is no fortune profits either body or mind." Fatally destructive as the above vice proves when indulged in private life, it becomes a perfect curse when engrafted on a regiment. Other species of libertinism may have their sway, when, possibly, by repletion, disgust will arise, eventually eradicating the disease. But the confirmed gambler, infuriated with the baneful excitement, pertinaciously pursues his favourite vice, reckless of impending ruin, which sooner or later is sure to track his career. The introduction into a corps by the admission of such a character as the above, self-debased himself, he exerts every method of persuasion to envelope the unmarked into the vortex of his destruction. In brief space the harmony of the regiment is destroyed, long-standing friendships become severed, discipline is undermined, until at last dishonest practices are resorted to, annihilating the last vestige of self respect. End not this humiliating exposition. Such fast rein those who have attained so unenviable a notoriety, that crime might have passed unshadowed by the remembrance of transgressions, embittering each hour of existence. The difficulties incumbent on the position of a commanding officer are great, and sometimes onerous in the extreme; yet, without resorting to a discreditable system of espionage, it appears incomprehensible how laxity in morals can be countenanced by the juniors, without coming to the knowledge of their superiors. In well regulated regiments such peculiarities could not be tolerated for a second. On conviction of the fact, the offender would be subjected to severe animadversion and reproof; but, if that failed to enforce discontinuance, removal from the corps would inconteatably ensue. Circumstances may arise in which the authority of the Colonel may not be enabled immediately to control, but perseverance in evil cannot for long evade observation; and the sooner such step is separated from the flock, the less detrimental will it prove to the remaining members.

While tables are constantly laid out in the anterooms of regiments, after mess, affording a rational amusement for those who prefer harmless recreation to prolonged sitting after dinner, or the solitude of their own barrack-room—parlies of a different description to the full country quarter. On such occasions, gambling is unheard of: the game is frequently played without stakes; or, if money is risked, the sum ventured is so insignificant as to render it, in a pecuniary view, perfectly indifferent to either party who wins. Nightly, these anterooms proved to have been noted at Windsor, and the infatuation of the barracks allotted for the accommodation of the officers. The full particulars have been fully investigated by the inquiry held here. The Judge Advocate General's department has now before it the opinion on every one of the parties implicated in the transaction. It will impart a feeling of satisfaction to the public at large, listening to plausible argument, may be objected to the commission of ungentlemanly acts; and, finally, it may consolingly be hoped that the much-to-be-regretted example of the scandalous will protect every regiment in the service from the like-to-be-disgusting scene—PLAY.

THE NEW ACT ON GAMBLING-HOUSES.—On Tuesday the new act for the suppression of gambling houses came into operation. Suspected houses can be entered, and persons obstructing the entry of the police by bolts, bars, chains, or any other contrivance, may be fined £100, or imprisoned for a period not exceeding six months. The appearance of obstructions is to be evidence of the existence of a common gambling-house. Persons apprehended in such houses, or addresses, may be fined £50, or imprisoned for a period not exceeding three months. Persons gaming-house, under this act, is £500, or three months' imprisonment. A new feature in this act is the power given to magistrates to examine on oath any of the parties apprehended, and they are also to give evidence, to den. with the other witnesses. Persons giving evidence to be indemnified. Half of the pecuniary penalty to go to the informer, and half to the parish. An appeal is given to the Quarter Sessions.

A BRAVE HUNGARIAN.—During the siege of Silistria, the Russians, in order to dislodge the Arnouts from their ditch in front of the Arab Tabia, carried their own trenches within a few yards from that gallant defence, which was formidable only because the bravest men had ever lived hold it. So near was the Russian ditch that the engineers threw the earth by shovefuls into the Arnout ditch. This was effected with an enormous loss to the besiegers. On one occasion a Major Emmens, a gigantic Hungarian, issued from the ditch, leaving on the pole of a waggon, and challenged the Russians in the other ditch to come out and fight him. They accepted the challenge by taking hold of one of his legs, and endeavoured to drag him into their quarters; but the Arnouts took hold of his other leg, and pulled him in their direction, while Major Emmens, utterly unconcerned, flourished the heavy pole and mowed the Russians. Skulls were cracked and bones broken wherever that formidable weapon descended, and thus long free from his assailants the Arnouts drew Major Emmens over. In this affray his life was saved on this occasion, only to be lost on another five days after the Russians drove him into the Arnout ditch, the Russians dispatched two of their tormidable foes. They accepted the challenge by taking hold of one of the Arab Tabia, and, by the mere physical weight of these masses, forced their way in. A hand-to-hand engagement ensued in the interior of the Tabia when the Turks fought with the fury of madmen and the agility of serpents. The Russians meanwhile sought to secure the cannon. Perhaps, they meditated a retreat, and wished to carry off at least some trophy from Silistria. They had ropes with them, which they tied to one of the pieces, and then commenced pulling it through the embrasure into the ditch below. Major Emmens saw the attempt, rushed up to the gun, and held it back. A Russian officer, almost equal in size and strength to the Hungarian, attacked and wounded Major Emmens just as he was cutting the ropes. The two strong men then turned against each other. They fought and fell.—*Letter from Silistria.*

PRISON DISCIPLINE.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

MUNICH, 25th July, 1854.

I HAVE found here an unexpected illustration of the power of the moral sentiments and intellect to govern and reform criminals, without using the lash or any severe punishments, and also irrespective of all theory or system. Herr Regierungsrath Obermaier is the Governor of the criminal prison of this city, and has under his charge above 600 of the worst male convicts collected from all the districts of Bavaria. Their sentences extend from eight to twelve years' imprisonment, and some of them for life. Their crimes have generally been attempts to murder, murder with extenuating circumstances, or highway robbery. A more unpromising collection of convicts could scarcely be imagined; and yet here there are no separate cells, no severe discipline, no paid superintendents, except a turnkey to each ward, whose station is outside the door, and who does not see into the apartment. The prisoners are collected in workshops, to the number of ten, twenty, or thirty, according to the size of the room; for the prison is merely an old cloister, and they labour each in a trade, under the superintendence of one of themselves. They sleep in similar groups, and have each a separate bed, a straw mattress, two very clean white sheets, a pillow, and a white blanket.* In winter there is a large stove in each sleeping-room, and also in each workshop. They eat in common, take exercise in the yards in common; and, in short, are under no perceptible restraint, except the prison bars and walls; and look much more likemen working quietly in different branches of production, in a great manufactory, than a collection of desperate criminals undergoing penal sentences. They card wool and flax, spin both, dye the wool, weave both, and dress both the linen and woollen cloth, so as to complete them for use. There are tailors, carpenters, shoemakers, and blacksmiths' workshops; and in none of them is any intelligence, except that of the convicts themselves, employed either to teach or superintend. The bars on the window are so slight, and so many tools are intrusted to the convicts, that escape could be easily accomplished, for outside there is only one soldier, and he cannot see a fourth of the windows; yet the culprits do not break the prison; they obey cheerfully, they work diligently; and there is not a moral culprit about them that is extraordinary. Of course they differ in mental condition, and moral expression, as their brains and training vary; but I mean to say that there is a moral calmness over them in dealing with the weapons, and about moral and mental expression in the countenance, the best I have seen, and longest in prison, that speaks highly of the success of their treatment.

How has all this been accomplished? By the genius of one man, Herr von Obermaier; I say genius, because it appears to me that he, and such men as Mr. Nash, in London, and Candidat Wicher at Hamburg, who are able, by the mere influence of their moral and intellectual faculties, to tame, guide, and mould the rudest and most brutal of their countrymen, indicate a mental power, original, Heaven-sent beneficient, which works independently of rules, and cannot be communicated, and which may, therefore, be regarded as genius for the moral world. Be this as it may, I proceed to explain how it operates.

"How do you," said I, "deal with a man who has no moral, determined character, who spurns your authority, and means to run you down?" "Every prisoner," replied he, "has original latent power in his character, and I convert it into a human, intelligent, moral principle. I appeal to his moral feelings, as brothers or sons would; and they must be touched by my sincerity and sentence. I appeal to him as a man. I tell him that I am his friend and not his enemy. That I regard him as one to be reformed, and not punished. I explain to him the rules of the house, and tell him that they are all calculated for the improvement of the prisoners; that if he will be my friend I shall be his, and that suffering and misery will overtake him here only in consequence of his own fault. The rudest natures, I have found, can rarely resist such an appeal. To the prisoners often roll down checks of tears as I speak to them of reform, and I soon make them feel that my words are not empty, but the expression of actual things. I give the new-comer into the care of the superintendent of the department for which he is most suited, and recommend him to his care as his friend and adviser, and I appeal to the other men in his behalf. Should the new-comer, as frequently happens, not believing in the reality of the law of kindness, begin to have all to his fellow-convicts, they soon ask him and set him right. The public spirit among them is in favour of obedience and steady conduct, and they say to him, 'That conduct will not do here: Herr von Obermaier is our friend, and we shall not allow you to act contrary to the rules of the house.'"

"But," said I, "at night are not all abominations practised, or how do you restrain them?" "You see," said he, "that there is a space between each bed; an overseer, one of themselves, whom I can thoroughly trust, is on watch all night with a bright light burning in every room, and every offence is observed and reported to me. I use persuasion with the offender—punish him by withholding part of his food, or depriving him of some other enjoyment—and he generally gives up his misconduct. When the general spirit of the men is directed towards virtue, an individual finds it extremely difficult to persevere in vice in the face of their condemnation."

"Have you any rewards for good conduct?"—"Yes; the men are paid for their labour; a certain sum is deducted for their food, which is wholesome and nourishing, including meat three times a week; they are allowed to spend a certain sum in extra comforts, if they please; and a third portion is allowed to accumulate as a means of support at their discharge."

"What percentage return to this or other prisons after expiry of their sentences here?"—"Out of thirteen hundred, eleven hundred have been reformed." "Have you any moral staff to assist you?"—"Only a schoolmaster and a chaplain." From all I could learn, these perform only their official duties, and he himself is the sole governor, guide, judge, and friend of the prisoners.

* The sleeping-rooms are overcrowded, and there is no provision for proper ventilation; the consequence is, great sickness and mortality.

"I see," said I, "that this establishment is penetrated to the core, and in every department, by your spirit. Are there any young men sent to you by the Government, to imbibe it from you, so as to be able to carry on the good work when age shall have impaired your powers?"—"No: foreigners come here and inquire into my plan—many such come—but here I am nobody; the Ministers grudge the expense; and many persons complain that I make the prisoners too happy. Nobody thinks it an honourable thing to manage a prison; and, when I die"—a shrug of the shoulders finished the sentence.

I told him of Pentonville and the English prisons. "I know all about them," said he: "I have considered their merits in a pamphlet, 'Die Verhandlungen über Gefängnissreform, &c., oder die Einzelhaft mit ihren Folgen.' Read it, and you will understand my views."

I have read it, and find that he condemns the principle of vengeance or punishment, the lash, the separate system, and all inflictions calculated to embitter the prisoner's life. He maintains that criminals cannot be improved by severity, and that an enlightened spirit of humanity, emanating from the governor and through every individual of the prison, will supply the most perfect guarantees for obedience, diligence, and individual morality that can be procured. "If once," says he, "the prison is pervaded by a sound public opinion, and the desire of improvement has gained the ascendency, then the reformed penitents (Büsser, for he avoids the word convicts), become such powerful instruments of further improvement that complete security in every department, and for every individual, is established; a security so great that one cannot expect always to find the like of it beyond the walls of the prison. "When," he adds, in large print, "the whole system of a prison is founded on humanity, the most unbounded confidence in the overseers is the natural consequence, loyalty to the general good speedily becomes the object of all, and when this has once been established, gross excesses, scandalous behaviour, and brutality are no longer to be apprehended; in general, they are no longer possible, and become exceptions very rarely occurring."

Here, then, we have a prison without classification of prisoners, without a staff of moral superintendents, without the prospect of abridged confinement as a reward for good conduct, without the lash, the solitary cell, the tread-mill, the crank-wheel, pious visitors, or any of the other appliances regarded as indispensable elements of prison discipline in England, and the place of them all is supplied by the enlightened humanity of one man!

Herr Obermaier is apparently between fifty and sixty years of age, of middle size, and quite a gentleman in manners and station. He has been many years employed in the prison department. He is of middle stature, well made, has a brain of full average size, largely developed in the moral and intellectual regions, with a moderate base. His temperament is nervous, sanguine, bilious. He is distinguished by a soft, kind, true, yet firm manner; a clear, active, penetrating intellect; an unpretending earnestness; and, when he finds that he is appreciated, his eye glistens with touching flashes of moral enthusiasm that commend him to one's love and esteem.

What conclusion, then, can be drawn from this example? In my opinion only one—that the spirit of enlightened humanity is the most effective instrument of prison discipline; the cheapest and the safest for the public, and the best adapted to reform offenders. But I do not say that, in the hands of every man, it is capable, without rules or assistance, of producing such results as I have herein described. Herr Obermaier is, in his own department what George Bidder was in calculation, Arkwright in machinery, Watt in steam, Davies in invention, what Shakspeare was in poetry—a man inspired by nature to do things which common men cannot accomplish, and to do them by a kind of practical instinct, the exact operation of which he cannot explain. But a man of an active and instructed intellect may observe the great principle which such geniuses are sent to illustrate, and he may, by study, carry from his example, and not so high, a practical governing power. We must observe the knowledge of the circumstances also under which these moral phenomena appear. In Bavaria there are no large manufacturing towns, and the self-determining action engendered by free mass meetings is unknown. The Bavarian criminals, therefore, differ considerably from the English in character. Herr Obermaier told me that the great majority of them have come to him grossly ignorant and very ill brought up; and that they have become criminals under the influence of drink, passion, or evil example. It was curious to me to observe the shapes of their brains. Some are almost cretins, and, to some extent, idiotic; others have large animal and intellectual, with deficient moral organs; others have large animal, with both the moral and intellectual organs tolerably full; while a very considerable number have the three regions—animal, moral, and intellectual—equally and pretty fully developed. These constitute the elements by which the prison is ruled. Herr Obermaier exerts an influence on these men of the most powerful and beneficent character, and attaches them to himself and to the cause of order and virtue by that mixed kind and practical administrative talent which he so fully possesses. The reflecting intellect is higher in the German race than in the English; and in prisoners it is also distinguishable. They are less impulsive, less opinionative, and calculate consequences better. In temperament, also, they are more lymphatic, and they have been accustomed to institutions in which the priest, the King, and the law, rule supreme, and subjects only obey. Grumbling and resistance are not allowed to Bavarians at large, and prisoners do not feel themselves so much aggrieved by command and restraint as an English thief and robber, accustomed to a lawless and reckless life, naturally does. There were about a dozen of men working in chains, with iron balls at their feet. They had very low brains, but even they were quiet; and the chains were part of their sentences, and not imposed in prison. On the contrary, Herr Obermaier had diminished the weight of both chains and iron balls, so as still to comply with the law, while he mitigated its severity. In the prison, also, the men were carding wool, and spinning flax with the hand, not because the Governor was unacquainted with machinery, but because he found it difficult to give employment to so many individuals, if he substituted machinism for manual labour, and he reckoned useful employment an indispensable element of success. Finally, the hours of labour, of meals, of exercise, and instruction were so judiciously arranged as to combine continuity of application with change of occupation, and thus to avoid at once dissipation of interest and ennui from monotony.

Without, therefore, supposing that the system here pursued may be successfully transferred to England, and that it will work equally well in the hands of English Prison Governors and on English criminals, all that I should recommend would be that its *spirit* should be adopted, and wrought out in good faith, under modifications suited to English circumstances.

Knowing how deep an interest you take in the department of human suffering, I trust to your excusing the length of this epistle, and

I remain, my dear sir,

Very truly yours,

GEO. COMBE.

THE TIPPERARY ABDUCTION CASE.

The trial of Mr. John Carden, of Barnane, a magistrate and Deputy-Lieutenant of Tipperary, for the abduction of Miss Eleanor Arbuthnot, commenced at Clonmel, on Friday, July 28. The Court-house was crowded with the gentry and inhabitants of the town and neighbourhood. The Attorney-General, who opened the case, gave a complete narrative of the affair. It appeared that Mr Carden had proposed for Miss Arbuthnot some time since; that his proposal was rejected with indignation, and that he had left no measure untried to effect the purpose of shattering the lady's decision; he followed her wherever she went, and endeavoured to force his society upon her in a manner that was highly reprehensible. On the 3rd of July, Mr. Carden assisted by six accomplices, attempted to carry her off. Force what he could not gain by favour. While on her way home from church an attack was made on the car in which Miss Arbuthnot was alone with her two sisters and Miss Lyndon. Miss Eleanor Arbuthnot, and the Misses Lyndon. Having stopped the car, Mr. Carden proceeded to lay hands on Miss Eleanor Arbuthnot, but, as she was farthest from the door, his first demand was for Miss Lyndon, who was nearest him, and in spite of her resistance, dragged her out, and at the same time Mrs. Gough made her escape, and gave the alarm. Mr. Carden, after considerable struggle, dragged Miss Lizzie Arbuthnot out of the car also, but she kept so firm a hold of him that both fell to the ground, and thus further time was gained. He then returned to the attack, aided by one of his men; but Miss Arbuthnot was not resisted so strongly as to give time for assistance to arrive, when Mr. Carden and his associates took to flight. In the carriage which Mr. Carden had provided for the abduction, were found two bottles of chloroform, some smelling salts, and several phials of medicine. A memorandum book was also found, in which were the following instructions:-

Look the demesne gate, and bolly and bushes all pursues, but do not endanger life; lead people to suppose I am shut up in the tower; take the guard at the house to manor house, and give Johnson a hint to be a friend and mislead the guards. Do not forward my letters, but write to me yourself to the Conservative Club, St. James's-street-London. Look after and protect the man who went with me.

The Jury found him guilty of the attempt to commit abduction, and also of assault. He was sentenced to two years' imprisonment and hard labour

The trial having closed, the arrangements which he had made are now very freely spoken of by his friends and others to whom he confided his plans. Mr. Carden had for some time previously been concocting measures for effecting his object, and finally decided upon conveying Miss Arbuthnot to Galway, where he had a steamer chartered for the purpose of taking her out to sea. Relays of horses were placed along the entire route from Rathronan to Galway. He intended, immediately on arriving at some port-town, point off the Galway Bay, to place his victim on board the steamer, which, in order to avoid excite ment or suspicion, was lying off the coast at some distance from the harbour, and it was then his intention to proceed direct for London. Mr. Carden has stated, since his imprisonment, to his confidential friends and advisers, that the preparations for his atrocious crime cost him no less a sum than £2850.

The sympathy of the people of Tipperary is altogether in favour of Mr. Carden, whom they look upon as a very ill-used man. Speaking of Miss Arbuthnot, they say, "He was far too good for the like of her."

NATIONAL SPORTS

BRIGHTON RACES.—WEDNESDAY.

Trial Stakes.—The Caliph, 1. Herbert, 2
Railway Plate Handicap.—St. Faith, 1 Red Rose, 2.
Brighton Stakes.—Winkfield, 1. Bribery, 2. Ten started: 5 to 1 against Bribery, and 10 to 1 against the winner.
Brighton Nursery Stakes.—Enchantress, 1. Mohican, 2
Marine Plate.—Kennyside Hero, 1. Henrietta, 2
Corporation Plate.—Lizzy, 1. New Brighton, 2
Second Brighton Biennial Stakes.—Champagne walked over.

THURSDAY.

Pavilion Plate.—Kennyside Hero, 1. Roebuck, 2.
Brighton Cup.—Sharavogue, 1. Dolcetta, 2.
Rottingdean Stakes.—Slender, 1. Bribery, 2.
Similitude.—Bribery, 1. Jouvence, 2
Sussex Plate.—Mohicanites Maid, 1. Vautrey, 2
Champagne Stakes.—Andover, 1. Mount, 2

THAMES NATIONAL REGATTA.—Extensive preparations are making at this place, which is appointed to take place on Tuesday, Wednesday, and Thursday in Putney; and the numerous prizes will be distributed by the Lord Mayor at Cremorne Gardens. The aggregate amount of the prizes, consisting of pleasure boats and variety those of any other regatta, are no less than £600, of which £200 is given each day. The best prizes are to be rowed for over the course in the Thames, but are liberally thrown open to the world. The prizes include £100 for four oar (Lloyd's), and £20 for the best pair oar. The £200 each day is appropriated to steam vessels, each of which a pleasure boat will be exhibited at Cremorne Gardens

CRICKET.—THE MARYLEBONE CLUB AND ENGLAND.—This great match was concluded on Wednesday. The scores stood:—England first innings, 113; second innings, 191. M.C.C. and Ground—first innings, 90; second innings, 116 for 2 wickets to go down

RACES TO COME.—The fixtures for next week will take place—at Odiham, on Monday; at Ripon, on Monday and Tuesday; at Yarmouth, on Tuesday and Wednesday; the North Staffordshire and the Reading, on the same days; and the Leeds, on Thursday and Friday.

AN ILLSE ROW IN NEW YORK.—A personal *rencontre* of a serious character took place at New York on the 13th ult., between the two Frenchmen, Messrs. Mesnard, formerly notoriously, and Mr. Mabille, proprietor of the *Fireman's Journal*—a New York organ of the Know-Nothing party. Mr. Mesnard, it appears, arrived by articles in the *Fireman's Journal* office at the office to demand an explanation. Mr. M'Master, who was not in at the time, fearing personal injury to himself, armed himself with a heavily-loaded walking stick and a revolver. In the afternoon of the same day Mr. Mesnard came upon the rival editor, unaware, in the street, and struck him several blows on the head with a small riding-whip. Mr. M'Master raised his cane to strike his assailant, but was knocked out of his hand. He then retreated a pace or two, drew his revolver, and presented it at his opponent's breast. Mr. Meagher immediately closed upon him, and Mr. M'Master fired. The ball passed over Mr. Meagher's left shoulder. Mr. M'Master was then knocked down. At this juncture the police came up, and both parties were taken before the magistrates, and held to bail to keep the peace.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The transactions in all national securities, this week, have been small compared with some previous periods; but prices have been firm and steady, and we had scarcely any important fluctuations in them. There has been a fair, but by no means active, demand for money, and the rates of discount have been well supported. The supplies of bullion to the Continent have been again liberal—viz., upwards of £200,000, chiefly gold. We have, however, received some large supplies from various quarters—1,700,000 dollars having arrived from Mexico, 800,000 dollars from New York, and about £700,000 from Australia. Only a portion has been sent to the Bank, and it is anticipated that the stock will continue to decline for some time hence. Any decrease in the value of money, therefore, is not expected at present.

The Market for Government securities on Monday was steady. The Three per Cents were done at 92½ to 92⅝; the Three per Cents Reduced, 92⅝; the New Three-and-a-Quarter per Cents, 93⅛ to 93; and Consols for Account, 92⅝. Long Annuities, 18⅝, were 18⅝; India Stock, 223 to 226. India Bonds, 2s.; Exchequer Bills (£10,000), par to 3s. pre mium; Ditto, Small Scrip 3s. On Tuesday, prices kept up with much steadiness. The Three per Cent Consols sold at 92⅝ ⅞; the Three per Cents Reduced, 92⅝; and the New Three-and-a-Quarter per Cents, 93⅛ ⅜. Exchequer Bills were par to 2s. pm. par, and Exchequer Bonds, 2s. The transactions on Wednesday were limited in extent. The Three per Cents varied from 92⅞ to 92; the Three per Cents Reduced, 92⅝ to 92⅞; and the New Three-and-a-Quarter per Cents, 93⅜ to 93⅝. India Stock, 224 to 226. Exchequer Bills, par to par; Ditto, Bonds, 3s. to par. On Thursday the three per Cent Consols were done at 92⅝ ⅞. The Three per Cents Reduced, 92⅝, and the New Three-and-a-Quarter per Cents, 93⅛ to 93⅜. Exchequer Bills were par to 3s.; Bonds, 2s. to par.

At the Foreign-house, we may observe that prices have ruled steady, and that 70,000 dollars have come to hand in payment of the Mexican dividends. The following are the leading quotations for the week:—Mexican Three per Cents, 24¾; Peruvian Four and a-Half per Cents, 68; Spanish Three per Cents, 38¾ ex div.; Ditto, New Deferred, 18¾ ex div.; Dutch Two-and-a-Half per Cents, 61 ex div.; Dutch Four per Cents, 92; Russian Five per Cents, 98; Ditto Four-and-a-Half per Cents, 89¾; Brazilian Five per Cents, 100; Colombian Three per Cents, 23; Sardinian Five per Cents, 85¾; and French Four-and-a-Half per Cents, 89¼.

The Board of Trade returns for the month ending on the 5th ult. show an increase in the shipments of home manufactures, compared with the same month last year, of £234,303. The average monthly shipments this year have been £8,105,200, against £6,977,799 in 1853; and £5,581,765 in 1852

The Market for Joint-Stock Bank Shares has been tolerably firm and prices have ruled steady:—Australasia have marked 51¾; Chartered Bank of Asia, 3¾; English, Scottish, and Australian Chartered, 11¾; London Chartered of Australia, 21; London and Westm ister, 32 ex div., and bonus; Oriental, 46¾; Provincial of Ireland, 68¾; South Australian, 21; Union of Australia, 38 ex div.; Union of London, 23¾ ex div. Miscellaneous Shares have been steady:—Australian Agricultural, 44¾; Canada Six per Cent Bonds, 107¾; Crystal Palace, 6¾; Ditto New, 3¾; Docks, East and West India Docks, 120; Electric Telegraph, 20 ex div.; General Steam Navigation, 25; London Docks, 105; Peel River Land and Mineral, 1¾; South Australian Land, 2¾; St. Katharine Dock, 84 ex div.; West London's Land, 11¾; Victoria Dock, 13¾. Canal Shares have been steadily firm as follows:—Ashton and Oldham, 154; Coventry, 215; Leeds, New, 1 Lancaster and Lougborough, 87½; Neath, 190; Rochdale, 6; Southern Union, Worcester, 40¾; Stourbridge, 23½; Worcester and Birmingham, 34. Berlin Waterworks have been quoted at 3¾. Grand Junction, 77; Ditto New, 4¾; Lambeth, 97; Southwark and Vauxhall, 84; Kent, 80; West Middlesex, 101 ex div. In Railway Shares, Caledonian Consolidated, 84; Dublin and Belfast Junction, 12; Dundalk, 12; Dundalk and Enniskillen, 3¾; Eastern Counties, 10¾; Edinburgh and Glasgow, 88¾; Great Northern, 87¾; Ditto, A Stock, 72; Great Western, 78; Lancaster and Carlisle, 93; Lancashire and Yorkshire, 67¾; Leeds Northern, 58; London and North Western, 98; Ditto, Newcastle and Berwick, 75; Manchester, Sheffield, and Lincolnshire, 34; Oxford, Worcester, and Wolverhampton, 42; Shrewsbury and Birmingham, 61; Ditto, Guaranteed, 84; Scottish Central, 84; Scottish Eastern, 64; York, Newcastle, and Berwick, 75; Ditto, G. N. E. Purchase, 5; York and North Midland, 86¾.

PREFERENCE SHARES.—Eastern Counties Extension, No. 1, 1¼; Great Northern, Four-and-a-Half per Cents, 106¾; Londonderry and Coleraine Half-shares, 4¾; Manchester, Sheffield, and Lincolnshire New £10 Shares, 11; Ditto, £6 6s., Oxford, Worcester, and Wolverhampton, 13¾; Shrewsbury and Birmingham, 10¾; Ditto, Five per Cent, 10¾; York, Newcastle, and Berwick Four per Cents, 103.

FOREIGN AND COLONIAL STOCKS.—Grand Trunk of Canada, A, issue, 4, Grand Luxembourg, 3¾; Paris and Strasbourg, 31¾; Sambre and Meuse, 3¾.

The market for Mining Shares has been exceedingly heavy, and the quotations have ruled almost nominal.

Friday Afternoon.

The Directors of the Bank of England having reduced the minimum rate of interest to 5 per cent, Consols have been steady to-day; but the business doing is by no means extensive. The Three per Cents are 92⅝ ⅞; the Three per Cents Reduced, 92⅝; and the New Three-and-a-Quarter per Cents, 93½. Exchequer-bills, 3s. prem. Foreign Bonds and Railway Shares are steady.

THE MARKETS.

CORN EXCHANGE (Friday).—[illegible] by the arrival's of English wheat were on a very limited scale, and the [illegible] sterling. There was more firmness in the market, and about an average business was done, at an advance in the price of Monday of [illegible] some instances 1s per quarter. The imports of foreign consist [illegible] ports of Hull have [illegible] parcels were quoted [illegible] The week ending to-day [illegible] Wheat, 2210; oats, 620; flour, 1[illegible] 1[illegible] 1[illegible]

formed in Halévy's operas "Le Val d'Andorre" and "Les Mousquetaires de la Reine." These were her first appearances on the stage. Dissatisfied with her position at the Opéra Comique, where she had a salary of only 2600 francs (£100 sterling) a year, and no other employment, she left that theatre, and accepted an engagement at Brussels at eight times the amount. M. Charles Hanssens, the eminent composer and *chef d'orchestre* (well known in our London musical circles), who went to Paris for the purpose of hearing her, perceived her merits better than M. Ferrin had done, and was the origin of this engagement, and the agent in effecting it. During two years her success at Brussels was most brilliant. An offer from Lyons, however, of 3000 fr. (£120) per month was not to be rejected. In that important city, which has been called "Pémule de Paris," in its cultivation of letters and the arts, Madame Cabel may be said to have reached that eminence which again roused the interest of the metropolis; and the manager of the Théâtre Lyrique persuaded her to accept a liberal engagement at that house—the third musical theatre of the capital. There, in September last, she made her début in Adolphe Adam's opera, "Le Bijou Perdu," with immense success; which, in May last, was further augmented by her performance of *Marie*, in "La Promise," which M. Clapisson wrote expressly for her. Auber and Meyerbeer were present on the first night of this opera, and went behind the scenes to congratulate the young prima donna on her talent and her success.

MADAME MARIE CABEL.—DRAWN BY BAUGNIET.

In June last the St. James's Theatre was opened for French comic opera, by the company of the Théâtre Lyrique. Their performances are fresh in the memory of the musical public, and have been recorded in our columns. Madame Cabel has not been favourably situated for the full development of her powers. As a member of that company, she has appeared in pieces, belonging to their *répertoire*, by no means of a high class; and even in the pieces really worthy of her, she has not been adequately supported. But even this has, perhaps, contributed to show the extent of her talent and captivating qualities. In the "Fille du Regiment," in the "Sirène," and in the "Diamans de la Couronne," she excited a degree of enthusiasm, which could not have been exceeded had these fine pieces been played by all the strength of the Opéra Comique. Whatever has been the success of the season, it has been owing to her. Whatever has been achieved, she may say, "Alone I did it!" and her claim will be disputed by no one.

THE NEW UNIFORMS FOR THE LIGHT INFANTRY AND CAVALRY.

THE NEW UNIFORMS.

We present our readers with an Engraving of a group of officers, attired in the new pattern of clothing, as sealed at the Board in Whitehall, for Light Infantry and Light Cavalry.

Henceforward the staff of the Light Infantry regiments are to wear a shako, light in construction to the one now in use, and more graceful. The small ball, the substitute for the feather, will be retained, and the number of the regiment will be conspicuously displayed in front. The coat will be a tunic or short frock, scarlet in colour, and double breasted. The collar will be low and open, with embroidered gold lace in crowns and stars, denoting the rank of the officer. For the shoulder belt and breast plate will be substituted a white patent leather waist-belt, with gilt ornaments in front. Epaulettes and sash will be abolished. The black trousers will be continued for the winter, and the blue for the summer. The new Infantry design is from an English house, Messrs. Moore and Co., of St. James's street. The new dressing-case, portfolio, and despatch-bag, so highly approved of by the Horse Guards, is from the design of Mr. West, of St. James's-street.

It may be remarked that the change in the Light Cavalry uniform is perfectly German. The new dress, as tested on Saturday last, consists of a rounded tunic, as seen in the Illustration, with a profusion of lace ending in "frogs." The belt will henceforward be worn under the garment. The colour will be as at present—blue. In lieu of the shako, as at present, the head covering will be a felt helmet, with a white plume.

The new dress for the Heavy Cavalry has not yet been decided upon.

WRECK OF "THE DOURO" STEAM-SHIP ON THE PARACELS IN THE CHINA SEA.—(SEE PAGE 114)

OPENING OF A NEW BRIDGE AT TRAVANCORE.—THE RAJAH'S STATE PROCESSION.

OPENING OF A NEW BRIDGE AT TRAVANCORE.

Travancore, the southernmost State in the west of India, including Cape Comorin, enjoys the most agreeable climate and presents the most picturesque and undulating views of the south of India. It is bordered on the east by the precipitous Ghats, and on the west by the sea. Between these the eye loses itself everywhere in trying to follow the labyrinth of hills of all forms and sizes; some covered with fantastic granite boulders, or, perhaps, by an antique pagoda—others by luxuriant forests. The valleys which separate them, winding like rivers, are chequered by green rice-fields, bordered by cocoa-nut topes. This country is favourably known in Europe by the liberal encouragement given by its Rajah to the cultivation of the arts and sciences. The skilfulness of the native carvers is also appreciated in this country. A splendid example of their work will be remembered in the magnificent ivory throne presented to the Queen by the Rajah of Travancore, and which attracted so much notice at the Great Exhibition of 1851.

Travancore is now showing other signs of progression in the construction of bridges and amelioration of routes. The old bridge over the Karamany River, is situated near Trevandrum, the seat of Government; and, at a short distance from it, a New Bridge, more suited to the requirements of the times, has been built, and was opened in great style by his Highness the Rajah, on the 17th December, 1853. Our View shows, near the centre of the bridge, the Rajah's magnificent state car, before which the old regal carriages at Versailles, and the most brilliant of our Lord Mayor's, would have to lower their diminished heads. The car was followed by the Princes, courtiers, and native officials, in carriages and palanquins, with their attendant hosts of peons, and by a number of elephants in their court costumes. Below, on the bed of the river, were a troop of elephants, that joined with the cannon and the multitudes around in proclaiming their loud rejoicings. In the front were the Body Guards, the Rajah's Brigade, and the leading elephant, carrying his Highness's flag. Only part of the Body Guard is seen in our view; the rest of the procession is lost in the grove of cocoa-nut trees, and behind the Pavilion, where Lieut.-General Cullen, the British Resident, and other Europeans, shared in the ceremony, and waited on his Highness the Rajah.

The Bridge, though not large, is an earnest of that progress so necessary in India for the development of its resources. As such it merited the honours bestowed on the opening by the Rajah and the British Resident.

It is to be hoped that the Government of his Highness will persevere in their career of improvement: as far as the Rajah and the British Resident are concerned, everything is to be expected. The former is well versed in European science, and is himself an excellent practical chemist. His zeal for the promotion of science has been emphatically exhibited by the liberal scale on which he has for many years maintained a complete Astronomical and Magnetical Observatory; and we understand that a second station for the study of magnetical and meteorological phenomena is now in course of erection on the highest peak of the Ghats in Travancore. The latter, during a long residence in India, has bestowed his spare time in scientific observation of all kinds, including useful barometrical levellings of the greater part of India. His encouragement to all scientific works in Travancore, we believe, has been of the greatest moment. We hope to hear again from Travancore.

OPENING OF THE GANGES CANAL.

This stupendous work is hailed by the people of India as one of the grandest improvements yet effected by European civilisation and enterprise; and its completion has been accordingly attended with great rejoicing and congratulation.

The Canal was opened, with impressive ceremony, at half-past six a.m. on the 8th of April, when high and low, European and Asiatic, Christian and Heathen, for once co-operated in the same public object.

The Christian part of the community repaired to an enclosure set apart for the purpose, and there, under a *Shumeeana*, the inauguration service was performed (according to a form expressly prepared by the Bishop) by the Rev. Messrs. Hamilton, D'Aguiar, and Maddock. A large and attentive congregation of ladies and gentlemen assisted, among whom not the least impressed appeared to be the youthful ruler of Gwalior. At the conclusion of this part of the ceremony the party, headed by the Lieutenant-Governor, ascended the massive staircase in the piers of the aqueduct. Here, amid the stirring strains of a military band, and the still more impressive silence of the myriads of spectators, Mr. Colvin stepped forward, and undid the fastenings and depressed the lever of the nearest gate. The broad majestic flood rushed through the opening. At this moment the

THE GANGES CANAL, AT ROORKEE.

Lieutenant-Governor, taking off his hat, took the lead in a hearty English cheer; and when it seemed stilled at last, it was only to be renewed with greater force than ever. "One cheer more," cried Mr. Colvin. "for Colonel Cautley," and the homage was vehemently given to the hero of the day.

As far as the eye could range, swelled the murmur of the people; frenzy gradually rising till massy crowds flung bodily into the flood, and ere long the broad channels were full of delighted swimmers.

The day was appropriately ended by a dinner laid out in a tastefully-arranged marquee. At the transver-e table at the upper end, were seated the Lieut.-Governor, supported by Colonel Cautley, Sir R. Hamilton, General Archdale, Sir H. Lawrence, &c. About 70 persons sat down to dinner.

After dinner Mr. Colvin rose and proposed "The Queen: God bless her, and protect our Isle and her Army." The Chairman then gave "The Governor-General of India;" and, in the course of his address, stated that, when Lord Dalhousie arrived in India, all the plans had been arranged for the vigorous prosecution of the Canal works; but, of the millions and near £400,000 which have up to this date been expended on them, all but £170,000 have been granted under his auspices. No crisis of war has been allowed to obstruct the prompt supply. By Lord Dalhousie, the revised and enlarged estimate amounts to about £1,560,000, on which the Canal, with its branches, are now to be completed, was recommended to the Home authorities, with the expression of his full confidence and satisfaction. Mr. Colvin then proposed "Lieut.-Colonel Cautley, and the Officers of the Ganges Canal;" for which Colonel Cautley returned thanks, gracefully referring to the co-operation of Mr. Thomason, Sir Robert Hamilton, and other gentlemen associated with him in the great work. The party then broke up. A fresh impulse was likewise given by Colonel Cautley to the overseers and other subordinates of the Canal department.

The great event of the day was announced to the Governor-General by electric tele graph; the time of transit (350 miles distant) being 47 min. 20 sec. His Excellency replied—"I have rejoiced over your message. All honour to Colonel Cautley. Dalhousie."

A very interesting account of the great work has been drawn up by Captain Baird Smith, and published in English, Oordoo, and Hindi. It commences with reference to the ancient canals of the Jumna canals, eastern and western, by the Mogul Emperors, and the improvements effected on them by the British Government to the renewal and great extension of their utility. The result has been that "great tracts of country, once desert and without inhabitants, are now filled with people; the crops that were liable to perish every year from the want of rain, are now secure, and every man on the banks of the canals can sleep soundly without dreaming of the loss of his year's toil because showers do not fall, and he knows that his family is sure of bread, even though the rains should fail altogether." This was only in a small part of these extensive provinces that such a fortunate condition of security and comfort had been established. Narrow tracts east and west of the Jumna, a small area in the Deyrah Dhoon, and a portion of Rohilkhund east of the Ganges, only had been protected from the scourge of drought by the rivers having been used to supply channels of irrigation and give fertility to the thirsty land. But the great tracts of these rich provinces were open to devastation by an accidental failure of the monsoon. The great leading motive, therefore, by which the British Government was led to sanction the Ganges Canal in the first instance, and to carry it forward, from its co mmencement to its close, with all the resources in men, money, and materials that could be procured, was to secure to its people in the country between the rivers Ganges and Jumna an immunity from the pains and losses that famine brings with it. The country is inhabited by nearly six millions of souls; it is thickly covered with villages occupied by industrious agricultural communities dependent on the soil for their daily bread. Many towns and cities are scattered over its surface and filled with active merchants, busy tradesmen, and industrious mechanics, of no mean skill in their way. To preserve all these people, with their wives and children, in security and comfort, it is above all things needful that the products of the soil should be secured, and under an Indian sun, and with Indian systems of culture, a abundant supply of water is the first want of the Zemindar; such a supply the Ganges Canal will bring to the boundary plains of nearly every Rukba in these provinces."

The improvement of the land and its revenue are of course the principal objects of such an undertaking, but they are not the only ones. The canal is to be navigable throughout. The main channel and every branch will receive boats of every description

THE CHATEAU, AT PAU.

PAU.—LE VAL D'OSSEAU, LE PIC DU MIDI DE PAU, ET LES EAUX BONNES.

Of all the minor cities of France, there is none more beautifully situated in every respect, or more plentifully associated with historic associations, than Pau. The view from the Pinteau is very magnificent; but that from the top of the tower of the ancient and venerable Château embraces a still greater range of delightful rural scenery, and reveals the peaks of several mountains not seen from below.

We can call to mind no Alpine range so varied in its outline, so abrupt in its changes from peak to chasm; the general character being that of the sierra—the cloven head of the Pic du Midi, rising in all its height sheer upwards, and which seems to block the Val d'Osseau. Farther to the east rises another pic—that of Bigorre; which though a striking mountain in several respects, is by no means so remarkable as its neighbour of Pau. Between what may be called the backbone of the Pyrenees arise a range of rounded hills, with valleys and sometimes clefts, through which the giant form of the Pyrenees are visible, and then spreads out to the right and left the beautiful d'Osseau.

Amongst the variety of objects with which the Château of Pau is decorated, there is none of more interest, in several points of view, than the cradle in which Le Bon Roi Henri IV. was rocked. As soon as the infant came into existence, its grandfather, Henry D'Albret, performed two ceremonies usual at the birth of children in Bearn. Taking the infant in his arms, he touched its lips with garlic, and poured down its throat a few drops of vin de Juranson a strong and heating wine as we can testify. The cradle possesses a peculiar interest. Its construction is curious. A trophy of flags, placed on spears, and rising three at each end of the cradle, supports a cushion with drapery and a helmet, with plume of feathers balanced under this trophy hangs a large tortoise-shell, the hollow side upwards. By this shell hangs a story. In the stormy days of the revolution, when the castle was stormed and pillaged, almost everything of value and interest smashed or stolen, the Commandant of the Castle conceived the daring idea of substituting a shell of the same size, possessed by a gentleman, who was the owner of a cabinet of objects of rarity in Pau. The exchange was made at night, and with great danger, but it was successful. The original, however, was not restored for some years, and until the country had grown somewhat settled.

Another object of interest in Pau is the small house with a peaked garret roof, as shown in our Engraving, in which the famous Bernadotte, the son of a poor saddler, who, when a boy, entered as a drummer in the French Marine, and died King of Sweden, being the only instance of a monarch appointed by Napoleon keeping his kingdom, and bequeathing it to his posterity.

Leaving Pau, celebrated for its pretty women, we proceed in a calèche towards Arans—crossing the rushing and foaming torrent of the Gave kept in a continued state of turmoil by successive ledges of rock, which it one by one tumbles over. The scenery on either side is very charming. On the right, on a lofty eminence, you pass the pleasantly situated village of Juranson, with its woods and its vineyards. Below stands a succession of cottages, with vineyards, the vine branches supported by trellises, or allowed to climb up the walls, or to twine their loaded tendrils around the branches of the trees. Gradually the valley begins to contract, and limestone rocks begin to appear, from every crevice of which issue luxuriant bunches of boxwood. They would be more luxuriant still, did not the people keep continually cropping them down, as a substance favourable to the growth of the vine, for their little vineyards. In no valleys in any mountain districts which we have seen do there abound meadows so exquisitely green as those in the Val d'Osseau. They are found only on the banks of still reaches of the river: rocky banks suit them not; but wherever the streams flow slowly and sleepingly there are meadows whose excess of greenness is actually a treat to the eye.

Passing on, the road ascends a long and steep ascent, and the limestone cliffs begin to rise higher and higher; innumerable streams shoot out at every crevice; and the boxwood, which seems to favour lime-

CRADLE OF HENRI IV., AT THE CHATEAU, PAU.

stone, appears wherever it has a chance. The road now commences a series of ups and downs—sometimes descending almost to the level of the ever-roaring Gave; and at others, clinging to the sides of precipices rising two or three hundred feet above it. The opposite side (the right) is not at all so precipitous; and here we begin to see the

EAUX BONNES, PYRENEES.

marble quarries in profusion. They are generally found towards the summit of a steep slope, the former being crowned with wood of every kind. All along the slope, which develops itself in ledges, are perched not only the huts of the quarrymen, but on the lower ranges are isolated hoothies, where the inhabitants rear a few sheep, which they drive down to the meadows, and cultivate small gardens. The marble found in the limestone varies in character. In some places it is veined, in others it is pure; in one spot it will be of average hardness, at another of remarkable hardness. This valuable material the miners cut out with great care and labour in rounded and pillar-like blocks of large dimension. By a complicated arrangement of tackling they place it upon a shoot, made of strongly-clamped-together trunks of trees, and leave it to make its own way to the bottom.

And now we are entering into the region of the true inhabitants of the mountains, and discern, in their stately walk, in their stalwart forms, in their coal-black eyes and hair, and also in the picturesque gaudiness of their costumes, that they have adhered to the customs of their ancestors. They wear the hair long and flowing behind, but cut short in front. The head-dress is an ample brown cloth cap, called a *berret*, which, being arranged in several picturesque folds, not only protects the wearer from heat or cold, but forms a fitting set-off to the peculiar arrangement of the hair. Their dress is the ordinary one of the mountains, and consists of jerkin and hose, both of which are brown; while round the waist is tied a flaming red sash, generally of silk, but sometimes of woollen manufacture; while, to complete their costume, they either carry or wear a white or brown *capa*, but which, in either position, is always arranged with a true eye to the picturesque.

The women are inferior to the men, except that under all their toils they preserve their natural beauty. Their hard work, not only domestic, but afield, has stunted and prevented the development of those more

HOUSE IN PAU, IN WHICH BERNADOTTE WAS BORN.

graceful forms which under other circumstances they would possess. Their dress puts one in mind of a nun's hood and robe, which serves at once for a species of bonnet and shawl. Wherever you meet with them you find them young—middle-aged, and old, even to senility—with the eternal spindle and distaff in their hands, always except when holding the one stilt of the plough; and, degrading task, carring a sack or basket of manure upon their heads. In the former case, the spindle and distaff are necessarily laid aside, but in the latter they are busily plied, except when they are spreading the manure in the fields with their hands—a still more degrading case.

We passed through the Val d'Osseau at the period when the shepherds were driving, or rather leading, their sheep, from the mountains to lowland pastures, where they are shorn, and a goodly proportion of them sent to the slaughter-house. The shepherds are the most magnificent fellows we ever beheld—tall, beyond the common standard, broad-shouldered, and with herculean limbs: when at home, all assume the gaudy dress which we have described; but when high in the mountains with the sheep, lay it aside, when merely the jerkin and hose and an ample *capa* are assumed. They are attended, when on the hills, by dogs of a size—a vigour of muscle and power of jaw—which surpass in a remarkable degree the St. Gothard and St. Bernard breeds.

At the marble-works of Baguerre de Bigore, there is a mastiff of really astonishing size, fully four feet in height, with correspondingly large and muscular limbs, and an expression of great mildness. He is of a fawn colour, and was basking in the sun at the door of the secretary's office. When, however, he saw strangers approaching, he slowly rose, and, with a majestic step, advanced to meet us, and then turned round, and, after having led us into the secretary's office, and, as it were, intro-

EAUX CHAUDES, PYRENEES.

dneed us to that functionary, he then, with great dignity, betook himself to his dose.

But, to return to the shepherds. In pursuing our way in the calèche, we encountered several of them, with their pastoral staffs and picturesque cloaks—some leading their sheep along the road, others feeding them in the pastures down by the river side. On several of these occasions violent squalls of wind rushed from the ravines of the cliffs, bearing a blinding shower of hail and rain before them, enveloping the stalwart form of the shepherd and his flying cape in grey wreaths of mist, and putting us in mind of one of the heroes of Ossian, being borne away in one of the misty whirlwinds which that genius—admired by Napoleon as "Ossian," as being greater than Homer; but, as our stalwart shepherd, with his staff planted before him, and his flock cowering around him, he easily weathered the storm.

Advancing still further, we begin to see glimpses of the Pic du Pau de Pau, rising in slopes of snow above shaggy forests of elm, oak, and pine, whitened with the drift of the avalanonces; and then a high ridge of precipice, edged with a bank of snow, from which continually huge masses of snow fell in thunder down to the slope below. These, however, were but the outworks of the pic, which, amid a sea of minor pics, all clad in eternal snow, the cloven peaks of the Pic de Pau rose high above them—pouring down continual avalanches —which no living thing has ever touched, save, mayhap, the talons of the shrieking eagle.

A short distance on, and we are at ARUDE, a deplorably dirty little town, peopled principally with pigs, a few dirty inhabitants, and a few grimy and diminutive French officers of the Customs—the latter were there in consequence of the boundaries of jealous Spain lying but a few miles further on, the summit of the pass. Still Arnas, with all its disadvantages, lies in a perfect nest of lofty mountains, and is a circle of routes to almost every part of the Pyrenees. Through a drenching rain and an encircling fog—which would, with a less well-engineered road, have placed us in considerable danger—we pursued our way rapidly, and just as we emerged from amongst the cliffs, the rain abated, the mist rose, and we beheld before us the pleasantly-wooded valley of the *Eaux Bonnes*, lying in a nook between environing mountains, and giving its visitors a full view of the Peak of Pau. As we, however, paid our visit in the month of January, we found about twenty hotels of great dimensions entirely at our disposal; and the same thing happened to us at the magnificent Hôtel Bagaurre de Bigore, where we were told we might sleep in any bed-room we chose: but being shown, at first, into one which might have suited an English Duke and Duchess, we preferred an humbler chamber; and breakfasted and dined, next day, four of us, at a *table d'hôte*, the dimensions of the accommodation of which might have dined 200.

Proceeding from Eaux Bonnes to Eaux Chaudes, we were most agreeably disappointed to find, instead of the long line of high hotels at Eaux Bonnes, a street of modest houses, in which the lodging and boarding system is resorted to at a fair and moderate scale of prices—very different from those of the hotels of Eaux Bonnes; where, the driver of our calèche told us that, in the height of the season, English gentlemen had to pay each a napoleon for the privilege of sleeping in the lobbies; and added, that the ladies were not much better off. At the Eaux Chaudes no such extravagant abuses can possibly prevail; so that it is naturally frequented by the humbler classes. It is three miles distant from the Eaux Bonnes, and lies on another line of road. The waters of both spas possess much the same saline quality.

A. B. R.

OUR LAND, OR, THE SONG OF THE FINNISH PATRIOTS.

(*Translated from the Swedish of J. L. Runeberg.*)

Our land, our land, our Fatherland!
Thou glorious word, ring forth!
No mountain rises, proud and grand,
Nor slopes a vale, nor sweeps a strand,
More dear than thou, land of the North—
Our fathers' native earth.

Our land is poor, as all can tell;
No gold our rivers hold,
A stranger scorns its heath and fell;
And yet this land we love full well;
For us—with mountain, wood, and wold—
'Tis still a land of gold.

We love our rivers' thundering tide,
Our streamlets sparkling bright;
The murmuring of our forests wide,
Our starry nights, our summers' pride:
All, all that e'er, with sound or sight,
Has filled us with delight.

'Twas here our fathers fought the fight,
With thought, and sword, and plough;
Here—here in moments dark or bright,
'Mid fortune's smile, or fortune's spite,
The Finnish people's heart would glow,
'Twould bear both weal and woe.

And who could count the struggles dire
Which that brave people stood,
When battle raged with sword and fire,
And frost and famine spent their ire;
And who could mete their outpoured blood—
Their patient, dauntless mood?

It was for us their life-blood flowed,
Here, here, upon this shore;
'Twas here with joy their bosoms glowed;
'Twas here in sorrow they abode:
Long ere we lived, in days of yore,
Our burdens here they bore.

How blest, how precious is this spot,
All that we love is here,
How'e'er hard fate may cast our lot,
A land—a fatherland—we've got:
Oh, what on earth can e'er
Be to our hearts more dear?

And here, yes here, we see this land—
Oh, sight how full of bliss!
We need but stretch our good right hand,
And joyous point to sea and strand,
And say, "Behold this country—this—
Our fatherland it is!"

And were we called to dwell in light,
'Midst golden clouds of morn;
Where thousand stars are glittering bright,
Where tears ne'er flow nor sorrows blight;—
Still for this land so poor, so stern,
Our longing souls would yearn.

Oh, land! thou land of thousand lakes,
Of song and constancy;
Against whose strand life's ocean breaks,
Where dreams the past, the future wakes
Oh! blush not for thy poverty,
Be hopeful, bold, and free!

Thy blossom in the bud that lies
Shall burst its fetters strong;
Lo! from our tender love shall rise
Thy light, thy fame, thy hopes, thy joys;
And prouder far shall sound ere long
Our Finland's patriot song!

CHESS.

TO CORRESPONDENTS.

OLDBUCK.—The introductory chapters, by Dr. Forbes, on "Arabic Chess" (which is this week again unavoidably postponed) will be followed by a series of papers on the Mediæval Game, by Sir Frederic Madden and Mr. Staunton. These latter will include notices of all the authors you name.

ARNAUD.—Your best course is to join the St. George's Chess-club, 53, St. James'-street, Piccadilly.

A. Ke. Lambeth.—It shall have insertion shortly.

J. B.; of Bridport; J. P., of Dalston, Amateur.—Now under consideration.

STUDENT, Lincoln.—Try the tangential Chess and cigar scheme called "The Wellington," in Piccad...y. You may always get play there.

F. M. The copy of Lucena's "Repetition de Amores e Arte de Axedres" &c., which you mention as having been sold some years back by Mr. Rodd, the bookseller, was a very imperfect copy, we are told, but we have not yet been able to learn into whose hands it fell. Can any Correspondent inform us?

BERLOPOLE is warmly thanked for his very obliging attention; but the work required was not "Damiano" of which there are copies *quantum suff* but the much rarer treatise by the Spanish writer LUCENA, which is without date, though supposed to have been written about 1497.

P. T. S.—The blank Chess Diagrams, now procurable at the Office of the *Chess Player's Chronicle*, can be had, we find, of different sizes, which will be a great convenience to amateurs who are in the habit of composing problems or recording positions. Those hitherto sold have been much too small.

C. O. B. BOY. Whom you give "double check" the adverse King must be moved. In such a case it is customary to call the best course, to say "Double check."

JACK OF SHREWSBURY, CALIBAN, C. P. Q.—Your Solutions were correct, but they arrived too late for notice.

T. G. W.—Look again. You will find both Problem and Solution right.

F. C., of Calre.—Incorrect. With thanks.

G. W., of Sudbury.—They shall be reported on next week.

W. F. A., Ven. H. S. & L., and R. de B., Bristol.—Received, with thanks, and acknowledged by letter

MORTIMER.—1 The "Loose Indian Chess Leaves," by Mr. Cochrane, are not yet ready for publication. 2 Every endeavour has been made to ascertain the present owner of Lord A——'s collection of rare chess works—without success. Have you any clue?

SOLUTIONS OF PROBLEM No. 544, by R. F. T., Philodicty, Jem, S. S. T., Ernest, Student, Dalgetty, Omer Pasha, F. R. S., Philidor, Omega, Major C., M. P., T. W. N., G. W., C. P. B. Boy, are correct.

SOLUTIONS OF PROBLEM No 545 by Dorveen, J. P., Jack of Worcester, Sultan, Mido, B. A. of Oxford, R. P. (Royal Artillery), E. K. of Norwich, M. P., O. Z., Dona Perum, G. P., Dalgetty, are correct

SOLUTIONS OF ENIGMA, by Omer Pasha Sultan, Omer Pasha, D. D., Jack of Worcester, Dorveen, E. K., Norwich, are correct. All others are wrong.

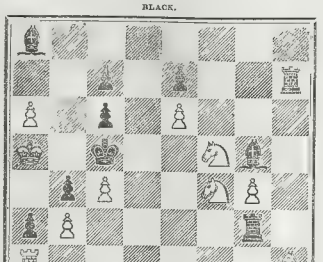
SOLUTION OF PROBLEM No. 545.

WHITE.	BLACK.	WHITE.	BLACK.
1. B to Q B 5th (ch)	K t takes B	3. R to Q B 4th (ch)	K t takes R
2. K t to Q B 3rd	K t to Q 3rd	4. K t to Q K t 5th—Mate.	

PROBLEM No. 546.

By R. B. WORMALD, Esq., of Oxford.

BLACK.



WHITE.

White to play, and mate in five moves.

CHESS IN BELGIUM.

The two instructive games which follow were lately played between Mr. Heydebrand der Lanz and a very promising amateur of Britain, Mr. Allix: the former giving the odds of the Pawn and two moves.

(*Remove Black's K B Pawn from the board.*)

WHITE (Mr. A.)	BLACK (Mr H.)	WHITE (Mr. A.)	BLACK (Mr. H.)
1. P to K 4th		17. Q K t to Q B 3rd	Q R to Q B 3rd
2. P to Q 4th	P to K 3rd	18. P to Q B 3rd	K to Q B 2nd
3. K B to Q 3rd	K t to K 2nd	19. Q to K 2nd	P to K R 3rd
4. K t to Q B 3rd	P to Q B 3rd	20. K Kt to K B 3rd	K to K Kt sq
5. P to K B 4th	P to Q 4th	21. P to Q R 4th (c)	P to Q 5th
6. P to K 5th	P to K Kt 3rd	22. Q R P takes Q Kt P	Q R P takes P
7. K Kt to B 3rd (c)	K Kt to K B 4th	23. Q takes Q Kt P	Q to Kt 3rd (c)
8. Castles	P to Q B 4th	24. Q Kt to Q B 4th	Q takes Q Kt P
9. B takes K Kt	K Kt P takes B	25. Q takes Q (d)	Kt takes Q
10. P takes Q B P (b)	B takes P (ch)	26. Q B to Q R 3rd	K t to Q 6th
11. K to K R	K t to Q B 3rd	27. Q B to Q 6th (ch)	K to Q 2nd
12. K Kt to K 4th	Q to K 2nd	28. Q R to Q R 2nd	Q B to Q 4th
13. Q to K R 5th (ch)	K to Q 2nd	29. Q R to Q R 4th	P to Q B 5th
14. P to Q R 3rd	P to Q R 3rd	30. B to Q K 3rd	Kt to K B 7th (ch)
15. Q Kt to Q R 4th	K B to Q B 4th	31. K to Kt sq	B takes Kt
16. P to Q Kt 4th	P to Q Kt 4th	32. Q R takes B	K t takes R

And Black wins.

(a) As a general principle, wherever the second player at the odds of the Pawn and two moves advances his K Kt Pawn, the first does well to throw forward his K R Pawn, and force an opening on the King's wing.

(b) This was not judicious. He should rather have played his K Kt to K Kt 5th; and he would then have had an easy game before him. Taking the Q B P now Black just the time he needs!

(c) We should have preferred playing the Bishop to K 3rd, both to prevent the advance of the adverse Q Pawn, and to bring the Bishop and Q Rook into the field.

(d) Much better to have played the Q Kt to Q 6th.

BETWEEN THE SAME PLAYERS.

(*Remove Black's K B Pawn from the board.*)

WHITE (Mr. A.)	BLACK (Mr. H.)	WHITE (Mr. A.)	BLACK (Mr. H.)
1. P to K 4th		14. K to R to K 4th	R Kt takes Q B
2. P to Q 4th	P to K 3rd	15. P takes Kt	K B to K 4th
3. K B to Q 3rd	P to Q B 3rd	16. K Kt to K 4th	K P takes P
4. P to Q B 4th (a)	K B to Q Kt 5th (ch)	17. Q B P takes P	Q to Q Kt 3rd (c)
5. Q Kt to Q B 3rd	K Kt to K 2nd	18. K to R sq	R takes K P
6. K Kt to K 2nd	Castles	19. Q R to K sq	Q to Q Kt 3rd
7. Castles	P to Q 4th	20. K B takes K Kt	K B takes Kt
8. Q to Q B 2nd	P takes K P	21. K B takes K R	K to R sq
9. Q Kt takes P (b)	K Kt to K B 4th	P (d)	
10. P to Q R 3rd	K to K B 4th	22. Q R takes Kt	Q B to K Kt 6th
11. Q B to K 3rd	Q Kt to Q 2nd	23. Q R to K 7th (e)	Q to Q 6th
12. Q Kt to K Kt 3rd	P to K R 3rd	24. B to K Kt 6th—	
13. P to Q 5th	Q Kt to K 4th	And Black succumbs.	

(a) P to K 5th is a much better move at this point.

(b) From the power and favourable disposition of the pieces he has in action, White is now enabled to prosecute his attack with great advantage.

(c) Threatening to take the Kt for nothing.

(d) Bold, but sound and well conceived.

(e) Leaving Black no possibility of extricating himself.

CHESS IN GERMANY.

Brilliant little Skirmish between Mr. CAPRAZ and another AMATEUR.

(*Evans' Gambit.*)

WHITE (Mr.——)	BLACK (Mr. C.)	WHITE (Mr.——)	BLACK (Mr. C.)
1. P to K 4th	P to K 4th	9. Q B to Q R 3rd (c)	P to Q B 3rd
2. Kt to K B 3rd	Kt to Q B 3rd	10. R to K sq	Castles
3. B to Q B 4th	B to Q B 4th	11. K B takes Kt	P takes B
4. P to Q Kt 4th	P to Q 4th (a)	12. B takes Kt	Q takes B
5. P takes P	Kt takes P	13. Kt to K to 6th	Q to K B 3rd
6. Kt takes K P	Kt takes Q P	14. Kt takes R (c)	B takes Q P
7. Castles	K to K 2nd	15. R to K 8th (d)	Q takes R P (ch)
8. P to Q 4th	B to Q Kt 3rd	16. K to R sq	Q B to K R 6th (e)

And White surrenders.

(a) This defence is rarely adopted against a powerful adversary, though it has never yet been *proved*, by analysis, to be less tenable than some others which are often played.

(b) A fine, but somewhat perilous, attack was now obtainable for White, by his taking the K B P with his Kt!

(c) He loses the advantage by this capture. Instead of taking the Rook, he should have checked with the Kt, and then have taken the Q Pawn. In that case we should have preferred his position to White's.

(d) Q to Q 2nd would have saved the game; nay, without very great vigilance on Black's side, might even have won it.

(e) Well played.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The French Emperor and Empress, after leaving Biarritz, intend to take up their residence for some days in the Château of Pau, so celebrated as the residence of Henry IV. M. Bineau, the Minister of Finance, and some of the officers of the Imperial household, have been at Pau to make the preparations.

The Emperor of Austria has gone to Ischl, but his journey is unconnected with political events.

The German journals announce the death of the Princess de Vasa, daughter of the Grand Duchess Stephanie of Baden, and mother of the Princess Carola, wife of Prince Albert of Saxony.

Santa Anna has sent the Grand Cross of Guadaloupe to Queen Victoria, the Emperor Napoleon, and the King of Prussia.

The King of Prussia arrived at the chateau of Nymphenburg on the 27th ult. The King of Wurtemberg was to meet him at Munich on the following day; and the King of Saxony and the Prince Regent of Baden were expected to join them a few days later.

Bevois-mount estate, near Southampton, the seat at one time of the great Earl of Peterborough, has been purchased of Mr. Betts, the railroad contractor, by Sampson Payne, Esq., a retired Southampton tradesman, for £24,000.

An action was lately brought by Captain Fitzroy, Aide-de-Camp, and son of the Governor of Australia, against the editors of the *People's Advocate* of Sydney, who charged him with cheating at cards. The court awarded him £25 damages, which amount was raised by public subscription in Sydney.

The sentence of death passed upon Miguel Ezquierdo, a Spaniard, at the Hertford Assizes, for the murder of a youth, by beating him on the head with a stick, has been commuted to penal servitude for life.

Overland Indian passengers are now conveyed the whole distance from Alexandria to the Nile, 66 miles, by railway. In another year, it is expected, the railway will be completed to Cairo.

The King of Portugal and the Duke of Oporto proceeded to Coburg from Berlin on the 28th ult., attended by their suite.

Lord Palmerston has, last week, installed into the office of Provincial Grand Master, to which he was appointed by the Grand Lodge of Scotland on the demise of his Lordship's father.

The members of the Royal Academy have elected S. A. Hart, R.A., to the office of Professor of Painting in that institution, rendered vacant by the resignation of the former Professor, C. R. Leslie, R.A.

Letters from Berne state that Spohr has just completed a new oratorio, entitled "Die Letzte Dinge." It has been performed with great success in the cathedral of that city.

The Rev. Dr. Hannah, Rector of the Edinburgh Academy, late fellow of Lincoln College, Oxford, has been appointed to the Wardenship of Trinity College, Glenalmond, rendered vacant by the resignation of the Right Rev. Dr. Charles Wordsworth, Bishop of St. Andrew's.

The taste for railway travelling is evidently on the increase in France. Last Saturday morning a pleasure-train started from Paris for Dankirk conveying at least 700 persons, at the very moderate charge of nine francs there and back.

The amount of gold conveyed to Melbourne and Geelong weekly by the Government armed escorts, without any reference to that brought in by private individuals, keeps with regularity to about 40,000 ounces.

The great demand in every portion of the globe for coal, both anthracite and soft, for steam purposes, has given a wonderful impetus to the coal districts of South Wales. Every coaster is in full employ, and more labour is required.

At the present moment the stocks of wheat at the port of Hull are said to amount to 80,000 quarters.

An order has been given for the suppression of machinery in certain factories in Barcelona, because they throw too much manual labour out of employment.

At the beginning of last month, the deaths from cholera, in Chicago, averaged 100 per day. The immigrants suffered most.

Yellow amber becomes every year more abundant on the Prussian coasts of the Baltic, and the collection and sale of it now form an important branch of commerce.

The parks or grounds formed within the metropolitan district since 1840 are—Primrose-hill, containing 40 acres, at a cost of £21,445; Kennington-common, 18 acres, costing £3,655 up to March, 1841; Victoria-park, containing 265 acres, at an expense of £129,718; and Battersea-park, which has cost £224,272.

The Hon. A. D. Smith, Trustee of the Supreme Court, Wisconsin, has given a decision which declares the Fugitive Slave-law to be unconstitutional and void.

A verdict of manslaughter has been returned against the pointsman whose neglect caused the death of the driver and fireman who were killed in the collision on the London and North-Western Railway, last week.

The *Alta California* states that a coal dépôt will be established at Simoda, in the island of Japan, for the convenience of steamers running from California to China. The Japanese promise to supply what ever quantity of coal may be required.

The Trade and Navigation Returns, published this week, show that war has not lessened our exports. For the first six months of 1854 our exports have amounted to £24,366,000 sterling. Last year, during the same period, they amounted only to £21,866,000.

It is said that one of the measures of next session will be a proposal for the establishment of a penal settlement at Lord Howe's island, for the purpose of receiving transported offenders from the Australian colonies.

The National Scotch church, Crown-court, Covent-garden, is now closed for public worship for the next month for the purpose of enlargement.

The inauguration of the statue of the late Charles XIV. (Bernadotte), when the inhabitants of Upsala have had erected in the park of Carolina, took place the other day.

A collision took place on the Manchester and Liverpool Railway, about a mile and a half from Liverpool, on Monday evening, by which a number of the passengers were seriously injured.

A telegraphic despatch received at Genoa, on the 25th, announces that the submarine cable has been successfully brought to Capo Corso. The paying out of the whole length of the cable took thirty-four hours; the greatest depth was 798 metres.

The total number of deaths in the island of Barbadoes, to the 10th of July, was estimated at fully 15,000, or one-ninth of the whole population.

Baheerood Dowlah, a wealthy Brahmin, contemplates the formation of a railway company, to make a line between Lucknow and Cawnpore.

The Court of Mecklenburg-Strelitz has gone into mourning for fourteen days, for the infant son of Duke George, who survived its birth at St. Petersburg only three hours.

The West India mail steamer, *Tamar*, which arrived in the Thames the other day, had £150,000 in specie on board.

Taking advantage of the late advance of 20s. per ton in the price of iron, the workmen in Staffordshire have made a demand for an advance of 6d. per day, which the masters refuse to give.

Sixty-three Roman Catholics have publicly renounced the creed of that Church in St. Paul's, Bermondsey, since April 27.

Mrs. Cavendish, the wife of the pretended Duke of Devonshire, who was acquitted the other day at Paris on a charge of swindling, has been convicted by the Court of Appeal, and is sentenced to eighteen months imprisonment, and a fine of fifty francs.

The *Tamar* brings intelligence that an English vessel had been boarded and plundered not far from Porto Rico by an armed vessel, showing no national colours. The *Devastators* and a French man-of-war were on the look out for her.

At the polygon of Lorient, a cannon burst last week, and killed nine artificers on the spot; eleven others were wounded.

An encaustic tile floor was discovered at the iron warehouse of Mr. Page, of Westgate-street, Gloucester, last week. The relic was found by some men who were making an excavation for a drain, some three feet below the present surface of the ground. The tiles are in a perfect state of preservation.

The French Government is taking measures to encourage the production of cotton in the colonies, as in America, as well as in Algeria.

A Court mourning of two months has been ordered in Spain, in consequence of the death of the Infante D. Fernando, youngest brother of the King Consort.

The waters of the Vistula, in Poland, have been so swollen by the continual rains, that they rose in some places more than five feet above the ordinary level in Cracow the inundation covered parts of the railway line, and interrupted traffic on the station.

Considerable damage has been done on several of the French railroads by the thunder-storm and heavy rains of last week. Extensive slips have taken place on the Paris and Lyons line, causing, in some instances gaps of 200 yards in extent.

Some small nuggets of gold have been found on the frontier near Graham's Town, but nothing positive is known yet as to there being large deposits of gold. Government has offered £1000 reward for further discoveries.

Address, Messrs. BEECH and BERNALL,

THE RE-BUYE,

63 and 64, Edgware-road, London.

ESTABLISHED IN 1841.—
By Appointment,
TO THE LONDON
GENERAL MOURNING WAREHOUSE,
Nos. 247, 248, and 251, Regent-street.

The Proprietors of this Old-established Establishment deem it necessary to submit that, from their having been so many years engaged in the exclusive

SALE OF MOURNING ATTIRE,

and from the immense quantity transacted in their warehouse, and from the numerous commands they receive to attend

in various parts of the country,

they are enabled to sell their goods

At Much Lower Prices

than any other house.

Messrs JAY have ever deemed it unnecessary to quote prices, from a conviction that it is calculated to mislead the purchaser: but they beg to offer the strongest assurance that whatever may be purchase at their Establishment will possess the value that is paid for it and that, in addition to their

COURT,

FAMILY, and

COMPLIMENTARY MOURNING,

they have every variety of quality and prices, and suited to any grade or condition of the community.

Widows' and Family Mourning

is always kept made up; also,

Mourning Jewellery.

The London General Mourning Warehouse,

247, 248, and 251, Regent-street.

STAYS SUPERSEDED.—Stiff Stays destroy nature's grace, produce deformity, and implant disease. MARTINA'S ELASTIC BODICE is without whalebone or steel, at the same time furnishing a sufficient support, and imparting to the figure that natural elegance which is only developed under the pressure which is the great aim, as mischief is the certain end, of all kinds of stays. The lines and outlines of the figure are thus spared, by a simple fastening in front. Can be sent by post. To be obtained only of the Inventor, Mrs. MARTIN, 364, New Oxford-street. A Prospectus, &c., on receipt of a stamp.

A SINGLE STAY

Carriage Free

To any part of the kingdom,

On receipt of a Post-office Order.

Size of the Waist required.

Drawings sent on receipt of a prepaid stamp.

The Elastic Bodice . . . . . 21s. ditto.

C. and H. G HASTIE'S BODICE, with simple fastening in front, is strongly recommended for Ladies

Families waited upon by experienced persons, within ten miles of 309, Oxford-street.

CARTER and HOUSTON, Stay Manufacturers and Importers, 98, Regent-street, 3, Blackfriars-road, 3, Cornhill, Somerset-street, Portman-street, and at South Gallery, Crystal Palace, Sydenham. Established 1811.

THE GREATEST NOVELTY of the SEASON.—The CASPIATO, or Folding Bonnet, a new invention, for which J. and F. SMITH have Her Majesty's Royal Letters Patent, combines convenience with elegance.—It is packed in a box 14 inches deep, thus dispensing with a bonnet-box; it is plain or trimmed in ten highest elegant Show-rooms, 181, Regent-street, opposite Beak-street, London.

DRAWING-ROOM, Dining-Room, and Library CURTAIN and TABLE DAMASKS.—JACKSON and GRAHAM respectfully call the notice of the nobility and gentry that they are in direct communication with the looms in the North, in most descriptions of Foreign and German, and have the largest and most beautiful STOCK in London of the NEW DAMASKS, which they are selling at a reduction of 4s. per yard below other houses, which they offer at now extraordinary prices than the Trade can command. Also, 1,500 pieces of Rich Damasks, 140 inches wide, at 4s. 6d. per yard; and all the new and tasteful designs of British manufacture together with a choice selection of Swiss and French muslin, lace and muslin curtains, of new and elegant designs.—83, 87, and 88, Oxford-street.

BEDDING.—ECONOMY, DURABILITY, and COMFORT.—The GERMAN SPRING and FRENCH MATTRESSES make the most elastic and softest bed. A price list of every description of Bedding, Blankets, and Quilts, sent free. Bedsteads.—Arabian, Four-post, French, and other styles, in iron, japanned, and brass; patent iron and brass Bedsteads on the most improved principle. Cribs, cots, &c. Bed-room Furniture of every description, in Mahogany, Birch, Bedding, Bedstead, and Bed-room Furniture Manufacturers, 13, Oxford-street, London.

SHIRTS for BOATING and MORNING Wear.—[illegible] new Patterns of Shirting Flannels, in stripes and checks, [illegible] the half-guinea Flannel Shirts, [illegible] 41s. per dozen, or sent on receipt of two stamps. GEORGE HUNNUM, 217, [illegible], Improved Shirt-makers, 5, St. Martin's-le-Grand, Cheapside.

SHIRTS (IMPROVED), 31s. 6d. and 37s. 6d. the Half-Dozen. They are cut upon a new principle and are the best fitting and wearing Shirts extant. Drawings, prices, and particulars gratis, and post free. HODGKINS, MICKINSON, and BOURNE, Improved Shirt-makers, 95, St. Martin's-lane, Charing-cross.

SHIRTS.—Patterns of the New Coloured Shirtings, in every variety of Colours.—Upwards of 200 different styles for making FURZE'S SUPERBA SHIRTS, including super, Opera, Dress, and Fancy Shirts, sent post free on receipt of a stamp. Price 37s. the Half-Dozen, if washed and ready for use, the Lace of Frills and Wristbands of real manufacture and post-free. Richard Furze, 38, Poultry.

PARIAN and JASPER SHIRT STUDS.—A series of beautiful new designs just produced, forming the lightest and most admired studs of any now in fashion. Price 6d. by any address on receipt of 8s. in penny stamps, direct from the Manufacturer, Mr. HENRY TIMMIS, Burslem, Staffordshire.

WANTED, left-off CLOTHES, REGIMENTALS, &c., for Australia.—Mr. and Mrs. JOHN ISAACS, of 319, Strand (opposite Somerset-house), give 130 per cent above all other dealers for every kind of Ladies', Gentlemen's, or Children's Clothes, &c., &c. Letters immediately attended to, or parcels being sent, the utmost value examined. Established 5 Years.

WATERPROOF GARMENTS, at very Reduced Prices.—As these Waterproof Garments are coming into general use the high price hitherto charged having been an obstacle, Mr. SILVER and CO. have much pleasure in announcing a large saving. That they are sure and to offer, at a great saving of cost to the Purchaser, thoroughly seasoned, perfectly waterproof, and summer wet weather Coats, walking and driving Capes and Leggings, which are unequalled for use in travelling by sea and land; likewise Waterproof Rugs, for soldiers or settlers, and Waterproof Sheeting for carriages, &c., and all are unobjectionable to rain in any climate. Purchasers of twelve articles and upwards will be presented with a Waterproof Cloth Watch, opposite her Majesty's Dockyard. Warehouses at 66 and 67, Strand; and 5, Buckingham-street, Strand. Factory, 5, Buckingham-street, Liverpool. S. W. Silver and Co., Outfitters and Contractors.

SAVE your WAR TAXES by purchasing your CLOTHING at SAMUEL BROTHERS, 29, Ludgate-hill.—The Gentry of their several districts are solicited to favour us with a call, to make a guarantee of the greatest economy, with every wish a gentleman can require from an establishment that has for its attendees, their sole aim being to supply superior gentlemen's Dress at the most reasonable prices. The Supplies Department is conducted on S. B.'s original system, charging for the cloth separately from the making, thus informing their patrons of the value of the cloth they have for their money. Every article is marked in plain figures, from which no article is executed in a guarantee that satisfaction is certain.

[illegible] MADE CLOTHES REGULATOR.—An advantage not to be obtained at any other Establishment.

CAUTION.—Messrs. ALLSOPP and SONS find it necessary to caution the Public, and especially Shippers of their Ales to the Colonies, against frauds committed by parties in selling spurious Ales under their names.

Messrs. Allsopp and Sons have felt compelled, by the extent to which the commercial practice has grown, to proceed, in several cases, by obtaining injunctions from the Court of Chancery, and have ultimately been driven to prosecute criminally, for the protection of this offence. They beg to call attention to the case of "The Queen v. Gray and Scaife," in which Lord Campbell summed up the parties charged to twelve months' imprisonment, with hard labour.—Vide Times of the 29th May and "Morning Advertiser" of the 19th May.

Messrs. Allsopp and Sons will thank all persons having reason to doubt the genuineness of any article sold under their name, to send them the earliest information, as only by such means can they be able to prosecute the parties.

Messrs Allsopp and Sons will be happy to furnish the names of respectable houses, where a supply of their Ales may be depended on, at home from their Brewery.

Brewery, Burton-on-Trent.

BEST SPERM CANDLES, 1s. 6d. per lb.; Composites, 8d., 10d., 11d., and 11½d.; Moulds, 9d.; Store Candles, 8d. and 9d.; Sperm Oil, 10s. per gallon. For cash. SAM. P. PAYNE and SON'S, 65, St. Martin's-lane, Charing-cross.

CANDLES FOR EXPORTATION.

PATENT BELMONT SPERM, and Patent Sicilian Sperm for tropical climates. Patent Australian Tallow. Patent Distilled Palm and Composite Candles. Patent Cocoa-nut Oil and Cocoa-nut Oil Soap. Prince's Patent Export Night Lights. Price's Patent Export Lamp Night Lights. PRICE'S PATENT CANDLE COMPANY, Belmont, Vauxhall, London.

PRICE'S PATENT CANDLE COMPANY have been compelled to proceed in Chancery against two London Houses for infringing their Patent, and in habitually selling the Candles of other manufacturers as those of the Company, and their substitution has been sanctioned by powerful dealings as well as by commons as the supposed commission of similar frauds by many other dealers. The Company will not permit a repetition of the gratify of such frauds seem not to be generally known. In the cases above referred to, although special circumstances induced the Company to accept as damages the payment of small fines to a charity, the sum of the Company paid by the Defendants, in addition to their own costs, amounted to £123 10s. 4d. and £68 10s. 3d. In a previous case, in which the law was allowed to take its course, the Defendant was compelled to account on oath for all the profits of his business for [illegible] years, extending over some years, and paid £150 damages, and £256 2s. 7d. costs. A similar fine was recently inflicted on Mr. Allsopp, of Burton, was recently punished criminally by Lord Campbell, with twelve months imprisonment and hard labour. The Company hope that this intimation will relieve them from the necessity of bringing forward any further proofs of proceeding in Chancery. Vauxhall Bridge-road, Pimlico.

OSLER'S CRYSTAL GLASS CHANDELIERS for GAS and CANDLES.—A great variety of the newest and richest designs always on view; also, a large assortment of Glass Lustres, Decanters, Wine Glasses, Jugs, Vases, and every description of Table Glass, at very moderate prices. ROYAL SHIP HOTEL, DOVER.—J. BIRNINGHAM, Posting-Master by appointment to her Majesty, begs to inform the Nobility, Gentry, and Travellers generally, that he has just completed the above Hotel with numerous additions and improvements, the object of which has been to secure such arrangements with regard to the business and to the patronage, and the convenience of the several suites of rooms, as must render "The Ship" indisputably superior to all similar establishments. To his tariff of charges J. Birmingham begs to invite special attention, as well as a comparison with that of other hotels. While deeply grateful for the distinguished patronage with which he has hitherto been favoured, he begs to intimate that no pains or its permanency are founded solely on the superiority of his accommodations, and the peculiar moderation of his charges; on this confidence he begs to expect or solicit it. J. Birmingham will be happy to forward by post the particulars of his tariff, and he will also be prepared, on previous notice being given, to send carriages and post horses, free of charge, for the purpose of conveying families or individual visitors to his establishment.

THE ILLUSTRATED LONDON NEWS

No. 697. VOL. XXV.] SATURDAY, AUGUST 12, 1854. [WITH A SUPPLEMENT, SIXPENCE

CLOSE OF THE SESSION.

THE Session of Parliament opened in February, amid considerable curiosity as to what England, through the intermedium of the Queen and Legislature, would say. It closes in August, amid still greater curiosity and anxiety as to what England will do. The great war, that was only a probability when the Session commenced, became a formidable reality long before its close; and, although the interval has been singularly prolific in negotiations, and as singularly barren of results anticipated by the impatient public spirit of the two greatest nations in the world; yet, if we calmly and impartially compare the state of Europe as it existed in February with what it is now, we shall find abundant reason to confess that the time has not been spent in vain. Victories have been gained, not the less valid or endurable because they have been the triumphs of reason and sound policy, achieved without the expenditure of human life. The Czar has not only been foiled by the moral power of Great Britain and France, but he has been beaten in every encounter against an enemy whom he despised. Though he has carried on the war with the utmost possible vigour, the only advantage he has gained over the Turks has been at Sinope; an advantage which it would be an abuse of words to call by any other name than a massacre and an infamy—dishonourable to his arms and disgraceful to his character. In every real conflict with the Ottomans he has been ignominiously defeated by inferior numbers. His weakness has been proclaimed to the uttermost ends of the earth. He has lost the prestige of centuries, and has dimmed the glory of his arms beyond the power of himself and his immediate successors to re-establish it. He stands before Europe a convicted bully—strong to defend his own territory, but powerless in offensive warfare. He cannot coerce or overawe a state that has not a tithe of his resources, or a millionth part of his braggadocio. The only present result of his ambition has been to humble Russia and to exalt Turkey, and he has been rightly served in both respects.

Long before the official declaration of war against him by this country, and, in fact, as soon as war was known to be inevitable, public opinion, many months in advance of that of statesmen, declared the capture of Cronstadt and Sebastopol to be the main objects of hostility—essential alike to the punishment of Russia, and to the security of Europe. Statesmanship, in due time, arrived at the same conviction. Though neither of these great results has yet been attained, the public can scarcely doubt that the measures already taken will be sufficient to secure one, if not both, before the lapse of many weeks. It may please the whim of "jokers of jokes" to represent this great country as idle and inert, because it has not done with its magnificent fleets and armies what the judicious, as well as brave commanders of those fleets and armies have not yet found a suitable opportunity to do; but practical men look at means as well as ends, and admit that all great results are not, o necessity, noisy ones. It is easy for men in clubs, and for fireside critics and readers to accuse our fleets and armies of inactivity, but the common sense of the country measures events by a better standard. The commanders of both services look to their duty, and will take their revenge on such critics by rendering their criticism of no account. They will excuse the impatience of their countrymen for the sake of the patriotism which it involves, and will do the right thing at the right time however much they may be "worried" or "flurried" in the meantime by advice that is not asked, and that could not be taken if it were.

Cronstadt and Sebastopol are still the prizes that are to be won. They are, perhaps, as strong as Russia would have the world imagine. Perhaps they are only bugbears and "make-believes," like the Czar himself. In either case they will not frighten the brave men whose duty it is to take possession of, or to destroy, them. Those who are of opinion that the summer has been utterly wasted should remember with what marvellous celerity the splendid fleet in the Baltic was got ready—with what a noble army it is supported—

THE NEW HOUSES OF PARLIAMENT.—LIBRARY OF THE HOUSE OF COMMONS.—(SEE NEXT PAGE.)

and how effectually it holds the power of Russia in check, and renders her impotent for offence throughout the whole north of Europe. Hitherto its business has been to watch and to wait. The day is approaching, if it have not already come, when its business will be to strike. Even to be ready to strike in such a cause, and with such an opportunity, is of itself a result of which the country may be proud. But whatever may be the course of events in the Baltic, Sebastopol is the place that appears destined to bear the first weight of our arms. The Czar is, no doubt, well prepared for his enemies in both of his strongholds. No announcement of the intentions of the Allies, whether conveyed through the mouths of Ministers or of statesmen, or through the columns of the press, will afford him much information of which he was previously ignorant. We need, therefore, be under no alarm for any premature disclosure of our intentions, even if the electric telegraph—for once telling the truth—should communicate to him at St. Petersburg the fact that from 80,000 to 100,000 English, French, and Turkish troops have commenced a landing on the eastern coast of the Crimea, and that Admirals Dundas and Hamelin support the operation by the blockade, if not by the bombardment, of Sebastopol. This country has threatened nothing that it is not in a position to perform. British statesmen and generals have never yet failed for want of keeping their own counsel. They will not, we may be sure, fail in the present instance. The Emperor, though both forewarned and forearmed, can offer no lengthened or effectual resistance; and the capture of Sebastopol and the total destruction of the naval power of Russia in the Euxine are results that no longer loom dimly in the future, but that may reasonably be anticipated from day to day. The operations have already begun; and, although they may prove both difficult and dangerous, they will offer no obstacles that courage and patience cannot surmount.

Parliament may therefore separate with an easy conscience as regards the war. It has nothing with which to reproach itself on that score. It has voted the funds required. It has expressed its confidence in the patriotism and energy of the nation, in the bravery of the army and navy, in the ability and honesty of the Ministry, and in the honour and zeal of our allies in the struggle. Although its members are dispersing as quietly as if Europe were not in a blaze, and as if no extraordinary events were in progress to stamp the policy of civilised nations for a century to come, the Legislature has left nothing undone that was expected of it. Nothing remains for it but to imitate the example of the people whom it represents, and to watch the issue. Should further sacrifices be required of it, it will be ready, like the people, to meet them. It will, in case of need, be called together before the usual period, without undue excitement, without irritation, and without delay, to do its part in consenting to the imposition of new burdens, and in watching over the national welfare. In such facts as these lie no small portion of the national strength; and the prestige of the British name. Individuals, both in and out of Parliament, may be factious, captious, and unreasonable, but the decisions of the majority are sound. The honour of the British name is thus in safe keeping, whatever may be the real sentiments of individuals in the Ministry, or however great may be the divergences of popular opinion in the Parliament

The domestic history of the Session is a short one. The war has so monopolised and absorbed attention that neither time nor inclination has been left for matters of internal policy. Fortunately, however, they will all keep, and be none the worse for the delay. The cause of Financial and Commercial Reform is postponed, but not abandoned. In quieter times it will be taken up where it was left; and it is possible that not even the war itself will prove sufficient to throw it into abeyance. We have allies with whom we can negotiate on the basis of mutual Free-trade, even though war may be raging all around us. The question of Parliamentary Reform is another that may well stand over until the nation shall have leisure to consider it. No possible damage can accrue from the delay which it has experienced. The measures for the Reform of the Universities and for the purification of our Electoral System, that have wound their dilatory and unsatisfactory way through both Houses during the Session may be dismissed with brief notice—as neither good nor evil; as mere stop-gaps and temporary expedients, that will last until Parliament shall be in a more suitable disposition to reconsider them. The Session has not been brilliant; but if it have strengthened the hands of the Executive in carrying on with vigour and energy one of the most formidable wars the country was ever engaged in; if its liberality have inspired our allies with confidence and our enemies with terror, it may claim the merit of having been in a high degree useful. That it may not be found necessary to call it together again before its usual period, is the best wish we can form for its members, both individually and collectively.

THE HOUSE OF COMMONS' LIBRARY.

In No. 545 of the ILLUSTRATED LONDON NEWS, we illustrated one of the superb apartments provided in the New Houses of Parliament for the Library of the House of Lords. We now Engrave one of the apartments, of corresponding decorative richness, appropriated to the Library of the House of Commons. They are the main apartments upon the principal floor of the river front.

The Commons' Library is entered by a door immediately opposite the fireplace: the quiet, graceful appearance of these rooms, four in number, is particularly striking. Here, ranged on its shelves, are about 50,000 volumes: which are added to yearly, by a grant by Parliament of £300 per annum, including the presentations made by the present Emperor of the French, who continues what his predecessor did, in favouring us with the debates in the French Chambers; as does also the King of Prussia. There are also six copies of Hansard's voluminous works, and nearly 5000 Blue Books amongst them. The books during the night are protected by blinds which are drawn down: they run on spring rollers.

The ceilings are of oak, paneled and painted. In the centre of each are the initials V. R., surrounded by a yellow border and fleur-de-lis in pale green, the ground being of a dull red colour. Each room has two chandeliers, lighted by eight gas-burners.

The rooms can be closed from each other by means of richly-flowered curtains or *portières*. The series of panels above the bookcases will hereafter be filled with portraits of our distinguished statesmen. Upon a future opportunity we may return to the illustration of the furniture and fittings of this superbly-appointed apartment.

We take this opportunity of noticing the improved edition of the authorised description of the New Palace, lately issued by Warrington and Co.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The entire programme of the Fête of the 15th being now arranged, we give the details of it in as succinct a form as possible. At six o'clock in the morning, the salute of the Invalides will fire salvos. A distribution of provisions, clothing, &c., will be made among a certain number of poor families in the twelve *arrondissements* of Paris. At two o'clock the day-fête will commence, simultaneously, at the Champs de Mars, the Barrière du Trône, and (contrary to what was first stated) on the Seine, between the Pont Royal and the Pont d'Iéna. At the Champs de Mars the actors of the Cirque will give a representation of the raising of the siege of Silistria, and the death of Mussa Pacha; and an *intermède* will take place, consisting of gymnastic and other exercises. At half-past three, an immense balloon, bearing on its zodiac the names of Turkey, France, and England, will rise from the Champs de Mars, which is to be adorned with their colours, and allegorical figures of the Allied nations; and at the same time will ascend a flotilla of 300 small balloons, each bearing the name of one of the vessels of the Allied fleet. At the Barrière du Trône will be established two theatres, which will alternate their representations from two till six o'clock; and four poles, garnished with various prizes, will be erected on the same locality. On the river, different nautical exercises, consisting of jousts, regattas, &c., will take place from two till four. At two o'clock the Opéra, the Théâtre Français (at which Mdlle. Rachel will appear), the Opéra Comique, the Gymnase, the Porte St. Martin, the Variétés, the Palais Royal, the Gaîté, the Ambigu Comique, the Cirques de l'Empereur et de l'Impératrice, the Hippodrome, and the Arènes Nationales, will all give gratis representations. The *fête de nuit* will begin at seven o'clock, by a concert in the Tuileries gardens, on an orchestra raised in the centre of the great basin of the parterres, opposite the Pavillon de l'Horloge; and another concert will take place at the same time on the Place de l'Hôtel de Ville. During all the soirée, military bands, stationed in different parts of the Champs Elysées, will execute various pieces. At nightfall, the Jardins des Tuileries, the Place de la Concorde, the Grand Avenue, and the Rondpoint des Champs Elysées, decorated with open portioces, in the Moorish style, triumphal arches, garlands, lustres, vases, and banners, will be illuminated, as well as the Cours la Reine, l'Allée d'Antin, the Arc de Triomphe de l'Etoile, the Barrière du Trône, &c., and the principal public edifices. The Hôtel de Ville, decorated during the day with flags, will, at night, bear a magnificent illumination in gas, representing the vessel of the city. At nine o'clock fireworks will take place on the Quai d'Orsay representing the Palace of the Louvre, terminated with the equestrian statue of Napoleon I., attended by the figures of Peace and War; and at the Barrière du Trône, imitating fiery cascades falling from the columns of the arch, and a luminous globe, decorated with stars and allegorical designs.

Considerable uncertainty exists as to the return of the Emperor and Empress for the Fête. The benefit her Imperial Majesty's health has obtained from her stay at Biarritz, and the prevalence of cholera in Paris and its environs, seem to render it by no means improbable that she, at least, will prolong her stay there; but it is said by some that the Ministry urge so strongly on the Emperor that he should be present on the occasion, that it is likely he will yield to their entreaties. Be this as it may, the *Moniteur* officially states that no reception will take place at the Tuileries on the event of the Fête.

Accounts from various quarters of the progress of the cholera, though in many instances exaggerated, prove its ravages to a most painful extent. At Marseilles it has been peculiarly severe; and to such an extent has the panic it had caused extended that the *adjoint* of the Mayor and other public functionaries have been dismissed from their posts, in consequence of having abandoned them under the influence of terror of the disease; and it is said that measures will also be taken against certain *avocats* guilty of a similar desertion. In some parts of the country, the panic is so great among the peasantry that it is impossible to obtain hands for the getting in of the harvest.

On the 1st inst. died the Baron de Vitrolles, whose name figures with such honour in the "History of the Restoration," and whose career has been through life a most noble and distinguished one. M. de Vitrolles was on the point of attaining his eightieth year at the period of his decease.

This is, in Paris, the dead season, *par excellence*. *Les Eaux* swallow up—figuratively, be it understood, dear readers—every family and every individual who can, during the course of the rest of the year, scrape together sufficient to accomplish the journey to Havre, Dieppe, Boulogne, Tronville, or the German waters—though the latter are in the minority. The waters of the Pyrenees seem to be in particular favour this season. Among a number of distinguished names stands that of M. Thiers, who is established for the moment at Cauterets, suffering from an affection of the larynx, which does not, however, in any way interfere with his literary labours; on the contrary, the retirement and tranquillity in which he resides have condnced much to their advancement, and it appears that his important work on Italy, and on the subject of Art in the Sixteenth Century, advances rapidly during his sojourn. M. Villemain, whose retreat extends no further than the environs of Paris, is preparing a second volume of his most interesting "Souvenirs Contemporains," for the commencement of the winter.

The five-act comedy, written by M. A. Dumas fils, for the Gymnase, has, as we stated, been taken by the Théâtre Français, where it will, ere very long, make its appearance; and a report exists that a treaty is to be drawn out, expressly stipulating that the young author is to be retained solely to write for the theatre in question for a certain period.

A new journal, *Le Satan*—whose directors, bearing such names as Méry, Roger de Beauvoir, H. Murger, C. Mouselet, P. Audebrand, &c., has in this list alone a certain guarantee of unusual merit, if not of as certain success—has made its appearance. Two other journals of a similar character—an epigrammatic and sarcastic turn—are announced to follow—*La Chauve-Souris* an evening paper, and *La Fronde*. The Government, it is said, looks with much tolerance on this sort of pub-lications, forming, as it does, a kind of safety-valve, where the discussion of political subjects is interdicted.

RENEWAL OF DISTURBANCES IN SPAIN.

The news from Madrid is not very satisfactory. Queen Christina is still in Madrid, nor is she likely to make her escape without disgorging some of her ill-gotten wealth. It is reported that the barricades are up again. O'Donnell declares that, having risked his head mainly against the iniquities of the Queen Mother, he will not lay down the sword till she is brought to justice, and made to refund, at least, some of the money of which she has robbed the nation. The difference between him and Espartero turns mainly, it is reported, upon this point. Espartero had arranged that Christina should be safely conducted to the frontier by a military escort, but O'Donnell, in his capacity of Minister at War, refused to furnish the troops.

The disturbances at Barcelona are still very serious. Letters received at Madrid on Monday evening, say that for the space of ten hours a desperate fight went on between the troops and the manufacturing operatives.

In the midst of all the troubles in Spain, one happy result is, that the price of bread has fallen to the extent of 2 or 3 maravedis per pound. Cholera has appeared at Cadiz, Seville, and Malaga.

M. Bravo Murillo, formerly President of the Council of Ministers of Spain, and General Lara, ex-Captain-General of Madrid, have arrived at Bayonne

UNITED STATES.

The steam-ship *Asia*, which left New York on the 26th, arrived at Liverpool on Sunday. The political intelligence she brings is more than usually important.

The Senate had ratified a treaty with Russia, securing the neutrality of the United States in the European War, and acknowledging the principle that the neutral flag protects vessels and cargo.

The *New York Herald* makes the positive announcement that despatches from the Russian Government arrived in the Pacific on the 25th of July, offering to the United States the whole of the Russian territory in North America.

In the House of Representatives, on the 25th of July, 870,000 dols. were appropriated for the expenses of the Japan expedition.

From Honolulu we learn that on the 20th of June the Russian frigate *Diana* sailed thence to the northward, followed in the same course on the succeeding day by the British sloop-of-war *Trincomalee*, evidently watching her.

The Russian frigate *Aurora* had left the port of Callao for the Sandwich Islands, and the Allied ships *Forte*, *President*, *Eurydice*, *Obligado*, and *Virago* were to leave the same port (Callao), their destination being unknown.

Letters from Central America report the bombardment of San Juan, in Nicaragua, by the United States sloop-of-war *Cyane*, for six hours, after which a landing was effected, and the city burnt to ashes. No loss of life was sustained. The alleged offence was an insult to Mr. Borland, United States Commissioner.

The news from California is of the most favourable description, rich diggings having been discovered in various localities, and the mines being attended with excellent success. Two millions of dollars are reported *en route*.

THE OVERLAND MAIL.

The steamer *Australia* arrived at Trieste, with the Indian Mail, on Tuesday afternoon. She brings advices from Calcutta, June 27; Madras, July 5; Singapore, June 1, Hong-Kong, June 22; Singapore, June 29; Penang, July 3; Bombay, July 11. The Russians have taken possession of Kulan, near Bokhara. Business in India is dull. Great distress in the North of China. Shiklung is in the hands of the insurrectionists, who threaten Canton with an attack.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, AUGUST 10

Month and Day.	Corrected reading of Barometer at 9 A.M.	Thermometer: Highest in the Day.	Thermometer: Lowest in the Day.	Mean temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°	°			Inches

„ 10	29.780	75.6	55.0	63.1	+ 1.4	72	CALM.	0.09

Note.—The sign — denotes below the average and the sign + above the average.

The corrected reading of the barometer has varied but little during the week: the highest reading was 30.04 inches, on the 7th; and the lowest, 29.60 inches, on the 10th. The mean for the week, at the height of 82 feet above the level of the sea, was 29.932 inches.

The mean daily temperatures of the 4th and 5th are the lowest mean temperatures at present recorded on those days, the register extending back to the year 1814; that of the 6th is the lowest recorded on that day since the year 1835, when it was 54°; the nearest approach being 57·2°, in 1837; and that of the 7th is the lowest since 1845, when the mean daily temperature was 57°.

The mean temperature of the week was 58·9°, being 3·9° below the average of the forty-eight years.

The range of temperature during the week was 26·3°.

The mean daily range of temperature during the week was 14·9°.

Rain fell during the week to the depth of six-tenths of an inch.

The weather, on the 4th and 5th, was dull, the sky overcast, and rain falling. From the 6th to the 9th it was fine, the sky being tolerably free from cloud; and on the 10th the weather was dull, and the sky overcast. The air has frequently been misty. JAMES GLAISHER.

Lewisham, August 11, 1854.

HEALTH OF LONDON.—During the week ending last Saturday, the births of 1603 children were registered within the metropolitan districts: of these, 776 were males and 827 were girls; exhibiting an excess of 76 boys and 63 girls over the average of the nine corresponding weeks of the nine preceding years. The number of deaths during the same week was 1456: of these, 706 were males and 688 were females; showing excesses of the deaths of 160 males and 160 females above the average of the ten corresponding weeks of the ten preceding years, corrected for increase of population. The present return, therefore, exhibits a mortality considerably in excess of the average; the result arising from cholera, which it will be seen with regret, continues to make progress in the metropolis. The zymotic or epidemic class of diseases, rose from 422, in the previous week, to 731 in this week. Of these 64 are ascribed to scarlatina, the deaths being all under fifteen years of age (the average is 45). Of these, 142 deaths are referred: 124 occurring under 15 years; 6 between 15 and 60; and 12 above sixty years (the average number is 119). To cholera, 399 deaths are ascribed: of these, 146 deaths occurred under the age of 15 years; 213 between 15 and 60, and 41 above the age of 60 years. To typhus, 44. To tubercular diseases, 198; of these, 178 are due to consumption. To diseases of the brain, nerves, and senses, 124. To diseases of the heart and blood-vessels, 24. To diseases of the lungs and of the other organs of respiration, 78. And to violence, cold, privation, and intemperance, 10 deaths are attributed.

THE WHITEBAIT DINNER.—The following members of the Ministry were present at the annual fish dinner at Greenwich, on Wednesday evening:—Lord John Russell, Duke of Argyll, Earl Granville, Duke of Newcastle, Viscount Palmerston, Right Hon. Sir Charles Wood, Bart.; Right Hon. Sir William Molesworth, Bart.; Right Hon. Sidney Herbert, Viscount Canning, Viscount Sydney, Lord Wodehouse, Lord Stanley of Alderley, Right Hon. W. G. Hayter, Right Hon. Lord Ernest Bruce, Right Hon. Edward Cardwell, Right Hon. Earl of Mulgrave, Right Hon. Sir John Young, Mr. Grenville Berkeley, the Solicitor-General, Major-General Peel, Mr. Chichester Fortescue, Lord Alfred Hervey, Mr. Lowe, Mr. Monsell, Mr. Frederick Peel, and Mr. James Wilson.

EARLY CLOSING MOVEMENT.—On Tuesday morning, at five o'clock, a well-attended meeting of the chemists and druggists' assistants of the metropolis, was held at the Freemasons' Tavern, Great Queen-street, Lincoln's-inn-fields, for the purpose effecting an arrangement to close the shops in their business at eight o'clock in the evening. Mr. J. Whitmore, who was called to the chair, said it was lamentable that the great body of assistants were confined fifteen and sixteen hours daily to the shop, thus depriving them of the opportunity of acquiring a scientific knowledge of their profession, and of enjoying the relaxation to which mankind was entitled. The employers must benefit by the proposed change, and the public would purchase their articles, instead of late at night or on Sunday, at more convenient occasions.

THE SPITALFIELDS WEAVERS.—On Monday a large body of Spitalfields silk-velvet weavers—a business which has sadly declined during the last twenty or thirty years—turned out for the purpose of waiting upon the master manufacturers, to solicit from them an advance of their present scanty amount of wages. The number in procession amounted to 800; and, placing their former demand for a uniform list of prices in abeyance at present, they adopted as the object of their mission the advance of threepence a yard all round, irrespective of any disparity that might exist in the prices at the present time. It is supposed that, if the manufacturers resist their demands, the men will turn out on strike.

CHARING-CROSS HOSPITAL.—On Tuesday last, Mr. Edwin Canton, who for many years has been assistant to Mr. Lescure on Anatomy at this hospital, was elected, without opposition, to the office of Assistant-Surgeon to the institution.

THE MOUSTACHE MOVEMENT.—The great shaving question remains in this wise:—Lord Raglan will issue no order on the subject, but the officers and men of the 1st division may wear their moustaches, though they *must shave* their *chins*. Brigadier Bentinck was very anxious to restrict the growth of the moustache to a weekly produce, after which he recommended clipping with scissors; but the Guards have got their own way, and the moustache is to be allowed to attain the greatest development nature permits in each case. *Letter from Dover.*

THE ESHER MURDERS.—The trial of Mary Anne Brough, for the murder of six of her children (at Esher, on the 9th of June), took place at Guildford Assizes on Wednesday. The trial lasted all day. At five o'clock the jury retired, and at seven they returned into court, and gave a verdict of "Not Guilty," on the ground of insanity. The prisoner, who did not betray the least emotion at any period of the proceedings, was ordered to be detained in safe custody during her Majesty's pleasure.

THE WAR.

THE BOMBARDMENT OF BOMARSUND.

As we anticipated last week, the telegraphic announcements of the taking of Bomarsund prove to have been entirely apocryphal. The first division of the transports did not reach Ledsund till the 30th ult.; and, up to the 3rd inst. nothing had been done to indicate with certainty when the attack would be made. The French troops were received most cordially by the English and French fleets. At ten o'clock on Sunday morning, the man at the masthead of the *Duke of Wellington* reported four line-of-battle ships in sight, and they were soon discovered to be those conveying the French troops from Calais. At twelve at noon the crews on board the French flag-ship *Inflexible* were mustered and inspected. They were informed that their brother soldiers were approaching, and would combine with them in their attack upon the enemy at Bomarsund. Three deafening hazzas immediately burst forth from the crew, and this ceremony was repeated throughout the whole of the French ships. At one p.m. the advanced ship *Hannibal*, with Commodore Grey's flag flying, entered the Sound, and saluted the Commander-in-Chief with fifteen guns; it was immediately returned by a rapid fire of seven guns. The bands of the French ships then struck up "God Save the Queen," and "L'Honneur et L'Empereur," the English bands repeating these in reversed order. Rounding the stern of the great *Duke*, the *Hannibal* let go her anchor. The *Algiers* came in shortly afterwards, followed by the *Royal William* and *St. Vincent*, in tow of the *Gladiator* and *Sphynx*. The French Admiral at once sent his barge to the chief military officers, and they were conveyed to the *Inflexible*, whither Colonel Jones, of the Royal Engineers, followed from the *Duke*. In the evening two transports arrived with more troops, and the *Stromboli*.

On Monday (the 31st), at two p.m., General Baraguay d'Hilliers, who had been at Stockholm on a diplomatic mission to the King of Sweden, in the Imperial steam-yacht *La Reine Hortense*, arrived. A salute was fired from both flag-ships in honour of his Excellency. In the evening he paid a visit to Sir Charles Napier, the Commander-in-Chief with the squadron. Next morning the three Commanders-in-Chief went up to Bomarsund in the *Impertinente*, yacht to arrange the plan of attack, which, it was thought, would take place on Thursday or Friday, as everything was prepared. The yacht having ventured very close to the forts, the masked batteries opened fire, and two shots passed over her. A few of our steam-ships have barricaded the bridge between the paddle-boxes to protect the officers from the Russian rifle-balls, and the French also have fitted barricade work of hammocks and sail-cloth in their tops.

Up to the latest accounts, the enemy were daily strengthening their defences. With jackets off, they were plying the pickaxe and shovel with energy, in throwing up works, opening loopholes for musketry, fraising, &c., and filling some of the embrasures with sand-bags. They are well supplied with provision stores, have a three years' store of provisions, and are quite prepared for prolonged resistance. The ships were guarding the passes in every direction, so that the garrison must see themselves completely hemmed in on every side, and cut off from all relief. All the ships were within signal distance of each other. The French ships cut off all retreat on the Swedish side. Captain Key, of the *Amphion*, took advantage of a dark, gloomy evening, when a fresh breeze was blowing, and heavy rain falling, to sound the waters close in by the forts, and make a general reconnoissance of the works. He quietly proceeded with muffled oars, and succeeded without being discovered.

The dispersion of the fleet in the Baltic on the 31st was as follows:—

At Bomarsund: The *Leopard*, Rear-Admiral Plumridge; *Edinburgh*, Rear-Admiral Chads; with the *Hogue*, *Ajax*, and *Blenheim* (block-ships), *Arrogant*, *Amphion*, two or three paddles, and two or three French ships.

At Lod Sound: *Duke of Wellington*, *St. Jean d'Acre*, *James Watt*, *Princess Royal*, *Majestic*, *Cumberland*, *Royal William*, *Hannibal*, *St. Vincent*, and *Algiers* (the four latter with their lower-deck guns out), *Valorous* (leaky, having been aground), *Gladiator*, *Sphinx*, *Driver*, *Stromboli*, and *Lightning*; together with the French fleet of nine sail of the line, and a few small steamers. At Baro Sound, or off Helsingfors: *Nile*, *Neptune*, *Royal George*, *St. George*, *Monarch*, *Prince Regent*, *Cæsar*, and *Cressy*; with a host of frigates, steamers, and gun-boats flying about in all directions.

On the 31st ult. three Russians escaped from one of the portholes of the large fort at Bomarsund, by means of a boat, and gave themselves up as prisoners of war. The *Locust* at once brought them to Sir Charles Napier, who interrogated them through the interpreter. The result of their statement, the number of Russian forces in those Islands is as follows:—

The Large Fort—1000 troops of the line; 500 irregulars; 300 artillerymen, total 1800.

First Round Fort—18 guns, 80 men; second ditto, 20 guns, 80 men; third ditto, 16 guns, 100 men.

Block-house battery of 7 guns, 45 men.

Besides which there were 200 sharpshooters, 700 irregulars, 80 Cossacks, and 4 field-pieces, stationed at various parts of the islands.

It appears that the delay in moving the troops up to Bomarsund at once, as was anticipated, was from the humane desire of saving life as much as possible. For this purpose, therefore, each ship has been ordered to build two platforms for large mortars, which are to be landed, and are to be used against the fort on the land side, which is deemed very weak, and incapable of resistance. A combined attack, directed to a point that has been lately discovered, or heard of, will very soon enable our troops to make a breach in the fortifications, without exposing themselves to the fire of the enemy's large guns. The men-of-war, it is thought, will not moor close to the batteries, unless of urgent necessity, but will shell the place while the troops are investing it.

Letters from Stockholm speak of the interview between the King of Sweden and General Baraguay d'Hilliers as having produced the best results. Immediately after the interview, an order was given to the Swedish fleet at Carlscrona not to do harm.

THE WAR IN ASIA.

A DEPUTATION FROM SCHAMYL.

The most recent news from Asia gives a more encouraging account of the position and prospects of the Turkish army there, than those previously received. From Circassia, too, intelligence is highly satisfactory. The French steam-frigate *Vauban*, has just returned to Constantinople, after having carried to Batoum a part of the last reinforcements sent to Omer Pacha, and visited the coast of Mingrelia, Georgia, and Circassia. Some of the principal Circassian chiefs whom she brought back with her had an interview, immediately on landing, with Marshal St. Arnaud, from whom they met with a very warm reception. These chiefs are serving under Schamyl, and they assured the Allied Generals they were prepared to raise the whole country, and assemble 80,000 fighting men to march against the Russians. The Marshal has had several conferences with them since they arrived, and there is every reason to believe that their offers will be accepted.

The *Vauban*, on her voyage from Batoum, touched at Sandja and Anapa, and cast anchor at cannon-shot distance from the Russian batteries, which pointed their guns on her, but did not fire. The *Vauban* did not fire either, as the captain had received instructions not to do so. At Sandja, however, he could not resist the temptation of throwing three shells at the Quarantine establishment. The Russians fled. At Anapa, where the *Vauban* passed the night, she succeeded, under cover of the darkness, in taking soundings within half-cable's length of the shore. She was so close, that the steps of the sentinels were distinctly heard.

THE CRIMEA EXPEDITION.

The startling announcement in the *Times* of last Saturday, that on that very day (August 5) a force, made up of English, French, and Turks, and amounting in the aggregate to 100,000 and 100,000 men, would invade the Crimea, and attempt to effect a lodgment on the heights commanding the harbour of Sebastopol, has not yet been confirmed in every particular by the news from Constantinople; but the most recent intelligence shows that great preparations were making for the conveyance of a large body of troops, whose destination was understood to be the Crimea.

A few days ago, a telegraphic despatch from Odessa stated that "the English and French fleets were seen off Sebastopol on the 30th, the steamers having transports in tow." Another despatch, not from Odessa, however, announces the departure, from Varna and Baltschik, on the 31st, of fourteen Anglo-French sail of the line (of which six were screw steamers), accompanied by a number of transports, and having on board 15,000 of the Allied troops. These were probably the vessels seen from Sebastopol. This expedition, it was thought, was destined to effect a landing at Odessa, or at Kaffa, while the bulk of the army was preparing to follow, and storm Sebastopol. Meanwhile, the Allied troops were under orders to move forward to the coast, but without knowing the object of their destination. In the camps at Varna and Devna the secret of the expedition to the Crimea appears to have been so well kept, that a march upon the Danube was regarded as the probable and immediate destination of the army until the moment when the regiments were ordered down to the coast to embark on board the transports.

One of the latest despatches from Constantinople states that, on the 29th of July, the flotilla of flat-bottomed boats, recently constructed there, was sent from the arsenal to the Black Sea, and that all the French and English vessels in the Sapphire were ordered to Varna, at which place there were already no less than 200 transports ready to take the Allied troops on board.

It is satisfactory to learn that the siege-train, which arrived at Scutari some time ago in the *Star of the South*, has not been disembarked, but was kept afloat and in readiness for the further service on which it is to be employed. The distance from Varna to Cape Chersonese, the south-western extremity of the Crimea, is somewhat under 300 miles; and one of the advantages of choosing the ports between Kavarna and Bourgas as the starting points of a great expedition is, that the ships can make the Russian coast with almost any wind that prevails in the Black Sea at this time of year, whereas vessels sailing from the Bosphorus have to beat up against the prevailing wind from the north. Under tolerably favourable circumstances, we may suppose that the expedition would effect its passage in about forty-eight hours; and it may be presumed that, when a lodgment has been made on the enemy's shores by a force sufficiently powerful to hold its ground, the transports will return for a second freight.

Brigadier-General Sir George Brown and Lieutenant-General Canrobert returned to Varna on the 27th ult., from an expedition to reconnoitre the coast of the Crimea, and select the best point for effecting a landing. A magnificent beach for the purpose was discovered about eight miles from Sebastopol. According to one account, the two Generals had rather a narrow escape. They advanced so close to the land on one occasion that they were fired upon by one of the batteries, and four shots entered the ship.

The following extract from a letter dated Devna, July 28, shows that the secret as to the destination of the troops had transpired:—

Notwithstanding every effort to keep us in the dark respecting the contemplated movements of the Allies, it has transpired that we (the Light Division) are drawn closer to Varna for the purpose of being at hand to embark at that place, from whence, and from another port (I think Baltschik), an immense expedition will shortly sail, it is said, for the Crimea. It is stated here that the force to be employed will amount to above 80,000 infantry, besides marines, and will be composed of 30,000 British troops, 25,000 French, and 25,000 Turkish; who, by-the-by, are splendid cavalry soldiers, and not bad as infantry. Two heavy battering trains and some field batteries will accompany the expedition, the landing of which, according to accounts here, is to take place simultaneously in two bays, on the western side of the Crimea, and to the north of Sebastopol.

In Paris, in quarters which ought to be well informed, it is greatly doubted if the expedition is directed against the Crimea; and, as a reason for the doubt, it is said that the French Government is preparing to send powerful reinforcements to the Black Sea, which would appear to show that Marshal de St. Arnaud does not feel himself sufficiently strong for an enterprise of so much importance. It is said that the additional number of troops to be embarked at Toulon for the East will not be less than 20,000 men; an immense force, if it be considered that fully that number of French troops are already in Turkey.

THE RETREAT OF THE RUSSIANS.—EVACUATION OF MOLDAVIA.

The news from the seat of war on the Danube, by electric telegraph, comes down to the 7th inst., on which day the Turkish advance-guard, under Skender Beg, had entered Bucharest, if that authority may be relied on. The rear-guard of the Russian army, consisting of Hussars and Cossacks, was said to be only two miles distant. The greatest confusion prevails in the Russian army, owing to the contradictory orders from head-quarters. The Czar was at first resolved to drive back the Infidel army beyond the Danube at all hazards, but he found out his mistake at last.

A correspondent of the *Wanderer*, writing from Bucharest, the 27th July, says:—"On the 24th, General Aderberg brought the order 'to evacuate Wallachia by the 5th of August;' nothing, however, was said of Moldavia." The order to retreat the correspondent attributes to the report of Prince Gortschakoff to the Czar. "This mighty Monarch," he says, "was so much terrified by the intelligence from the Prince, that the Grand Duke Nicholas Nicolajewitsch, for three days, and admitted no one to his presence. It is reported that, on receiving the intelligence, he sorrowfully exclaimed, 'I can understand the defeat at Silistria, but to be forced without a battle to lose, by a horde of wild, half-naked Turks, from position[illegible] have been occupied and fortified for a year—that I should first sustain an engagement, then storm the islands fortified by us, and lastly, have paid in blood for every inch of ground gained on the left bank of the Danube—all this I cannot understand.' Four or five days later, the Emperor sent by General Aderberg the order for the evacuation of Wallachia."

The following despatch from Vienna, on Wednesday evening, confirms the previous rumour that the Russians have given up their intention of retaining Moldavia:—

Prince Gortschakoff to-day (Wednesday) announced the immediate evacuation of Moldavia, as well as Wallachia.

Notwithstanding this declaration, Count Buol, on the 8th inst., exchanged with Lord Westmoreland and M. Bourqueney, notes, from which it appears that Austria views in the same light as England and France the guarantees which it will be necessary to require from Russia, in order to prevent the return of the difficulties which have troubled Europe. Unless these guarantees are furnished by Russia, Austria engages herself not to treat alone with the Cabinet of St. Petersburg, until the restoration of general peace.

DOGS IN TRUCKS.—There has just been printed an Act of Parliament, under which dogs are not to draw trucks, carts, &c., in any part of the United Kingdom, after the 1st of January next. The provisions of this Act extend to the metropolitan district now extended.

THE NEW BEER ACT.—The new Act for "Regulating the Sale of Beer and other Liquors on the Lord's Day," will come into force on Sunday (to-morrow). It is enacted that it shall not be lawful for any licensed victualler, or person licensed to sell beer by retail, to be drunk on the premises, or not to be drunk on the premises, or any person licensed or authorised to sell any fermented or distilled liquors, or any person who, by reason of the freedom of the mystery or craft of vintner of the City of London, or of any right or privilege, shall claim to be entitled to sell wine by retail, to be drunk or consumed on the premises, in any part of England or Wales, to open or keep open his house for the sale of or to sell beer, or wine, or spirits, or any other fermented or distilled liquor, between half-past two o'clock and six o'clock, or after ten o'clock in the afternoon on Sunday, or on Christmas-day, or Good Friday, or any day appointed for a Public Fast or Thanksgiving, or before four o'clock in the morning of the day following, except as refreshments to a *bonâ fide* traveller, or a lodger therein.

TEN THOUSAND A YEAR.—A ROMANCE OF REAL LIFE.—At the Kilkenny Assizes, before Mr. Justice Ball, the trial of an important cause, exciting great interest, commenced on Tuesday the 1st inst., and terminated on Saturday. It was a suit instituted by Mr. Pierce Butler, the nephew of the late Colonel Butler, to recover certain estates said to be worth £10,000 per annum, from Lord Montgarret, minister, which were alleged to be the illegitimate son of the late Hon. Henry Butler, on the ground that the marriage between his father, the Hon. Henry Butler, and his mother, who was a Miss Harrison, was illegal, because, it was said, a previous marriage according to the Scottish law existed between the Hon. Henry Butler and a Mrs. Colebrooke. The defence, of course, was that there was no marriage with Mrs. Colebrook, and that the marriage of the defendant's father with Miss Harrison was a valid one.—The jury, having retired for about three hours, returned into court, and found a verdict for the plaintiff, with sixpence costs.—It appears that the action of ejectment determined by this verdict only applies to one portion of the estates, and that there are other estates which are to form the grounds for other actions. Lord Mountgarret's claim to vote for Irish Representative Peers is opposed before the Committee of Privileges by Mr. Pierce Butler, the plaintiff.

PRISON DISCIPLINE.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

SIR,—In your paper of last week, which I have only seen this morning, you have published a most admirable letter from Mr. Combe, dated from Munich, and giving an account of the prison management and its results in the large state prison in that city; and you have added some comments of your own, with all of which, as well as with the letter, I most entirely concur.

It supplies another illustration to the many that have gone before, of the certain influence of kindness and confidence, not only in restraining, but also in reclaiming, even the originally very worthless of mankind, if only judiciously and from the heart applied. And if I differ from Mr. Combe at all, it is in the estimate he makes of the difficulty of obtaining similar results to those he quotes, were we to make the same experiment, with like requirements, in this country also. I do not, for instance, believe in the great difference that he imagines to exist between the English and Bavarian criminals. Throughout the world all criminals are men alike, and governed on the same general principles; and the system, were is once introduced here, would speedily make its own agents. Only let us proclaim the reform of criminals, and not their vindictive punishment, to be the leading object in our management of them—requiring kindness, confidence, and effective labour, as the principal means to be employed; and estimating and *rewarding* our agents in proportion as they succeed in keeping down recommitments to their custody—and we should soon have no difficulty, either with details, or in finding suitable superior agents. Their own interest, as well as higher feelings, would speedily dictate to them suitable accessory means.

In one of my earliest publications on this subject I said that "a good system in a bad prison, is better than a bad system in a good prison;" and, certainly, this position is most remarkably illustrated in this account of the prison at Munich, and in one I published two years ago, of that of Valencia, in Spain—of which, also, two other accounts are given in Mr. Tocklin's "Spain as It Is," and an anonymous work, "Recollections of an Attaché" in the same country. From these collectively it will be seen that the most remarkable successes have attended the most deficient material means, the principles of kindness and confidence alone distinguishing and equally characterizing both. From this it is not to be inferred that good prisons are bad things: this would be but to fly to the opposite error to that which so repeatedly characterises our late mechanical notions on the subject, that they are everything. But this circumstance is worth noting; and I wish I were able to dwell on it at greater length in your columns.

I remain, Sir, your most obedient servant,

Carisbrooke, Isle of Wight, 8th Aug., 1854. A. MACONOCHIE.

HULL ELECTION.

HULL ELECTION.—Major-General Peronnet Thompson, who was some time since invited by the Radical party in Hull to become a candidate for the representation of that borough, has issued an address, in which he declines doing so, unless freedom from all expense is guaranteed him, and unless such a demonstration is made as to render his success probable. There are two candidates already in the field—Mr. Dickson and Mr. W. H. Watson—both of whom have issued addresses. The former gentleman announces himself as "a true Conservative in principle," a friend of "perfect liberty of conscience," but "an unflinching opponent of Popery, and prepared to resist the insidious attempts that are now being made to secure for it a position in this country." Mr. Watson is a London barrister, and comes forward on "Liberal and Reform principles." On religious questions, he says:—"I am myself a member of the established Church of this country, but I am also a friend of Religious Liberty, and opposed to the imposition of any civil disabilities on account of religion."

TURKISH COAL-MINE ON THE BLACK SEA.

THE new system of steam-warfare demands an immediate supply of coal, and its means of providing this *material* has already received great attention. One of the most fortunate results has been the finding of the coal-pits of Heraclea, situated about midway between the Bosphorus and Sinope, which are stated to be capable of furnishing an inexhaustible supply, if worked with due enterprise and a proper application of capital.

The Heraclea coal-field commences about seven miles N.E. of Heraclea, and extends along the coast a distance of sixty miles to Amasserah. Geologically speaking, it pertains to the true carboniferous formation. The configuration of the country is that of mountain ridges (from 1500 to 2000 feet high), separated by narrow valleys, which terminate in the sea-coast plains. The coal seams are found cropping out upon the sides of these mountain ridges throughout the district. About 17 years ago the deposit was first discovered or publicly made known. Since then, with the exception of the coal lying in the neighbourhood of the Coslou Valley, it has been worked by Greeks, Montenegrins, Bosnians, and other workmen drawn from among the quarrymen in the neighbourhood of Constantinople. These persons work the "out-crop," and are paid alike for coal worked from seams good, bad, and indifferent. Considerable seams have been already entirely worked out and abandoned by these persons at from 100 to 150 yards into the mountains, and it consequently results that, should future works be undertaken, a considerable expense, in the absence of any records, will have to be incurred before even a knowledge of the quality can be ascertained. In the course of a few years (five or six) the whole district will be similarly abandoned. The coal thus worked amounts to about 30,000 tons annually, and is conveyed to the shore on mules, whence it is transported during the summer months to Constantinople. A small quantity is boated round from the mouths of the different valleys to Heraclea, to supply the casual wants of steamers; but no shipments on any extensive scale can ever take place from that port. In one valley, the valley of Coslou, 18 miles north-east of Heraclea, works on an improved system have been adopted during the last three years, and the management entrusted to English engineers, assisted by a small staff of Piræan workmen. The coal is transported to the shipping spouts on a tram railway, and is thence boated off to ships lying in the roadstead. From 400 to 500 tons can be thus shipped daily. The mines situated in this valley were lately visited by her Majesty's steamer *Spitfire*, Comm. Spratt, and a survey made of the roadstead and port of Heraclea. Good holding ground was found in both places; while, in addition, the latter affords a secure shelter for any steamers on the coast. The object of the *Spitfire*'s visit was to inquire as to the quantity disposable, and to test the coal found before even a knowledge of its quality can be understood that the trial proved very satisfactory. The coal varies from Newcastle in being more friable, and in producing from one to two per cent less "ash" and "clinker" in other respects it is undistinguishable.

After the return of the *Spitfire*, an application was made on behalf of the English and French Governments for a monthly supply of this coal to the Anglo-French fleet.

The Correspondent, to whom we are indebted for the accompanying Sketch of the mouth of the pit, states that the English and French Governments have contracted with the Turkish Government for this coal, at 21 per ton (the price of English coal now being £3 5s.); but, owing to the indolent neglect of the Turkish authorities, no secure reliance can be placed on a steady supply.

The *Firebrand*, *Highflyer*, *Terrible*, and *Inflexible*, besides French and English transports, have coaled at Coslou, and find the quality of the coal fully equal to the description given in Captain Spratt's report. The coal-field is inexhaustible for present supply, if properly worked; but, in the hands of the Turkish authorities, who have neither the means nor the skill requisite, is comparatively valueless. The French Government have sent 100 sappers and miners to Heraclea, for the purpose of expediting the supply, and it is understood that the two Governments are fully alive to the importance of obtaining permission to work a portion of these mines on their own account for the necessities of the Allied fleets. Should the fleets draw their coal supplies from this source, in addition to the immense benefit which would attach to the possession of a permanant and immediate supply at all seasons a saving of £100,000 a year would be effected.

Under these circumstances, it is to be hoped that the paltry jealousy and private interests of the Turkish authorities will not be permitted to interfere with so desirable an end.

A remarkable affair, in connection with these mines, has occurred since the date of our Correspondent's communication.

An English steamer, the *Cyclops*, had a narrow escape from being taken by a Russian steam-frigate, the *Wladimir*, the other day, in the neighbourhood of Heraclea. Having received intelligence as to the intended movements of the *Cyclops*, the Russian steamer, in spite of the blockade, made its way out of Sebastopol, and, after sinking several Turkish vessels laden with corn, proceeded to Heraclia, in the hope of surprising the English steamer, which, having landed her guns, would have fallen an easy prey had she been in the roads. The *Cyclops* fortunately was detained at Constantinople for the purpose of undergoing some repairs after being ordered to Heraclea to inquire into the state of the coal mines. The *Wladimir*, however, did not return empty-handed, for she took in tow at Heraclia, and brought off, two vessels laden with [illegible]

FUNERAL OF CAPTAIN PARKER, AT THE CHAMP DES MORTS, AT PERA.

FUNERAL OF CAPTAIN HYDE PARKER.

In our Journal of last week we illustrated the impressive scene of the honours paid to the remains of Captain Parker, before their leaving the arsenal at Tophana. Our Artist at Constantinople has now enabled us to engrave the mournful cortége emerging from one of the steep and narrow streets of Tophana, on its way to the Grand Champ des Morts, at Pera. This point of view has been chosen, from its showing the principal features of the procession. The coffin was placed upon a piece of artillery, the wheels of which were painted black. An immense white flag, bearing the Cross of St. George, served as a pall, upon which were placed the hat, sword, and epaulettes of the deceased, on a cushion; the whole covered with a black veil. Sailors walked as pall-bearers; and there followed a great number of naval officers of every grade and nation—French, English, Austrian, and Sardinian, and a few Turkish. The procession was flanked by lines of British infantry. The funeral car was drawn by horses, driven by three artillerymen, and preceded by two artillery-officers. The British Ambassador, with most of the Attachés, attended the ceremony, which took place with full military honours.

The *Charlemagne*, French screw line-of-battle ship (now in the Bosphorus), and her Captain, the Count de Chabannes, with most of his officers, and a portion of the crew, was present. Detachments from all the regiments which have left any of their number at Scutari formed part of the procession. Among them were files of the 28th, 50th, 93rd Highlanders, and 95th regiment. Halil Pacha represented the Turkish Navy, in his quality of Superintendent of the Artillery. The crew of the *Firebrand*, who were much attached to their Captain, mustered strong; and one of the most interesting sights was a little child, who was found alone, and wounded by the Bashi-bozouks, after the abandonment of Kustendje. The mother was murdered by those ruffians, and the infant was discovered almost lifeless by her side. The child became a great pet with the crew of the *Firebrand*, and he was carried to the Captain's funeral by one of his protectors. Should the war last, such events as the above must be of frequent occurrence; but this time it had the interest of novelty. The Turks, who use no ceremonies at the burial of their dead, except in the case of the Sultan and his family, seemed much struck with the ceremony of a military funeral—the first they had ever seen—and the crowd of various races who filled the large area of the burial-ground brought to mind the vast assemblages which curiosity calls together in our own country.

ENTRANCE TO THE COAL-MINE OF KURACHA, ON THE BLACK SEA.—(SEE PRECEDING PAGE.)

THE FEMALE HIPPOPOTAMUS, AT THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S-PARK

THE FEMALE HIPPOPOTAMUS IN THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S-PARK.

Four days before the death of the late Pacha of Egypt, his last gift to the Zoological Society—a female Hippopotamus—was taken on board the *Repos*, at Alexandria: a vessel which had, on many previous occasions, been laden with the rarest productions of the Valley of the Nile, for our great collection in Regent's-park.

Every one remembers the excitement which was created by the arrival in the metropolis of the first Hippopotamus, in 1850. And he still retains his power; for not even the Aquavivarium, with its myriads of sea-gems, gathers a larger crowd of admiring visitors than our now expanded friend Obayseh. To those who have watched his growth in frequent visits—and who does not visit the Zoological Gardens when he can?—the huge size of this promising five-year-old was scarcely appreciable until the arrival of his companion Adheia, whose portrait we now engrave. Adheia's early history is but a repetition of that of our old friend Obayseh, except that the difficulty of obtaining her appears to have been even greater. For three years since the capture of Obayseh, the Nubian hunters searched for his mate in vain; it is true that they last year brought down the fine male which is now in the Garden of Plants, in Paris; but, until the early part of last autumn, their efforts to procure a young female were entirely unsuccessful. On her arrival at Cairo, his late Highness, remembering his promise to Mr. Murray (through whose influence the Society have obtained all their Egyptian acquisitions), not only presented her to her Majesty's present Consul-General, the Hon. F. A. Bruce, for the Society, but placed at his disposal suitable winter-quarters for her, at his palace at Benha, where she remained from the month of November until the proper period for transmitting her to England. She is still attended by an Arab, whose boyish portrait has already appeared in our columns, as the Snake-charmer of 1850.

A large and massive building has been constructed for the male, who has actually outgrown the accommodation originally prepared for him; and the only pair of Hippopotami which have ever graced the Vivaria of Europe here seem to find a congenial home, if we may form a judgment from the exuberant health which both the animals enjoy.

The extremely beautiful state in which the Gardens are kept, renders them especially attractive at the present moment, when the floral effects are daily growing more and more beautiful as the season advances.

"THE CATARAQUI" COMING DOWN THE GALOP RAPIDS, ABOVE MONTREAL, CANADA.

THE "CATARAGUI" COMING DOWN THE GALOP RAPIDS ABOVE MONTREAL, CANADA.

Among the many enterprises now on foot in the province of Canada, ship-building may be reckoned one of the most important. Quebec has long been noted for good ships, but it is only lately that sea-going vessels have been built on the great lakes, and we have this week to record the arrival in the Thames of a fine barque of upwards of 800 tons, built at Kingston, on Lake Ontario, and brought through the dangerous rapids and rocky bed of the St. Lawrence with safety to the sea.

The *Cataraqui* is the largest vessel ever built on the fresh waters of Upper Canada: she is 146 feet long and 30 feet beam, hold 14 feet, and measures 842 tons. She is the second vessel built by Mr. J. Counter, of Kingston, who last year built and dispatched from the same place a barque named the *Cherokee*. This vessel took a cargo of

flour at Toronto, and brought it direct to Liverpool in the summer of 1853, without breaking bulk—being the first vessel that ever took a cargo from the fresh waters to the mother country.

This being accomplished with success, he laid down, last year, the keels of two ships—viz., the one of 842 tons, shown above, and another, now on the stocks, of 1000 tons, which again opens another source of a very important trade, as those vessels were built for ocean service, and will be sold in England.

CALENDAR FOR THE WEEK.

SUNDAY, Aug. 13.—9th Sunday after Trinity. Q. Adelaide born, 1792.
MONDAY, 14.—King's College incorporated, 1829.
TUESDAY, 15.—Assumption. Napoleon I born, 1769.
WEDNESDAY, 16.—Andrew Marvel died, 1678.
THURSDAY, 17.—Duchess of Kendburn, 1786. Riots at Manchester, 1819.
FRIDAY, 18.—Battle of Lincelles, 1793.
SATURDAY, 19.—Royal George sunk at Spithead, 1782.

HIGH WATER AT LONDON-BRIDGE
FOR THE WEEK ENDING AUGUST 19.

Sunday.		Monday.		Tuesday.		Wednesday.		Thursday.		Friday.		Saturday.

TO CORRESPONDENTS.

R. L., Littlebourne; and A. SUBSCRIBER, Jersey.—The Title-page and Index of Engravings complete the Volume.

J. A. G., Camp, Aldeen, is thanked. The Sketches have been forwarded as desired.

A. L. M.—We regret that we have not room for the Sketches.

A CORRESPONDENT.—The crown-piece and half-crown of Charles II. are of no value; and the first is not one of the trial-pieces by the celebrated Simon.

NEMO.—If Viscount Enfield were to die vitâ patris, he would be succeeded in the barony of Strafford by his eldest son.

L. M. R.—Arms of Oliver Cromwell: Ba. a lion rampt. arg. Crest: A demi-lion rampt. arg. in his dexter gamb a gem ring or.

CLARENS.—We do not undertake to identify arms.

A SUBSCRIBER.—Arms of Alston, of Suffolk and Middlesex: Az. ten etoiles or, four, three, two, and one. Crest: A crescent arg. charged with an etoile or. Motto: "Immotus."

LEX ET PONTIFEX.—A bachelor is entitled to quarter the arms of his mother, only when the lady is an heiress or co-heiress. A husband should impale his wife's arms, unless in the case of marrying an heiress. He then bears them on an escutcheon of pretence.

ELLA.—We know of no fund such as our Correspondent inquires for.

CYRIL.—The Heralds' College is situated on Bennet's-hill, St. Paul's Churchyard, London, in close proximity to Doctors'-commons.

LIVERPUDLIAN.—The sons of Richard de Wydeville, Earl Rivers, and Jacquetine, his wife, widow of John Duke of Bedford, were—Anthony, Lord Scales, *jure uxoris*, and afterwards Earl Rivers; John, put to death with his father; Lionel, Bishop of Salisbury; Edward, who died sp.; and Richard, third Earl Rivers.

AGINCOURT.—A Crest cannot be adopted or altered, unless by the authority of the Kings of Arms; nor can a coronet be in any way added.

A CONSTANT READER.—Arms of Mantell, Bart.: Arg. a chev. between three mantlets sa. Crest: A cap of maintenance, inflamed on the top ppr. Motto: "Quod vult, valde vult."

A CORRESPONDENT.—The general impression is that "Ward's Cases" are air-tight, and hence that the delicate ferns of the Tropics are preserved beautifully in the dense atmosphere of cities by the entire exclusion of the impure air. This is a misconception: none of Ward's Cases are air-tight. The object is to prevent rapid evaporation from the plant, which requires a humid atmosphere for its existence, to protect the leaves from the obstructions occasioned by the lodging of particles of solid carbon on them, and to allow the air within to change slowly by the operation of the vital forces of the plants themselves.—*Robert Hunt's Handbook to the Great Exhibition.*

AN OLD SUBSCRIBER.—T. S., of Peterborough, informs us that "A History of Huntingdon" was published by Mr. J. P. Wood, in 1824, who still resides at Huntingdon. The author was a schoolmaster, named Richard Carruthers.

A SUBSCRIBER.—1. Frederick the Great first introduced horse artillery in the army during the spring of 1759, and was accustomed to exercise the new corps, and direct its movements, at the head-quarters of Reichenbach, near Landshut, Silesia. 2. The Royal Horse Guards does not derive its appellation of "Oxford Blues," from the City or University so famed for loyalty to the House of Stuart, during the civil wars, as often has been erroneously stated; but from the noble family of Oxford, the head of which, Aubrey, Earl of Oxford, was its first Colonel, in 1661. The corps has distinguished itself when the French lines—between Ligny and Genappe, 16th June, 1815—were forced, on the 18th of July, 1793. It was then termed the "Blue Guards." It is the only cavalry regiment denominated *horse* present on the British establishment. 3. The origin of the military Order of the Bath may be found in any cyclopedia. 4. The Royal Regiment not only ranks as the first, but is undoubtedly the oldest corps in the service. It is even said to be entitled to precedence, in the latter point, of any regiment in Europe. Originally, it constituted the body guard of the Scottish Kings, from which cause it was known as the "Royal Scots." It was not, however, placed on the English establishment until 1685—about thirty years after James VI. of Scotland and I. of England had succeeded to the united Crown. It naturally follows that so old a regiment has seen much service, and on every occasion it gallantly distinguished itself. 5. On the reduction of the Army at the close of the late war, the 26th was *numerically* disbanded. The Rifle Brigade now ranks next in precedence to the 3d Regiment, the Sutherland Highlanders, having, at that period, been the last battalion in regular rotation retained on the establishment.

SCOTUS.—We have not room.

LITTLE HOUDIN, R.—One of the many; political tokens struck by Spence and others, in the last century.

THE VOLUMES OF THE ILLUSTRATED LONDON NEWS.

COMPLETE SETS of the VOLUMES of the ILLUSTRATED LONDON NEWS, from the commencement to the present time, may now be had, bound in paper or cloth. Price of the Complete Set (24 Vols.), in cloth, £29 17s.; in paper, £29.

Any of the Volumes, in paper or cloth, can be had separate.

Price of each Volume in cloth:—Vol. I., 21s.; II. to XVII., 18s. each; XVIII., 21s.; XIX., 26s.; XX., 18s.; XXI. to XXIV., 21s. each.

Price of each Volume in Paper, 5s. per Volume less.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 12, 1854.

THE telegraphic news from the Baltic, the Danube, and the Black Sea continues to be as untrustworthy as usual. The reported capture of Bomarsund by Admirals Napier and Parseval, assisted by General Baraguay d'Hilliers and the French auxiliary force, is not confirmed; but there is every reason to believe that a severe blow against Russia in the Baltic is imminent, if it have not already been struck. Napier and his fleet keep the whole Russian coast, from the Aland Isles to Cronstadt, in continual alarm; and Revel and Riga are as incessantly on the watch as Sveaborg and St. Petersburg to guard against a sudden onslaught of the British invincibles. From the Danube the intelligence is more precise. The retreat of the Russians from Wallachia is confirmed by every letter and despatch that arrives, and the vanguard of the Ottoman army has already made its triumphal entry into Bucharest. The statement that not only Wallachia but Moldavia is to be evacuated, requires confirmation; although it is confidently announced from Vienna that Prince Gortschakoff has officially communicated to the Austrian Government that the force under his command has received orders to cross the Pruth. The head-quarters of Omer Pacha are at Rustchuk, but will shortly be transferred to Bucharest. The Russians, alarmed for the safety of Sebastopol, and pressed by the advancing forces of Austria, appear determined to make a vigorous defence of the Crimea. Prince Gortschakoff declines to give any information of his motive for the thorough evacuation of the Danubian Principalities that has already commenced; but it requires no great amount of military science to understand his tactics, and the uncontrollable exigencies which have compelled the movement. The attack of the combined naval and military forces of Turkey and the Allies against the Crimea will not, according to all present probabilities, be long delayed. Let us hope that the deed will not be half done; that we shall not repeat the error that was committed at Odessa; that we shall strike, and not spare; that we shall go to war in real and downright earnest, and inflict as much damage upon the Russians as powder and shot or cold steel can accomplish. The true mercy in warfare is to strike hard and effectually. Procrastination and half measures are far more cruel, as well as more unsatisfactory, than decision and energy. Is it not disgraceful, for instance, that the British and French fleets should keep so bad a look-out in the Euxine as to permit the *Vladimir*, a Russian vessel, to break the blockade, to sail out of Sebastopol, to give chase to the *Cyclops*—an English frigate of inferior force—to capture some Turkish vessels laden with corn, to steam, unchallenged, almost to the very shores of the Bosphorus, and to pay a visit to the coal-mines of Heraclea, supposed to be safe in British and French custody? A fact like this does more to make our Admirals and the Administration unpopular than a defeat in a fair fight. It shows culpable negligence or mismanagement, and is galling to the national pride. Our former wars were not carried on in such a fashion, neither must this be, or a heavy responsibility will be incurred by those who fall asleep over their duty, and encourage the audacity of the foe, while they discourage or disgust their own countrymen.

THE Cholera bids fair to become an established institution amongst us. The time was when its approach excited alarm, and when—not metaphorically, but actually—the people put their houses in order as soon as it began to declare itself. When its presence was announced in those Russian and pestiferous regions, where it was too commonly generated, and whence it was known to travel westwards with unfailing regularity, and in a course that seemed to be laid down for it upon the medical charts of Europe, all England and Scotland were astir to diminish, if they could not prevent, its ravages. Town-councils were on the move, Boards of Health were improvised, sewers were flushed, cottages and hovels were whitewashed; and the benevolence, as well as the fear, of the wealthy was roused to active exertion. If little was done, much was attempted. Perhaps, however, the nation has grown wiser in this respect, and no longer fears the pestilence, because it has systematically done its utmost to prevent its coming. If so, the apparent apathy of the public on the periodical visits of this Eastern scourge is intelligible, and of a tendency to inspire confidence. We learn, however, from the weekly returns of the Registrar-General, that during the last month the disease has made a rapid progress in the metropolis. In the first week of July the number of deaths from Cholera was five; in the second, twenty-six; in the third, one hundred and thirty-three; and in the fourth, three hundred and ninety-nine. It is interesting, and may be useful to consider which districts or portions of London have suffered most from the infliction, for we shall then be enabled to decide whether local and removable causes have had any influence upon the rise and progress of the disease, and whether the guardians of the public health have in reality done all that they might have done. In the western districts—with a population of 376,427, including Chelsea, St. George's, Hanover-square, and a portion of Westminster—the deaths from Cholera, in the last week of July, were 23; in the northern districts—with a population of 490,396, including Hampstead, Marylebone, St. Pancras, Islington, &c.—the deaths were 12 only; in the central district—from St. Giles's, Holborn, to St. Luke's, with a population of 393,256—the deaths were 14; in the eastern district—with a population of 485,522, including such places as Whitechapel, Bethnal-green, Shoreditch, Stepney, &c.—the deaths were 60; while in the southern, or transluvian, districts of Lambeth, Southwark, and Bermondsey, with a population of 616,635, the deaths were 290, or nearly three-fourths of the whole number. It is impossible to dissociate a fact so striking as the last-mentioned from the position of the affected district as regards the river Thames. The boroughs of Lambeth and Southwark, where this large mortality has occurred, lie low upon the river bank, and are in some places actually lower than high-water mark. They are thickly covered with mean hovels—and the natural impurity of the atmosphere is increased by the pestilential vapours of bone-boilers' yards, gas factories, tanneries, and dye-works. Added to all these sources of evil, the river Thames carries up and down, under the hot glare of a midsummer sun, the refuse of the largest and most populous metropolis in the world. Here, at all events, is a source of mischief patent to the understanding of all men—an evil that afflicts us when Cholera is not amongst us—which daily offends the senses of sight and smell; and turns the stream that might be the most splendid ornament and the greatest blessing of the whole city, into a foul ditch, continually churned, with its impurities never at rest—an eye-sore to all who behold it, and a nuisance to all who dwell within a mile or two of its banks. The people are very jealous of any interference with their privilege of local self-government; but there are some tasks that local self-government cannot approach. Local self-government will never cleanse the river Thames; and yet the achievement would by no means be a difficult one. It would be much easier than the conquest of Cronstadt, and quite as easy as the construction of a railroad from London to Liverpool—perhaps even easier than the construction of the great Ganges Canal, which we have undertaken for the people of India, and the extent and benefits of which were so forcibly described to the House of Commons on Tuesday evening by Sir Charles Wood. Whatever means may have been taken to lighten the present visitation of the Cholera, we may be positive that nothing effectual has been attempted for the metropolis while the Thames remains in its present state. It seems, however, that it is not the business of Lambeth and Southwark to stir in the matter; it is not the business of the City of London, or of the City of Westminster;—and, if it were, not one of these agencies has any power or means to accomplish the object. It is too large a task for any agency but that of the whole people acting through the Government to undertake with success. Shall no Home Secretary be found to grapple with it? The Sovereign who found a city of brick, and left it of marble, was not so great a public benefactor as the Minister would be who found the Thames a muddy and pestilential ditch and left it a limpid and wholesome river. It is a mere question of money and determination. The first would come if the second were in existence.

LONDON, it appears, is threatened with a new strike. The omnibus drivers and proprietors are to imitate the example of the cab-drivers—still fresh in the popular memory—and to deprive the people for a time of the convenience, or, we might more properly say, the inconvenience of omnibus travelling. The public will be able to bear the infliction, and we are almost tempted to hope that the omnibus proprietors will carry their threat into execution. Any one who has travelled in those roomy, commodious, and elegant omnibuses that traverse the streets of Paris, will admit that London omnibuses are positively disgraceful in comparison. But we need not go so far as Paris to discover what omnibuses ought to be. The streets of Manchester, Liverpool, and Glasgow, afford specimens of public conveyances infinitely superior to any thing of the kind that London can offer. A London omnibus is dirty, narrow, confined, and unventilated; it is convenient for the pickpocket, inconvenient for everybody else. A tall man cannot sit upright in one of them; a stout man must partially sit in the lap of his neighbour, or crush his neighbour into a space too small for comfort, if not for respiration. To thread one's way from the door of an omnibus, between the knees of the passengers on each side, to a seat at the extremity, is a task that gentleman do not like on account of its difficulty, and that ladies shrink from on account of its indelicacy. In every possible respect, a London omnibus is a disgrace; and the only wonder is that public opinion has not long since forced the proprietors to introduce vehicles of a better class. Our provincial towns and cities might have supplied the model. The Commissioners of Police have at last taken up the subject, and insist that no omnibus shall be licensed for the future that shall be of dimensions less than forty inches from the centre of the seat in a line perpendicular to the roof, and fifty-four inches in width in the part next to the door. The omnibus proprietors object to the change, and have had an interview with the Chancellor of the Exchequer to represent that they will withdraw all their vehicles from the streets, if the regulations be persisted in. We earnestly hope the Government will not yield. The omnibus proprietors have a practical monopoly—and as an equivalent to the public, they ought to be compelled to conform to regulations which the public comfort and health require. If it be urged that it is not the business of the Government to interfere in such matters, but to leave them to free-trade and competition, we reply that free-trade, if we could get it, would be a satisfactory remedy. If we had free-trade in omnibuses, the present system would not last a month. Unrestrained competition would bring into the omnibus trade a class of persons who would make it their business to study the public convenience, and who would strive to deserve patronage by the excellence and commodiousness of their vehicles. At present the system is one of a strict monopoly. The Government legalises and restricts the trade by exacting a license; and the omnibus proprietors, not contented with this advantage, keep out competitors by a system of combination, which, whenever it is put into force, degenerates into blackguardism of the worst kind. Rival vehicles are run off the line of road, and scenes occur that lead to continual breaches of the peace. It is not a simple question of profit and loss, as the omnibus proprietors represent it; but a question of public decency and safety. If the present owners of omnibus property cannot give the public of this great city the same conveniences as are afforded by the same class in such places as Manchester and Liverpool, there is no compulsion upon them to remain in the business. Failing them and their omnibuses, we do not doubt that a new race of traders would come into the field, and reap sufficient advantage to satisfy the legitimate and fair demands of their business, with much greater accommodation to the public.

THE COURT.

The Queen has commenced her summer excursions this year by a marine trip on; the south-western coast, visiting en route some of the Channel Islands.

Her Majesty and the Prince Consort, accompanied by their Royal Highnesses the Prince of Wales, Prince Alfred and Arthur, and her Royal Highness the Princess Helena, embarked in the *Victoria and Albert* Royal yacht, on Tuesday morning, and proceeded to the westward. The *Victoria and Albert* was preceded by her Majesty's yacht *Fairy*, and the *Black Eagle* and her Majesty's steamer *Dasher* (Captain Lefevre). The same evening, at half-past six o'clock, the Royal squadron anchored in the Harbour of St. Mary's, in the Island of Alderney. Shortly after the Royal yacht had anchored, Colonel Le Mesurier, the officer in command of the island, waited on her Majesty; as did also Vice-Admiral Sir Thomas Cochrane, who was at the island on a tour of inspection. The Prince Consort, with the Prince of Wales and Prince Alfred, landed, and visited the new works and the breakwater. Sir Thomas Cochrane and Colonel Le Mesurier had the honour of dining with her Majesty.

On Wednesday morning Mr. J. Gaudien, Judge of Alderney, with the principal authorities of the island, went on board, and presented a dutiful and loyal address to her Majesty. Shortly afterwards, the Queen and Prince, accompanied by the Prince of Wales, Prince Alfred, and the Princess Helena, and attended by the Marchioness of Ely, the Hon. Mary Bethell, Major-General the Hon. C. Grey, Col. the Hon. C. B. Phipps, Capt. Du Plat, and Mr. Gibbs, landed, and proceeded to visit the principal objects of interest in the island. The Queen and the Prince, with the Royal family, re-embarked at noon; and the Royal yacht, accompanied as before, made a circuit of the island, and then proceeded direct for the Needles. The yacht anchored at Portsmouth at 5 p.m.

On Thursday morning the *Victoria and Albert* arrived off Osborne Pier, took after one o'clock. The Queen and the Prince, with the Royal family and suite, shortly afterwards disembarked, and proceeded to Osborne.

Her Majesty came to town yesterday (Friday), and in the afternoon presided at a Privy Council at Buckingham Palace, when the Speech to be delivered on the prorogation of Parliament this day was read and determined upon.

MARRIAGES IN HIGH LIFE.—The marriage of the Earl Spencer with Miss Adelaide Seymour, daughter of the late Sir Horace Seymour, and formerly Maid of Honour to her Majesty Queen Adelaide, was solemnised on Wednesday morning, at St. James's Church, in the presence of a select circle of the friends of both families. The marriage of Mr. Robert Stayner Holford, of Weston-hall, with Miss Mary Lindsay, the beautiful daughter of Major-General James Lindsay, of Balcarres, N.B., was solemnised by special license, on Saturday last, at St. George's Church, Hanover-square.

LATEST INTELLIGENCE.

DEATH OF THE KING OF SAXONY.

A despatch from Munich, viâ Paris, dated Thursday, August 10, announces that the carriage of the King of Saxony was overturned at Brankuehel, between Munich and Dresden. The King was killed by a kick from one of the horses.

ATTACK ON ALAND.

A telegraphic despatch from Dantzic, Aug. 11, states, that "three thousand French soldiers and six hundred English Marines landed at three points on Aland, with little interruption, and no loss, on Tuesday last. The forts have not been attacked, but were to be on Wednesday. Admiral Napier is in the *Bulldog*, at Bomarsund."

AMERICA.

The steamer *Ottawa* arrived at Liverpool on Friday, with dates from New York, of the 28th ult. It was reported at New York, that in addition to the treaty of neutrality agreed upon by the United States and Russia, is one that the latter Power proposes to transfer to the former the Island of Sitka, in the Pacific Ocean, on the west coast of North America.

TURKEY.

The following has been received from Vienna, by electric telegraph:—

CONSTANTINOPLE, Aug. 3.

The Turkish squadron, with flat-bottomed boats for landing cavalry and artillery, has entered the Black Sea.

Odessa is to be taken; that port has been chosen to establish quarters.

Twenty allied steamers are reconnoitring the coast of the Crimea.

All the Anglo-French ships here have been ordered to Varna.

Four divisions of troops have been shipped there.

The *Spitfire* and *Vesuvius* have destroyed the village of Sulineh, sparing only the church and lighthouse.

The commanders at Kars are to be tried by court-martial.

BELGRADE, August 10.

The Prince of Servia has imposed a new tax of one ducat per taxpayer as an extraordinary levy—half to be paid at once, and half in October. Despite orders from the Porte, military excesses in the interior still continue.

SPAIN.

Despatches from Madrid state that the Junta in that city had declared to Espartero that Queen Christina will not be allowed to leave Madrid until the Cortes has decreed respecting her. The Ministry is said to have consented.

ARRIVAL OF HER MAJESTY AND PRINCE ALBERT FROM OSBORNE.—Her Majesty and Prince Albert left Osborne on Friday morning shortly after nine o'clock, on board the *Fairy*, and arrived at Gosport about half-past ten o'clock. On landing, her Majesty was received by the Commander-in-Chief, both naval and military, on the station; a guard of honour, consisting of a body of the Royal Marines, being stationed off the Royal Clarence Victualling Establishment, who received her Majesty and the Prince with the customary honours. The Queen then proceeded to the station of the South-Western Railway, where she was received by the managing directors and railway officials, the Royal special train being in readiness to receive her Majesty and Royal suite. The train, which was express, arrived at the Royal private station, Wandsworth-road, at twelve o'clock. The Royal carriages being in attendance, her Majesty proceeded to Buckingham Palace—the necessary preparations having been arranged and completed for her Majesty going in state to-day (Saturday) in person to close the present Session of Parliament. In the afternoon her Majesty attended the Council held at the Palace, when the Speech on the prorogation of Parliament was finally agreed upon. The Queen and Prince Albert will leave Buckingham Palace for Osborne immediately after the prorogation, to rejoin their youthful family the Prince of Wales and Princes Alfred and Arthur, and the Princess Helena—remaining at Osborne.

ACQUITTAL OF LIEUTENANT PERRY ON THE FIRST CHARGE.—On Thursday morning an express arrived at Windsor, from the Horse Guards, bearing despatches announcing the final decision on the charge of assault brought against Lieut. Perry, who was tried before Colonel the Hon. James Lindsay, M.P., and a General Court-martial, at the Infantry Barracks, Windsor, on the 19th, 20th, and 21st ult. The Court martial found Lieut. Perry guilty of the charge, and sentenced him to be dismissed from the service. The Judge-Advocate-General, however, on carefully perusing the evidence, found that some questions had been put which ought to have been rejected, and certain answers refused which ought to have been taken; and therefore he recommended her Majesty not to confirm the sentence. The sentence was unconfirmed, and Lieut. Perry consequently released from the charge.

THE THEATRES.

IN addition to the theatres we mentioned last week, as having announced their immediate closing, the OLYMPIC may now be named, which closes this (Saturday) evening. The PRINCESS'S terminated its season on Thursday. Mr. Ryder, of the last-named theatre, if the statements in theatrical journals are to be trusted, appears to have resolved on a bold step, having engaged with a well-selected company to perform at the BOWER SALOON. Good acting, it is generally understood, has not yet penetrated to the stage of that establishment, if, however, it conducted in a manner neglectful of the charge, and subservient to the purpose of educating the popular taste, and thus, at whatever sacrifice to the professional reputation of a West-end actor, achieve a public benefit. We may, also, recall in this place, a demonstration at Liverpool made in behalf of Sir Vincent Cotton, who had announced his intended intention of retiring from the stage. An influential meeting having been called at the Clarendon rooms, the veteran tragedian consented to reconsider his decision, and has, indeed, undertaken to remain on the boards for another season or two, under the assurance that, in the present state of theatrical affairs, his continuance in the profession will be highly beneficial.

WHITTINGTON CLUB.—A new aspirant at a new entertainment made his first appeal to a London audience on Thursday evening, in the person of Mr. Edward Copping—the subject of his lecture being "London Lodging, and Lodgers." The lecture consisted of narrative, pranked by humorous bits of poetry, both serious and comic, and of characterisation, verse and striking; with a few snatches of song, showing much vocal quickness and flexibility. Mr. Copping has every qualification for the task he has undertaken; he is easy, in fact, was distinguished by superior attributes, and possesses extraordinary merits as a literary production. We have seldom passed a more delightful evening.

DEPARTURE OF GRISI AND MARIO FOR NEW YORK.—On Wednesday morning Madame Grisi and Signor Mario left Liverpool in the *Arctic*, Captain Comstock, for New York. They are accompanied by Mr. H. Lavenu, the acting manager of the new theatre in that city, and to commence an engagement in the United States on the 4th of September. Previous to their departure they presented Grisi, with a specimen of epergne, and Mario with a handsome gold ring, each having a large bloodstone, both the gifts of an Italian lady, who witnessed the farewell appearance of these renowned vocalists at the Royal Italian Opera on Monday night.

LONDON AND SOUTH-WESTERN RAILWAY.—On Thursday the half-yearly meeting of this company was held in the York-road—W. Chaplin, Esq., M.P., in the chair—when a dividend at the rate of 6½ per cent per annum was declared, and the chairman announced that, at the next meeting, it would be necessary to make provision for additions to the working stock. Mr. Wilson, M.P., and Mr. Snell, having been put in nomination for the office of director, the show of hands fell on the latter gentleman. The result of the poll will be declared on Wednesday next.

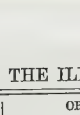
A PROSELYTISER.—A priest of Pekin (Grecce) has been imprisoned for exhorting his hearers from the pulpit to pray for the extirpation of the three great curses of the country, the King, the new Ministry, the army of occupation, and the famine.

THE King of Bavaria has ordered that no children aged less than ten years are to be brought to receive elementary and religious instruction in the churches or schools, and that all such are to be kept at home or in the open air. The Archbishop of Munich has remonstrated against this order, which he considers to be a violation of the Concordat.

OBITUARY OF EMINENT PERSONS.

HENRY AGLIONBY AGLIONBY, ESQ., M.P. FOR COCKERMOUTH.

THE death of this veteran member of Parliament—a prominent one of the extreme Liberal party—has just been announced. He had a seat in the House of Commons uninterruptedly since the passing of the Reform Bill.



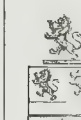
Mr. Aglionby, a Barrister-at-Law of the Northern Circuit, was son of the Rev. Samuel Bateman, Rector of Farthinghoe, by Anne, his wife, daughter and co-heir of Henry Aglionby, Esq., of The Nunnery, in Cumberland, and assumed the surname of his maternal ancestors on inheriting a portion of the estates. The Aglionbys derive descent from one of the soldiers of the Conquest, and have been ever since resident in Cumberland, enjoying large estates, intermarrying with the Bromghams, the Lawsons, the Musgraves, &c., and frequently representing the Cumberland boroughs in Parliament. During the Civil War they espoused the Royal cause; and John Aglionby, the then chief of the house, took an active part in the defence of Carlisle, when besieged by the Parliamentarians.

THE HON. LADY BEDINGFELD.

THE Hon. Charlotte Georgina, Lady Bedingfeld, died on the 29th ult., in London. Her Ladyship was only daughter of Sir William Jerningham, Bart., of Costessy, in Norfolk, by Frances, his wife, eldest daughter of Henry, eleventh Viscount Dillon, and obtained the rank and precedence of a Baron's daughter in October, 1831, consequent on the restoration of the old Barony of Stafford to her brother, the late Sir George William Jerningham.

She married, 17th June, 1795, Sir Richard Bedingfeld, Bart., the representative of the ancient Catholic family of Bedingfeld, of Oxburgh, county Norfolk, and had four sons, and as many daughters. Of the former, the eldest is the present Sir Henry Richard Paston-Bedingfeld, Bart., the claimant of the Grandison Peerage; and of the latter, the eldest, Frances-Charlotte, wife of William Lord Petre, died in 1822; and the second, Matilda, is married to George Stanley Cary, Esq., of Follaton Park, Devon.

LIEUT.-COLONEL P. F. THORNE.



LIEUT.-COLONEL PEREGRINE FRANCIS THORNE, formerly Commandant at Plymouth, died on the 11th ult., at Constantinople. To him London owes the idea and general organisation, even to the minutest detail, of its admirable Police Force. For his suggestions on the subject, Sir Robert Peel expressed his thanks, and offered Colonel Thorne the supervision of the whole establishment—an offer, however, which was declined.

Colonel Thorne, who received all the honours of William IV. the decoration of K.H., enjoyed the consideration of many distinguished men in high office. The last six months of his life were spent in collecting military information for the proprietors of a leading journal; in which pursuit, owing to the early period in spring wherein he was obliged to travel, he had to encounter, though the snow, between Trebizond and Erzeroum, *en route* to Kars, a most perilous and fatiguing journey.

MAJOR THOMAS RIDDELL, H.E.I.C.S.

THIS gentleman, who died, aged forty-three, on the 23rd May last, at Mussoorie, East Indies, after a short illness, was the fourth son of the late Thomas Riddell, Esq., of Cameleston, Roxburghshire, a descendant of the old family of Riddell, for centuries settled at Riddell, in that county, and now represented by Sir Walter Riddell, Bart. Major Riddell married Ellen, daughter of Captain Booth, of the Bengal Army, by whom he has left one son. He has been about twenty-seven years in India, and did deeply regretted. He served in the Affghan war, under General Sir George Pollock; after which he was appointed to the command of one of the police battalions raised in the north-west provinces of India; and, upon the subsequent reduction of that corps, he was made joint commissariat magistrate of Cawnpore, which appointment he held till his death.

THOMAS ELDE DARBY, ESQ.

ON Tuesday, the 1st instant, died at his house in Queen's-square, Westminster, aged seventy-four, Thomas Elde Darby, Esq., a gentleman known to perhaps as wide a circle of friends and acquaintances, foreign and native, as any individual in our social sphere. Educated at Cambridge, Mr. Darby was even before travels when he unfortunately became a prisoner in France. On the restoration of pacific intercourse between the countries, his intimacy with the language and people recommended him to an official position under our Ambassador at Paris, the confidential nature of which led to communications with all the leading politicians of both nations, as well as a knowledge of the secret springs of Government. Thus no man during the last forty years was more conversant with the private history of public affairs than Mr. Darby, a fact mixed more generally with all classes of the intelligent community—statesmen, artists, literati, and cosmopolites of every shade and opinion. For his services he enjoyed a pension, which expires with him; a portion of which he enjoyed a pension, which expires with him; a portion of which he bequeaths to his widow (Mrs. Eleanor Darby, may be hoped, will be comforted to her widow (Mrs. Eleanor Darby, whose poetic volume, "The Sweet South," recently published, and many popular Lyrics, add a literary interest to her other claims) and the four children now left fatherless.

DEATH OF THE GOVERNOR OF FERNANDO PO.—On June 10th, at Clarence, after twenty-five years' residence in Africa, died, John Beecroft, Esq., her Britannic Majesty's Consul, and Governor of Fernando Po. He was buried on Sunday the 11th, amidst the tears of friends and colonists, with all naval honours paid by her Majesty's vessels *Britomart* and *Pluto*.

TESTIMONIAL TO MR. HUME.—On Saturday last, at one o'clock, a number of friends and admirers of Mr. Hume, M.P. (including four Cabinet Ministers) assembled at his residence, Sydenham-house square, Clapham, to witness the presentation of his portrait by Lord John Russell, on behalf of the subscribers as an acknowledgment of his long public services, and a testimony of respect for his personal character. Among those present were—Sir Joshua Walmsley, M.P.; Sir Jas. Duke, M.P.; Mr. Thornely, M.P.; Mr. Harrison, Lord Dudley Stuart, M.P.; Mr. Taylor, Dr. Arnott, Mr. Cobden, M.P., Mr. Williams, M.P., Mr. Moore, Mr. Harris, Mr. Macgregor, M.P.; Mr. Graves, Sir W. Molesworth, M.P.; Mr. Peto, M.P., Mr. Morris, Mr. Heyworth, M.P.; Mr. Duncan, M.P.; Lord John Russell, M.P.; Sir Charles Wood, M.P.; Mr. Anderson, M.P.; Lord Palmerston, M.P.; Sir R. Gardner, M.P.; Mr. J. S. Hume, Mr. W. Ewart, M.P., &c. A deputation attended to receive the Council of Chapel-street, of which Mr. Hume is an honorary member. It comprised Earl Fortescue, vice-pr sident; Mr. H. C. Robinson, Mr. G. Grote, Mr. E. Romilly, and Mr. Atkinson, secretary. The members of the family having assembled with the visitors in the drawing-room, and the portrait being placed in the room, Lord J. Russell read an address to Mrs. Hume. Mr. Hume returned thanks, on behalf of Mrs. Hume, in a short speech, in which he stated that the portrait having been originally ordered to be placed in some public institution, Mrs. Hume and he had consulted together, as the question had engaged his attention more constantly than any other, and had resolved to them selves to request permission that it might be placed in the house of the first council of University College—a body which could be more gratifying to them than to be to be personally placed in that institution. Mr. Cobden, on behalf of the deputation which attended there that day to represent the council of the London University, begged to return their cordial thanks for the valuable gift. The company then partook of lunch, and shortly after dispersed. Among the subscribers' names registered in the address by Lord John Russell were those of Lord Brougham, Lord Panmure, Mr. Labouchere, and Sir George Grey.

THE NEW STAMP DUTY.—The penny receipt stamps for bills amounting to and not come into operation till the 10th October. It will be 1d. under £5, 1d. under £10, and so on progressively.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

THOMAS CROFTON CROKER has been taken from among us during the present week, at the age of fifty-seven. He was an Irishman in heart, and voice, and look; and was favourably known to the public by his "Fairy Legends of Ireland;" his "Legends of the Lakes; or, Sayings and Doings at Killarney;" and by what we believe was his first work, his "Researches in the South of Ireland, Illustrative of the Scenery, Architectural Remains, Manners and Superstitions of the Peasantry," derived from personal observation, and professedly from "ancient MS." He was living at Cork when he first rose into distinction; but his literary ambition was for a long time much greater than his skill as an author. His admiration of Sir Walter Scott led him into a correspondence with the great novelist, and his local information and name into a correspondence with his better-known namesake, John Wilson Croker—the Quarterly slasher—the excellent editor of Boswell, and the ex-Secretary of the Admiralty. The fairy and traditional stories, mixed with odd bits of antiquarian intelligence, delighted Scott; while his local knowledge, excellent handwriting, and official habits, attracted the attention of Mr. Secretary Croker. Scott repaid him with letters; but Wilson Croker brought him to London and made him a clerk in the Admiralty, where he rose so rapidly that he was enabled, some four years ago, to retire with a pension of five hundred and eighty pounds a year.

Crofton Croker was small in make. In the journal of Sir Walter Scott (under the year 1826) he is thus described:—"Here was Crofton Croker, little as a dwarf, keen-eyed as a hawk, and of easy prepossessing manners, something like Tom Moore." We may add that he was in no way related to the kind and unostentatious Mr. John Wilson Croker.

There was a long period of Mr. Crofton Croker's life to which all his friends look back with pleasure. He was at one time a most *okebbable* man; full of information—full of entertainment—replete with Irish fun—always amusing, with or without whisky—unwilling to give offence—ready to talk—anxious to listen—and some what indifferent whether the hours of departure were before the *wee short hours* or not. He shone at the *Noviomagians*. People will ask who were the Noviomagians? Let us endeavour to satisfy them.

A knot of known and unknown antiquaries had a fancy for fixing the site of a Roman settlement in England known as Noviomagus. As will be easily imagined, they differed widely, and even learnedly, among themselves about its site. Noviomagus had as many localities as Junius has authors urging claims for peculiar pets to a still unsettled honour. They consequently became peripatetic—nay, convivial. Kent and Surrey were ransacked for every Roman squat or settlement. They dined, they talked, they consulted, they drank. A very pleasant party was formed. Dryasdust was there—but Dryasdust was not there. Their large and little differences led to a club in London, where books and maps could be settled—and (shame to say) better wines obtained than they could get in the Weald of Kent or the commons of Surrey. Of this club Crofton Croker (now, we regret to say, no more!) was long the presiding spirit. Here he was "at home;" here he revelled in his own native wit, and here he was the soul that put fresh marrow into the standing dish of the Noviomagians—marrowbones, new and direct from Clare-market—land dedicated to that real delicacy, English marrowbones.

In musing Crofton Croker, we cannot but feel that we have lost a man who did something for letters in his day, and one who, in spite of some now forgiveable infirmities of temper that made him quarrel too frequently with his best friends, was a man to be esteemed. But he has gone, and his "Fairy Legends" with him. Authors, when alive, are too often judged by their worst performances; when dead, they are weighed and measured by their best.

The original MS. of Gray's exquisite "Elegy in a Country Churchyard" was sold last week, at Sotheby and Wilkinson's, for one hundred and thirty-one pounds—thirty-one pounds more than Mr. Penn, of Stoke Pogis, gave for it some ten years ago. The purchaser was not an autograph collector, not a dealer, not even a Yankee, not even an English nobleman. Will the reader believe it?—the purchaser was a poet: no less a person than Mr. Robert Charles Wrightson, writer of the Fine Arts contributions in *Aris's Birmingham Gazette*, and author of a volume of poems, entitled "The Trance." For Gray's poetical notes Mr. Wrightson paid down proudly and at once, new and crisp Bank of England notes, with an air of well-justified delight, that he had become the possessor of the original MS. of one of the best-known poems in the world; in short, that he was, and is still, as, indeed, we take him to be, a person to be envied.

The other Gray MSS. sold well. Mr. Daniel, of Canonbury, added to his store of literary treasures Gray's own annotated copy of the Strawberry-hill edition of his Odes: the price—a song—£37 10s. Mr. Holloway, of Bedford-street, carried off the cheapest lot of the day—the whole of the Mason and Gray Correspondence—at Catnach bullad price, £31. If separately sold, they would have brought thrice that sum. Mr. Murray, of Albemarle-street, secured six little note-books of Gray's tours for £36 10s. Indeed, all the known collectors went off enriched and pleased. Mr. Penn was more than pleased; and sellers and purchasers are not always equally delighted, and at the same time.

Mrs Southey was buried—not with the poet of Thalaba and Kehama, amid the lakes of Cumberland, but in Lymington Churchyard, in the same grave with her father and mother; where, let us hope with Collins,

> The year's best flowers shall duteous rise,
> To deck its poet's sylvan grave.

Mrs. Caroline Southey should, indeed, have a sylvan grave.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectory*: The Rev. J. F. Allegro to Kentisbeare, Devonshire. *Vicarage* The Hon. and Rev. W. Moreton to Sherborne, Dorsetshire. *Hon. Canonries*: The Rev. J. Maude and the Rev. M. Davies to St. Asaph Cathedral. *Incumbency*: The Rev. J. Johnson to Saie, near Ashton-upon-Mersey.

THE Rev. M. O'Brien, Professor of Natural Philosophy and Astronomy in King's College, London, has been appointed Professor of Mathematics at the Royal Military Academy.

THE Rev. H. A. Rawes, Curate of St. Bartholomew's Church, Cripplegate, has been appointed Warden of the House of Charity, Rosestreet, Soho.

TESTIMONIALS.—The following clergymen have recently received testimonials of affection and esteem:—The Rev. R. Anderson from the parishioners of Burnetton, with a silver inkstand and library clock. The Rev. H. Marten, B.A., Curate of Trinity Church, Newington, Surrey, with a papier-mâché cabinet and case, by the Bible Class.

POLYTECHNIC INSTITUTION.—One of the features of the new management of this attractive establishment is the admission of the industrial classes on Monday evenings, on payment of sixpence each, provided they procure a ticket signed by the foreman or superintendent of the works to which they belong.

THE CRYSTAL PALACE.—An addition has recently been made to the refreshment department in the shape of a machine for making tea and coffee by hydrostatic pressure. It is the invention of M. Loysel, a French chemist, and by its agency he proposes to achieve the following results—namely, the production of tea and coffee of double flavour and clearness, and a great economy and saving in the use of the material. In the preparation of tea his great discovery is very simple. M. Loysel says he has discovered that by grinding the tea in the same manner as coffee, before infusion, the quantity of exhilarating liquid obtained is nearly doubled.

TOLBEACON LIGHT.

H.M.S. "DRIVER," AND YACHTS "GONDOLA" AND

THE accompanying spirited scenes were sketched by Mr. Brierly, on board the *Driver*, Hon. Arthur A. Cochrane, when that vessel went in on the 27th June, with Mr. Biddlecombe, master of the fleet, and Lieutenants Nugent and Cowell, Royal Engineers, to make their reconnoissance of the fortifications of Cronstadt.

The day was fine and clear, with a fresh breeze from the westward, and the *Driver* steamed in, past the Tolbeacon Light, and up towards Cronstadt, until the particulars of the fortification and arrangement of the ships within them could be clearly made out from her deck, when she rounded to, while the required observations and sketches were made. As she was standing out again, she was met by the two yachts *Gondola*, R.Y.C., the Earl of Lichfield, and *Esmeralda*, R.W.Y.C., Mr. Campbell (then with the fleet), which ran past her, and were standing up towards Cronstadt, when a Russian steamer was seen coming rapidly out of the harbour. The *Driver* immediately went to quarters and prepared to receive the steamer; and the yachts began to work out. After standing on a short time, the Russian steamer returned again to Cronstadt.

In the upper Sketch, the yachts are shown working out, and the *Driver*, with a small Russian vessel, picked up at anchor inside the Tolbeacon, in tow.

Later in the afternoon the *Driver* went round, and steamed along the northern side of Cronstadt. In the evening a Russian steamer again c
steamed for some distance clear of the harbour, the *Driver* sta
try and cut her off. The *Desperate* and *Penelope* got under wa
and the Russian turned back again. This vessel was schooner
fast; had a Russian ensign at the peak, and a flag (blue) at the
The lower Illustration shows Cronstadt and the present appea
ships and fortifications from the sea.

port on the proceedings of the Anglo French fleets in front of C
extract from which runs as follows:—

FORT PETER THE GREAT. FORT ALEXANDER. FORT MENSCHIKOFF.

CRONSTADT, AND THE RUSSIAN FLEE

T ALEXANDER. FORT MENSCHIKOFF "REMENALDA." "GONDOLA." FORT RISBANK

A," OFF CRONSTADT.—SKETCHED BY O. W. BRIERLY.

al Napier having kept cruising about for a long time in the Baltic, and of Finland, at last made his appearance before Cronstadt. He cast tween the lighthouse of Tolbeacon and Krasnopigorki, when it was from the Admiral's ship, *Peter I.*, that he was preparing for action. , six of the enemy's ships advanced, sailing past the lighthouse, and a position in Cronstadt roads: but of course beyond the reach uns in the forts. The next day four ships approached within a l a half of Fort Alexander I. but soon retired to their former At six in the morning six steamers sailed round the Tongue, anchor in the northern channel. In the afternoon they captured boat: the peasant who was on board informed us that he had been taken before the Admiral, a little white-haired man, and was questioned in the Finnish language, which he did not understand. They took away his fish and bread, and then set him at liberty. On the evening of the same day, the *Wladimir* was sent out by the Russian Admiral to reconnoitre, and was met by one screw and one paddle-wheel frigate: from one of which a shot was fired at the *Wladimir*, but did not fall within 600 yards of the vessel. The *Wladimir* then returned to its anchorage. The 28th was evidently a holiday in the fleet. All the ships were decorated with flags, and the guns were fired. In the evening the detached squadron left the northern channel, and rejoined the fleet. The three following days the fleet lay inactive at anchor, a few steamers only were cruising in the northern channel. Two of them approached our forts, and boats communicated with the lighthouse. On the 2nd of July the fleet weighed anchor, and put to sea, bringing up at Seeker, 80 verts from Cronstadt. The English left several memorials of their visit to the lighthouse, in the shape of inscriptions on the walls, and hung upon the signal-mast a small basket and a rope mat. This closed the enemy's reconnoissance of Cronstadt.

The report winds up in the following terms:—

During this visit the people in Cronstadt lived as usual. On board the fleet, after their day's work, the men were mustered in the evening, and the inhabitants and garrison slept as soundly at night as if in Moscow or Tull.

FORT CRONSLOTT. FORT RISBANK.

THE SEA.—SKETCHED BY O. W. BRIERLY.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—Monday.

The Royal assent was given, by commission, to a large number of public and private bills.

Lord Brougham presented a petition praying the House to pass, next session, a measure similar to the Bills of Exchange Bill, which was withdrawn for the present year in the House of Commons on Friday last. The noble Lord defended his measure from the censures pronounced upon it by Mr Muntz on that occasion. Lord Campbell and the Lord Chancellor concurred in regretting the defeat of the bill. Lord Brougham then re-introduced the measure in a somewhat amended form, and the bill was read a first time.

The Literary and Scientific Institutions Bill was read a third time and passed.

The Bribery Bill was read a third time. On the question that the bill should pass, the Marquis of Clanricarde moved an amendment disallowing the payment of the travelling expenses of voters at elections. After a short discussion their Lordships divided, when the numbers were—Contents, 20; non-contents, 4. The clause was, therefore, struck out of the measure. The bill was then passed.

HOUSE OF COMMONS.—Monday.

ENCUMBERED ESTATES (WEST INDIES) BILL.

The motion for going into Committee on the Encumbered Estates (West Indies) Bill was opposed by Sir J. Pakington, who contended that the measure amounted to an act of confiscation, which would result in a cruel deprivation of their property to the great majority of West India landowners.

After a short discussion, the bill passed through Committee.

The Legislative Council (Canada) Bill and the Customs Bill, also passed through Committee.

The Public Health Bill was read a third time and passed. Several other bills were advanced a stage.

RUSSIAN GOVERNMENT SECURITIES BILL.

On the motion for the third reading of the Russian Government Securities Bill,

Sir F. Kelly moved the insertion of a fresh clause in the place of clause 1, and the addition of a proviso, by which the original purport of the bill would be entirely changed, and exceptions created from its penal consequences in favour of all commercial firms which had a house of business abroad, and among whose partners one or more subjects of a foreign Power might be numbered. Also the possession of Russian securities was to be declared legal, provided they had been acquired by inheritance, or as payment for a *bond fide* debt. Sir F. Kelly traced the operation of his suggested provisions, and contended that they offered a considerable improvement upon the original measure.

The Solicitor General argued that the new clause and proviso, if adopted, would render the whole bill utterly ineffectual.

Mr Hume recommended that all legislation on the subject should be postponed till next session

Lord D. Stuart defended the bill as it stood, observing that it had been adopted upon three divisions by majorities of 3 to 1.

Mr Wilkinson objected both to the new clause and the old, disapproving of the whole principle of the bill.

Lord J. Russell remarked that in principle the bill did but carry out the existing code of law, by which it was made high treason to lend money to an alien enemy. Comparing the effect of the clause proposed by Sir F. Kelly with the original provisions of the measure, he pronounced an opinion in favour of the latter.

Both clause and proviso were negatived without a division.

On the question that the bill do pass, the House divided—Ayes, 51; Noes, 13: majority, 38. The bill was then passed.

HOUSE OF LORDS.—Tuesday.

The Commons' amendments to the Episcopal and Capitular Estates (1854) Bill were agreed to. The Merchant Shipping Acts Repeal Bill, and the Duchy of Cornwall Office Bill, were severally read a third time and passed. The Public Revenue and Consolidated Fund Charges Bill was read a second time, and, after some discussion, the standing orders were suspended, and the bill was passed through all its remaining stages. The Militia Bills were committed. The Public Health Bill passed through all its stages, the standing orders being suspended for the purpose. The Metropolitan Sewers Bill was also passed.

HOUSE OF COMMONS.—Tuesday.

THE BRIBERY BILL.

Lord J. Russell moved that the Lords' amendments to the Bribery Bill should be agreed to. Parliament must be hereafter called upon to define to what extent the expenses of electors should be legal.

Lord Hotham strongly protested against the omission of the clause regarding such expenses, which had been struck out by the Lords, and moved the further consideration of the bill that day month.

Lord J. Russell contended against this mode of defeating a measure upon which so much consideration had been expended.

After discussion, the House divided, when the numbers were—For agreeing to the Lords' amendments, 78; for Lord Hotham's amendment, 21 majority for agreement, 57.

Lord Hotham then moved the adjournment of the House, and was defeated by 68 to 16; and other motions for adjournment of the House and of the debate were successively negatived at length a compromise was arrived at, to the effect that, on condition of the operation of the bill being limited to one year, opposition was not to be persisted in.

Lord J. Russell assenting, the Lords' amendments were agreed to.

MR. O'FLAHERTY.

On the order of the day for considering the Consolidated Fund (Appropriation) Bill,

Mr. Lucas availed himself of the opportunity of entering at considerable length into a statement of the alleged unfitness of Mr. Edmund O'Flaherty (the late Special Commissioner of Income-tax in Ireland) for his office, and to animadvert touching his misconduct therein, and asked whether that gentleman still retained his official position?

The Chancellor of the Exchequer said that Mr. O'Flaherty had ceased to hold office in consequence of the abolition of the tax itself, but because the office itself had been abolished. He objected to the indefinite mode in which the question of Mr. O'Flaherty's qualifications had been brought before the House, and explained the principles upon which such appointments were made.

The Bankruptcy Bill was read a third time and passed, as, after considerable discussion, was the Common Law Procedure Bill.

EAST INDIA COMPANY'S REVENUE ACCOUNT.

Sir C. Wood, in a House of some twelve or thirteen members, made his statement relating to India. For details connected with the income and expenditure of the several Presidencies he referred to printed papers in the hands of members. He regretted to say, that for 1853-4, there would be a deficit of £872,000, nor did he think that there was any certain prospect of increase in the income or diminution in the expenditure. He then gave a general review of the events and measures of last year. The state of Burmah was satisfactory; amicable relations had been established with frontier chiefs; the position of the native judges had been improved; railways were progressing satisfactorily, and would, again next year, be opened from Calcutta to Bombay; important measures were in progress for reforming the procedure in the Indian law courts; and a scheme of national education had been projected from which very important results were anticipated. Sir Charles concluded by moving a resolution embodying the financial results.

After a few words from various members, the resolution was agreed to, and the House was soon afterwards counted out.

HOUSE OF LORDS.—Wednesday.

RUSSIAN GOVERNMENT SECURITIES BILL.

Earl Fitzwilliam moved the second reading of the Russian Securities Bill, and expressed a hope that the urgency of the measure would induce their Lordships to support their unanimous decision in its favour, so that it might pass through committee before the adjournment of the House.

The Duke of Newcastle, on the part of the Government, gave his assent to the bill, observing that it had been deprived of its objectionable features, and that it would do some good, and could do no harm.

Lord Campbell, in supporting the approval of the measure, which was in accordance with the principles of English law, characterised the noble Duke opposite's conduct in the matter as "liberal, lawyer, like." The bill was then read, and a clause was subsequently introduced to reach English shipowners engaged in pseudo-foreign enterprise.

After a few observations, the bill was ordered to be read a third time on that day week, except the 1st, 2nd, and 3rd, on the third reading to-morrow (Thursday), a clause should be introduced to render the bill more efficient.

The Militia Bills were read a third time and passed.

HOUSE OF COMMONS.—Wednesday.

Mr. Hume called attention to the state of the slave-trade as carried on by Spain, and called upon the Government to insist upon that country fulfilling her engagements to put an end to the traffic.

Lord J. Russell promised compliance; and expressed his confidence in the good faith of the new Spanish Government.

Sir H. Willoughby originated a short discussion on some financial points.

The Chancellor of the Exchequer, in the course of his remarks, stated that the expectations he entertained, when he made his financial statement in May last, had been fully realised. In fact, up to the day on which he spoke, the expenditure was within the revenue.

Several bills passed their final stage.

HOUSE OF LORDS.—Thursday.

ROYAL COMMISSION.

The Royal Assent was given by commission to the following bills—viz., the Consolidated Fund Charges, Land Assessed and Income-taxes, Valuation of Lands (Scotland), Usury Laws Repeal, Crime and Outrage (Ireland), Stannary Courts, Parochial Schoolmasters (Scotland), National Gallery (Dublin), Merchant Shipping, Drainage (Ireland), Public Health, Bribery, Friendly Societies, Burials Beyond the Metropolis, and a number of private bills. The Commissioners were the Lord Chancellor, the Duke of Argyll, and Earl Granville.

Lord Campbell called attention to the subject of the statue of the poet Campbell, which was executed with the view to its being placed over his remains in Westminster Abbey. Notwithstanding the exertions had paid on the occasion of the funeral (about ten years ago) £75 5s. 9d. for the grave, and £7 7s. for leave to put the name of the poet upon the stone, the Dean and Chapter now peremptorily refused to admit the statue into the Abbey, unless a further sum of £210 for the two feet square of ground required for the statue was paid to them. He asked the Earl of Aberdeen whether he was prepared to make a representation to the Dean and Chapter to forego this demand, there being no fund available for the purpose; or whether he would advise Parliament, in the next session, to make a grant for the purpose?

The Earl of Aberdeen said, that he was most desirous of seeing the statue placed in Westminster Abbey; but he suggested that the simplest way of meeting the difficulty would be for Lord Campbell, himself (the noble Earl), and the many other admirers of the late poet to pay the amount demanded. It should be recollected that there were no other funds for the maintenance of the glorious edifice but such as were derived from interments and the erection of monuments within Westminster Abbey.

The Russian Government Securities Bill was read a third time, and passed.

The following bills were also read a third time, and passed, viz., The Militia (Ireland), the Militia Ballots Suspension, the Militia Pay, and the Midland Great Western (Ireland) Bills.

The Consolidated Fund (Appropriation) Bill and the Customs Bill were severally read a second time.

THE WAR.

The Marquis of Clanricarde moved for further information respecting the war, and the alliances and confederacies entered into. He took occasion to comment upon the transactions which had recently taken place in the Black and Baltic Seas, and complained of the defective arrangements made by the Government to meet the difficulties that were well known to exist in any warlike operations against Russia. He thought that, before Parliament was prorogued, the Government ought to lay upon the table a copy of the treaty entered into on the 14th of June at Constantinople between Austria and Turkey. He looked upon the conduct of Austria in respect to that treaty as most suspicious; and he was desirous of knowing what securities her Majesty's Government had received that Austria would assist in carrying out the views of Turkey and the Western Powers. It was his firm belief that Austria would never take an active part in hostility to Russia, but that she would content herself with the Principalities only in the event of Russia evacuating them. The noble Marquis concluded by moving for a copy of the Convention entered into between Austria and Turkey, respecting the occupation of the Danubian Principalities by the former Power.

The Earl of Clarendon said, he could not impute inconsistency to his noble friend, for from the first day of the session to the present, he had been consistent in his attacks upon the Government in respect to this war; and the details contained in the commencement of his speech this evening, would, he (Lord Clarendon) was afraid, be most precious to the enemy. It was in consequence of the movement of Austria that Russia had evacuated Wallachia, and within the last two days he had heard that it was also evacuating Moldavia. He did not intend to enter into any vindication of the policy of Austria. She was an independent Power, and had a perfect right to adopt an independent course. This he would say, that the policy of England had not been dependent upon that of Austria. He could, however, state, that recent notes which had passed between Austria and England showed that the Austrian Government was as determined as England and France not to revert to the *status quo ante bellum*. The course taken by England and France was such that if the power of Russia were a reality it would be curtailed, and if it were a delusion it would be dispelled. If no brilliant triumphs had been as yet attained, the commerce of Russia had been completely destroyed, and the various ukases that had been issued by the Emperor of Russia showed that a great pressure had existed upon the people of that country.

The motion having been agreed to, their Lordships adjourned.

HOUSE OF COMMONS.—Thursday.

The Lords' Amendments in the Militia (No. 2) Bill, and in the Militia (Scotland) Bill were considered, and agreed to.

HOUSE OF LORDS.—Friday.

ROYAL COMMISSION.

The Royal Assent was given to the following Bills:—The Metropolitan Sewers; Literary and Scientific Institutions; Real Estate Charges; Militia (Scotland); Prisoners' Removal; Episcopal and Capitular Estates Management, 1854; Militia, No. 2; Militia (Ireland), Militia Ballots Suspension; Militia Pay; Incumbered Estates (West Indies); Bankruptcy; Schoolmasters (Scotland); Medical Graduates; London (University of London); Mayo County Advances; Legislative Council of Canada; and the Merchant Shipping Acts Repeal.

The Royal Commissioners were the Lord Chancellor the Duke of Argyll, and the Marquis of Westminster.

The Earl of Clarendon laid upon the table a despatch from the Consul-General of Cuba, which conveyed the gratifying information that a great improvement had recently taken place in respect to the suppression of the slave-trade in that island.

The Consolidated Fund Charges (Appropriation) Bill, and the Customs Bill, were read and passed.

HOUSE OF COMMONS.—Friday.

Mr. Steele took the oath and his seat for the borough of Cockermouth, in the room of Mr. Aglionby, deceased.

NEW WRIT FOR MARYLEBONE.

On the motion of Mr. Hayter, a new writ was ordered to issue for the borough of Marylebone, in the room of Sir B. Hall, who had accepted of the office of Steward of the Chiltern Hundreds.

THE RELATIONS OF ROMAN CATHOLICS TO THE LAW.

Mr. T. Chambers gave notice that, early in the next session of Parliament, he would call the attention of the House to the relations at present subsisting between her Majesty Roman Catholic subjects and the laws and institutions of the realm, with a view to ascertain what measures should be adopted and religious disabilities removed, in order to place them upon the same footing as other subjects of her Majesty, and to bring them into harmony with our Common and Statute Law, and might be made compatible with the safety of our institutions, and the maintenance of our civil and religious liberties.

The Lords' amendments to the Common Law Procedure Act, and the Russian Government Securities Bill were considered and agreed to.

THE SUSPENDED WRITS.

Sir W. Jollyffe moved that a new writ be issued for Canterbury, in the room of Messrs. Gipps and Johnstow, who had been declared unduly elected.

Mr. T. Duncombe moved, as an amendment, that, in the election for Canterbury, and for the other four boroughs, the writs of which had been suspended, provision be made for the taking of the votes of the electors by means of the Ballot.

Upon a division, there appeared—For the amendment, 33; against it, 40: majority against the ballot, 7.

On the motion that the writ for Canterbury be issued, another division took place, when the numbers were—For the motion, 45; against, 32: majority in favour of the writ, 13.

Sir W. Jollyffe then moved the issuing of the Writ for Cambridge.

The motion was agreed to by a majority of 46 to 31.

The remaining writs for Maldon, Barnstaple, and Hull, were also ordered to be issued.

MUSIC.

The Italian musical stage, in this country at least, has lost its brightest ornament. On Monday last Grisi took her final leave of the English public. She has since embarked for America; but it is understood that, after her visit to the United States, she is to retire wholly into private life, in the beautiful Italian retreat which is the fruit of her talents and labours. On Monday night Covent-garden presented a striking and interesting scene, though the management of the theatre did a good deal to spoil it, by a surprising want of judgment in raising inordinately the prices of admission. From the general excitement which prevailed there would have been an overflow; but, in consequence of this unaccountable blunder, the theatre was by no means full, though a great number of distinguished persons were present. But had the house been ever so crowded, the celebrated prima donna's reception could not have been more enthusiastic; and the first act act of "Norma" and the "Huguenots (omitting the last scene) were performed. On her first appearance she was welcomed with thunders of applause, prolonged for several minutes, but theolumax of public feeling was reserved for the moment when she came forward to take her mute but expressive farewell. The whole audience rose to receive her; the house rang with acclamations, hats and handkerchiefs waved on all sides, and showers of bouquets, many of them darted from distant boxes, lay in heaps upon the stage. She thrice retired, and thrice was recalled by the continued demonstrations of feeling; and it was not till she disappeared for the third time that the tumult of exoitement subsided. She was deeply moved; she shook with agitation, and, as she left the stage for the last time with slow and faltering steps, it was observed that her face was covered with tears. The scene, in short, was one which those who were present will never forget. Having very lately given our readers a portrait of this illustrious lady, together with a sketch of her life, and an estimate of her merits, nothing remains for us to add to this record of her closing scene but the expression of our heart-felt sorrow for the greatest loss that the musical stage has suffered in our day.

The Surrey Theatre is conducted at present as an English Opera-house, with considerable spirit and success. English operas, indeed, are not performed there, but those which are they performed as any so called "English Opera-house," now-a-days. The pieces in vogue just now on the other side of the river are the "Sonnambula," the "Juive," the "Huguenots," and the "Prophète." This last opera was produced on Monday evening, to an enormously crowded house, and with immense applause. In some respects the applause was deserved. Mr. Augustus Braham, to be sure, is a most lackadaisical representative of the grand and terrible *John of Leyden*. As an actor this young gentleman is feebleness and insipidity personified. This is harsh language, but we use it for two reasons—first (and which, indeed, is enough) because it is true; and secondly, because it can do no possible harm to him, for the worst thing that can happen to him, is his remaining on the stage, for which he has not the slightest qualification. As he has a fine tenor voice, and sings with considerable sweetness, he may do something as a concert-singer, but as an actor, nothing. The character of *John* is sustained with great power by Miss Romer, who, though her best days are past, is the most experienced and accomplished of our English female dramatic singers; and Miss Rebecca Isaacs, as *Bertha*, acts intelligently, and sings beautifully. The rest of the characters are supported, but the orchestra is by no means contemptible; the chorus is rough, is not ineffective; and the spectacle is excellent. The great scene in the cathedral would, in any theatre, be regarded as splendid and imposing. We must add, however, that the scene is not much calculated to refine the taste of the suburban public. It is evident that the Surrey audience—the bulk of them, at least—look upon the "Prophète" as a mere show, and neither care for, nor even believe in, the music.

Mr. Whitworth, our eminent bravura singer, has just returned to London, from Rio de Janeiro, where he has for a considerable time enjoyed great favour as principal tenor at the Grand Opera.

Mr. Henry Russell has announced his popular entertainment, the "Musical Bouquet," to commence at the Royal Theatre, on Monday, the 28th instant.

NAVAL AND MILITARY INTELLIGENCE.

Some interesting experiments were made with the Lancaster long-range gun, at Shoeburyness, on Saturday last, in presence of Admiral Berkley, Captain Milne, and a large number of Royal Navy officers. The practice commenced with a 68-pounder, ten feet long, and weighing 95 cwt., on Lancaster's principle, which has all the advantage of rifle practice. The shot or shell is egg-shaped, weighs 68 lbs., and is loaded with 8 lbs. of powder. The range was 5000 yards. Breathless suspense followed the discharge of the destructive missile whilst on its three miles' flight, and all hats and eyes were momentarily lowered as it came down with a terrific crash within or short of the mark. On the bursting of the shell the explosion was audible at that long distance by the smoke rising like a cloud. The practice exceeded everything that could have been expected, and has opened a new feature of scientific novelty in the gunnery department, particularly in light field-pieces for flying artillery, which will be as superior to the old 6-lb. Minié rifle is over the ordinary musket.

The *Australia*, transport steam-vessel, having by great exertion completed taking on board her munitions of war from the Royal Arsenal for the East, moved up to the Dockyard on Tuesday morning, when two lieutenants and eighteen non-commissioned officers and gunners of the Royal Artillery embarked in her, taking ten horses on board with them. The *Australia* left the Dockyard at one o'clock p.m. the same day for Gravesend, where Major Young's and Captain Irving's companies of the Royal Artillery were to embark in her for the east of war.

The carbines of all the cavalry at home are about to be immediately served out to Turkey, and our dragoons in country quarters will be served out temporarily with the store carbines kept for the yeomanry.

Six flat-bottomed boats, for the conveyance of troops, are ordered to be built immediately at Devonport dockyard. An equal number is also to be built at each of the other dockyards.

The *Devonshire*, receiving ship for Russian prisoners of war, at Sheerness, is increasing her medical stores, &c., anticipating in a short time an arrival of prisoners and wounded from the Baltic.

Experiments are now being made, by order of Government, to test the effect of shot made from antimonial iron wooden as well as iron surfaces. As far as they have been tested, the destructive effects of these balls are more apparent than those arising from iron ones; for as soon as the surface is struck, the metal, owing to its great brittleness, breaks, and the various particles, consequently, become doubly speed.

It is stated that two more regiments of cavalry and six regiments of infantry are to proceed to Turkey, and that the whole of the militia are to be embodied.

The four line-of-battle ships, *Royal William*, 120; *St. Vincent*, 121; *Rosamond*, 21, screw; and *Algiers*, 91, screw, that conveyed the Prince Consort to the Baltic, are daily expected to return to England, and will fill up complements, and most likely proceed to the Black Sea.

Intelligence from Archangel left the blockading squadron—*Amethyst*, 24, Captain Ommaney; *Miranda*, 17, screw, Captain Lyons; and *Jaseur*, 21, screw, Captain Bythesea—on the morning of the 4th July; and that the fleet was still cruising off the entrance of the White Sea, in order to keep open the communications, and to intercept supplies of provisions and warlike stores from taking their course to the interior of the empire.

Sir George Cathcart, the Earl of Lucan, and Sir Richard Dacres, embarked at the Isle of Dogs on Tuesday last, on board the *Caradoc*, which was the first steamer that was ordered to Turkey.

The Archduke Constantine had a narrow escape of his life at Gravesend, on the day of the departure of the *Caradoc*, on board which he was embarked with the Admiral and General. The anchor was dropped.

The New Dress for the Army.—In our last Number we gave an illustration, representing the new dress for the 49th Infantry (the first of the new dress that attracted much attention in London), in addition to the fact, that the whole of the Light Infantry (a feature of the new plan) for Inverness and Nairn were clothed in London alone, out of the regiment.

NOTES OF A RAMBLER.

RAILWAYS AND REFRESHMENT-ROOMS.

Only those whose occupations bind them to the Babel of the great metropolis can fully appreciate the gush of joy with which one escapes from its eternal hubbub, and suddenly finds himself hurrying past hedge-rows and hillocks, corn-fields and clover, broad meadows and pleasant slopes rich with waving corn—everywhere indicating an abundant harvest.

For the full enjoyment of the country it is, perhaps, necessary that one's early life should have been spent in connexion with it. We value the jewel lost and restored more than that around which no anxieties have ever been twined; and a re-awakened pleasure has infinitely more zest than that which comes without the charm of a previous experience. An apprenticeship seems necessary to build up the perfect workman; and early acquaintance with country habits, its labours and its pastimes, seems essential to the thorough appreciation of its diffe lties, its dangers, and its joys.

When the long-looked for morning arrives, and we feel ourselves whirling along, with rich landscapes, smiling villages, woods and streams, swimming past us, we are at York before we have time to get our imaginatio cerbed, and the mind brought under proper control.

"York, Sir, *York!*—twenty minutes here, Sir—dine here, Sir"—and certain suggestions of the appetite being down our wondering thoughts, and lead us to discuss very matter-of-fact affairs, which we shall from time to time do for the benefit of our friends. When refreshment-rooms in connection with railways first opened, the general observation was, "How very convenient—how much superior to our old coach system." And well they deserved the commendation. There was not only an abundant supply of all that could be desired, but prompt attendance, accompanied by all the unostentatious elegance of the best private social life. You knew, by unvarying clocks, the precise time you had to stay, and you used your time accordingly. There was none of that terrible fuss and worry so long experienced at country inns in the palmy days of coaching—the cloth half laid, and the chickens half cooked; and, just when you had made up your mind to enjoyment, the guard's horn blew, and, half starving, you were remorselessly called away.

This, for a while, vanished, but now it has re-appeared, greatly aggravated. In the days of stage-coaches, you might have a crust and drink at every stage; but now, unless you can secure a decent meal, you have no hope for hours to come. No consideration seems to be given to those who travel long journeys. You pass from the jurisdiction of one company to that of another, and neither of them have the slightest compassion for the feelings or wants of those committed to their charge. As my experiences must be the experience of thousands, I shall jot them down as they arise, and leave it for your columns to spread the information where most it is required.

Blessed with a pleasant family, it is my pleasure to spend some time and some money every year for their comfort and my own satisfaction. A few days back I left London by the Great Northern Railway, at 9.30. I had four ladies under my charge. I need not say how lovely; suffice to say, I felt proud of them. We went to York. Twenty minutes were professedly allowed for lunch, or early dinner. The table seemed spread with abundance, but before we got helped to soup, half the time had passed away; then bread was to be fetched. Everything was everywhere, except where it should have been; and by t' e time plates were changed, in rushed the official, announcing that passengers of the north by express, must take their places immediately. The ladies were, in a flutter, if not in a fever, and I was borne off slowly, masticating my first bite of meat, and with the full knowledge that I had no other opportunity until we reached Newcastle. It was said the food was good; I cannot tell, because I had no experience. The attendance was most discreditable. I verily believe that this notice will send it. The principle existing that people in public position affect to despise so much as the press; but there is nothing or which they are so much afraid. In a short time we forgot our troubles; the fun the ladies made at my expense put us all in good-humour, for I had waited upon them, and they were not famished; but, the real annoyance was, that not only was the attendance most lethargic, but our time was curtailed five minutes; and when we had taken our seats, we were drawn forward, shunted, and afterwards taken back to the refreshment-room door, where we stayed nearly ten minutes before we finally moved off. In the course of time, though half an hour late, we arrived at Newcastle, and shot out from Newcastle along that stupendous work of Stephenson, the High Level Bridge. Ten minutes were here allowed for a cup of tea or coffee: a score of people rushed into the small first-class refreshment-room, where there was no coffee ready, and only one small teapot to supply the party. The first cups, as I was informed, were cold and rank in flavour, the latter cups were hot, but what the flavour was I could not even guess. It certainly was that of anything but tea, although the waiter declared that it should be good, as fresh water had just been added. A slice of bread-and-butter could not be got. The buns were stale; and as for the biscuits, they were leguminous and tough, and might have been part of a cargo intended for the Baltic fleet, but rejected as inferior in quality.

As the authorities take no care of the public, the public must take care of themselves. Many are betrayed by their flaming notices to place entire reliance on them for the supply of every want; such confidence is entirely unmerited, and the only possible course to ensure a change rapid and effectual is for every passenger to supply themselves with what refreshments they think they may require for a twelve hours journey. A shilling spent thus will be preferred to the five shillings expended in refreshment-rooms, where the performance lags so far behind the promise.

Fatigued, hungry, and impatient, we arrived at Edinburgh, and the comfortable quarters of the British Hotel were exceedingly soothing; but appetite had vanished, and would not re-appear, however temptingly the repast might be presented; so we retired to rest ill at ease, and in no humour to bless even the railway companies, although we came our 400 miles in less than twelve hours. The best arrangements suffer from the oversight of small details, and the sooner the various companies overhaul the proprietors of refreshment-rooms, the better it will be for the public, and more creditable to themselves.

After so much growling it is very agreeable to be able to confirm the most favourable reports that have been made regarding the crops. Nothing seems to have failed. The hay, as a rule, is well gathered; wheat, oats, and barley are hopeful almost beyond precedent. The potatoes, so far, are untainted; and the turnips unequalled in leaf and root. So, unless the weather suddenly changes, there is every prospect of not only an abundant but a superabundant harvest.

RAMBLER.

ROYAL BOTANIC SOCIETY OF LONDON.—On Thursday the fifteenth annual meeting of this society was held at the offices, in the Regent's-park: Colonel Hanmer, K.H., in the chair. The report stated that the number of visitors during the year amounted to 149,258. The total income of the year was £15,200, and the expenditure £11,408. The report was adopted, and some routine business transacted.

PROMOTIONS AND APPOINTMENTS.—Sir Graham Montgomery, Bart., has been appointed Lord-Lieutenant and Sheriff Principal for the county and shire of Kinross. Mr. Arthur Edward Kennedy, Governor of Sierra Leone, is also appointed to be her Majesty's Consul-General in the Sherboro country, on the west coast of Africa. Mr. John Bell, her Majesty's Consul in Algeria, has been promoted to the rank of Consul-General, but without any addition to his present salary. Mr. Thomas Elmore is appointed unpaid Vice Consul at Algiers. Rear-Admiral Henry Byam Martin is appointed to Sir C. Napier's fleet in the Baltic.

NATIONAL SPORTS.

From twice ten hundred thousand throats, crashes the Yorkshire roar,
And the name of the winner proudly floats a league from the course, or more.
SIR FRANCIS H. DOYLE.

THE month between the festivals of Goodwood and "Old Ebor" is never a very stirring one, and this year has quite kept up the charter. "Water, water, everywhere," was the universal wail at Brighton, while the attendance of horses was miserably disproportionate to the banquet of "1330 sovs. of added money" which was prepared for them. At Durham, Merry Monk—who is said to have the foot of nearly everything at Middleham Moor—won his race very cleverly; and Templeman re-appeared, as the winning jock of Chicken, for the first time since he sprained his knee off Marley-hill, at Ascot. The wretched running of Derwish, at Goodwood, has been a great source of delight to "Sim's" friends, as it has completely crushed all those calumnies which the "dancing dervishes" of the Ring had endeavoured to propagate, and to which, to judge from their tactics on the Oaks day, Scott's stable seem almost to have lent an ear. Strange as it may seem, such is John Scott's infatuation about this horse, from his extraordinary chested performances with West Australian over the tan gallop at Whitewall, that he not only totally ignores his awkward temper and inability to get through mud, but will have it that the Derby was a mistake, and that "*he did all we wished*" at Goodwood. It seems difficult to understand Lord Derby's notions on the subject, especially after he has lost both Derby and Oaks with a first favourite this year; but the belief has for some time been current (and the fall of Acrobat to 25 to 1, with scarcely a taker, confirms it) that the stable cannot bear to make the humiliating confession, that their best Derby horse was chumping his corn within earshot of the course on the day; and that, therefore, they would rather lose the St. Leger with Derwish than let Acrobat meet and beat him in it. If they carry out their present resolution, it will be an immense disappointment to Frank Butler, who always told his friends, when he was at his worst, that he quite intended to get well, and win the St. Leger on Acrobat. This eminent jockey looked wonderfully well at Goodwood, and brought his light saddle with him; but he was persuaded not to risk wasting, and to reserve himself for Doncaster and the October Meetings. Trainers generally hold Derwish's claims so very cheap; that if Acrobat is scratched, a very large "scratch field" is expected to come out, to have a run at hung Tom. Mr. Major, it is said, has made Autocrat quite as sound as The Reiver and Andover, although it is averred that his "lotion" quite failed with Augur. Calamus has also appeared in the betting, and hence Job Marson will most probably have to mount the "all green," instead of the "red spots," to the great sorrow of Richmond, which refuses to this day to be comforted, because Lord Clifden took him off Hospodar in the Derby.

Both in Yorkshire, and among turfites generally, Mr. F. Lawley's secession has occasioned the most bitter regrets, as few men have been more popular. Although he was connected with a very "clever" party, his speculations were comparatively slight, and his losses had been most promptly met. It was generally supposed that he had a share in Clincher at one time; but he ran no horses in his own name, and has very few entries in the Book Calendar, the largest of them being a 200-sov. h. f. Produce Stakes at Doncaster, 1856. Poor "Will Beresford's" memory will also be long green, and it well may, as his fund of wit and humour, to say nothing of his wonderful acquaintance with our dramatists and modern literature generally, was quite inexhaustible. Perhaps the historic glades of Sherwood Forest, where he once trained Mr. Houldsworth's horses (after John Scott migrated to Whitewall), might have nursed these tastes for the "*Hores humaulores*," in which his brother gentlemen are generally somewhat deficient. He coined a train for Sir Joseph Hawley after the very season (1847) that he won the Oaks with Miami; in consequence, so it was said, of the trials (if such brutes as Lovelace, Vanity, &c., were worth trying) getting wind too soon, through the Newmarket touts; and Orlando was the last horse of any pretensions that he brought out. This was in the spring of 1852, and he was soon after seized with the fit of paralysis which ultimately proved fatal; Arnull succeeding him as trainer to Lord Orford.

The most dashing offer of the week has been the one of 2000 guineas and contingencies, which "the Squire," with more spirit than judgment, has refused for his St. Leger and Derby colt, Rifleman. He is a surly little horse, very like Orlando himself, both in size and barrel, but quite as much more civilised temper. Rumour also has it that Lord Glasgow has purchased Mr. Wright's St. Leger yearling, Prairie Birdcatcher (own brother to Bird-on-the-Wing) for 800 guineas and contingencies. In 1852 his Lordship, unfortunately, just missed buying a splendid yearling (own brother to Maid of Masham), at York, and as the colt fell into the hands of stake defaulters, he has never appeared, in consequence of countless unpaid forfeits which now hang over him.

York seems to be making an effort this year to rival Doncaster as a horse market, as nearly all Mr. Meddam's stud, including Sicily, are to be brought to the hammer, besides forty-one lots from the Rasby Abbey stud, and thirty-two from the Fairfield Stud Farm.

Four thousand guineas is said to be the price set by Lord Exeter upon Stockwell, whose racing days have been, it would seem, brought to a close by feet-fever, owing to bad hoof-pacing after his Ascot Cup race. Baron Rothschild did not fancy him at this price, and did not care to have any of the stud but King Tom's half-brother, Stroof—an arrangement which the Marquis would not hear of. This reminds us that 300 sovereigns is said to be the reserve price of Mr. Brown's celebrated greyhound Bellamite, whose thirty or forty kennel companions are to be sold during the Doncaster race week. If Mr. Tattersall with a "Howard," and old John Day to help him, can invoke half the enthusiam among vendees, in Yorkshire, that he did on the Royal Sale day, Cockins and Dorkings will have again to hide their diminished heads before the young grey Chanticleers, &c. of the turf. Mr. Howard is the Napoleon of speculation in this way, as he has in his stable at present, three yearlings which average 300 guineas each, and three two-year-olds, Cavalier, Quotation, and Farina (all which average 430 guineas. The latter colt, which has figured in the Derby quotations, was purchased from a Mr. Sadler, of Doncaster, and was last year, with the exception of being rather slack behind the saddle, the finest Surplice junior we have as yet looked over.

READING RACES.—TUESDAY.

Easthampstead Park Stakes. Herbert, 1. Thrush, 2.
Borough Plate.—Evangeline, 1. Dan Cupid, 2.
Berkshire Stakes.—Brother to Grey Tommy, 1. Mishap, 2.
Match: 100, h. ft.—Mickenlmas Maid, 1. William Rufus, 2.
Althorp Stakes.—Maid, 1. [illegible], 2.
Handicap Plate.—Miss Lee, 1. Dan Cupid, 2.
Berkshire Hunt Stakes.—Light Phœbus, 1. Narcissus, 2.

WEDNESDAY.

Innkeepers' Stakes.—Octavia, 1. Caiot, 2.
Reading Stakes.—Tomthumbe, 1. Hurrington, 2.
Caversham Stakes.—Little Gerard, 1. Magnet, 2.
Forbury Stakes.—Dan Cupid, 1. The Peri, 2.
Plate of 60 sovs.—Octavia, 1. Ruth, 2.
Surrey Stakes.—Dartford, 1. Lina, 2.

LEWES RACES.—FRIDAY.

Queen's Plate.—Sharvogue, 1. [illegible], 2.
£50 Handicap Plate.—Henrietta, 1. Hurrington, 2.
Lewes Handicap.—Vingtun, 1. Dalesby, 2.
Club Plate.—Now-or-Never, 1. Honesty, 2.
County Stakes.—Peridicus, 1. Switch, 2.

THAMES GRAND NATIONAL REGATTA.

The annual gathering of the admirers of aquatic sports, both professionals and amateurs, for the purpose of holding the National Regatta, commenced on Tuesday, at Putney, the Right Hon. the Lord Mayor being the patron. This regatta, from the time of its commencement, some twelve years since, has year by year increased in interest; and certainly the list of competitors and the number of races fixed for Tuesday, Wednesday, and Thursday, were of a character to create a most lively interest among this portion of the sporting world. Nothing could be more fortunate than the days fixed on by the stewards for holding the Regatta; the weather being—with the exception of a little rain on Wednesday—all that could be desired; and, in addition to the interest and excitement amongst professionals and amateurs, many thousands were drawn to the spot, owing to the extraordinary fineness of the weather. Putney-bridge, the banks at Fulham, and the entire banks on the Putney side, so far as a glimpse of the racing could be obtained, were crowded with persons of respectability; a large number of carriages containing ladies, and equestrians without number, being on the bridge and along the line of Putney lower road. At Hammersmith the excitement was equally intense, the bridge and banks also the numerous gardens attached to the villas on the borders of the river, being crowded with spectators.

FIRST DAY.

The programme furnished no fewer than eleven races, and, amongst these, some possessing peculiar interest. The sport was announced to commence at half-past twelve, at which time there were not many hundreds present; but, from that period, the railway and steam-boats, at short intervals, poured them into Putney, and, as the evening approached, there was a vast concourse of persons diffused over the wide space from Putney-bridge to Chiswick-Eyot, which was the course for four oars, the distance being reduced to from Hammersmith to Putney for pair-oars and sculls. The sports commenced with—

The Watermen's Pair-oared Match, open to all the world. Money prizes

THE THAMES NATIONAL REGATTA PRIZES

Regatta. The several articles are very tastefully grouped. Above all towers the Grand Challenge Cup, for eight-oared boats (gentlemen amateurs)—a fine silver-gilt piece of plate, with ornamental cover, surmounted by a figure of Neptune; twisted snake handles, and ornamental scroll work running round it just below the lip of the cup. Immediately below it, in the centre of the group, is the handsome Silver Challenge Vase, for flowers, to be used also as a wine-cooler. This is the prize for the gentlemen's four-oared race: it is a very rich and elaborate piece of workmanship. The groups of nine cups each, immediately under the Grand Challenge Cup on either side are the "scratch" race prizes; and the groups of five each to the right and left of the centre silver vase are the presentation cups for the gentlemen's and tradesmen's four-oared race respectively. In the front of these, in pairs, are the "pair-oared" cups—and in the centre, in front on the lowest stands, the three scullers' cups—the gentlemen's, senior and junior, and the tradesmen's. The gold oars and rudder are the most elegant we ever recollect to have seen, and were the gift of a gentleman to the committee, as the prize for the gentlemen's (junior) four-oared race. These several prizes have been designed and manufactured by Messrs. Eskins of Salisbury-square, Fleet-street, and reflect greatly to their credit as artists and workers in metals.

HIGHGATE MODEL YACHT CLUB.

For some time past, the young people of Hampstead and Highgate have been accustomed to enjoy a species of pastime by means which, considering the inland position of "the Sister Hills," it required some ingenuity to devise. A sailing match at Highgate sounds somewhat paradoxical; yet it has been accomplished, upon a scale neither so small as the Model Tank at the Polytechnic Institution, nor so large as the estuary of the Thames. The idea was taken from the formation of the Prince of Wales Model Yacht Club on the Serpentine. Within a year the Highgate youths produced twenty miniature vessels, the greater part of which were either entirely constructed or rigged by the owners. Prizes of a handsome silver cup and a gold seal were offered—the latter to be sailed for by vessels of the second class only, i.e., those not exceeding three feet in length. The course was twice up and down the reservoir of the Hampstead Waterworks, situated in the valley between Highgate and Hampstead. In some cases, the almost entire absence of wind gives but few of the Lilliputian craft an opportunity of showing their capabilities; but the beauties of the scenery and the bracing air attracted a gay company to witness the mimic match; and the novel sport has continued to prosper.

On Friday, the 4th inst., in spite of the rain, which came down in torrents, the spirited members of this interesting Club held their annual Regatta on the principal lake between Highgate and Hampstead; and a more beautiful locality it is difficult to conceive. Many ladies graced the proceedings with their presence.

The number of yachts entered for the prizes was ten; the first prize being awarded to Augustus Gardiner, the owner of the *Flying Cloud* and the second prize to Oliver Lodge, owner of the *Musquito*.

The following is a list of the several yachts, their owners, and their distinguishing colours:—

MATCH 1.—FOR A SILVER CUP.

Yachts.	Owner.	Sailing Colours.
Black Eagle ..	C. P. Wilmer	Crimson and Black.
Flying Cloud ..	A. Gardiner	Blue, with red and white cross.
Antelope	C. Rivington	Blue.
Lady of the Lake	L. Vallimey	Blue and white.
Salamander ..	L. L. Vallimey ..	Blue and red, with white cross.
Wildfire	H. F. Vallimey ..	Blue, white, and red.

MATCH 2.—FOR A GOLD SEAL.

Titania	E. Aitchison	Blue, with white cross.
Musquito	O. Lodge	White.

THE HIGHGATE MODEL YACHT CLUB.

"OTHELLO."—PAINTED BY H. C. SELOUS.—FROM THE EXHIBITION OF THE BRITISH INSTITUTION, 1854.

"THE RUSSIAN SERF."—PAINTED BY JOSEPH J. JENKINS.—FROM THE EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS, 1854.

"OTHELLO." PAINTED BY H. C. SELOUS.

In this little Picture which was exhibited at the British Institution during the current season, Mr. Selous treats with considerable vigour and pictorial effect the last tragic scene in "Othello." The jealous Moor has just drawn aside the curtain of the bed, and contemplates the calm features of the sleeping *Desdemona*; his hand still resting on the dagger by his side, but as if on the point of removing it, as he exclaims:—

> Yet I'll not shed her blood;
> Nor scar that whiter skin of hers than snow,
> And smooth as monumental alabaster.
> Yet she must die.

The colouring is very rich in tone, and detail of ornamentation in various parts introduced with considerable judgment and taste.

"A RUSSIAN SERF." BY J. J. JENKINS.

This very beautiful group picture formed part of the collection exhibited at the Gallery of the Society of Water-Colours. Russian peasants are all serfs; and here we see a female in the act of drawing water for the use of a party of soldiers in the distance: the employment of females in servile labour being a distinctive characteristic of barbarous and semi-civilized nations. Behind, resting on the back of the old horse, is a young urchin serf, whose contented look betrays the fact that he is little aware of the cruel destinies to which fate submits his after life—smiling as he does in his chains. Mr. Jenkins, whose delicate pencil is unrivalled in this branch of art, has given a *couleur de rose* aspect to the above subject, which, though highly agreeable in a picture, we fear little accords with the stern realities of the subject. The costume is accurate, and very effective; and all the details are executed with the nicest delicacy.

THE ART-UNION OF LONDON EXHIBITION.

The Art-Union of London, in addition to other prizes, have, this year, allotted £710 amongst the shareholders, for the purchase of pictures, out of the various Exhibitions of the season. The works selected, at the option of the fortunate prizeholders, are 191 in number: about thirty of which are in water-colours, the others in oil, and the whole collection, according to annual custom, has been thrown open to the public view [illegible] in the Gallery of the Society of British Artists, in Suffolk-street [illegible], of the after-season of the year in question. The larger prizes being necessarily few in number [illegible] varying from £80 down to £5 [illegible] it was scarcely to be expected that many of the works of chief importance in the recent Exhibitions should be selected; added to which, it should be stated that the time at which the prizes were distributed was after many of the Exhibitions had been opened, and numerous purchases made from them. Nevertheless, on the whole, in the main, the works secured to the Art-Union prizeholders are of no mean merit, and, in many instances, the choice has done great credit to the purchasers. A large majority of the selections are in the Landscape [illegible]

genre subjects are generally of a homely, sometimes of a puerile order; but, still, we must not be critical with them: the taste for art must be nurtured and reared from the bottom, and it is possible that many of those who now highly prize and enjoy works of a trivial character, and of crude performance, which we see amongst the present collection, may, after a few years' subscription to the Art Union, and study of Art examples, learn to look to a higher standard of excellence.

Amongst the Landscape subjects selected by the shareholders, we observe four by Tennant, three by Hulme, three by Jutsam (including the highly-effective "Rocky Path of a Mountain Barn," which we engraved); several by Boddington, the Williamses, Perry, and Cliff; and (so by Gosling. Three of Underhill's rustic subjects also (including the [illegible] by the Way," which we engraved), have found purchasers. [illegible] and colored picture "A Cabin in a Wood," represents [illegible] to confess to our shortcomings in not having [illegible] effected that fine piece of home-scene and of the farm, which [illegible] Cooper's "Common Lane," a spirited group of donkeys, sheep, &c., on a common, exhibited at the Royal Academy, is hung at the opposite side the purchaser, Mr. J. Heath, having cheerfully paid the extra in the price (£10), beyond the amount of the prize (£20), which fell to the lot. A [illegible] water-colour landscape and river subject, Rial's "View of Antwerp Cathedral" commands attention, and will, for praise, for its admirable finish and feeling treatment.

Of the *genre* subjects there are few which call for particular notice. [illegible] "Lady of Shalott," by S. S. Lauder—a strange subject, but cleverly treated; Wallis's picture of "Dr. Johnson at Cave's, the Publisher"—Johnson, too regretful of the great bibliopole's table, having a plate of victuals sent to him behind the screen; J. Stirling's "Bible Class in a Scottish Parish School, examined by a Committee of Presbytery"—clever for character, but crudely executed; and T. Warren's pretty water-colour piece of "Mein Vögleins," representing a [illegible] feeding her pet bird (engraved in this Journal).

The Council of the Art Union, in their annual Report, speak feelingly, and somewhat naively, on the existing war-clouds, which it seems has affected their financial concerns, in common with those of the world at large:—

The subscriptions for the year amount (the Report says), to the sum of £12,910 7s., and would have been much larger but for spontaneous circumstances of the clouded condition of the public mind, and the threatened impetus which follow in the train of "grim visaged war"). None have more reason to deplore the necessity for war than those who desire to advance the arts of peace. The achievements of our gallant countrymen and allies will doubtless supply materials for our painters and sculptors hereafter; but it is to be earnestly hoped that the struggle will be short and decisive.

In a later part of the same Report the Council make the following observations on the progress of art-culture in this country, and their own share in promoting it.—

As a recent artistic dinner, Mr. Disraeli, commenting on the difficulty with which the mass of the people have been led to appreciate the [illegible] pathise with artists, and inquiring into the causes of this, asked, with reference to those who attributed it to our devotion to money-making, if it were true that we are so entirely devoted to material interests, that a general feeling for the fine arts cannot be supported and maintained in England? "If we examine the evidence," said the speaker, "I must confess I can not answer to me to substantiate that theory. Who, for example, are the most munificent and most influential patrons of the fine arts? Do we not find them among the most busy classes? to one those who are supposed to be entirely devoted to the pursuits of material fortune—the manufacturers and the m[illegible] One of the great features of the present day is the [illegible] Formerly the only classes for the [illegible] [illegible] be continued, that the aristocracy of E[illegible] [illegible] [illegible] [illegible] refined [illegible] society in the present day [illegible] [illegible] [illegible]

That the Art-Union of London has [illegible] [illegible] [illegible] this result is the chief boast of its [illegible] [illegible] [illegible] to its further labors to extend the [illegible] [illegible] [illegible] society. Artists will thus be led to produce [illegible] [illegible] of art will be best advanced. If it were our province to point out [illegible] is meet to be regretted in the majority of the artistic productions of the day, we should venture to say the absence of deep feeling [illegible] tion which happens. "The true object of the arts," as a [illegible] justly says, "should be, instead of resting in externals, to lead the mind upwards into a more exalted region and a spiritual world." And elsewhere, the same author truly points out that there is no moral word but one virtue, so in the arts there is but one true path, writes, "Perfection consists in the union of the idea and vitality; everything that breaks this union, every deficiency on the one side or the other, is a fault; and, if further developed or adopted as a principle, will lead to mannerism. The idea, if suffered to predominate, produces works that are cold and lifeless, or at least in some measure deficient in the vitality of nature. The attempt, on the other hand, merely to copy life and nature, many in some cases produce strong effects, as many of the *naturalist*[illegible] done, but with the loss of ideality which must ever remain a [illegible] [illegible] ternal character which forms a most essential condition of the art." In deep feeling, as it seems to us, is found the only source of true beauty and exalted art.

POTATOES.—At Mill farm, Cranley, a root of potatoes was lately dug, on which there were no less than 12, of which deserved to be used.

THE NEW GOVERNOR OF VAN DIEMEN'S LAND.—Sir Henry Young, Governor of South Australia, is to succeed Sir William Denison in the more lucrative government of Van Diemen's Land.

ANOTHER ABDUCTION CASE.—At the Northern Circuit, on Friday, a young teacher, named Atkinson (aged twenty-three), was sentenced to nine months' imprisonment for running away with a boarding-school miss (aged twelve), and contracting with her a Gretna-Green marriage. The young lady is said to possess £10,000 in her own right; and it is believed that the marriage is a valid one.

AN ITEM IN THE COST OF CRIME.—The new arrangement for voting an [illegible] which have hitherto been paid without [illegible] the Metropolitan [illegible] has involved a number of [illegible] the expense of the metropolitan police force, £2[illegible] [illegible] [illegible] £293,50—is for the salaries of the twenty-three police magistrates. These salaries will be paid out of the Consolidated Fund, along with the other judicial salaries of the country; but a vote will be taken for the remainder—£21,326—which is required to pay clerks, ushers, and incidental expenses of the police courts.

A HUGE PRIZE.—In 1799 the four British frigates, *Naiad*, *Ethalion*, *Alcmène*, and *Triton*, captured the two Spanish frigates *Thetis* and *Santa Brigida*, bound from Vera Cruz for Spain, with a [illegible] The treasure in the *Thetis* was worth £231,000; and the other [illegible] tained as much or more specie, besides a valuable cargo of cochineal, &c. The prizes were safely carried to Plymouth, and the treasure was forwarded with much pomp to London, and deposited in the Bank of England. The prize-money, exclusive of the value of the hulls and stores of the frigates, was distributed among the officers and crews of the Divine Justice in the following shares:—Captains, £40,730 18s. each; Lieutenants, £6681 7s. 9d.; warrant officers, £2468 10s. 9½d.; midshipmen, &c., £791 17s. 0½d.; seamen and marines, £189 1s. 7½d.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent).

Another instalment of the Loan upon Exchequer Bonds having become due, this week [illegible] the demand for gold on Continental account has not fallen off, the amount for Consols has been very inactive, and, in some instances, the quotations have had a downward tendency. The declaration on the part of the Chancellor of the Exchequer, that no additional sums will be required this year, beyond those already voted, to pay the expenses of the war, has had the effect that steady imports of gold continue from Australia and New York, have given confidence to the *Bull* party, while operations, however, have been comparatively limited. The loan of £5,000,000 will be paid in by instalments of £1,000,000 each; neither is it supposed that it will be larger at any time during the present year. At present, most of the Australian gold is taken for France; and we have advices from China to the effect that a demand exists there at very high price, sufficiently high to [illegible] from England.

During the week about 800,000 dollars [illegible] the United States, of which £[illegible]0 from the Continent, and £[illegible] amounted to fully £200,000. The demand for money has improved [illegible] the reduction in the rate of discount by the Bank Directors, and the general feeling of confidence [illegible] [illegible] [illegible]

The Money [illegible] [illegible] [illegible]

AMUSEMENTS, &c.

THEATRE ROYAL, HAYMARKET.—MONDAY, AUGUST 14, and during the Week, the New Drama of THE OLD CHATEAU; the extraordinary SPANISH DANCERS, and AS LIKE AS TWO PEAS.

Parties intending to visit the Crystal Palace by the Express Trains will be booked through to the Crystal Palace Station every week-day as follows:—A.7 10, 9 10, 9 16, 9.45, 10 10, 10.40, 11.15, 11.40 a.m.; and 12.10, 12.45, 1.10, 1.40, 2.5, 2.40, 3.10, 3.40, 4.10, 4.40, 5.10, 5.40 p.m.; returning from the Crystal Palace at 11 20, 11.50 a.m., and 12.20, 12.50, 1.20, 1.50, 2.20, 2.50, 3.20, 3.50, 4.20, 4.50, 5.20, 5.50, 6.20, 6.50, 7.20, 7.50, 8.20, 8.50, and 9.20 p.m.; and further additional trains will run whenever the traffic renders it necessary.

The 7.10, 9.10, and 9.16 a.m., down trains, and the 4.45, 5.40, 6.50, and 9.20 p.m., up trains, will run to and from Farnborough.

Hours and Days of Admission to the Crystal Palace:—Open from 10 a.m. and from Quarter-past One o'Clock. Admission on the charge for admission is 1s.

Special trains will run from Hampshire

BALDOMERO ESPARTERO,

THE DUKE OF VICTORY, PRESIDENT OF THE COUNCIL OF THE MINISTRY OF SPAIN.

GENERAL ESPARTERO.

It is a very common error to speak of the present as a matter-of fact age, and to look to times past for the elements and the incidents of the romantic. To dissipate this illusion, it is only necessary to regard the history (whose events have been enacted under our own eyes) of three living men—of the present Emperor of the French; of Kossuth, the ex-Dictator of Hungary; and of Espartero, the ex Regent, and now (for a second time) the favoured hero, of Spain. Surely, in the rise of these remarkable personages, and in the incidents of their lives, there is enough of the marvellous to establish the claim of the present century to a share in the poetry of history, and to show that there is nothing in railroads and steam-engines incompatible with romance.

It is in the highest degree honourable to the character of Espartero (whatever may have been his errors or his faults when formerly in power) that, although he has been for eleven years in retirement, if not in disgrace, no sooner does the Spanish nation feel the necessity of rescuing itself from political and moral degradation, and of resuming its ancient constitutional rights, than the name of Espartero surges up from amidst the turbid excitement of insurrection and civil strife, and the combatants rest on their arms to await his coming. In briefly sketching the incidents of his career, we shall be enabled to indicate the causes of this preference.

In the year 1702, at Granatula, a small village in La Mancha, the country of Don Quixote, Baldomero Espartero came into the world. He was the ninth and youngest child of Antonio Espartero, a poor hard-working man, who exercised the trade of a carpenter, or of a wheelwright, or of a carrier—for the biographers of his celebrated son differ on the point; perhaps all these vocations together. The child was of a weekly constitution, and was, therefore, destined for the priesthood, as being too feeble to follow the occupations of his father. He had been early sent to school; and one of his elder brothers, Manuel Espartero, who was the Curé of a neighbouring village, took on himself the charge of his education. While the young Baldomero was pursuing his studies at the seminary where his brother had placed him, the news came of the invasion of Spain by Napoleon, and of the outburst of patriotic feeling it provoked. No sooner had the Spaniards taken to arms, than young Espartero, then sixteen years of age, flung aside the cassock for the musket, and entered as a volunteer in a company formed of young priests like himself, and which was called the Sacred Battalion. Those who most distinguished themselves were from time to time incorporated in a regiment. Espartero was among the number; and, after some little fighting, finding his inclination grow stronger for a military life, and less for that of the cloister, he obtained a presentation to a military school which had been recently established in Leon. This advantage he gained through the influence of a noble family, of whom his elder brother had become the chaplain. From this school he emerged at the end of about a year to enter the corps of Cadets, and towards the end of the year 1811 he was appointed Sub-Lieutenant in the corps of Engineers, at that time at Cadiz: but as he did not well pass the examinations required, he was in 1814 transferred with the same rank to a regiment of infantry, in garrison at Valladolid. This check so wounded his *amour propre*, that he was on the point of resigning his commission, when a new career opened to his ambition.

This was in the year 1814, after the fall of Napoleon, and when Spain was still alive with soldiers who had sprung up during the War of Liberation, and for whom employment was necessary. It was at this time that the final struggle commenced between Spain and her South American colonies, and an expedition was in preparation for Chili, which was to leave Spain in January, 1815. Its commander Pablo Murillo, one day received a visit from a young Sub-Lieutenant, of a calm and grave appearance, who earnestly solicited permission to take part in the war. The General was taken with his aspect, and agreed to his request. This young man was Baldomero Espartero, the son of the carpenter of Granatula, and in whom the Church had narrowly escaped spoiling a good soldier, by making him an indifferent priest. The immediate motive of the young man was to obtain one step of advancement, which was accorded to every officer taking part in the expedition to South America. The General Murillo not only accepted him, but during the voyage kept him by his side and made him his secretary, and chief of his staff. He had now the rank of Captain. It appears, however, that Espartero did not show much fitness for this post, and on the arrival of the expedition in Peru he was appointed Major of a regiment of infantry. During more than eight years Espartero fought in the South-American wars with a bravery which commanded admiration even amongst the host of brave men who have since become famous, and he obtained his promotion literally at the point of the sword. At the very commencement of his career he found himself face to face with the redoubtable insurgent chief La Madrid, with whom he had several encounters. In the year 1817, in the affair of Cochabamba, in the heart of the country now known as Bolivia, he received the order—although he had been twice wounded—to take the command of a battalion which was to take by assault a redoubt, when he conducted himself with great intrepidity. Some days after, at Sapachri, he gained on the field of battle his rank of Lieutenant-Colonel; and in 1818 he obtained a signal success over the insurgents of Kneto, on the plains of Mayocayo In 1822 he had arrived at the grade of Colonel, and he took an active part in all the military operations, especially in the affair of Torato, where he was again twice wounded. At length, in 1824, the victory gained by the insurgent General Sucre was followed by the capitulation of Ayacucho, which put an end for ever to the dominion of Spain in America; and Espartero returned to his own country, in company with Narvaez, Maroto, Valdez, Rodil, Alaix, Lopez, and others, who, like himself, had taken part in the war.

As he was the bearer of several standards which had been taken from the enemy, he was promoted to the rank of Brigadier; but neither his brilliant services, nor this public proof of the esteem in which he was held by his superiors, saved him from the nickname of "Ayacucho," which the people, with true Spanish pride, flung at all those who had taken part in the defeat and capitulation of that name. Most of the officers were young men, who deserved better treatment; and a sense of the injustice they suffered in common, as well as of the light estimation in which they were held by the elder officers who had served in America, led to their forming among themselves a kind of confederacy, or friendship, for the purpose of keeping each other in countenance; and thus it happened that—although in after-life they became chiefs of opposite camps, in the civil wars of Spain—occasions arose when the remembrance of their former friendship assuaged in some degree the bitterness of personal strife. This was especially the case between Espartero and Maroto on the occasion of the celebrated convention of Bergara

We now come to an interesting epoch in the personal life of Espartero. Soon after his return he was sent into garrison at Logrono—a place which was destined to be closely associated with his history, and which is so even at the moment when we write. In the personal character of Espartero there are two singular features: the one, a habit of prolonged lethargy after any excitement, which proceeds from chronic disease; the other, a confirmed passion for play. In this last he but resembles most of his compatriots, only that in him this propensity is more systematic, and that it appears he enjoys a rare good fortune. No one has ever dared to hint that he has the bad qualities of a gambler; but he flings himself confidently on his fortune, with a generous abandonment, and he almost always wins. Not as accepting it for true, but as showing the popular opinion, we give the anecdote told of him and Maroto, at that same Convention of Bergara, when these two furious gamblers shut themselves up all night in a farm, and decided, over the chances of tresillo, the clauses of the Convention, and, therefore, the future of the rival parties! When such stories are told, and believed, of the Espartero already grown illustrious in domestic history, it will not surprise the reader that, on his return, in youth, from South America, he should have brought with him an enormous fortune, gained at play. Gambling had been the great madness of the expeditionary army; and it is told of Espartero, that although always successful, he would never actually pocket more than the deposit-money of his antagonist, although often obliged to humour his passion for extravagant stakes. While in garrison at Logrono, he fell in love with a young and beautiful lady, the Signorita Jacintha Santa Cruz, the daughter of a rich merchant. In the eyes of her father, all the advantages of Espartero weighed as nothing against his one vice as a gambler; in those of the daughter, the conditions were a little reversed. Espartero, probably, read his fortune in the eyes of the lady, played for the stake in spite of the father, and, as usual, won. The opposition of the Signor Santa Cruz was, however, ended with the game, and the young people were happily married with his consent. Soon after his marriage Espartero was sent, with his regiment, in garrison, to the island of Majorca, where, with the exception of some occasional visits to Barcelona, he continued to reside until the death of King Ferdinand VII., called on all men to decide between the law of succession to the Crown, established by that Monarch in favour of his daughter, and the right of Don Carlos. Espartero had, in 1832, declared in favour of the former; and, on the death of the King, when the Civil War broke out, he immediately offered to march with his regiment against the insurgent provinces of the north. He was named Commander-General in the province of Biscay—soon after Lieutenant-General. Here he was not very successful, being three times beaten by Zumala Carreguy. The death of Zumala Carregny, in 1835, lessened the chances against the Christinos; but, on the other hand, their army was demoralised, and General after General was defeated by the Carlists. Cordova, the Commander-in-Chief, had been more successful, but he, on hearing of the military surprise of La Granja, resigned his command, and Espartero was appointed to succeed him *ad interim*. This was in May, 1836. In the August following, the Carlist Chief, Gomez, who had previously beaten the Christino Generals in detail, made a rapid and triumphant advance on the capital. Espartero followed him, came up with him at Escuro, on the frontiers of the kingdoms of Leon and the Asturias, defeated him, and made a large number of prisoners, from whom he formed the first battalion of his Guides. In recompense for this service, he was, in September, named General-in-Chief of the Army in the North, Viceroy of Navarre, and Captain-General of the Basque Provinces. He employed himself in restoring order in every direction, and his efforts were crowned with success. Soon after he gained the battle of Luchana, and broke up the siege of Bilboa—a fatal blow to the Carlist cause. For this service he was created Count of Luchana. He was elected Deputy to the Cortes, and took the oath to the Constitution of 1837; but soon after, being discontented with the Calatrava Ministry, he was chiefly instrumental in bringing about its downfall. Offered the

PUBLIC ENTRY OF ESPARTERO INTO MADRID.—(SEE PAGE 143.)

posts of Minister of War and President of the Council, he declined them both. During the period of demoralisation, which preceded his advent to the chief command of the Army of the North, the soldiers had revolted, and two Generals, Saarsfield and Escalara, had been assassinated. Espartero had the courage to risk his own life, first at Miranda del Ebro, and ten days after at Pampeluna, by dragging from the ranks the assassins of those officers, and causing them to be shot before the eyes of their comrades, or their accomplices.

In the spring of 1837, the best of the Carlist troops, with Don Carlos, and the infant Don Sebastian, at their head, descended from the Basque Provinces, on Arragon. Pursued by the Constitutional army, and after various sanguinary combats, they were discomfited; the Christinos maintaining that if Espartero's orders had been carried out by his subordinate generals, the Carlists would have been utterly crushed; as it was, they contrived to effect a junction with Cabrera, and to march on Madrid. Espartero was at their heels, and soon obliged them to retrace their steps towards the Basque Provinces. In the spring of 1838 he again assumed the offensive; and surprised, on the 27th of April, near Burgos, the Carlist General Negri, who had advanced into Castile, and completely defeated him, killing or taking prisoners 5000 men, with the baggage of all the artillery. The effect of this defeat on the Carlist army, was fatal. Don Carlos was in the hands of the priests. 15,000 of his troops were beaten by Espartero near the town of Penacerrada, which he took. He was about to lay siege to Estella, when he was deterred by the news that Cabrera had defeated the Christino General Oraa before Morilla. In the meanwhile, the command of the Carlist army had passed into the hands of Maroto, the old comrade and "Ayacucho" *confrère* of Espartero. They soon found themselves face to face. In the month of May, 1838, Espartero, at the head of 30,000 men, gained successes at Penadel Moro, Ramales, and Quadaminho; for which he was recompensed with the title of Duke of Victory, of Grandee of Spain of the first class, the Grand Cross of the Legion of Honour, and that of the Tower and Sword of Portugal. These successes naturally discouraged the Carlists; their camp was divided in two parties, one of which was for continuing the contest, the other for an accommodation. Espartero profited by this, to come to an understanding with Maroto, who carried with him the troops, as against Don Carlos himself. On the 26th of August Maroto and Espartero had an interview at Ugarta, and, on the 29th, a suspension of arms was agreed to. On the 30th, the two armies were concentrated on the plains of Bengara. Maroto had doubted whether his troops would obey his orders; but Espartero said, "Assemble them; I undertake to make them obey." As Maroto's men were formed in their ranks, Espartero advanced, alone, in front of them, and exclaimed, "Will you all live together, like good Spaniards, under one flag? Go and embrace my soldiers, who are your brethren, as I embrace your General!" Enthusiastic acclamations were the response; and then, regarding himself as already become their General, Espartero drew his sword, and commanded them to range their arms and break their ranks. An unexampled scene ensued. At the voice of Espartero the two armies mingled together, and those who had been such bitter enemies became thenceforth brothers. This trait in Espartero's character is heroic.

The next act of Espartero was to go in pursuit of Don Carlos, whom e followed into the valley of the Bastan. He came up with the rearguard of the Prince's force on the 13th of September, at Elizondo; but Don Carlos took the route towards Urdach, and on the 14th he entered the French territory. This result, which virtually put an end to the civil war, was received with universal satisfaction, and Espartero was the object of general enthusiasm. There still remained, however, Cabrera in Aragon; but in the beginning of the next year Espartero went and reduced him also, and thus the peace became general.

THE INSURRECTION IN SPAIN.—BARRICADE IN THE PLACE SAN GERONIMO, NEAR THE PRADO, MADRID.

With these events terminated the purely military career of Espartero. We have now to regard him more in his character of a political man. His successes had made him by far the most important personage in the kingdom; courted, though feared, by the Queen Regent, and envied by the other Generals. During the previous year or two, he had to a certain extent mixed himself up in politics, more from necessity than from choice. Pending his occupation of Madrid after the retirement of Don Carlos from that capital, Espartero brought about the fall of the then Ministry. Later, he was on bad terms with Ofalia, the Minister of War, on whose incapacity he charged delays and inactivity, which his own enemies ascribed to his constitutional fits of apathy and sloth. Subsequently, before commencing the campaign against Cabrera, he forced Narvaez to quit the Ministry, and obtained, in spite of all opposition, the rank of General for his Secretary, Aide-de-Camp, and factotum, Linage. *En passant*, it may be observed, that the enemies of Espartero insist that all his merit is due to Linage; but as every remarkable man who has fought his way, is more or less subject to similar imputations, we may suppose that Espartero is his own inspiration.

Conscious, in all probability, of the honesty of his intentions—for Espartero stands out in this respect honourably from among the public men of Spain—he assumed latterly the authority to which his strong position seemed to entitle him. At this time the French party in Spain, of which Queen Christina was the chief, desired to introduce the French system of centralization; while Espartero, who has always favoured the English party, was identified with the Exaltador, who sought to maintain the ancient municipal institutions of the country. The Ministry, elated with a majority, proposed a law infringing on these institutions, and Queen Christina supported them. Seeing the necessity for obtaining the aid of Espartero, she undertook a visit to Barcelona in order to have an interview. Espartero resisted all her seductions, but he went so far as to agree to form a new Ministry. The Queen, however, refused to abandon the attempt at centralisation, and Espartero offered his resignation, which was not accepted. Barcelona, where these events took place, was almost in a state of insurrection, which was only calmed by the formation of a new Ministry. The Queen, however, refused to yield, and in September, 1840, nearly the whole kingdom was in a state of insurrection. Espartero refused to obey when commanded to march against the rebels, and then the Queen was obliged to give way, making him Prime Minister with full powers. On the 3rd of October he formed his Ministry. On the 8th, their scheme of policy was laid before Christina, who, in an interview with Espartero, refused to sanction it, and declared her irrevocable resolution to resign the Regency. It was at this interview that the Queen is said to have exclaimed to Espartero, "I have given you everything, Espartero. I have made you Count of Luchana, Duke of Morilla, Duke of Victory, and a Grandee of Spain; but I have never been able to make a gentleman of you." It should be added, that the later interviews between them had been sufficiently stormy to provoke the Royal passions. Before forming his Ministry, Espartero had entered Madrid in true Royal style amidst the enthusiastic acclamations of the people, and standing upright in an open carriage which he had taken from Don Carlos. The same triumphal demonstrations attended his progress to, and his arrival at, Valencia, which no doubt contributed to sour the temper of the Queen. Nothing would induce Christina to withdraw her abdication, and she soon after embarked for France. One month later, she and Cabrera—who, but so short a time before had been a rebel chief in arms against her—encountered each other in the streets of Montpellier, and the curious observed a strange smile exchanged between them.

From this time forth Espartero became the arbiter of the destinies of Spain. On the 8th May, 1841, he was elected sole Regent of the kingdom; at the same time, the principle of a sole Regency was only carried by a majority of seventeen votes, while the majority for Espartero as such Regent was only of sixty votes. It boded little good for the country that the man who was to exercise the sovereign power should not have been elected unanimously, more especially when it is remembered that Spain was at that time torn and distracted by factions, and that the embers of civil war were yet scarcely extinguished. Espartero, probably actuated by a high sense of duty, accepted the trust on these unsatisfactory terms. He entered on the almost impracticable task of governing, in strict accordance with constitutional principles, a country which at that time required the strong hand of a Military Dictator. Nevertheless, he displayed considerable political talents, and acted with both firmness and diplomatic address. He steadily resisted the encroachments of the Court of Rome, repressed various *émeutes* of the Republican party, crushed an insurrection at Pampeluna, where the General O'Donnell of the events of to-day had raised the standard of the Queen Regent; baffled plots for getting possession of the young Queen, and thus reducing the army plots carried on by Diego Leon and Concha, for which the former was shot in October, 1841; and finally

THE INSURRECTION IN SPAIN.—THE INSURGENTS SETTING FIRE TO THE PALACE OF QUEEN CHRISTINA AT MADRID.—(SEE NEXT PAGE.)

spread terror throughout the Basque Provinces by sending there moveable columns, and levying contributions. But Spain at that period was in want rather of a Cromwell than a Washington; and Espartero, notwithstanding these acts of severity, manifested throughout an absolute respect for the Constitution to which he had sworn. It would but fatigue the reader to enter into all the details of the government of the Regent. Unfortunately, he was badly seconded by his Ministries; but, even if he had had the aid of men trained in the Parliamentary system of England, he could not have made head against the turbulence, the treachery, and the madness of political passions which characterised the period of his Regency. The first seven or eight months of his Government were occupied chiefly in suppressing the insurrections to which we have referred. In November, 1841, he was obliged to reduce to obedience the city of Barcelona, where a Republican insurrection had broken out. On the 26th of the month he made another triumphal entry into Madrid.

The preference of Espartero for an English policy, more especially in commerce, contributed mainly to the events which followed, because it gave an additional influence over the French party to Queen Christina, who, from her hotel in the Rue de Courcelles in Paris, directed, or was supposed to direct, all the various plots that surged up against the Government. Towards the end of 1842, an event occurred which furnished Espartero's enemies with powerful weapons against him. Another insurrection broke out in Barcelona, which became so formidable, that Espartero was reluctantly compelled to consent to the bombardment of that city. General Rodil, his Chief Minister, shrunk from defending this necessary measure before the Cortes, and this symptom of weakness emboldened his enemies. A coalition was effected between the Republicans and the friends of Christina; and before this combination Espartero ultimately fell. On the 9th of May, 1843, he found himself obliged to sanction a general amnesty, the real object of which was to allow his enemies to plot in safety. This had been forced upon him by the Lopez Ministry, which next proceeded to demand the disgrace of General Linage and of General Barbano, who was offensive to the Progress party as the agent of the severities practised at Barcelona. To these demands Espartero gave a refusal, dismissed his Ministers, and dissolved the Cortes. This was on the 26th of May. As soon as the news spread, accompanied by a rumour that the Regent was about to sign with England a commercial treaty injurious to Spain, an insurrection broke out, which was stimulated by the various enemies of Espartero, and extended rapidly through Catalonia, Andalusia, Arragon, and Galicia. On the 15th of June a Revolutionary Junta, which had been established at Barcelona, proclaimed the majority of Queen Isabella and the downfall of Espartero; and, soon after, a Provisional Government, composed of Lopez, Caballero, and Serrano, declared him a traitor to his country, and deprived him of all his titles and dignities. Narvaez, always the personal antagonist of Espartero, put himself at the head of the insurrection, and marched from Valencia on Madrid, where corruption had already prepared for him the adhesion of the troops on which the Regent had counted. Espartero, who had proceeded towards Barcelona, found himself paralysed by so sudden and violent a change. The entrance of Narvaez into Madrid, on the 22nd July, 1843, was the signal for Espartero to embark at Cadiz, for Lisbon, from whence he proceeded to England, where he landed, at Falmouth, on the 19th of August. By the English nation he was received with all the respect due to his rank as Regent, and to his high personal character. In Spain, by a decree made public three days before his arrival here, he was formally deprived of all his titles and dignities.

Espartero continued to reside unostentatiously in England until the year 1847. In that year the obstacles to a residence in Spain having been removed, he returned to his native country, where, at Logrono—the scene of his courtship and marriage—he calmed to live quietly on the remains of his fortune, until the events of the other day once more called him forth from obscurity. The great object of Espartero's political life has been, to teach the Spaniards to work in the light of the Constitution. If he has failed in accomplishing that object, his failure, at least to a great extent, is attributable to his respect for constitutional forms. His downfall was the signal for the return of Christina, and for various efforts at a Government independent of constitutional control. The purely military insurrection of O'Donnell received no sympathy from the nation until he inscribed the Constitution on his banners, and from that moment the Spaniards began to think once more of Espartero.

The expectations of the Spaniards of the intentions of Espartero were confirmed on knowing the conditions he had exacted from the Queen—that is to say, the Convocation of the Constituent Cortes, with Universal Suffrage, and the expatriation of Queen Christina. A week previously, on the 17th, a revolution at Saragossa resulted in the formation of a Junta, with Espartero at its head; and the publication at Madrid, on the 20th, that Espartero had been called on by the Queen, at once tranquillised that capital. His triumphal entry into Madrid was a scene of the most extraordinary enthusiasm, which was confirmed when the names of his Ministry, with himself as President of the Council, and O'Donnell (created a Marshal) as Minister at War, were made public. His first measures have been of a very satisfactory character; and much is hoped from his influence with the nation. A trait is related of him and O'Donnell which promises well. The latter had advanced towards Madrid, at the head of a considerable force but hesitated to enter the capital before Espartero. The latter immediately sent to him a cordial invitation, and they gave public evidence that the best understanding exists between them. The Queen, also, has been well advised to manifest her high approval of his conduct and expectations as to the future.

It augurs well for the future destiny of the Spanish nation, that insurgents and Provisional Government should alike, and by a kind of common consent, have suspended all their operations until the advent of Espartero—a man who, in his military character, has rendered such services to the country, who has proved his attachment to Queen Isabella, and who, above all, has manifested so strongly his respect for the cause of constitutional liberty.

ESPARTERO'S ENTRANCE INTO MADRID.

(*Engraved on page 140.*)

MADRID rose early on the morning of the 28th ult., to welcome its favourite hero. Perhaps it would be more correct to say that Madrid never went to bed, for there were fêtes in the streets all night, and music and singing at the barricades, and at daybreak there was a move towards the gate of Alcala, by which Espartero was to enter. As the morning wore on, the streets became more and more thronged, and the windows on the whole line along which the General was to pass were filled with ladies. Every balcony was covered with coloured hangings, a great number of them new for the occasion—the Museum in the Calle Alcala being particularly remarkable for its purple satin drapery and gold fringes. Triumphal arches were erected at all the barricades on the line, and at the entrance and for a considerable way up some of the side streets, trees were planted, and the pavement strewn with branches. In the crowd, which was particularly orderly and in the highest good-humour, were a great many ladies, and women of the lower classes innumerable. The Junta, a vast number of private carriages, and persons on horseback, a considerable body of cavalry, and the National Guard, marched out of the town to meet Espartero; and half Madrid must have followed them on foot; for, from Torrejon de Ardoz (three leagues off) to the gate of the capital, the road was as alive with people as that to Epsom on a Derby day.

At the Venta del Espiritu Santo, about half a league from Madrid, the official cortége met the Duke. An open carriage was there, into which he got, accompanied by a member of his family, by Count Horsin, long his Aide-de-camp, and who was with him during the whole of his exile in England, and by Colonel Fernando Garcea, brother of the present Captain-General of Arragon. These three persons had come with him from Saragossa. A number of private carriages preceded him; cavalry rode a little in advance of him, on either side of the road, a string of other carriages, with members of the Junta and Ayuntamiento (the latter in their official robes), and bodies of infantry and National Guards and more cavalry followed. The troops did not surround the Duke's carriage, nor in the least prevent the people from pressing close up to its doors, praying hands and handkerchiefs and uttering vivas as loud as the parched state of their windpipes and exhausted condition of their lungs would allow. Espartero was evidently greatly pleased, as, indeed, he could not help being. Any man must have felt proud and happy at such a reception, even though enthusiasm. Dressed in a General's uniform, and looking very well, and very young for his age, he stood up in his carriage and shook hands with many of the persons who thronged around it. Around and behind the vehicle, on horseback, were a number of Generals—Valdez, Crespo, Oribe, Irrarte, and others. O'Donnell was not there, as had been expected. He had passed at Tembleque, three hours' railway from Madrid, and had sent an officer to Espartero, placing himself at his orders. The Duke is said to have embraced the messenger, who took back a most friendly reply, and O'Donnell was expected the same afternoon.

As Espartero entered the gate of Alcala the scene was very striking. So many persons had gone out of the town that it might have been thought that the streets would have been scantily filled. But, on looking from the gate down the long and spacious Calle Alcala, which sinks to the Prado, and then again rises nearly to the Puerta del Sol, there was scarcely a square foot of pavement to be seen. Under the quadruple rows of trees on either side of the broad street the throng was nearly as great, especially when the advance of the procession cleared the middle of the road. From every balcony handkerchiefs were waved and flowers flung. The shouting was not as great as it would have been on a similar occasion in England; but clouds of dust and 86 degrees of Reaumur are not favourable to the free exercise of the lungs; and, moreover, the Spanish viva has never the stunning vigour of the Anglo-Saxon hurrah. All along the Alcala, through the Puerta del Sol, and along the Calle Mayor, the scene was the same; crowds in the streets, crowds at the windows, on scaffoldings, and on housetops—wherever they could perch themselves. The people who had been on the road outside rushed into the town, eager for a second view, and out of all the side streets surged tides of humanity, bent on getting at least a passing glance of the Pacificator of Spain, as they love to call him.

On reaching the Palace, Espartero and the two officers who accompanied him entered as far as the room that precedes the Throne-room, the Duke having been met at the bottom of the staircase by the Duke of Ahumeda and other high officials. Thence Espartero proceeded along to the Queen's private cabinet, where he remained for more than half an hour in conference with her Majesty. When he returned to his carriage, the mob cheered again, and the Queen and King came out on the balcony, and waved their handkerchiefs. There were some cheers for the Queen. Espartero then drove—his progress still very slow, owing to the great crowds, that apparently could not see enough of him—to the residence of a friend of his, Don Manuel Mathea, in the Calle Espoz y Mina, where he has taken up his abode for the present.

THE MADRID INSURRECTION.—SACKING OF THE MINISTERS' HOTELS.

THE first objects of attack by the people of Madrid, when they rose against the Government, on the night of the 17th ult., were the houses of Salamanca, Sartorius, and the other obnoxious Ministers, and the palace of Queen Christina. In doing so, however, they were careful to show that none of them were actuated by love of plunder. Before they began to sack the houses of the Ministry, they placarded all the corners of the streets, "*Pena de la vida al ladron*" (pain of death for the thief), "*Y viva la moralidad*" (hurrah for morality). As a public demonstration of their indignation against Ministers, they went into the houses of three or four of the most noted of them, and, making a bonfire in the street, they threw from the windows into it everything the house contained. Here was exhibited the true spirit that animated these people. Innumerable anecdotes are related of their noble deportment in the midst of their enthusiasm, and their desire for public justice. A poor man, very badly dressed, detected a woman who was carrying off some things, which in the confusion she hoped to profit by, and stopping her, he declared that if she did not put down all she had he would make an example of her. Among other things which she had was a fine piece of new linen; he looked at it for a moment, and then at his own shirt, which was all in rags: but exclaiming, "*Llevo andrajos, pero alla va!*" (I wear rags, but there it goes), and it also went to the flames. Bags of napoleons, boxes of cigars, bottles of champagne, jewels, in fine everything was burnt.

The work of destruction was stayed in the house of Salamanca by the coolness and resolution of Mr. Charles Ross, an English resident. This gentleman got together five or six Spaniards took possession of Mdme. Salamanca's apartments, and held them against the mob, insisting that they were his rooms, and pleading his quality of a foreigner. The mob apparently did no more than half believe him, for they made attempts to get in; but Mr. Ross and his followers contrived, between pushing and expostulation, to keep them out. When the people went, the military came, and were about to shoot the defenders, taking them for insurgents, but contented themselves with keeping them prisoners until ten in the forenoon. Some very valuable pictures were sacrificed that night in some of the houses that were sacked: Count Quinto had several precious specimens of the old masters—one, in particular, for which it is stated that he had refused £4000 sterling. A choice library belonging to Sartorius was also committed to the flames. The value of Quinto's pictures is estimated at £18,000 or £20,000.

On the night of the 21st a large crowd collected in front of the palace of Queen Christina, and it was thought they were about to attack it a second time, but they dispersed without committing any damage. The general cry among the mob was that "wicked old Queen," as she is styled by them, had not suffered half enough.

LAUNCH OF A MISSION VESSEL.

OFTTIMES our pages are devoted to the illustration of the launch of ships of commerce; the object for which the mainspring of the scene we now engrave, is the spread of peace, in its most angelic forms—the *Allen Gardiner* having been built for the Patagonian Missionary Society, and launched on the 11 h ult., from the Sandquay Dockyard, at Dartmouth. She is a fine schooner of 100 tons, built expressly for a stormy sea and rocky coast; and is intended for a Christian mission to the aboriginal natives of South America, under the direction of the Patagonian Missionary Society, and was dedicated to the Great Lord of the spiritual harvest, with appropriate service of prayer and praise. The scene in the Cut is taken from the side of Dartmouth Harbour, opposite to the ship-yard, where the *Allen Gardiner* was built, and depicts her appearance just previous to her dismissal to her future home on the ocean wave.

Those who take an interest in the efforts of Christian philanthropy, will follow with their inquiries and their prayers the future course of this vessel, at once bearing the name and processuting the objects of Captain Allen Gardiner.

LAUNCH OF THE "ALLEN GARDINER" MISSION VESSEL.

LITERATURE.

HISTORY OF RUSSIA. By ALPHONSE RABBE and JONATHAN DUNCAN. Herbert Ingram and Co; W. S. Orr and Co.

THE NATIONS OF RUSSIA AND TURKEY, AND THEIR DESTINY. By IVAN GOLOVIN, Author of "The Caucasus." Trubner and Co.; John Wiley, New York.

The first of these books is like a gleam of sunlight from behind a cloud. No sooner was Russia become, by the momentous events still in progress, an object of intense and inquisitive attention to the mere fortunate public of the West of Europe, than a swarm of crude essays, narratives, descriptions, anecdotes—composed, compiled, and invented, respectively—darkened the literary atmosphere. The feverish haste with which these accounts were proffered betrays the vigilance and activity of the book-making element among the writers of the most civilised communities of our very civilised and highly-instructed age. It may be taken in general as a rule, the reasons of which are obvious to anybody, that the first compositions which are thrown out to meet the unexpected and sudden demand of a curiosity excited by such events as those occurring now in Europe, are the worst. They may serve their turn as pecuniary speculations; for there are not only superficial writers, but superficial readers, in immense numbers. But such productions cannot last as books. We have here a more solid work, the history of Russia, by Mons. Rabbe and Mr. Duncan—a work, of which a peculiar and happy circumstance greatly facilitated the English author's share; but which, whatever the speed of its execution, is based on an imperishable foundation. It is to be added, that among the innumerable Russian volumes recently published, there is no attempt at a regular history of Russia. We have had no complete history of Russia in a compendious form, or of moderate price. This production, therefore, is more than a good work among many which cannot claim that description; it is, moreover, the supply in a small and available compass, of a positive want felt by the intelligent and well informed portion of the English reading community. In the mass of rubbish raked together with all the haste of desperate competition, and then pitchforked into the market, there are indeed some few readable and pleasant notes: Maxwell's "Court of the Czar" is not the worst. But very different, we assure the reader, is the intrinsic value of the record which Mr. Duncan has now placed within his reach. We have said that a happy circumstance has facilitated Mr. Duncan's labour. It amounts to this, that an excellent history of Russia—excellent in all it contained, and excellent for containing so much in so condensed a shape, already existed in French. This was M. Rabbe's work, originally published in the French Historical Library of Felix Bon. That record, however, admitted of some improvement, and required, both in its beginning and at its close, a rather more ample treatment. It enters on the story without giving what most historical readers desire, a satisfactory retrospect of the origin of the people, whose more active career supplies its subject; and again, it closes with the great invasion of Napoleon in 1812. Nearly half a century of very busy and important vicissitudes has elapsed since that great epoch. It is no disparagement to M. Rabbe's merits to say that his production would be more useful with that matter which it wants added. Mr. Duncan's plan includes the reproduction of the text of M. Rabbe and the supply of the very omissions we have indicated. He prefixes a short and lucid account of the parentage of the Russian people; he timely and ably relates with spirit and ease M. Rabbe's valuable chronicle; and, where the latter terminates, he offers a narrative of his own, bringing on the history from the destruction of the great French army in 1812 to the suppression, by Russian intervention, of the attempt of the Hungarians, five years ago, to maintain their ancient privileges and independence. With the present ravenous curiosity of the public to learn what is to be known about the Russians, we can hardly conceive a book more fit to be generally read. It is opportune; it is full of matter; it is extremely and conveniently planned; and it is written with vigour and simplicity. The authors, therefore, have done all that could be expected of them, and at a very good moment. We must say the same for the publishers. The work is not merely well printed and handsomely bound, but it is illustrated in a manner that does the greatest credit to those concerned. The reader is surprised, when he comes a book of this sort, at the amount of information which he carries away. It is portable information, in a very intelligible sense of that word; in fact, it is not such as forces him to make notes and references, but such as he finds he can remember easily and use practically on any occasion. The secret is in the illustrations, or rather in their combination with the text, to which they are subsidiary. Alone, they would be comparatively valueless; without them, on the other hand, the literary details, though always possessing their own intrinsic and independent purpose and utility, would be less lively and less interesting, and would require a different kind of attention, and more of it, to master and to remember them. It is a charming addition to a book of the nature to be well illustrated. It is a way of speaking to the eye in a language which nobody has learnt, and yet every body understands. The child comprehends all it says, as well as the mature scholar; people who know nothing of the literary part of

the book, as well as the reader in whose national tongue it is written. How applicable to this case the old remark, that things conveyed through the *ear* make a duller impression on the mind—" *Quam quæ sunt oculis subjecta fidelibus*."

After an exposition of the Sclavonian, Finnish, and Mogul and Tartar or Tartar origin of the Russians, and of the "political and physical geography" of the empire, the history proceeds to show that the pernicious tyranny which is now exercised by the Czars is by no means the first form of Government under which the people obeying it have lived. Novgorod, the ancient capital, was the seat once of municipal institutions and of a disputed liberty. It was the centre and metropolis of a free and elective republic; but we must go far back into the past to find its traces. A variety of causes, simple and sure in their operation, subverted the old magistracies, and we find them replaced, towards the beginning of the tenth century, by savage chieftainships, the power of the sword, and the vicissitudes of war. The schismatical Christianity originated by the corrupt, arrogant, and able Photius, Patriarch of Constantinople, was the form (so much defaced and so much disgraced !) of the revealed faith, to which the majority of the Russians were finally attracted, and to which they have since adhered.

At all the natural breaks which occur in the subject—such as the close of any marked era—the author pauses to review the state of the nation, its progress or retrogression, its manners at that date, and other particulars not obvious in the narra ive of mere events. This it is which makes a book of history different from an almanack.

The second era of Russian annals includes the inroad of the Tatars, and the changeful fortunes of their bloody interregnum for about 200 years. At the beginning of the sixteenth century, Ivan the Great re-united the shattered fragments of the empire, and left a throne, already beginning to be powerful, to Ivan "the Terrible," or "the Tyrant," as he has been variously designated—the Russian calling him by the former name, and foreigners by the latter. It was he who founded and embodied the militia known as the Streltzi, at onward annihilated in frightful a manner by Peter the Great. It was this Ivan, also, who first assumed or received the title of Czar—a barbarous Tartar word, having no conn xion whatever, save the accident of sound, with the name of Cæsar. The commencement of their religion with that of the separate Greek, and the pretension of the Russian Sovereigns to be the virtual successors of the Byzantine Emperors, if not the continuators of the heritage and work of the Cæsars of the East, have concurred to render this mistake (continuing two distinct origins lone), very natural among ignorant per sons. Ivan, the fourth of the name, and first Czar—was contemporary with our Elizabeth. He was one of the most pitiless oppressors whose atrocities history has delivered up to the execration of all succeeding ages; yet was he a Prince under whose energetical and able control in much a righteous aggrandisement was accomplished for the people whom he made wretched. No more deliberately cruel ruler ever lived, no more fiendish or unnatural murderer ever escaped human vengeance, or, indeed, ever endured life. Having extended the empire greatly to the South, the West, and the North, and annexed in the East the immense region of Siberia, Ivan, the first Czar, was removed from the midst of his horror-stricken subjects by death, and the country became a prey to the civil wars of rival usurpers. Boris, attaining supreme power, rivetted the "domestic institution" of serfdom, which the present Emperor has endeavoured to mitigate. A few years then bring us to the son-seion of Michael Romanoff, founder of the dynasty which has since reigned. The narrative of the career of Peter, wrongly and foolishly called the "Great," and that of Catherine II., is extremely interesting; and, indeed, the whole work throws new and sufficient light on those subjects which it is now so much the interest of Europe and the desire of the public to understand.

The second book under our consideration is also well worth perusal—it is not a great man, or the history of Russia, but a life-like picture of many of its more striking moral characteristics. To the author, Ivan Golovin, it would, we suppose, be absurd to deny an intimate acquaintance with his subject. He naturally he must understand it; and in fact, with the manners and habits of the Russians, with their language, the practical working of their institutions, the social conditions in which they live, and all the details of their relations to each other at home, he ought to be familiar to a degree, neither to exceed nor possible to the two writers, whose more general and broad production we have been examining. His knowledge should be of course much more esoteric and minute than that of any one, not a Russian, could be. And this knowledge is exactly suited to the author's attempt, which is partly sketch, partly anecdote, and partly essay. It is amusing, but not always quite select, in the sense or passages recorded

We cannot add, that Mr. Golovin, or, as is, we believe, a Russian, has some advantage on that very account, when it is his lot to treat of Russia, he is also, and perhaps to an equal extent, impeded and disqualified by the same circumstance; for it is necessary that he should treat of Russia in English. "Russianisms," *in extenso*, and many other mistakes, make us regret that the basket of thoroughly understanding Russ, and being save from blunders of one sort, should not apply to the degree of his knowledge of the language in which he must convey to us the results of his observations. For he makes blunders of another kind, which leave him but quite, at best, in this respect. It is also to be remarked that this little book of his is not entirely about Russia, or the Russians. He treats, likewise, of the Osmanlis, Yezidis, Druses, Circassians, Mormons, and communities of the races, and of their countries. His work, in fine, is desultory, but entertaining.

THE LIME-TREE.

I

Sing, sing the Lime the odorous Lime!
With tassels of gold and leaves so green.
It ever has made the pleasantest shade
For lovers to loiter and talk unseen—
When hi.h overhead its arms are spread,
And bees are busily buzzing around,
When sunlight and shade a woof have laid
Of flickering net-work on the ground.
I love the Lime—the odorous Lime!
With tassels of gold and leaves so green
To its balmy bower in the noontide hour
Is wafted pleasure on wings unseen.

II.

When the Switzer fought, and gallantly wrought
His charter of freedom with lance and spear,
A branch was torn from the Lime, and borne
As the patriot's joy, and the tyrant's fear.
O they proudly tell how the herald fell
With the living branch in his dying hand.
'Tis a blood-hallowed tree of liberty—
A sacred symbol through Switzerland.
O the Lime—the odorous Lime!
With tassels of gold and leaves so green:
The whispering» heard when its leaves are stirred
Are the voices of martyrs that prompt unseen.

III

I love it the more for the days of yore,
And the avenue leading—I tell not where;
But, there was a bower, and a witching flower
Of gracefullest beauty grew ripening there.
From valley and hill, fr m forge and mill,
From neighbouring hamlets murmurs stole;
But the sound most dear to my sensitive ear
Was a musical whisper that thrilled my soul.
O, the Lime—the odorous Lime!
With tassels of gold and leaves so green:
It ever has made the pleasantest shade
For lovers to wander and woo unseen.

IV.

When the garish noon had passed, and the moon
Came silvering forest, and lake, and tower,
In the bush of the night, so calm and bright,
How silent and sweet was the Lime-tree bower.
They may boast of their forests of larch and pine,
Of maple and elm, and scented thorn,
Of oak and of oak, defying the stroke
Of the tempest on pinions of fury borne:
Give me the Lime—the odorous Lime!
With tassels of gold and leaves so green;
The vows that are made beneath its shade
Are throbbings of spirits that Love knows unseen.

Blackheath Park. FRANCIS BENNOCH.

CHESS

TO CORRESPONDENTS.

T. J. G. Cotton.—See a notice by an Amateur, de-ring a competitor for a Game by Correspondence in the present Number.

BLACK PAWN, Chester.—1. The Shrewsbury Chess club meets every Friday evening, from October to March, and has the honour of being presided over by one of the most learned and accomplished men of the day, the Rev. H. H. Kennedy, D.D., Head Master of the well-known Shrewsbury School. A note to the Honorary Sec retary, W. Nicol, Esq., 51, Castle-street, Shrewsbury, would procure you admission to the meeting. 2. The Worcester Chess-club, (Free-d-nt, Lord Lyttelton; Secretaries every Friday evening at the Natural History Museum.

DERBYON. A B C Q R Sunderland, J. F. H., Margate, and others.—The omissions in Diagram No 546, are rectified in the present number.

F. C., of Ghurj, A K., of Lambeth, R. B. W., of Oxford; J. B., of Bridport, W. G., of York, are gentlemen asked for their correct addresses.

J. T. C., of Ryde.—It shall be re-examined, and an opinion of its merits given next week.

B. W. P.—1. The work mentioned is considered the best authority on the subject. 2. Your last Problem shall be noticed shortly.

Any good Chess player who may so play by Correspondence will find an Amateur opponent by addressing to C. King, Esq., Mortlake, Surrey.

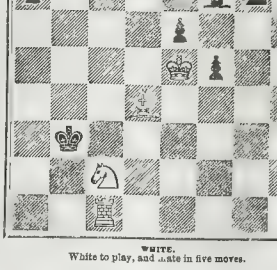
PROBLEM No. 546.

In the diagram of this position, an omission occurred, which permitted an easy mate in three moves. On White's side, were left out a *Pawn on Q 2nd and 3rd*; and, on Black's side, a *Pawn at Q 5th*. As the Problem when perfect is very clever, we have reprinted it among the Enigmas.

PROBLEM No. 547.

This fine stratagem is the invention of J. B., of Bridport.

BLACK.



WHITE.

White to play, and mate in five moves.

CHESS IN BELGIUM.

A very clever and suggestive Game, lately played between MM. VON HEYDEBRAND and DE RIVES.

(Allgauer Gambit).

WHITE. (M. De R.)	BLACK (M. Von H.)	WHITE. (M. De R.)	BLACK (M. Von H.)
1. P to K 4th	P to K 4th	17. Q Kt to Q 8 4th	Kt takes B
2. P to K B 4th	P takes P	18. K Kt takes P (ch)	K to Q sq
3. P to K B 5rd	P to K Kt 4th	19. Q Kt takes Q	B takes P (ch)
4. P to K R 4th	P to K R 5th	20. K to K B sq	B takes Kt
5. Kt to K 5 h	Kt to K B 3rd	21. Kt takes Q R	B to Q 5 h
6. Kt tke K Kt P	Kt takes K P	22. Q to her B sq	B to h 5th
7. P to Q 3rd (a)	Kt to K Kt 6th (b)	23. Q to K 5th (ch)	K to K 3rd
8. Q B takes P	Q to K 2nd (ch) (c)	24. Q to K Kt 7th	K to K sq
9. R to K 2nd	Kt tke K R (ch)	25. K to Q B sq	Q to Q B 3rd
10. Q B to K Kt 6th	Q to Q Kt 5 h (ch)	26. B to K B 3rd	K Kt to Kt 6th (ch)
11. P to Q B 3rd	Q takes Q Kt P	27. K to B 2nd	Q Kt to Q 8th
12. K to h B5 h (ch)	K to his 2nd	28. R to Q B 5th	Q Kt to K 3rd
13. Q Kt to Q 2nd (d)	B to K Kt 2nd	29. R takes B (ch)	K takes R
14. Kt to Q 3rd	K to B 3rd	30. Q takes R R P (ch)	K to Q sq
15. Q B to Q 3rd (double ch)	K to his 2nd	31. Q to K 7th	K Kt to K 8 4th
16. Kt to B 7 h (ch)	K to his sq	32. Q to Q 8 4th	K Kt to Q 3rd
16. B to Q Kt 5th	Kt to Q B 3rd	33. P to K R 4th	K to Q Kt sq
		34. Kt to Q Kt 6th	P takes Kt

And in a few more moves White was compelled to surrender.

(a) We beg to claim the particular attention of amateurs to this novel and singularly interesting variation. It first presented itself to Mr. de Rives and Staunton, while studying the last few moves of the Allgaier Gambit on the last year, and it evidently appears to us one of the most important variations in this opening which has been made since Allgaier first brought it into general vogue.

(b) His only move, evidently.

(c) The position is remarkable. If Black now take the Rook, White obtains a fine attacking game, *cæ. gr.*:—

8.	Kt takes R	9. B to K Kt 5th	B to K 2nd
(If P to K B 3rd, White may take the Pawn with his Kt, checking, and then play Q to K B 3rd having an irresistible position)			
10. Q to K 2nd	P to K B 3rd	11. Kt takes P (ch)	With an even less game

White, when the Rook is taken, may also play as follows, if he prefer it:—

8.	Kt takes R	9. Q to K 2nd (ch)	Q to K 2nd
(If he play B to K 2nd, he is obviously to be mated in two moves.)			
10 Kt to K B 6th (ch)	K to Q sq	11. Kt to Q 8th (ch), and wins the Queen.	
11 B takes Q B P (ch)	K takes B		

(d) It is not safe, even now, to take the Rook. After well considering the situation, we are almost convinced that Black's only course to avoid very serious loss at this point, is to stick with his Queen at her Kt 6th (compelling White to retreat his Q Bishop), and afterwards pay Q to her Kt 3rd. We have not space to give the variations springing from this line of play, which we regret, for they are extremely pleasing, and highly instructive also (e) In a note to this move, M. de Rives remarks that he might now have drawn the game, by playing Kt. to K 4 h discovering check, &c.; for, if Black attempted to escape that "draw" by moving K to K 3rd or P to K B 3rd he must necessarily lose. This appears rue enough, but we are much deceived if, instead of drawing the game, he might not easily have won it. As this moment by playing Q to her K 6th. Let us suppose, for example:—

15. Q to Q 8 4th		Kt to K Kt 6 h	
(If he has a better move than playing the Kt, we have overlooked it, and shall be obliged to any Correspondent who points it out.)			
14. Kt takes Q P (dis. ch)	K to K 3rd, or *	15 Q to Q B 4th (ch)	K to K B 4th
16. Kt takes B (ch)	R takes Kt		
(If he play his King to K 4th. White should take the Q B P, checking, and he can then force mate in a very few moves)			
17. Q to K B 4th (ch)	K to K 3rd	18. Q to K B 6th (ch)	

And win the Queen, or gives mate in three moves.

* 14	K to Q 3rd, or †	15 Q to her 4 h (ch)	K to Q B 3rd
(If he play K to K 3rd, White may take the Bishop, checking, and proceed, as above.)			
16. Kt to K 8th (ch)			

Winning the Queen next move, by advancing the Pawn to Q B 4th (ch).

† 14.	P to K B 3rd, or ‡	15 B takes P (ch)	K to K 3rd

(If K to Q 3rd, White proceeds as in Variation *, and, if K to B 2nd, he must check with his Q at Q 8 4th, &c., as in the present Variation).

16 R to Kt 4 h (ch)		K to Q 3rd	

(Should he intervene the Kt. White can take it with impunity the next move, if his Bishop fall. If Black, however, instead of taking the Kt or moving to his B 2nd, play his King to Q 3rd—mistook by playing his B thus. White must give check with his Queen at her 4th and continue as we have shown previously.)

17. Q to Q B 4th (ch)	K to K 3rd	18. P to K B 4th (ch)	Kt takes P (best)

And White can mate in five moves.

‡ 14.	K to his sq	15. R to K B 4th (ch)	K to Q 8 4th
16. Kt to K B 8th (ch)	K to his 2nd	16 P to Q 4th (ch)	K to Q Kt 3rd
16. Q to K 8th (ch)	K to Q 3rd	19 B takes Q P (ch)	

(The only way but a very ingenious one, to win by force.

19	K takes B	22 Q to Q B 7 h (ch)	K takes Kt
20. Kt to Q 8th (ch)	K to Q 3rd	23. R to Q 8 4th (ch)	K to K 5th
21. Q to K 5th (ch)	K to Q 4th	24. Q to K 5th. Mate	

(*) Better, perhaps, to have taken the Q Kt P with the Bishop, giving check.

CHESS ENIGMAS.

No 881.—By R. B. WORMALD, Esq.

White K at Q R 6th, R at Q R 2nd, B at K 3rd, Kts at K B 4th and 5th; Ps at K Kt 4th, K 6th, Q 2nd and 3rd, Q B 4th, Q Kt 3rd, and Q R 6th.

Black K at Q B 4th, Rs at K R 2nd and K Kt 6th, Bs at K Kt 4th and Q B 2nd, Kt at K R 8th; Ps at K 2nd, Q 5th, Q B 2nd and 3rd, Q Kt 5th, and Q R 4th.

White to play, and mate in five moves

No 882.—By H. W., of York.

White: K at Q R 6th, Rs at K Kt 4th and Q 6th, B at K B 7th, Kt at Q Kt 7th, Ps at Q 4th and Q B 2nd.

Black: K at Q B 5th, Rs at K B 5th and K 7th, Ps at K Kt 4th, K 3rd, Q B 3rd and 4th, and Q R 5th.

White to play, and mate in three moves.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Bishop of London has intimated to the clergy of his diocese that he will hold a general visitation in October next, when he will deliver a charge.

The Principalship of Highbury Training College has become vacant by the appointment of the Rev. Vincent W. Ryan, B.A., to the Bishopric of the Mauritius. It is worth £500 a year.

The Emperor and Empress of Austria arrived in the afternoon of the 29th at Ischl, and were received by the inhabitants with enthusiasm. It is said that his Majesty the King of Prussia would probably spend a day at Ischl with their Majesties.

Mdme. de St. Aulaire, mother of the Marquis of that name, lately expired on the very day on which she attained her hundredth year.

Mr. Bell, the sculptor, who lately received the commission to execute the large Guildhall memorial to the late Duke of Wellington, has been commissioned by Colonel Adair, to execute a marble heroic statue of "Armed Science," to be presented to the Woolwich mess room.

M. Emile de Girardin has been ordered *effleurement* not to continue publishing, as he has been doing from time to time, excerpts from the writings of Louis Napoleon while a prisoner at Ham, and which are not quite in comformity with the present *régime*.

The King of Prussia, the King of Wurtemberg, and the King of Bavaria, visited the Munich Crystal Palace, on the 29th ult., in company.

The project for a railway to Cintra, along the banks of the Tagus, has been submitted to the Portuguese Cortes by the Minister of Public Works. It is estimated that it will cost £800,000, and the projectors calculate chiefly upon the dock and other buildings on the water side from the Quay do Sodre to Belem to obtain the interest of the capital.

Filian's bust of Professor Wilson is now on view in Edinburgh. It is said to be a most striking portrait of "Christopher North," and will be re-produced in porcelain, by Kerr, of Worcester: the profits of the sale to be devoted to the Wilson monument fund.

There is at Hasselmoor, in Bavaria, a manufactory where a sort of peat is made which possesses almost all the qualities of coal, and is used by the engines on several of the railways in that country. This manufactory last year supplied ten millions of cubic feet of the fuel.

The glass of the Crystal Palace, at Sydenham, when illuminated by the sun, may be distinctly seen by a person with ordinary eyesight from the fields adjoining the national school-house, at Billericay, a distance of at least twenty-six miles.

The number of German emigrants who embarked at Antwerp during the first six months of the present year amounted to 18,696, being more than in the whole of last year. From the 1st of January to the 1st July, 11,959 Swedes emigrated, being 1 in 309 of the whole population of that country.

M. Bruggeman, editor of the *Cologne Gazette*, has been declared "not guilty" upon charges brought against him, of having in three different articles insulted the King, and sought to bring the Government into hatred and contempt.

Permission of the Government has been obtained for placing the statues of the late Lord Justice General Boyle, and of Lord Jeffrey, in the recesses formerly used as Lord Ordinaries' Courts, on the east side of the outer house of the Court of Sessions, Edinburgh.

The Rev. E. D. Maurice will deliver four lectures in the course of the ensuing season, before the members of the Edinburgh Philosophical Institution.

New York will soon have one of the largest theatres in the world, built upon the site of Jenny Lind's Hall.

Recent returns show that, generally through South Wales, there has been a gradual but sure decrease in the amount of crime and pauperism.

A shark, measuring twelve feet in length, was recently captured in Wigton Bay; since which there is said to be a marked diminution in the number of bathers frequenting that locality.

Measures are on foot for the construction of a railway from Hondeklip Bay to the centre of the copper mines in Namaqua Land, about sixty or seven y miles.

From samples of coffee which have been grown in Liberia, it is believed that coffee of the very finest quality can be cultivated there.

The Emperor of France, on the occasion of the birthday and commercial treaty between France and Belgium, has conferred the Grand Cross of the Legion of Honour on M. de Brouckere, Minister of Foreign Affairs in Belgium; that of Grand Officer on Lebeau, Baron Stassart (Minister of Finance), and other decorations on some eminent functionaries in Belgium, who took part in preparing the treaties.

From the Government return, it appears that from the 1st October, 1853, to the 30th April last, 34,998 persons were injured by machinery in factories, and of that number 325 were killed.

A distinguished physician of Paris, Dr. Robert de Lambelle, announces that a dose of ether, or of chloroform, or of laudanum, given during the effects of chloroform, immediately counteracts its influence, and restores the sufferer to life.

Some returns of the nature of the population of New York may be gathered from the circumstance that of the 915 persons who died there in the third week in July—183 of them by cholera—only 172 were natives of the United States; 215 were from Ireland.

At Banavie, in the West Highlands, nearly three hundred individuals consisting principally of agricultural labourers and shepherds, have engaged with the Government agent to embark, in the course of the season, for Australia.

The rainy season was very severe at Pernambuco, causing an overflow in the river and the loss of several lives. The damage to property is estimated at from £50,000 to £100,000.

There is to be an extensive amnesty in France on the 15th August. It is said that about 800 of the persons banished to Algiers (without trial) after the *coup d'état* are to be allowed to return to their homes.

Five Sisters of Charity have set off for Bulgaria to form part of the expeditions to the Baltic. They are to be placed on board the hospital ships, where they are to attend on the sick.

An invention has been patented for what are termed chromatic glass, or glass-faced grooved bricks. By the new process, red or other clay can be combined with glass, and this will secure durability, entire resistance to moisture, and give an ornamental appearance to a building.

Of sixty-four people who left Switzerland last spring for New Orleans, thirty-eight have died there of the cholera. They had disregarded the advice of the Swiss consul, not to go in the summer.

A large number of silver coins, principally of the reigns of the first three Edwards, struck at Canterbury, London, and Dublin, have been found at Pe th.

The Bois de Boulogne, which was considerably reduced in extent by the building of the fortifications in 1841, is about to be further reduced by the sale of about 40,000 square yards, situated by the side of the military road of the fortifications, which runs from the route de St. Cloud to the Avenue d'Auteuil.

The number of exhibitors at the Munich Exhibition has augmented considerably since the first opening, and that of visitors in a much larger ratio. On the 27th ult., 4447 persons paid entrance money. The average daily receipts are about 700 florins.

An attempt was made about the end of last month to get up an insurrection in Lisbon, after the Madrid fashion; but it was a failure. The Cortes closed for the session on the 3rd inst.

The electric telegraph between Williamstown and Melbourne, which has only been a short time in operation, is said to be already nearly paying its expenses. A contract has been taken to continue the line to Geelong and the heads of the Port Phillip Bay, a distance of about a hundred miles. The estimated expense is about £150 a mile.

The monetary pressure in New York is increasing. "Good mercantile bills," says a recent letter, "go a begging for discount at 10 to 15 per cent."

Hobart Town appears to be in a thriving way. When the last mail left that port there were £2,000,000 in the banks in shape of deposits, and, taking the population at 60,000, this was given more than £33 to each individual. The population in Victoria is only £5, whilst in Sydney and Adelaide it is still less.

Letters from Gumri, in Georgia, state that the Russian General Prince Bebikoff has died there of poison, introduced into his food by a Pole.

It is said that Sir B. Hall, M.P. for Marylebone, will be the first Minister appointed under the new bill, brought in by Sir W. Molesworth for the re-constitution of the Board of Health.

In Andalusia the wheat crop is nearly double that of 1853. In some parts of Italy the price of wheat has fallen nearly fifty per cent within the last few weeks.

Dr. Grabamsley, superintendent of the Worcester City and County Lunatic Asylum, committed suicide by taking prussic acid, on Saturday last.

A letter has been received by the Geographical society, announcing the arrival of Mr. Livingston at Quesange in the Portuguese territory of Angola, to which place he had made his way, through the interior of Africa, from the Cape of Good Hope.

Three Ministerial candidates have been elected in Quebec by a majority of two to one over the late members. The opposition member for Montreal has lost his election, and three Reformers are returned in Upper Canada. All the elections are going for the Ministry.

TURKEY: GEOGRAPHICAL, AGRICULTURAL, COMMERCIAL, AND STATISTICAL.

THE territorial possessions of Turkey occupy a superficies of about 36,000 square geographical miles. The shores of this immense empire are washed by six seas—the Adriatic, the Mediterranean, the Sea of Marmora, the Black Sea, the Red Sea, and a portion of the Persian Gulf. Turkey in Europe, exclusive of the provinces of Moldavia, Wallachia, and Servia, is divided by the Turks into twelve eyalets, or departments. The eyalet of Tchirmen (ancient Thrace), of which the chief town is Adrianople, and which is subdivided into six districts, the eyalets of Silistria Widdin, and Nissa, which formed together the ancient kingdom of Bulgaria, conquered by the Sultan Bayezid in 1396; the eyalets of Yania and Selanik, or Salonica (formerly Epirus and Macedonia), conquered in 1431 by the Sultan Mourad II.; the eyalets of Uskup and Roumelia, known collectively by the name of Albania, and added to the Turkish empire at the end of the fifteenth century by Mohammed II.; the eyalet of Bosna, composed of Bosnia, a part of Croatia, and Herzek (or Herzegovina), conquered at the end of the fifteenth century by the celebrated Scanderbeg, and the eyalet of the Djizar (or the Islands), consisting of the whole Ottoman archipelago, with the exception of Candia or Crete, which forms a separate eyalet. The Government of Belgrade includes the fortress of Belgrade town, and five other Servian fortresses, with the country adjacent to them, and is placed under the immediate authority of the Porte.

Turkey in Asia is composed of four great divisions.—Asia Minor, Turkish Armenia and Kurdistan, Syria, and Arabia. Asia Minor, in Turkish Anatolia, is a large peninsula, equal in area to France; and bounded on the north by the Black Sea, on the west by the Archipelago, on the south by the Mediterranean and a chain of the Taurus, and on the east by an imaginary line drawn between Trebizond and the Gulf of Alexandretta. Asia Minor is divided into eighteen eyalets, that of Khoudavendkiar, consisting of the ancient kingdoms of Bithynia, Phrygia, and Mysia, and of which the chief town is Brussa, formerly called Prusium, and conquered in 1326; that of Kastemouni, anciently called Paphlagonia, and conquered in 1392, under the name of Kizil-Ahmedli, by the Sultan Bayezid I.; that of Aidin, formerly in the possession of the *Aidin Oglu*, or descendants of Aidin, Ertogrul's second son, received in dower, and conquered in 1426, by Mourad II.; that of Karaman, so called from the name of its ancient rulers, and conquered in 1475, by Mohammed II., that of Adana, conquered by Bayezid II., that of Boz Ghandi Sevasi, ancient Cappadocia, formerly called by the Turks *Amasia-Sandjak*, and that of Trabezoun, or Trebizond, conquered by Mohammed II. in 1460. Turkish Armenia is composed of the two eyalets of Erzeroum and Kars-Ardout Kurdistan, extending as far as the confines of Persia, has only recently been made a Turkish province, the conquest of the mountainous region was commenced in 1847, and completed in 1847. Syria, or Cham, as it is called by the Eastern nations, extends from the Mediterranean to the Persian Gulf, and is divided into five eyalets—those of Haleb, or Aleppo of Sham (ancient Phœnicia and Palestine) of Cham or Syria Proper, of Mossoul, or Assyria, and of Bagdad or Babylon Turkish Arabia, or Arbistan, is divided into the eyalets of Haleeah and Hareem Bedeir, the latter, (the chief town of which is Mecca) is composed of Western Arabia and Hedjaz. Of the latter is composed of Medina, or the "Sanctuary" of the Prophet, and a wild region inhabited by wandering tribes. Gharb, or Ottoman Africa, is composed of the Vice-Regency of Egypt (called by the Turks Misr and governed by Sehim I. in 1517, and of the independent kingdom of Tripoli on the Barbary coast, which was added to the Turkish Empire in 1552, by Soliman the Great, and the latter, twenty years later, by Selim II.

The total population of the Ottoman empire is estimated by some geographers at no more than 7,000,000, and by others at as much as 22 000 000. M. Ubicini, however, who is admitted to be one of the best as well as the latest authorities on the subject estimates it at 35 380 000 inhabitants, thereby the provinces of Moldavia, Wallachia, and Servia; that of Turkey in Europe being 15 500 000, that of Turkey in Asia 16,050 000; and that of Gharb, or Ottoman Africa, 3,800,000. The population of Turkey is composed of fourteen different and distinct races, viz., Osmanlis, Greeks, Armenians, Jews, Albanians, Bosniacs, Bedouins, Arabs, Syrians and Chaldeans, Druses, Kurdes, Turkomans, and Tsiganes.

Turkey is described as being one of the most fertile countries in the world, and has been called by some writers the "Garden of the Earth." Its Asiatic provinces, in particular, appear to have excited the admiration of travellers. Mr. Fowler, a recent writer on the subject, says of it, that, "in travelling through the interior, a traveller in Asia Minor feels transported into a new world. It is the ancient land of the Hittites, which the poets of the world have celebrated under the "fruitful Ionia." In the favoured regions, the earth is literally loaded with the gifts of man, in spite, however, of the natural and other natural advantages—in spite, too, of the injunctions of the Koran, which enforce the cultivation of the soil as a religious duty, the state of agriculture in Turkey is at a very low ebb. The contrast between the wealth of the present day and the neglected state of affairs to be most saddening. That land upon which once flourished the famous towns and kingdoms of Pergame, Sardes, Cyzique, Milet, Prusum, Troy, and Macedonia, is still in a condition to excite just rebuke between the most wretched and neglected, and the most luxuriant and productive. Where were less luxuriant they would be more plentiful seems a paradox, but we have warrant for the assertion in the fact that in other countries where the soil is not a tenth part so wealthy, and where agriculture is forced upon the inhabitants as a matter of necessity, the productions are more abundant than in Turkey, where agriculture is neglected from its not being a necessity. Where a people can have the fruits of the soil for the gathering, they are too apt to look upon the occupation as an encumbrance, and upon man only as an impertinence they "let in the sun and rain," and when the morrow comes Nature wears upon them at table and wardrobe there, not.

The most fertile and best cultivated portion of European Turkey is Roumelia. The principal vegetable productions of this "granary of Turkey," as it has been not inaptly designated, are corn, millet, buck wheat, *kavousmi*, rye, oats, maize, rice, tobacco, hemp, flax, cotton, and silk. The latter is very abundant, 200 lbs. of cocoons being sold for 1*l.* at the principal places of Provesa, the town of Gardeboula, and the hemp, cotton, and flax of the southern districts are among the finest in Europe. The best Turkish tobacco grows in the province of Roudchak (Rhodope), but cotton flourishes so well in the vicinity of Rodosto, which is sometimes known as Cotton Rodosto, that it is exported from the latter town and gathered in the same season. The best silk produce is at Adrianople, also celebrated for its *gallons* a species of rose trees, from which a great quantity of essence of attar of roses is extracted. Beeswax, opium, and a peculiar kind of yellow berry called *Spikir*, are much cultivated in Roumelia. The principal trees are the mulberry, the orange, the laurel, the green bay, sycamore of enormous dimensions, cypress, fine pine, and the evil cherries and plums, which last serve for the fabrication of a sort of brandy called *rakki*. Roumelia is one great garden, in which however, the ore is confined with the trusts of the earth for the mastery, but according to Ubicini, scarcely two-thirds of it are under cultivation. The average value of land in Roumelia is 71 piastres (about 12*s.* 6*d.*) for a measure of 40 square feet, and the rental for the same about 5 piastres. In some parts of the valley rich in pasturage it is as much as 15 piastres, and in others so as little as 2 piastres per acre. Moldavia, or, as it is called by the Turks, Bogdan, is also very fertile, and abounds in arable and pasture lands and forests of fruit trees. Corn and wine are produced in enormous quantities, and the latter, in one year, was largely exported to Poland and Russia. The principal wealth of Moldavia consists in its cattle and herds, and in its horses, which produce annually 40 000 foals. Wallachia, in fact in Turkey, is composed nearly of large farms for the rearing of cattle. The exports of Wallachia are reckoned at 3,000,000, and the goats at 6,000,000. The principal corn grown is Turkish wheat, of which a sort of porridge, called *mammaliga*, is made. It is stated by Mr. Fowler, that no less than one-third of the landed property of Wallachia belongs to the Mosques. In Bosnia there are splendid pastures, rearing immense numbers of oxen and fine Merino sheep. There are also large extents of arable lands, producing wheat, barley, and maize. The other productions of Turkey in Europe are oranges, lemons, dates and figs (which grow wild in the woods), and peas, beans, cucumbers, and melons, which form a principal part of the ordinary food of the Turks.

Asiatic Turkey is as a rule and as badly cultivated as European Turkey. Everywhere the traveller beholds the same neglect, and the same wild luxuriance of nature, even in thorns, bushes, and weeds. The productions of this portion of the Ottoman empire are somewhat similar to those of Turkey in Europe. The annual agricultural productions of Asia Minor are estimated at 55,000,000 of kiles (equivalent to 705,100,000 kilogrammes), of wh ch one-fourth is exported into Europe, and which represent a value in money of £3,000,000 sterling. The rice of the marshy districts of Asia Minor is said to be equal to that of Damietta; and the tobacco of Magnesia, Pergame, Adalia, and Samsoun, is sometimes preferred to the tobacco of Syria.

In Asia Minor, a country inhabited, a district fifty square geographical miles in extent, along the western shore of Kis Irmak, and yields an annual wool supply of from 450 000 to 500 000 kilogrammes, three-fourths of which are exported into Europe, and principally to England—the remainder being reserved for home use. The oats of Angora are also very valuable. Their hair is said to be of the finest description, and might, no doubt, be turned to numberless good purposes in the hands of an enterprising Englishman. Silk is very abundant in Asiatic Turkey, the district of Amasia alone producing more than 50,000 okes of cocoons. The annual production of cotton in Asia Minor, of which there are five different qualities, is estimat d at 30 000 bales, or about 7,500 000 kilogrammes. Of these upwards of 120 bales are exported. Opium is extracted from the black poppy, which abounds in all parts of the peninsula, but the best is obtained at Kara Hissar. The produce of opium in Turkey is from 28 to 38 francs per kilogram. Djehri is principally cultivated at Kowah Kalaseh. It is largely exported into England, and sells as they say from 6*l.* to 6*l.* per kilogramme. These statistics, though tolerably large, are said to be mere trifles when compared to the amount of produce and of revenue which a little more attention to the science of agriculture would ensure to Turkey.

The remains of ancient roads, bridges, and aqueducts, the traces of several old villages and towns on plains which at present contain but a trifling support of the, the heaps of stones scattered about in different part, and which had been cleared from the surrounding soil in order to render it more productive all testify to the truth of the assertion that Turkey was much further advanced in agriculture in ancient times than she is to day. It was the comparison between the past and present condition of agriculture in Turkey that led the Turkish Government, about two years ago, to appoint a special committee to inquire into the causes of the bad state of agriculture in the different parts of the empire, and to suggest some means of remedying it for the purpose the Mouchel Inas, or "amelioration committee men," were elected from amongst the state of agriculture in Roumelia and Anatolia. Each of these committees was composed of three members, a president and a secretary, chosen from among the military and civil staff of the empire. In addition to this, several European agriculturists and engineers were employed from time to time, both in Asiatic and in European Turkey, to collect not only agricultural, but industrial and commercial statistics. In 1846 a special school of agriculture was formed in the Imperial farm of Aymana, about nine miles from Constantinople, and a model farm was established for the differ ent agricultures. This school, composed of fifty scholars, is like the other Imperial schools of Turkey, supported entirely at the expense of the Government. The colony of Adam Kemi, on the Bosphorus, founded by Prince Czartoriski, and composed of a many as two hundred Polish agricultur sts, was established with the same object in 1850. Bulgaria, Macedonia, and Thessaly are explored by M. Joanovo, a Moldavian. His observations, recent published in the *Journal de Constantinople*, ascribe the different reasons for the decline of agriculture in Turkey—1st, the ignorance of the agricultur sts; 2nd, the scarcity of hands; and, the want of a circulating capital; and, 4th, the sheer of high roads. These impediments have not yet been entirely removed, but considerable progress in agriculture has, nevertheless, been made in different parts of the Empire, and particularly in Roumelia and Bulgaria. M. Ubicini states that the inferior qualities of grain produced at the present day in the provinces are equal to the best productions of four years back, and that the capabilities of grain have been trebled, if sold in the same space of time. The Roumeliens and Bulgarians are said to be thoroughly in earnest in their agricultural improvements.

These are only particular instances, however, and are, unfortunately, very far from being universally appreciated. But it is not to be wondered at that no general practical good has yet followed in the wake of this movement, when we take the proverbial slowness of the Orientalists into consideration. The institution of these inquiries, however, is a desire for improvement on the part of the Turkish Government; and when we consider how difficult a matter it is, even in progressive and enterprising England, to carry out great reforms, it will at once be acknowledged that the mere fact of the Turkish Government having set on foot the means to revolutionise the habits of a whole people, and to uproot the customs and prejudices of centuries. Now that the first step has been taken by the Government, the progress of agriculture in Turkey is possible that Turkey will soon be enabled to advance with such rapid strides as ultimately to keep pace with other countries in this most useful of all the branches of industry.

The aversion with which statistics are regarded by Eastern nations is one of the most remarkable features in Turkey is the very last nation in the world to reveal the secrets of its wealth and resources, and of augmenting their prosperity by means of statistics. Turkey in keeping her's a profound secret. Hence it was that the actual resources of the Ottoman Empire were so little to be understood.

Of the exact and complete state of Turkey very little is known beyond what is obtained from the public accounts of the Custom-houses, and from the trade. M. Ubicini, however, who has recently given to the world a resume of his celebrated work, entitled "Lettres sur la Turquie," originally published in 1850 in the *Moniteur Universel*, and corrected up to the present year, has done much towards filling up the many wide gaps that exist in the history of the present commercial prospect of the Ottoman Empire. But all the investigations of the different English, French, and German travellers who have devoted themselves to the hard study of Turkish statistics, have failed to give us any clear information with respect to the extensive internal trade that is annually carried on by means of caravans between Turkey and the several nations of the Levant.

The principal imports of Turkey are—from England—cotton and woollen goods, haberdashery, watches, sugar, pepper, indigo coch neal, gamboge, coffee, goods, iron coals, and dyes; from France, cottons, woollens, silks, coffee, sugar, tanned hides, glass ware, haberdashery, furniture and cochineal; from Austria, cloth, glass ware, timber, linen, cotton, iron, steel, drugs, and dyes; from Holland and Belgium, woollens, sugar, coffee, copper, iron, window-glass, nails, leather, indigo, white lead, and wrought iron; from Germany, through Sardinia, velvet, silks, tea, hardware, and colonial goods; from Greece, oil, wine, and figs; from Persia, shawls, tapestry, embroidered muslins, silk, a sort of tobacco called *tumbeki*, pearls, diamonds, and precious stones; from Switzerland, watches, clocks, and haberdashery; from Canada, from the United States of America wood, timber, and colonial produce; from Brazil, great quantities of coffee. The principal exports of Turkey, to England, Russians and the other countries from whom she receives imports, are, 1850 the value of which was £14,000,000—exports, brass, steel, goat and sheep's wool under, skins, gall-nuts, yellow berries, rosemony, cant sander, ralep, otto of roses tobacco, cotton, wheat, sumac, linseed, opium, madder gum tragacanth, fruit, wine, carpets, shawls, dried beef, shumac, pearls, precious stones, barilla, boracic, saffron, wax, tallow, liquorice, glue, galls, caviare, butter, spices, and pearl. The total value of import into Turkey in the year 1852, was £15,100 000 pounds, and the exports during the same year £14,000,000. The returns of the imports trade with England were £7,622,000; exports, £7,300 000.—Import trade with France, £1,087 021; exports £1 299,714; import trade with Austria, £1 175,000; export, £1 800 000; import trade with Russia, £972 000; exports, £712 000.—Import trade with Holland, £1 0 0,000; exports, £930 000.—Import trade with Belgium £1 0 0 000; exports, £2,000.—Import trade with Sardinia, £38 583, export, £104,269.—Import trade with Greece, £17,400; export, £187,000.—Import trade with Persia (direct trade only), £12,000; export, £1,000,000.—Import trade with Switzerland, United States, &c., exports, £1,000,000.—Import trade with Egypt, £1 0 0 000; export £1 0 0 000.—Import trade with Wallachia, £1,000; exports £202 000.—Import trade with Moldavia, £1 0 0 000; exports, £1 0 0 000.—Import trade with Servia, £70,120, exports, £11,700.

The average number of vessels that enter and clear the several ports of Turkey in the course of the year is estimated by M. Ubicini, at from 35,000 to 40 000. Of these, in the Archipelago, export, £1,000,000; Trebizond, 200 Samsoun, uncertain, Varna 480, Suhuch, 4548; Salonica, 820; Serres, 156, La Cavale, 244; Volo, 893; Smyrna, 5000; Beyrout, 976; Candia, uncertain; Rhodes, 1400; Cyprus and Mytelene, uncertain.

The principal manufactures of Turkey are in the hands of a class of men, Armenians by birth, and known by the name of *sarafs*, or bankers. They are among the most influential, and the most wealthy class in the empire. They have the superintendence of the steam boat traffic, of mining operations, of the powder-magazines, and of the coinage of money. The chief of artizans are divided into *esnafs*, or corporations, of which the principal are those of the merchants, goldsmiths, watchmakers, architects, locksmiths, house-decorators, and tanners. The merchants are divided into two classes—the ordinary merchants and the *bezestaines*—who are exempted from certain customs-duties, and have a tribunal of their own, apart from the other courts of law, and which is presided over by the Minister of Commerce. The goldsmith *esnaf* is composed of all such as work on stone and metals. The corporation is chiefly composed of Armenians, of whom three hundred are those of Constantinople and Brousses. Very little attention is paid to watchmaking in Turkey; but architecture is in a very advanced state. The best architects are the Armenians. The Armenians are the Imperial galoons of Beshegan, Beylerbey, and Do ma Bagtiché, the barracks of Scutari, and the new sque of Topkané, bear eloquent testimony. Turkey has long been celebrated for its mathematicians, of whom one (a certain Michael de Sivas) is said to have constructed an extraordinary sun dial, by which the principal astronomical and chronological calculations are made with exactitude, such as the instant at which the sun rises or sets, the changes of the moon, &c.

The cloth and silk factories of Nicomedia, founded by a M. Hughos Dadiani, have been recently purchased by the Sultan, and converted into an ional establishments. The principal tanneries are at Adrianople, and the principal gunpowder factories are in the vicinity of Constantinople. At Scutari and Kasim Pasha there are upwards of 200 mills in factories, at Salonica there are eighteen silk factories producing annually 40 000 kilogrammes of fine silks. In Anatolia, Durbekir, and Brousses, the silk factories produce an annual average of from 30 000 worth of silks. The silks of Brousses in particular, manufactured chiefly by the Armenians, were great y admired at the Great Exhibition of 1851. The manufactures of Bagdad, including coloured cloths, tanned leather, shawls, and Turkish works, and Turkish works, although they have somewhat fallen off of late, still reach the annual amount of £150,000 per annum. The gold-thread, and cotton and silk factories of Aleppo, realise upwards of £300,000. The soap and tin manufactures of the islands of Candia, yield a return of upwards of £100,000. The coloured cloths, light silks, and gold and silver embroideries of the island of Cyprus, are famous for their quality, and are in great request among the nations of the East, the other articles of industry are the enamels and gun barrel stuffs of Angora, comprehended in manufactured terms, under the general name of *Chala*, the sandals of Chio the Indiennes of Tokat, the crapes and gaze of Salonica, and the carpets of Smyrna and Taskol. The soldier's work of Turkey, in particular, has reached a height of excellence unequalled by any other manufacture.

In 1838 Turkey concluded a commercial treaty with England, which was followed by treaties with Austria, Belgium, Denmark Spain, the United States, France, Holland, Portugal, Sardinia, Norway, and Sweden, Prussia, Greece, the Hanse Towns, and Tuscany. Similar treaties have also been signed with Russia and with Persia, but to ever, although so near a neighbour, has not yet entered into any treaty of the kind with Turkey, and cannot, therefore, send goods into the Ottoman dominions, unless they are sent under the protection of some power that has. The Code Napoleon was introduced into Turkey, and is now employed for the direction of the commercial tribunals. A commercial tribunal has also been established in Constantinople, and others are in formation in Smyrna and Alexandria. Each of these consists of a President, and from twelve to fourteen Assessors or Judges, and is divided into two Courts—one for the hearing of law-suits between Turks, and holding its sittings in the Seraskier of every week, the other, for the hearing of suits between Turks and Europeans, and holding its sittings every Tuesday. The Custom-duties of Turkey consist of a duty of one per cent *ad valorem* on all exports and imports, together with a supplement ary duty of 2 per cent on imports and of 9 per cent on exports. The transit duty is 3 per cent *ad valorem*. The market prices of goods, and the rate of percentage to be remitted every seven years. The shipping dues consist of the Quarantine due, varying from 5 to 20 piastres according to the size of the vessel, and of the anchorage due, amounting to 50 piastres for every vessel, irrespective of its tonnage. In addition to this, every vessel passing through the Bosphorus, or the Dardanelles, must pay, according to its freight, from 33 to 76½ piastres for each time it traverses.

THE BASHI-BOZOUKS.—These gentry are nothing literally "locked into shape" at last. Their camp, just outside the town, is worth a journey to see. Their tents are all pitched regularly, instead of being thrown about in their own higgled-piggledy; and the horses are neatly picketed lines, like those of regular cavalry. There are about 3000 of these wild fellows here at present, and of them are splendid-looking fellows with fine sunny faces, beautifully proportioned, muscular arms, and noble waists, breasts, of the true Caucasian mould. Mixed up with them are a few ignoble-looking, pigmant-looking Arabs, with sinister eyes and lumpy figures, and some six dirty Maroubouts, fanatics from Mecca, inflamed with the fulness of their Hadj, or pilgrimage. They are divided into several regiments, and each man is paid a franc a day. The French authorities for the present have the command of them, and Colonel Beauprêtre, a very clever officer, has the principal direction of their organisation. The organisation of the irregular Arab cavalry perfectly suited to the Bashi-bozouks. The latter, however, feel great contempt, or affect to feel it, for the well-looking Spahis who are now with us at the camp, inasmuch as they have been so recently enlisted, many of them from the Bashi-bozouk ranks. For real service, however, all their valuable attributes are required.—*Letter from Varna.*

A FIELD FOR ENGLISH ENTERPRISE.—Where are our British merchants and our English enterprise? We have many people who go to the Baltic, as it is to be on, during the summer months, but how few of them ever think of going a little further? For the same price, or even less than it costs to go to Stockholm, a visit can be paid to Abo, the capital of Finland, and the centre of the Aland Islands. Here, in the summer, vessels are every week or fortnight arriving from and departing for all parts of the world, and the islands themselves are a perfect paradise for sportsmen. Wild fowl of every description, and in countless numbers, are to be found in the marshes, while the lakes and streams abound with fish. Deer are also plentiful, and the forests are full of game. Then, as to the people, they are hospitality itself, and their manners and customs are most interesting. Their language is, it is true, a difficult one to learn, but it is not impossible, and the Finns generally speak Swedish, which is comparatively easy. Then, as to the country, it is one of the most beautiful in the world. Its lakes, rivers, and forests are unrivalled, and the people are a most interesting race. Their dress is picturesque in the extreme, and their manners and customs are most primitive. Their houses are built entirely of wood, and are generally two stories high, with a large room in the upper story, which is used for dancing, and in which the whole family sleep. Their food consists principally of fish, and they are very fond of tea, which they drink in large quantities. Their beverage is a kind of beer, which is very good, and which they brew themselves. Their dress is very picturesque

JONES'S £4 4s. SILVER LEVER WATCHES, and £16 10s. GOLD LEVERS, at the Manufactory, 338, Strand, opposite Somerset House, are warranted not to vary more than ten minutes per week. On receipt of a Post-office Order, payable to JOHN JONES for £4 4s., one will be sent free. Jones's Almanack of Watchwork, free, for 2d.

FLUID COMPASS WITHOUT AIR BUBBLE.—F. DENT Chronometer Maker to the Queen and Prince A. have now opened the Shop at 33, Ko. Exchange, next door to no other shop, (No 34,) for the Exclusive Sale of the above Ship Compasses, for which the Prize Medal was awarded to the late F. J. Dent at the Great Exhibition and has ever since been the Ship Compasses, which is steadier than any other in use (See "Nautical Magazine" for June, 1854 p 334.) Prices the same as 8 dinary Compasses

C. F. HANCOCK, JEWELLER and SILVERSMITH beg respectfully to inform the Nobility and Gentry that he has RE-OPENED his premises, 32, BRUTON-STREET (which have been extensively enlarged to meet the demands of his increasing business), with an entirely New and Splendid Stock of Jewellery, Silver and Plated Articles, and he takes this opportunity of returning his most grateful thanks for their kind patronage, and earnestly to solicit a continuance of the same.—29, Bruton-street, Bond-street. N B - A large Stock of Second-hand Plate.

HAIR JEWELLERY.—Artist in Hair.—DEWDNEY begs to inform ladies or gentlemen resident in town, or any part of the kingdom, that his beautifully plaited and elegantly mounted in gold, HAIR BRACELETS, Chains, Brooches, Rings, Pins, Studs, &c., and forwards a Gold Mark, carefully packed in boxes, at about one-half the usual charge. A beautiful collection of specimens, handsomely mounted, kept for inspection. An Illustrated book sent free on receipt of two postage stamps. Dewdney, 172, Fleet-street.

SARL'S ARGENTINE SILVER PLATE.—No 17 and 18, Cornhill, and 220, Regent-street. Table Services of the finest and most unrivalled manufacture all the substitutes for Silver. Its lustrous excellence, combined with its brilliant appearance, defies all competition. It is warranted for fifteen years with the best possible usage, and is preferred by SARL and Sons to the public, and, notwithstanding the many imitations and unprincipled assertions, the present Stock of Spoons is all former recorders, that they are exactly the same as have ever been manufactured by SARL and Sons, and are to be procurable at SARL'S Establishments only. Fiddle pattern, per dozen, £4 4s. Thread, £5 5s. Kings, £6 6s. Lily, £7 7s. Lily and Thread, £8 8s. Lily and King's, £9 9s. Lily, Thread and King's, £10 10s. Fiddle, Thread and King's, £12 12s. Fiddle, Thread, King's and Lily, £14 14s. Fiddle, Thread, King's, Lily and Shell, £16 16s. Fiddle, Thread, King's, Lily, Shell and Honeysuckle, £18 18s. Fiddle, Thread, King's, Lily, Shell, Honeysuckle and Rose, £21 0s. Fiddle, Thread, King's, Lily, Shell, Honeysuckle, Rose and Palm, £24 0s. Fiddle, Thread, King's, Lily, Shell, Honeysuckle, Rose, Palm and Oak, £28 0s. Fiddle, Thread, King's, Lily, Shell, Honeysuckle, Rose, Palm, Oak and Vine, £32 0s. Fiddle, Thread, King's, Lily, Shell, Honeysuckle, Rose, Palm, Oak, Vine and Ivy, £36 0s. Fiddle, Thread, King's, Lily, Shell, Honeysuckle, Rose, Palm, Oak, Vine, Ivy and Bead, £40 0s. NEW BOOKS, &c.

NEW WORKS and NEW EDITIONS.

HISTORY of the REIGNS of LOUIS XVIII. and CHARLES X. By EYRE EVANS CROWE, Author of "The History of France." 2 vols. 8vo. 28s.

"Mr. Crowe's some great qualifications for a work such as this. In his "History of France" he has shown that he has successful to the full measure of the demand for the sparse history of a country whose annals are h.f our own, he p sessed himself for discussing the contemporary politics of France, and in his capacity as a journal at he has been at once a spectator and an actor in the period he now does s with Calm and measured judgment, and with a rare Macaulay-type-like portrait is an excellent thing. New Englishmen are such masters of French literature and French politics as Mr. Crowe."—Leader.

2

The SECOND EDITION of LAMARTINE'S MEMOIRS of CELEBRATED CHARACTERS. 2 vols. 8vo. 28s.

"Lamartine's farewell literary offering to the reading world is by far the most perfect pose production of its author, displaying more than his accustomed loftiness of thought, animation of description and narrative, and felicity of style. We have no doubt it will form an important addition to Lamartine's fame."—Times.

3

THE ILLUSTRATED LONDON NEWS.

No. 698.—VOL. XXV.] SATURDAY, AUGUST 19, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE SECOND STAGE OF THE WAR.

The retreat of the Russians from the Danubian provinces is confirmed. Not only Wallachia, but Moldavia is evacuated. The Czar has been compelled to disgorge his plunder. His "material guarantee" has been wrested from his grasp. Overawed by England and France, menaced by Austria, condemned by all Europe, and beaten by the Turks, he has relaxed his hold of the territory he desired to despoil and to appropriate, has fled in precipitate retreat, and left behind him large districts strewed with the wounded, the dying, and the dead, and the *débris* of mighty armies and munitions of war. Nor is his physical less complete than his moral discomfiture. His reputation is destroyed. The good name of his country is tarnished. Russia, that so long affrighted the world, and projected its dark shadow upon the fairest regions and most civilised populations of the globe, is exhibited at last, by the mad acts of its sovereign, as a weak bully, an empty blusterer, powerless to confront the most despised of its enemies—a thing that derived its *prestige*, not from any inherent strength of its own, but from the terror and weakness of those who knew it to be big, but were not aware that it was rotten.

The first chapter in the history of the War may be said to have ended with the retreat of the Russians. The second—and let us hope more active and brilliant chapter—will commence with the attack of the British and French forces upon the Crimea. Towards that point the Czar is directing all his remaining energies. He cannot afford to make the suicidal confession that he has been actually beaten and driven out of Wallachia and Moldavia. Unless he have made up his mind to retire from the conflict which he has so wickedly provoked, he must defend himself at Sebastopol and Cronstadt. There are no signs of any return to reason on his part. The only reason that avails with him, and such as he, is the sword. He has not yet felt its weight sufficiently to be convinced. The duty of the Allies is therefore clear before them. They must make him feel it to the very core of his empire, if they desire to restrain that "ambitious and aggressive spirit" which the Queen of Great Britain condemned so emphatically and with so much calm dignity in her Speech at the close of the Session. If they desire at the same time to secure the future tranquillity of Europe, they must follow up the advantages which they have secured, and bind him and his successors to keep the peace for the next half a century—not by paper treaties, which he may trample upon; or by appeals to his honour, which he may despise—but by the destruction of his naval power both in the Baltic and in the Euxine.

Can Great Britain and France effect this great object, either with or without the concurrence of Austria, or in spite of the wish of the King of Prussia—and perhaps of some other Potentates—to protect Russia from well-merited punishment and degradation? We take it for granted that the Maritime Allies cannot stop short of such a result; and many reasons might be urged why they ought not, and probably will not, be contented with so little. Hereafter, they may have to insist that Finland shall be restored to Sweden—not so much for the sake of Sweden as of Europe; and that the Crimea, on the same large grounds of general policy, shall be restored to Turkey, or erected into a semi-independent State, under the joint protection of the Maritime Powers, and, perhaps of Austria and Turkey. But, leaving these matters as not yet sufficiently mature for profitable consideration, the immediate question which the people and Governments of Great Britain and France are asking is, in what position they stand towards Europe, towards Turkey, and towards Russia, by the partial defeat which Turkish valour and the policy of the Allies have inflicted upon the foe? In a better position in every way. Towards Europe they stand as the successful defenders of its civilisation. Towards Turkey they stand as firm friends, who have achieved a certain object, and are pledged to achieve a larger one. Towards Russia they stand as invincible foes, emboldened by success, justly aggrieved by all the expense and trouble to which they have been unrighteously put by a selfish aggressor, fully enlightened as to the real intentions of their opponent, aware of their own strength, and bound by every consideration of justice, honour, and humanity, and wise policy, not only to strike hard while fortune is upon their side, but to prevent the recurrence of calamities which imperil Civilisation. Austria shares to a large extent the interest, as well as the danger, of other States; and whatever may be the personal feelings of her Sovereign towards the Emperor Nicholas, and however much he may be disposed to treat him with lenity in the day of his

SELIM PACHA MUSOMIR, COMMANDER-IN-CHIEF OF THE TURKISH ARMY OF BATOUM.—(SEE NEXT PAGE.)

adversity, the duty and policy of Great Britain and France remain as closely and rigidly prescribed for them as if Austria were not in existence to proffer aid, to suggest mercy, or to embarrass the question in any shape or degree. Austria may, if she pleases, be counsel for the prisoners; but the Judge is the Public Opinion of all the civilised States of Europe, which will compel Great Britain and France to act as the officers of justice, and to coerce and restrain, as well as punish, the flagrant evil-doer, who has already caused more mischief than the efforts of a quarter of a century will be able to repair. No half-measures will suffice. Any mercy to Russia would be barbarous cruelty to all Europe. The Czar must not only be humbled, but he must be effectually deprived of the power of aggression. It is no longer a question between him and Turkey, or between him and Austria, or any Power or Powers in Europe. It is not even a question between him and the two Maritime Allies. It is a question of the honour and safety of England. If the Czar be not absolutely beaten at every point, England will no longer be in her old position. She will have fallen from her high place. She will not be the first, or even the second power in the Christian commonwealth. She will have found her match in the Czar, and will have lost much of that moral greatness, which everywhere encircles her name, because she has hitherto proved herself invincible.

It is no doubt quite right and proper that Sir Charles Napier should take Bomarsund; but England expects that he will take Cronstadt, and will not be contented with less. It is agreeable to know that the Russians have been driven beyond the Danube and the Pruth; but the people expect that the forces of the Allies will take Sebastopol and the Russian fleet, and will not be contented with any achievements less splendid and conclusive. There is a certain class of lazy critics who represent both of the Russian strongholds to be impregnable; but the naval and military commanders, who are charged with the expeditions against those places, do not share the opinion. We may be quite certain that they will not act upon any such supposition. No doubt the conquest of either will cost us a few ships and the lives of many brave men; but it will cost us far more in ships, in lives, in honour, and in security, if they be not taken, or if by some other means, equally potent, Russia be not reduced to her proper position. That one or both will be taken during the present campaign, we will not suffer ourselves to doubt.

SELIM PACHA.

(From a Correspondent at the Black Sea.)

Selim Pacha Mueshir, Commander-in-Chief of the Turkish army at Batoum, in Asia Minor, is an officer of much distinction in the Turkish service; he is a hale old gentleman of perhaps sixty three or four. He began life as a simple soldier, was a lieutenant at the period of the murder of the Janissaries, since which period he has been constantly employed as that a foreign enemy, such as the Russians, in 1828 and 1829; the Egyptians, and against internal rebels. In 1840 he served with great distinction at Acre and on the Lebanon, and has gained all his successive steps by actual service. In November or December, at the head of 8000 men, he captured Cheffketil (near Nikolai), and has since bravely beaten off the Russian attacks (three of these attacks were by sea, and on one occasion he says that he sunk a steamer and a frigate. Though on his retreat to Chooroksoo he lost eleven guns, he seems to have handled the Russians and Mingrelians very roughly their loss was immense. At the late battle the Muschir fought like a lion. At his request I made the accompanying Sketch (engraved upon the preceding page), for he had heard of the fame of the Illustrated London News.

The Pacha, who had taken a short cruise in the ship in which I was a passenger, was received by the whole garrison of Chooroksoo under arms. We followed, and joined him in a little faggot harbour, or summer-house, high up on the beach, commanding a most beautiful view of the coast and neighbouring mountains. The country here, though it threatens ague, is exquisitely beautiful towards Batoum. We were welcomed by an irregular salute of guns, disagreeably near; and, after having sipped coffee and smoked pipes, and listened to his band, which played an original piece, called the "Capture of Cheffketil," composed by his bandmaster, mounted on his horses, and, guided by him, we rode round the works. Things looked promising for a good defence: the regular troops, though ragged, seemed in good serviceable order; but the Bashi-bozouks did not appear all that one would wish. A few of them were drawn up separately. "Those are my braves," said Selim, "who stuck by me lately, and whom I have proved before: as for all the rest, they are only fit to be burnt."

NAVAL AND MILITARY INTELLIGENCE.

The dépôts of the 12th and 27th Regiments will be removed immediately from Ireland to Chatham.

The 16th Royal Irish, from Canterbury, marched into Chatham on Wednesday last.

The Bedford Militia left Bedfor by rail for Berwick-on-Tweed yesterday, the 18th inst.

The Essex Rifles marched from the Tower *en route* for Canterbury, on Tuesday.

On Tuesday there was no military on duty at the Royal Mint, Tower-hill, and the entire duty of guarding that establishment has now devolved upon the police.

Rear-Admiral H. Eden, Acting Superintendent of Devonport Dockyard, having received his commission as Rear-Admiral of the Blue —to which he had been promoted on the death of Rear-Admiral Hope, hoisted his flag on Monday last on board the *Plymouth* yacht.

The *Fire Queen* went down to Southampton to receive on board the Right Hon. Sir James Graham, on his visit to the Isle of Wight. On Wednesday the Lords of the Admiralty officially inspected the dockyard and ships in commission; and, on Friday the Royal Clarence Yard, and Forton Barracks, Hasler, &c.

British Ships of War in the Pacific.—The *Pique* frigate left Callao on a cruise on the 17th June. The *Nereus* was at Valparaiso, and the *Nereid* and *Cockatrice* at Callao in the end of June. *Dido* was expected at Panama for Mexico.

The English transport *Eliza* has arrived at Calais to take on board 300 men for the army of the Baltic. Some other transports were also expected, as well as the *Colossus*, of 100 guns, and other line-of-battle ships, in order to take on board the second division of the army of the Baltic, which will be composed of the 8th battalion of the Chasseurs de Vincennes, and the 16th, 22nd, 41st, and 46th regiments of the Line. The embarkation will take place very shortly, and a great number of visitors from England have already gone across in order to be present at it.

In anticipation of the British fleet and army remaining out in the Baltic and Black Sea during the approaching winter, contracts have been entered into for the necessary supply of warm clothing required in so rigorous a climate; and the manufacturers at Leicester and elsewhere are preparing warm shirts and hosiery for the seamen and soldiers.

The Lords of the Admiralty have determined that all ships hired as transports, for the conveyance of troops or freight, must be supplied, at the expense of the owners, with three or more of the patent fire-annihilator machines, and the necessary number of additional charges.

Warlike Symptoms in Prussia.—Very great activity is observable in all the military departments of Prussia. The garrison of Dantzic, about 10,000 men, are kept at continual drill. Rifle practice, pontoon and boat bridge building, are daily exercised; and the entire army and landwehr of the kingdom, amounting to about 200,000 men—artillery, cavalry, and infantry—is held ready for action at fourteen days' notice.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

Paris, Thursday.

Having already given our reader a programme of the Fête of the 15th, but little remains to be related of its progress. The illuminations, being exactly the same as those of last year, presented no new feature. The banquet of 2000 persons, which was to have taken place in the new Palace d'Industrie, was countermanded a week or ten days before the Fête, for what reason has not been stated. A "Te Deum," at which were present all the principal authorities, was sung in all the communes of France; in many, other rejoicings were celebrated, and alms distributed by the various Mairies to the poor. In all the garrisons twenty-one salutes were fired, morning and evening; the troops passed in review; the soldiers under arrest for infringements of discipline were set at liberty; a double ration of wine distributed to the troops; and in all the towns where artillery was stationed, fireworks were discharged.

The absence of their Majesties from Paris was a considerable disappointment, though for some days previously it was known that neither would be present. The town of Bayonne offered to them a ball, which took place at the theatre, and was, as may be supposed, conducted with the utmost taste and splendour that the place could afford. The *séjour* at Biarritz continues to produce the most favourable effect on the health of the Empress; and so much is she pleased with the place, that the Emperor has selected a site for the erection of an Imperial residence; measures have been taken for the purchase of the portion of ground necessary for the purpose, and the building materials are being prepared with the utmost dispatch, as orders have been issued that the palace is to be completed by the 1st of July, 1855. The Comtesse de Montijo, mother of the Empress, has been on a visit to their Majesties at Biarritz.

Certain arrests on political motives, which took place some time since, at Paris, have led to no results, and the persons accused have been liberated.
